The Council of Safety gave particular attention at this time to the defenses at Billingsport, seeking to complete them before the enemy came up. The land needed was bought for six hundred pounds in the name of the United States; M. Kermanvor, a French officer, was asked to lay out the works. Capt. Blaithwait Jones and Thomas Hanson were appointed engineers, and Col. John Bull, superintendent of workmen, had for his staff James Dundas, Robert Cather, clerk of the works; John Moyer, commissary of utensils and provisions; and Charles Souder and Edward McCaggen, bricklayers. Volunteers were called for from the associators, and the plan of the works was drawn by the celebrated Polish patriot, Thaddeus Kosciuszko, who had just arrived from France, and who was paid fifty pounds for his services. New *chevaux-de-frise* were made and sunk near this place by the Committee of Safety's carpenter, Robert Smith. The heights on the north side of the Wissahickon were selected as a strong place for a magazine of military stores, and the hill above Vandering's mill, on the same stream, for a fortification.

On October 14th the Council of Safety received from Congress a copy of a letter from Gen. Lee, informing it that the Hessians had embarked from Staten Island, and did not doubt but that they intended a visit to this State, whereupon a letter was written to the commodore, directing him to get the fleet in a proper state of defense. Information was at once sent to the lookout at Lewes to forward the earliest intelligence of naval movements, and if any was detected, to fire signal-guns and light the beacons. A bounty of ten dollars was offered to every able-bodied man joining the Philadelphia fleet, and the State's cannon in Jersey were sent for. David Rittenhouse, Cols. Matlack, Bayard, and Biddle were appointed a committee to select sites for defensive works, and they called to their aid the veteran Gen. Adam Stephens, of Virginia, and Cols. Dickinson, Cadwalader, and Hampton. The alarm was premature and the panic short-lived. A few days later fifteen Hessian prisoners were brought in and lodged in jail, while Gen. Thompson, Col. Irwine, Capt. Wilson, Capt. Duncan, Lieuts. Curry, Hoge, and Bird, Rev. Mr. Calla, and Dr. Mackenzie arrived from Canada, having been paroled by Gen. Carleton.

On November 11th news of a definite character was received of Gen. Howe's march towards Philadelphia, and there could be no doubt now of serious danger to the city. On the 15th, according to Marshall, "handbills were published last night by order of Congress and Council of Safety, requesting the inhabitants of this State to put themselves in a martial array, and march by companies and parts of companies, as they could be ready, and march with the utmost expedition to this city." Twelve expresses were organized for immediate service, stores and

equipments were overhauled and reviewed, caissons mounted on carriages, and wagons hired to carry stores in case an evacuation was necessary. Association officers were ordered to march their detachments at once to the city; owners of live-stock were prepared to remove them into the interior; companies traversed the city in search of blankets and provisions, and the hospital accommodations and stores were enlarged. There was great need of the removal of trains of sick and disabled soldiers were committed to the Council of Safety cleared a wing of "the Meeting House" for a hospital, and the Pennsylvania Hospital was set apart for the use of Continental troops, Christopher Marshall, Maj. Melchor, Thomas Smith, Capt. Davis, and Thomas Casdrop being appointed to take possession of empty stores and provisions, and aid the surgeons in providing other accommodations for the sick and disabled. The senior and junior Drs. Thomas Bond rendered efficient aid in organizing the hospital system upon a proper basis, and securing competent surgical and medical aid. Many of the sick were down with smallpox, and it was important to prevent the contagion from spreading.

News came on the 19th confirming the capture of Fort Washington, and making it certain that the British was marching towards Philadelphia. The casualties to Pennsylvania troops in this disastrous battle, which never should have been fought, were severe. Prisoners taken were Cols. Robert Magaw, La Cadwalader, Swoop, Lieut.-Col. Thomas Bull, Beatty and Galbreath, Capts. Miller, Decker, Van Richardson, Steward, West, Graydon, Lenox, Tudor, Edwards, Dehuff, Smyser, Trett, McDermott, Stake, McElhatten, McFarland, Camble, St. Wallace, McClure, Hetherling, and Culbertson. The usual proportion of lieutenants and ensigns. It was severe news, for Fort Washington was deemed impregnable, and if it could not be held, where was there to attempt the defense of Philadelphia? Marshall's *Remembrancer* says: "Nov. 18th. A report spread to-day of Gen. Howe's taking Fort Washington last Seventh Day, in the afternoon, but it is not credited but by our enemies and the timorous and faint-hearted among us. 20th. The reduction of Fort Washington is confirmed by intelligence received from Congress." Rev. Dr. Muhlenberg, in his diary, says as follows: "Nov. 13th. Brought a letter from Lieut. Muhlenberg, Jr., in which he states that Gen. Howe, with ten thousand men, is on the march towards Philadelphia, and that we shall engage a team and our stage-wagon ready to send down to town as soon as he sends us notice that the time of need is at hand. . . . Nov. 30th. . . . a letter from Henry Muhlenberg, Jr., and a trunk and box of books for safe keeping, as it is reported that the British army is growing nearer and nearer to Philadelphia, and a party is determined to defend the place. If this attempt is made, the consequence may be that the town

be laid in ashes. Where the Lord does not watch, the watchman watches in vain," etc.

On the 27th news of Howe's advance and Washington's retreat was received, with rumors of movements in different directions. On the 28th a meeting was held at the State-House, the Council of Safety and members of Assembly being present, with David Rittenhouse in the chair. It was at this meeting that Gen. Mifflin spoke so vigorously and induced the associators to resolve to march to meet the enemy. In Marshall's words, "It's said Gen. Mifflin spoke animatedly pleasing, which gave great satisfaction." November 30th the Council of Safety published a notice to the effect that "it is no less necessary than painful that the present movements of Gen. Howe's army requires we should apprise the inhabitants of this city who wish to avoid the insults and oppressions of a licentious soldiery, that they prepare for removing their wives and children and valuable effects, on a short warning, to some place of security." On December 2d the news came of Howe's army being in Brunswick, on the march for Philadelphia. And now a panic ensued. Marshall's entry for the day is full of the bustle and confusion of the scene: "Drums beat; a martial appearance; the shops shut; and all business except preparing to disappoint our enemies laid aside. I went to the Coffee-House; then to the children's; then home; then back to the Coffee-House and other parts of the city; then home; dined there. Our people then began to pack up some things, wearing and bedding, to send to the place. After dinner I went to State-House; conversed with Jacobs, Speaker of Assembly, with Robert White Hill, J. Dickinson, Gen. Mifflin, etc. To Coffee-House; then home; drank tea; then down town. Accounts brought that Gen. Lee was near our army with ten thousand men. Various but great appearances of our people's zeal. Came home near nine; then went down again as far as the children's," etc.

Dr. Muhlenberg's diary shows the same hurry and confusion, though he was away off at Reading. "Dec. 1st. Fred. Muhlenberg rode on horseback to the city, as the road is impassable for the wagon, owing to the late rains, and his parents-in-law are very anxious to see him on account of the frightful state of things in that city. . . . Dec. 2d. Last night between 11 and 12 o'clock, some person knocked violently at the door and demanded admittance, saying he was an express from Philadelphia. When I opened the door it was a well-known member of our congregation in the city, Mr. Specht, a butcher from Spring Garden. He had printed orders to all the colonels of the respective battalions of associators, stating that Gen. Howe had taken possession of Brunswick, and as Gen. Washington had not sufficient force to oppose to him, he was obliged to retire to Trenton. . . . Dec. 7th. Today many teams loaded with furniture and people flying from Philadelphia have passed the house." December 11th the good parson had to make room for

five families of friends and kinsfolk and their furniture. "Dec. 18th. During the whole day wagons have been passing with goods, and men, women, and children, flying from Philadelphia."

Marshall's little details are still more graphic. "Dec. 3d. Numbers of families loading wagons with their furniture, etc., taking them out of town. . . . Drank tea at home; then went with a number of deeds to son Christopher's; put them into his iron chest. . . . 8th. Martial law declared. . . . 9th. All shops ordered to be shut; the militia to march into the Jerseys; all in hurry and confusion; news that Gen. Howe is on his march, etc. . . . 10th. Our people in confusion, of all ranks, sending all their goods out of town into the country. . . . 11th. Further accounts of the rapid progress of Gen. Howe. Our Congress leaves this city for Baltimore. The militia going out fast for Trenton; streets full of wagons, going out with goods. . . . 13th. The Friends here moved but little of their goods, as they seem satisfied that if Gen. Howe should take this city, as many here imagined that he would, their goods and property would be safe; other people still sending their goods. 14th. Alarming and fresh accounts of Howe's near approach; people hurrying out of town, etc."

The Assembly, on December 2d, ordered all the associators in Philadelphia City and county, and in Bucks, Chester, and Northampton Counties, to be enrolled, and one-half of them drawn for four weeks' service, every man with permission to provide a substitute. At the end of the four weeks the other half were to take their places in camp. An attempt was made to raise fifty thousand dollars in hard money among the citizens. Gen. Mifflin was sent by the Assembly to rouse the citizens, local committees being appointed to aid him. The committee from Philadelphia was composed of Frederick Antis and Col. Curry. Bounties were offered for volunteers,—ten dollars to such as should join Washington on or before December 20th; seven dollars to those coming forward before December 25th; and five dollars to all enlisting between 25th and 30th for six weeks' service. Money was provided for the families of poor members in every battalion, to be disbursed by two subalterns chosen by each battalion. The public records of Assembly and Committee of Safety were removed to Lancaster. Lewis Nicola, barrack-master, was made town-major, with directions to incorporate all persons not fit to march with the associators into a city guard, which was detailed for the protection of magazines, etc., and for patrol duty in the streets.¹ Nicola distributed his forces around the

¹ Col. Lewis Nicola was a surveyor and an officer of many accomplishments, and of a peculiarly inventive turn. He planned a "calavat" for river defense; he devised plans for magazines, for enlistments, etc.; he made maps of the injuries done by the British; served as barrack-master and town-major, and had command of the Veteran Invalid Corps. He enjoyed the confidence both of the local authorities and the general government; was major, colonel, and brevet brigadier-general in the United States army, his commission as colonel dating June 20, 1777, and

three districts into which he divided the city. Each district was served by two companies, consisting of one captain, one lieutenant, one ensign, four sergeants, four corporals, and eighty men,—a police force, in fact, of four hundred and fifty men.

On the same day, December 2d, the Committee of Safety ordered shops and schools to be closed, and every citizen to aid in providing for the public defense. All the associators of the city and liberties were formed into a single brigade, under command of Col. John Cadwalader. Those who were willing to serve as horsemen were to be supplied with a broadsword and brace of pistols each. The "Real Whigs," assembling in Philosophical Hall, resolved that in the absence of a militia law, every male between sixteen and sixty should be ordered under arms for defense of the State, and heavy fines levied on those declining to serve.

The Council took measures to protect associators absent on duty from attachment for debt and distress by landlords. The schools were ordered open again on December 8th, but the same day came news of Howe's advance upon Princeton. The armed boats under Commodore Seymour were sent up to Trenton to aid in removing stores and public property, and Gen. Roberdeau was sent to Lancaster to alarm the people. To enable him to make dispatch he was authorized to seize the carriage of either of the three Pembertons or that of Samuel Emlen. The associators were greatly embarrassed by their helpless families, still they responded so willingly to the call to arms that on December 9/10th, Cadwalader was on the march to Trenton with a brigade of twelve hundred men, which was daily reinforced by new companies as it reached the front.

When Congress fled to Baltimore it left a committee in charge at Philadelphia, with Robert Morris for chairman, and conferred discretionary or dictatorial powers upon Washington. These things helped to bring order out of confusion; Washington and the Committee of Congress co-operated with the Committee of Safety, and chaos ceased to reign. The Committee of Safety ordered shops to open on the 14th, and goods to be sold as usual, those not complying with this mandate being denounced as public enemies. Parties of soldiers were sent to drum up laggard associators, and able-bodied men were forced into the ranks, except Quakers and Dunkards. Washington appointed Gen. Putnam military Governor of the city, with instructions to fortify a line of defenses from Fairmount and the heights of Springettsbury across to the Delaware.

The general took command on the 12th, and established what was practically martial law. All soldiers on furlough were ordered to their commands; the

provost-guard swept the streets, and none could pass the patrol at night without permits. Putnam denounced the report that the Continental forces meant to burn Philadelphia, and declared that he would hang all incendiaries without ceremony. He also ordered all able-bodied persons to turn out and muster under arms, for he would not tolerate any idle spectators of the present contest; and persons refusing to take Continental currency were to forfeit their goods and go to prison. Putnam further compelled citizens and associators to furnish relays for completing the fortifications and for cutting fire-wood to supply the camps,—the "Governor's woods" of the Penn family suffering much from these forays. With Kosciusko for his engineer Putnam began new works at Red Bank, opposite the mud fort and covering the *chevaux-de-frise*.

To secure the quick crossing of the Delaware, in case of an emergency, Putnam, having no pontoons and not being able to collect boats enough (even for the Susquehanna), consulted with Capt. Richard Peters and some Philadelphia shipwrights, and at their suggestion built a floating bridge upon carpenters' floating stages. The military stores and powder were sent on to Lancaster for safe-keeping, and Putnam employed Capt. Sharpe Delaney to make a muster-roll of all male inhabitants between sixteen and sixty. The British were now in Trenton, their advance guard at Burlington and Mount Holly and Moorestown, and it was important to dislodge these last. The Council of Safety, under date of December 23d, issued a circular to "friends and countrymen" which was really a stirring appeal to arms. "We call upon you," it said, "we entreat and beseech you to come forth to the assistance of our worthy Gen. Washington, and our invaded brethren in the Jerseys. If you wish to secure your property from being plundered and to protect the innocence of your wives and children, if you wish to live in freedom and are determined to maintain that best boon of heaven, you have no time to deliberate. A manly resistance will secure every blessing; inactivity and sloth will bring horror and destruction." The Council also elected John Cadwalader, brigadier-general of associators, and Samuel Miles, brigadier of State troops. On Christmas-day there was a reserve of three thousand men in Philadelphia ready to march at Putnam's orders and under his command.

The position of the American forces on the west side of the Delaware was from Yardley's Ferry, opposite Trenton, to Coryell's Ferry, below Bristol. This was the centre and main body, the four brigades of Stirling, Mercer, Stephen, and De Fermoy being here stationed. Gen. Ewing, of the Pennsylvania flying camp, with some few of the New Jersey troops under Gen. Philemon Dickinson (brother of John Dickinson) was encamped between Yardley's Ferry and the ferry opposite Bordentown. Cadwalader, with the Pennsylvania associators, was posted above the Ne-

as general Nov. 27, 1783. That he must have been a man of some scientific attainments is evident from the fact that he published a paper in the "Transactions of the American Philosophical Society," on methods of preserving subjects for dissection.

shaminy to Bristol and below it to Dunk's Ferry. This crossing was guarded by Col. John Nixon, of the Third Pennsylvania Battalion. Washington ordered redoubts to be thrown up at the Neshaminy fords and at Dunk's Ferry, so that a stand could be made in case the enemy attempted to cross. If a passage was forced, the retreat was to be to the Germantown heights.¹

The plan of Washington for the critical movement of December 25th was comprehensive enough. With a picked corps of his best men he was to cross at McKonkey's Ferry (Taylorsville) nine miles above Trenton, descend upon that post and surprise Rahl's Hessians centered there, a force of fifteen hundred men, with a troop of light horse and some chasseurs. Gen. Ewing, with the Pennsylvania State troops, was to cross at a ferry below Trenton, secure the mouth of the Assanpink, and cut off the retreat of the enemy in that direction. Gen. Putnam, with his brigade, and the forces under Cadwalader, were to cross below Burlington and attack the lower posts under Count Donop from Burlington to Mount Holly. The crossings were to be made simultaneously, so that all the American army was to be on the east bank of the Delaware at 5 A.M. the morning after Christmas.

The plan was not carried out, except by the division under Washington. Putnam made no attempt to cross with his three thousand men. Cadwalader did not get over until the 27th, when Washington had already returned to the west bank. Ewing found the ice an insuperable obstacle. Cadwalader might have been cut off, but the surprise at Trenton had taught the British caution, and Donop retreated before him. Washington crossed again to Trenton on the 30th. On the same day nine hundred Hessian prisoners were brought in, and six of the Hessian colors, in charge of Col. Wheaton. The Hessians were on their way to Lancaster, and were paraded in the streets for exhibition. "They made a poor, despicable appearance," wrote Christopher Marshall. A letter of the period says they "formed a line on Front

Street, two deep, from Market to Walnut Street. Most people seemed angry that we should think of running away from such vagabonds."²

Howe's proclamation of November 30th was issued

² The Germans in Philadelphia and Pennsylvania understood the Hessians better, knew they were not vagabonds, that they were doing compulsory military service, and would not require great persuasion to induce them to desert. Dr. Muhlenberg, in his diary, mentions the fact that several Hessian prisoners, brought to Philadelphia early in November, were challenged by settlers to know why they had come to America to injure their own flesh and blood. One said that "he was dragged out of his bed from his wife and children and forced into the service. Others were asked why they attacked the Americans on Long Island so violently, and treated the wounded with such barbarity. Answer: The English officers had made them believe that the Americans were savages and cannibals, in particular those with fringe on their dress (rifleman), who were especially to be put out of the way as fast as possible, if they (the Hessians) were not desirous of being tortured and eaten while still living." Christopher Ludwig (or Ludwick, as usually Anglicized), the "Baker General" of Washington's army, a Philadelphia German, was in the flying camp at the time these Hessians to whom Dr. Muhlenberg refers were brought in. There was a difference of opinion about where they should be confined. "Let us take them to Philadelphia," said Ludwig, "and there show them our fine German churches. Let them see how our tradesmen eat good beef, drink out of silver cups every day, and ride out in chairs every afternoon; and then let us send them back to their countrymen, and they will soon all run away, and come and settle in our city, and be as good Whigs as any of us." To show that he believed what he preached, Ludwig went himself to the Hessian camp, passed himself off as a deserter from the American side, and is said by Dr. Rush, his biographer, to have presented the life of the Pennsylvania Germans in such glowing colors to the Hessians that his exertions "were followed by the gradual desertion of many hundred soldiers, who, now in comfortable freeholds or on valuable farms, with numerous descendants, bless the name of Christopher Ludwig." Be this as it may, Ludwig was a notable and estimable character and as remarkable a figure almost as any contributed by Philadelphia to the Revolution. He was born in the Upper Rhine circle, at Giessen, in Hesse-Darmstadt, in 1720, brought up to his father's trade,—a baker,—put in the emperor's army at seventeen, and sent to fight the Turks, was besieged in Prague, enlisted in the King of Prussia's army, and then went to England, where he turned baker aboard an Indiaman, and sailed under Boscawen's flag. He was sailor until 1753, when he came to Philadelphia, setting up as a gingerbread baker in Letitia Court in 1754. He made money, married, saved three thousand five hundred pounds, and got influence. In 1774 his neighbors pleasantly styled him "the governor of Letitia Court." He espoused the American cause ardently,—staked his nine houses, his farm, his three thousand five hundred pounds all on it, was active member of all the committees and conventions. When some one objected to Mifflin's proposition to raise fifty thousand pounds, Ludwig spoke out: "I am nichts more as a slingerbread baker, but put down alt Ludwig for two hundred pounds." He joined the associators, went into the flying camp, and exerted himself to keep the soldiers up to their work. May 3, 1777, Congress commissioned him as follows: "Resolved, That Christopher Ludwig be and he is hereby appointed superintendent of Bakers and Director of Baking in the army of the United States, and that he shall have power to engage, and by permission of the Commander-in-Chief or officer commanding at any principal post, all persons to be employed in this business, and to regulate their pay, making proper reports of his proceedings, and using his best endeavors to rectify all abuse in the articles of bread; that no person be permitted to exercise the trade of a baker in the said army without such license, and that he receive for his services herein an allowance of seventy-five dollars a month and two rations a day." Congress proposed to Ludwig to supply a pound of bread for every pound of flour furnished. Ludwig said no; he did not want to get rich; he had money enough; he would supply one hundred and thirty-five pounds of bread for each hundredweight of flour. The bread was always good after Ludwig got his commission; he was capable and honest, and all liked him in the army, high and low. Washington called him his "honest friend," and the other officers enjoyed his blunt ways. Ludwig lived till June, 1801, and in his will left property to endow an educational fund for poor children of all denominations in Philadelphia, upon which was built a most useful institution.

¹ From Gen. Davis' paper in the *Pennsylvania Magazine*, before quoted we get further particulars of these movements and troops. The Continental brigades were placed on the 9th. Stirling was at Beaumonts, near Brownsburg, with three regiments; his men were in houses and shanties, and ground flour in Robert Thompson's mill for the soldiers. The house where Stirling was quartered is still standing. Nixon had two field-pieces at Dunk's Ferry. Washington's instructions to Cadwalader were dated December 12th. They say, "You are to post your brigade at and near Bristol. . . . You'll establish the necessary guards, and throw up some little Redoubts at Dunk's Ferry and the different passes in the Meshuamane."

"Spurn no pains or expense to get intelligence of the enemy's motions and intentions. Any promises made, or sums advanced, shall be fully complied with and discharged. Keep proper patrols going from guard to guard. Every piece of intelligence you obtain worthy notice, send it forward by express." He was also commanded to keep a particular lookout for spies and boats. Capt. William Washington and James Monroe were quartered at James Neely's, in Solebury. The first rifle regiment was here also, barefoot and nearly naked. The depots were at Newtown, in Bucks, and headquarters in Upper Wakefield, Washington being at William Keith's house, Greene at Robert Henick's, Sullivan at John Hayhurst's, Knox and Hamilton at Dr. Chapman's.

at Trenton, and, as has been said, it brought over Galloway, the Allens, and others. Of Galloway's departure a local satirist took occasion to say, in January, 1777, in Bradford's paper, that

"Galloway has fled and joined the venal Howe.
To prove his baseness, see him cringe and bow,
A traitor to his country and its laws,
A friend to tyrants and their cursed cause.
Unhappy wretch! thy interest must be sold,
Fortunately, not for polished gold," etc.

A letter from Philadelphia, telling of the flight of these Tories, says, "Among the worthies who have joined or put themselves under the protection of Howe and company at Trenton we find the names of the following noted personages, viz.: Joseph Galloway, Esq., late a member of Congress, Speaker of the Pennsylvania Senate, and printer of a public newspaper at Philadelphia; John Allen (son of the celebrated rhetorical, impartial, learned judge, whose

On Jan. 1, 1777, the Council of Safety, acting on the recommendation of Congress, took stringent measures to prevent the depreciation of Continental currency. This money was not the favorite even of undoubted patriots, nor should it have been, except as a matter of sentiment. John Dickinson wrote to his brother Philemon not to take any more Continental money in liquidation of bonds and mortgages held by him. The letter was intercepted and sent to Washington as well as to the Council of Safety. The Council resolved that to refuse this money for debts, contracts, or goods sold, and to demand higher prices in currency than hard money was criminal. The offense was to be tried before three field-officers of militia, or three committeemen of the county where committed, and the punishment, when convicted, was forfeiture of goods and fine, and the informer got his share of the proceeds of confiscation.

To raise money Congress established a loan-office, paying six per cent. interest on money lent the public. The office was in the house of William Shippen, Jr., on Fourth Street. A United States lottery was also authorized. The office was in Front Street, opposite the Coffee-House. The first drawing took place at College Hall on August 11th. This lottery was authorized by act of Congress of Nov. 18 to 30, 1776. The managers were Sharpe Delaney, John Purviance, Owen Biddle, Francis Lewis, Jr., Jacob Barge, Jonathan B. Smith, and James Searle. There were one hundred thousand tickets, "each ticket to be divided into four billets, and to be drawn in four classes," with a complicated scheme.

After the battle of Trenton, Gen. Putnam joined Washington with his brigade, leaving Gen. Irvine in authority in Philadelphia. Gen. Gates soon succeeded to the command, holding his position until the retreat of the enemy

FAC-SIMILE OF CONTINENTAL CURRENCY.

memory will outlast the 'five-mile stone'), late a member of the Philadelphia Committee of Inspection and Observation; Andrew Allen, Esq. (brother to Jack), late a member of Congress, one of the Pennsylvania Committee of Safety, and at the same time a sworn advocate for George III. of Britain and his creatures; William Allen, Esq. (brother to Andrew), late a lieutenant-colonel in the Continental service, which station he resigned, not because he was wholly unfit for it, but because the Continental Congress presumed to declare the American States free and independent without first asking the consent and obtaining the approbation of himself and his wise family.¹

¹ Chief Justice Allen was a very prominent man, and deservedly so, in his day. He was probably the leading merchant of Philadelphia, and the richest man, certainly. His father was William Allen, and like him a successful Philadelphia merchant, dying in 1725. William was born in 1703, and succeeded his father in business, taking a large part in public affairs. In 1730 he bought the ground for the State-House, and paid for it with his own money. He was mayor in 1735, and inaugurated

the State-House in 1736 with a splendid banquet. He did much to promote new enterprises, embarking in iron manufacture as well as commerce, and buying large tracts of land, in the present anthracite coal regions. Allentown is named for him. Mr. Allen was member of Assembly many years, in 1737 was justice of a special Court of Oyer and Terminer, in 1741 became recorder, in 1751 chief justice, holding the office till 1774. He did much to promote education and encourage science, fitting out the first Arctic expedition; he was an early patron of Benjamin West. He married Andrew Hamilton's daughter; one of his daughters married Governor John Penn, the other, James de Launcey, of New York. Chief Justice Allen was neither Whig nor Tory, he believed in the cause of the colonists, but not in rebellion nor independence. His sons agreed with him in sentiment,—all were on both sides at some period during the contest. John was in the Provincial Congress of New Jersey, William marched to Quebec with Montgomery, Andrew was in the Pennsylvania Council of Safety and the Continental Congress, James took no part, but remained quiet in the country. The Allens were put down on the list of disaffected in December, 1776, and all but James went to Trenton. William became lieutenant-colonel in the regiment of "Pennsylvania Loyalists," his motto being, says Graydon, *ad desperandum Teucro duce et auspice Teucro*, arrogant enough, certainly, to suit the son of Chief Justice Allen. Andrew Allen's estate was confiscated.

through New Jersey made it no longer necessary to have a military Governor. The Philadelphia associators were with Washington at the battle of Princeton and until late in January, when they were relieved by fresh troops. The brave Virginian, Gen. Hugh Mercer, Washington's old companion in arms, fell on the field at Princeton, and was buried on January 16th, with the honors of war, in Christ churchyard. His remains are now in Laurel Hill. On the 17th, Capt. William Shippen, of Philadelphia, killed in same battle, was buried in St. Peter's churchyard. Col. John Haslett, of the Delaware regiment, was buried in the yard of the First Presbyterian Church, White Horse Alley, below Market Street. On 24th, Ensign Anthony Morris, Jr., killed at Princeton, was buried in the Friends' burying-ground, Fourth and Arch Streets.

There were a good many changes in the Philadelphia military after these battles. The First Battalion of the associators was now commanded by Jacob Morgan, Jr., colonel; James Cowperthwaite, major. Second Battalion: John Bayard, colonel; William Bradford, major. Third Battalion: John Nixon, colonel; Samuel Meredith and Robert Knox, majors. Fourth Battalion (rifles): Timothy Matlack, colonel. These officers, with Gen. Cadwalader, on January 15th, addressed the Council of Safety, strongly urging that associators who had not been in the field should be called out. Gen. Reed said that the City Troop particularly distinguished itself at Princeton, capturing double their number of British dragoons. When this troop's term of service expired, January 23d, Washington gave them a discharge over his own signature, saying that he took the opportunity of returning his most sincere thanks to them for their essential services to the country and to him personally during a severe campaign. "Though composed of gentlemen of fortune," he said, "they have shown a noble example of discipline and subordination, and in several actions have shown a spirit and bravery which will ever do honor to them and will ever be gratefully remembered by me." The uniform of the troop, says Mr. Westcott, adopted in 1774, was dark-brown short coat, faced and lined with white, white vest and breeches, high topped boots, round black hat, bound with silver cord, a buck's tail; housings brown, edged with white, and the letters "L. H." (Light Horse) worked in them. Arms,—a carbine, a pair of pistols, and holsters with flounces of brown cloth trimmed with white, a horseman's sword, and white belts for sword and carbine. The following is the roster for the campaign of 1776-77: Samuel Morris,¹ captain; Joseph Bud-

den, second lieutenant; John Dunlap, cornet; Thos. Leiper, first sergeant; William Hall, second sergeant; Samuel Penrose, third sergeant and quartermaster; Samuel Howell, Jr., first corporal; James Hunter, second corporal; Levi Hollingsworth, George Campbell, John Mease, Blair McClenachan, John Donaldson, George Fullerton, Thomas Peters, William Pollard, James Caldwell, William Tod, Samuel Caldwell, Benjamin Randolph, John Lardner, Alexander Nesbitt, Thomas Leaming, Jonathan Penrose, George Graff, Francis Nichols. The names of Samuel Penrose, George Fullerton, William Tod, Samuel Caldwell, Benjamin Randolph, Alexander Nesbitt, Thomas Leaming, and Francis Nichols do not appear in the discharge given by Washington.

The disagreements between the friends and opponents of the State Constitution continued in 1777, so that many members of the committees, while willing to take the oath of allegiance to the United States, refused to subscribe to the State oath. The result was, as the Supreme Executive Council declared in May, that "weakness and languor prevailed in every department of the government," and there was no regular administration of justice. A petition, strongly signed, was sent up to the Assembly to ask that body to recommend a new election for members of a constitutional convention to revise the recently-adopted

who ran to Mercer's support, and Moulder's city battery that Washington brought up in person. Dr. Potts' letter to Biddle is as follows:

"MY D'R FRIEND:

"Tho' the Ac't I send is a melancholy one (in one respect), yet I have sent an Express, to give you the best Information I can collect. Our Mutual Friend, Anthony Morris, died here in three hours after he received his wounds on Friday morning. They were three in number,—one on his chin, one on the knee, and the third and fatal one on the right temple, by a grape-shot. Bravo man! he fought and died nobly, deserving a much better fate. Gen. Mercer is dangerously ill, indeed. I have scarcely any hopes of him, the Villains have stab'd him in five different Places. The dead on our side of this Place amount to sixteen, that of the Enemy to twenty-three. They have retreated to Brunswick with the greatest Precipitation, and from Accounts just come, the Hero, Washington, is not far from them; they have never been so shamefully Drob'd and outgeneraled in every Respect. I hourly expect to hear of their whole Army being cut to pieces, or made Prisoners.

"It pains me to inform you that on the morning of the Action I was obliged to fly before the Rascals, or fall into their hands, and leave behind me my wounded Brethren; would you believe that the inhuman Monsters rob'd the General as he lay unable to resist on the Bed, even to the taking of his Cravat from his Neck, insulting him all the Time.

"The number of Prisoners we have taken I cannot yet find out, but they are numerous.

"Should be glad to hear from you by the bearer; is the Reinforcement march'd?

"I am, in haste, your most obedient

"humble Serv't,

"JON'N POTTS.

"Dated at the Field of Action, near

"PRINCETON, Sunday Evening, Jan'y 5th."

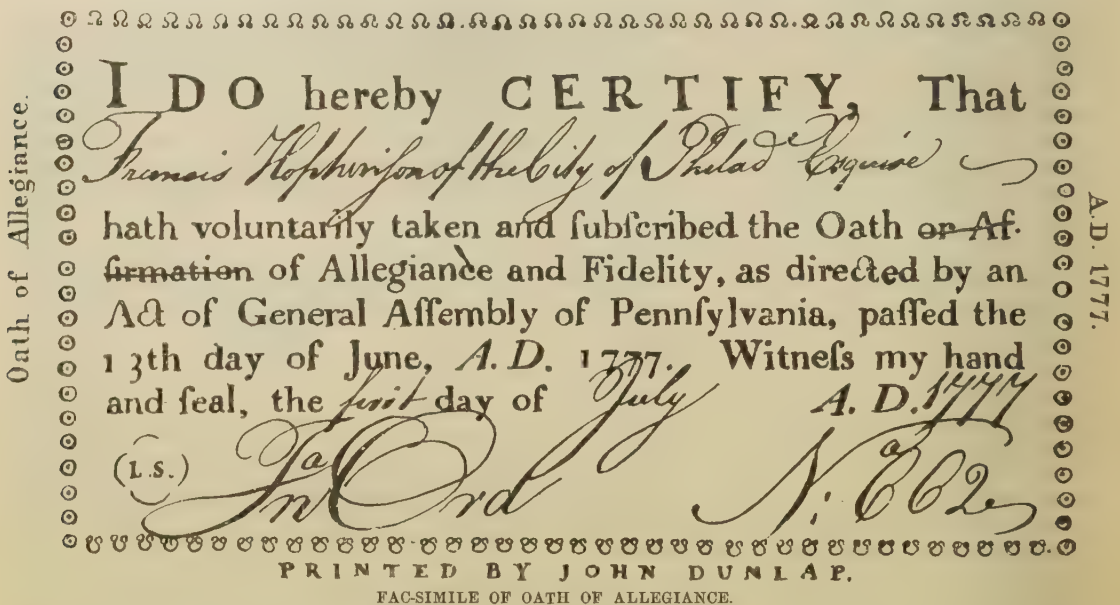

Maj. Morris was first buried in the graveyard of the stone Quaker meeting-house, near the battle-field, but his remains were subsequently, at the request of his family, taken to Philadelphia, and buried without military honors; but an escort was ordered for the funeral,—"one Capt. 2 Sub's, 2 Drummers, and 50 men from the garrison in the Barracks, to parade at the City Tavern, at two o'clock this afternoon, . . . the rest of the garrison off Duty, to attend with side arms only. Coll. Penrose, Coll. Irvine, Coll. McKey, to attend as bearers."

¹ In the *Pennsylvania Magazine*, vol. i. No. 2, p. 175, is an account of the death of Maj. Morris, from a letter written on the field by Dr. Jonathan Potts, who was a surgeon U.S.A. The letter was addressed to Owen Biddle. Anthony Morris, Jr., was the fourth of the same name, the descendant of three Anthony Morrises prominent in Philadelphia history. His grandfather and great-grandfather had both been mayors of the city. His brother, Samuel Morris, was captain of the Philadelphia City Troop. Princeton was Philadelphia's battle, it was the city militia

instrument. This measure was actively opposed by the "Whig Society," upon the ground that an invasion was threatened, a convention would take useful men from the field, while soldiers in the field would be deprived of their votes. The policy of the society was to wait, in order that citizens might get a better knowledge of the science of government. "The Whig Society" had Charles Wilson Peale, the artist, for its president, and its members were James Cannon (philomath), David Rittenhouse (astronomer), Dr. Thomas Young, Maj. Thomas Paine ("Common Sense"), and others. This society prepared an agreement, to be taken around among the inhabitants for signatures, pledging the signers to a cordial support to the authority of Congress and the several States, for the promotion of peace and good order. The agreement proposed to overturn nothing, but support the execution of the laws until time and experience taught the

Philip Boehm; Middle, Plunket Fleeson, Samuel Simpson; Walnut, George Henry, John McCalla; Lower Delaware, Samuel Howell, John Ord; Dock, George Bryan, Benjamin Paschall; Southwark, William McMullen, Richard Dennis. As there was no longer any city corporation, municipal affairs were managed by the street commissioners (Isaac Howell, John McCalla), wardens (Benjamin Paschall, William Colliday), and city commissioners (James Claypoole, Philip Boehm, William Shute, Robert Curry, Jacob Laughlin, and Isaac Coates). The county commissioners were Isaac Snowden, Jacob Bright, and John Williams.

The members of the Supreme Executive Council met and organized March 4th. In joint meeting with the Assembly, Thomas Wharton, Jr., was elected president, and George Bryan vice-president. Henceforth the Council of Safety ceased to exercise minis-

people how to make better ones. Newspapers took up the theme. John Dickinson, it is supposed, wrote the best of the essays, over the signature of "Phocion," and this writer was bitterly attacked as a retainer of the proprietaries, a procrastinating delegate; John Adams "piddling politician," a summer soldier, a "detested jackal," with an "infernal ambition" to be at the head of everything. The pressure of more urgent public events, however, prevented anything from being done towards settling the constitutional question.

On Feb. 14, 1777, an election was held at the State-House under the Constitution. Thomas Wharton was chosen member of the Supreme Executive Council, and John Loller and Cols. Moore and Coates members of Assembly for Philadelphia County. Justices were elected for the city,—North Ward, Isaac Howell, Joseph Redman, Sr.; Mulberry Ward, James Young,

terial power, and the Supreme Council took control. The new president was inaugurated with imposing ceremony, and proclaimed, on March 5th, as not only president of the Supreme Executive Council, but also captain-general and commander-in-chief of Pennsylvania. Thirteen Hessian cannon, captured at Princeton, fired the salute, and then there was a banquet at the City Tavern, given by the Assembly and attended by members of Congress and the chief officers of army and navy. A round of patriotic toasts was drunk, of course. The Assembly reorganized the courts during March to suit the new order of things, and a City Court was established (James Young, John Ord, Plunkett Fleeson, Isaac Howell, and Philip Boehm, judges), which set about a general and much-needed jail-delivery. The grand jury found twenty-one true bills, and all the machinery of the new court worked well. The Quarter Sessions were to meet again in

September, but "events over which they had no control" effectually prevented that session. The Assembly bought a coach for "Lady Washington," and also got to work in May upon arrangements for port-wardens, health office, and custom house, Frederick Phyle being appointed naval officer, Jedediah Snowden board measurer, and Philip Ryan stave inspector for Philadelphia, the latter having some difficulty in ousting the old inspector from his office.

In March, Brinton Debadée, twenty-four years old, a deserter from the Tenth Pennsylvania, who had gone over to the enemy, was shot on the common, near the Centre House. Here also James Molesworth, a British spy, was hung on the 31st. He was a Staffordshire Englishman, had been for several years clerk to the mayor of Philadelphia, and was detected in the attempt to bribe pilots to navigate Lord Howe's vessels from New York to Philadelphia. He offered three of the Delaware pilots (John Eldridge, Andrew Higgins, and John Snyder) five hundred pounds and life service with king's pay for this treachery, telling them that boats were ready and the guns at Mud Fort would be spiked by the garrison. Mrs. Abigail McCoy was Molesworth's go-between with the pilots, who took effective measures to secure his arrest by the board of war. It was proved that Molesworth, who lodged at Mrs. Yarnall's on Chestnut Street, had several times passed between Philadelphia and New York as a spy, and that he held Sir William Howe's commission as lieutenant in the British army. Luke Carter, Thomas Collins, Joseph Thomas, Hastings Stackhouse, and Jonathan H. Smith were implicated in this business, but escaped.

Tories and suspected persons were dealt with promptly and severely. Dr. Abram Chovet was compelled to pledge his "sacred faith" to neither do nor say anything to the injury of the United States or hold any correspondence with their enemies, and William D. Smith, Charles Stedman, Jr., Robert Dove, and George Harrison were similarly bound. Maj. Richard W. Stockton, a Tory officer,—"the famous land-pilot of the king's troops," he was called,—was made prisoner in the forepart of the year with sixty-six other Tories, all being brought to Philadelphia and confined in jail. John Weaver gave security to answer at court; Dr. Connolly was released on parole to go to a farm at York, Pa., and stay there, and Robert Burton, Leatherbury Barker, William Bagwell, and William Milby, Delaware Tories, were released on giving security. Some of the Tory partisans were active and attempted to capture the Pennsylvania salt-works at Tom's River, requiring a galley to be stationed there to protect it.

The privateers of Philadelphia did not accomplish much in 1777, the only captures being those made by the "Oliver Cromwell" and the "Rattlesnake." The "General Mifflin" was wrecked in Sinepuxent, losing part of her crew and the vessel and cargo, while the "Montgomery" was captured and sent into Gibraltar;

the "Sally" was chased ashore and captured in Delaware Bay, but another "Sally" ran in safely with a large cargo of arms and ammunition. The Continental brig "Andrew Doria" captured two armed vessels while coming from St. Eustatius with gunpowder and cloth for Congress; the "Lexington" was captured by a frigate off the capes; her crew, however, rose on the prize crew, retook the vessel, and brought her safely into the Chesapeake.

The Supreme Executive Council, immediately after its organization, proceeded to constitute a Board of War and a Navy Board. The latter was appointed March 18th, and consisted of eleven members,—Andrew Caldwell, Joseph Blewer, Joseph Marsh, Emanuel Eyre, Robert Ritchie, Paul Cox, Samuel Massey, William Bradford, Thomas Fitzsimons, Samuel Morris, Jr., and Thomas Barclay.¹ To the Board of War was intrusted all that concerned the land service; to the Navy Board full authority with regard to the State fleet, subject, however, to direction from the Supreme Executive Council. Under ordinary circumstances, the latter was engrossed with the cares of civil business.

The Navy Board went to work at once, finding the boats out of order and in need of repairs; badly manned also, in consequence of the merchants and privateer service paying better wages to sailors, and the service disturbed by questions of rank. The works at Billingsport were not completed. They were planned on too magnificent a scale, and were not in the right place anyhow. The attempts to cast cannon had been only partly successful. The supply was not equal to the demand, and all the old pieces about the city had to be mounted because there were not new ones to replace them. James Boyce, at the suggestion of the Committee of Safety, attempted to cast brass ordnance. There was a cannon-foundry at Southwark, but it was not at work. The powder-mill on French Creek blew up in March, killing a

¹ Thomas Fitzsimons was an Irish Catholic, born in 1741; it is not certain whether in Ireland or Philadelphia. He went into mercantile business and married a daughter of Robert Meade, great-grandfather of Gen. George G. Meade. George Meade, his wife's brother, and Fitzsimons went into partnership as merchants and ship-owners. Fitzsimons warmly espoused the colonial cause after the Stamp Act, and went into active service when hostilities began. He was with the associators under Cadwalader, member of the Council of Safety and naval board, constructed fire-ships, and gave five thousand pounds for the support of the cause. In 1782 he was elected to the Continental Congress; afterwards sat several years in the Pennsylvania Assembly, and was member of the Federal Constitutional Convention, after which he became a member of the House of Representatives; trustee of the University, founder and director of the Bank of North America, president of the Insurance Company of North America, etc. He died in 1811. Emanuel Eyre was son of George Eyre, an English ship-builder, who settled at Burlington, N. J., in 1727. Emanuel was born about 1731, and with his brother, Jehu Eyre, afterwards colonel in the Continental service, embarked in ship-building at Kensington. Emanuel's model for a gun-boat was the first accepted by the Committee of Safety, and his boat, the "Bull Dog," was the first launched. The brothers put their workmen in the army to aid Washington in the gloomy days before Trenton, John being captain. Emanuel went into the navy board in March, 1777; after the British took Philadelphia the brothers went into the business of privateering, and Emanuel was justice of the peace after the British withdrew.

man, and foul play was suspected. When, in June, the steeple of Christ Church was struck by lightning and half the crown near the top of the spire was melted, it was considered as ominous of the fate of King George's British crown.

After the battles of Trenton and Princeton, Philadelphia was filled with the new levies continually pouring in, and such an access of strangers was a serious inconvenience. The new-comers were nearly all hasty levies of raw militia, without military training and discipline and without stores and supplies. Quarters had to be found for them, provisions, clothing, hospital service, arms, drill, and transportation. They would not go into camp or the field until supplied, and, like Gen. Greene, they thought that the larder of patriotism should be well filled. Some of them started to go home when all their expectations were not met, and were very indignant at being prevented. It was as difficult to get quarters for them as to get food and clothing. The college and academy protested against their being quartered in the buildings and grounds of their institutions, and the Tories were horrified when the order went forth to canton them upon the non-associators. These remonstrances were not greatly heeded. The deputies of the barrack-master, Isaac Melcher, broke down doors that were locked against them, and the town-major's main concern was to keep the levies from deserting, to which end the bridge, ferries, and roads were strongly guarded, while guards were also placed at the wharves, the hospitals, the State-House, and the officers' quarters.

The Virginia troops were ordered to Germantown by Gates to avoid the smallpox. This disease was then raging in the city, and very fatal to soldiers, numbers of whom were buried in pits and trenches in Washington Square. John Adams, writing in July, said there had been two thousand interments in Potter's Field, and that disease destroyed ten soldiers where the enemy slew one. There were still enough left, however, to cause a scarcity of provisions, and Congress forbade the exportation of bacon, salt beef, pork, soap, tallow, and candles from January 5th to November 1st. There were now twelve Pennsylvania regiments in the Continental service, besides Proctor's artillery battalion, which in part the State retained still in its service, in addition to the two battalions of rifles and the musketmen. Experience had taught that the association system was not to be depended on in serious warfare. After Princeton whole companies sometimes deserted; Putnam mentioned one case where all who were left of a company were "one lieutenant and a lame man." The Assembly passed a militia bill to take the place of the associators. The counties and city were divided into districts, each to contain not less than six hundred and forty nor more than six hundred and eighty men fit for military duty. There were lieutenants for the city and counties, and a sub-lieutenant for each dis-

trict; the latter being divided into eight parts or companies. Each district elected its own lieutenant-colonel, major, captains, and subalterns, the lieutenants enlisting the people, collecting the fines, and executing the details of the law. The companies were divided into classes by lot, provision being made for calling out the classes as they were wanted. Enrolled men refusing to parade when ordered were fined seven shillings sixpence per diem; absent officers ten shillings per day; non-commissioned officers and privates, five shillings. On field-days the fine for non-attendance was five pounds, and fifteen shillings for non-commissioned officers and privates. For exercises, two days were set in April, three in May, two in August, two in September, and one in October, each year. There were battalion drills in May and October. In case of loss of limb by militiamen in service, the State guaranteed half pay.

Under this law Jacob Morgan was appointed lieutenant for the city, but declined to act, and James Reed was appointed, soon succeeded by William Henry. The sub-lieutenants were Richard Humphreys, George Henry, Frederick Hagner, Casper Geyer, Ephraim Bonham, and William Simpson. In Philadelphia County, William Coats, lieutenant; Jacob Engle, Samuel Dewees, George Smith, Archibald Thompson, and William Antis, sub-lieutenants.

The officers in command of the militia were Brig-Generals John Armstrong, John Cadwalader, James Potter, and Samuel Meredith. The city battalions were officered in part as follows: Colonels, William Bradford, Sharpe Delaney, Jonathan Bayard Smith, Francis Gurney, — Clymer, William Will. For Philadelphia County: *First Battalion* (townships of Upper Salford, Lower Salford, Towamensing, Hatfield, Perkiomen, and Skippack), Daniel Heister, Jr., colonel; Jacob Reid, lieutenant-colonel; Jacob Markley, major. *Second Battalion* (Germantown, Roxborough, Springfield, and Bristol), John Moore, colonel; Aaron Levering, lieutenant-colonel; George Miller, major. *Third Battalion* (Cheltenham, Abington, Lower Moreland, Lower Dublin, Byberry, and Oxford), Benjamin McVeagh, colonel; David Schneider, lieutenant-colonel; John Holmes, major. *Fourth Battalion* (Upper Moreland, Upper Gwynedd, and Montgomery), William Dean, colonel; Robert Loller, lieutenant-colonel; George Right, major. *Fifth Battalion* (White Marsh, Plymouth, Whitpain, Norristown, Worcester, and New Providence), Robert Curry, colonel; Archibald Thompson, lieutenant-colonel; John Edwards, major. *Sixth Battalion* (Limerick, Douglass, Marlboro', New Hanover, Upper Hanover, and Frederick), Frederick Antis, colonel; Frederick Wees, lieutenant-colonel; Jacob Bush, major. *Seventh Battalion* (Upper Merion, Lower Merion, Blockley, and Kingessing), Jonathan Paschall, colonel; Isaac Warner, lieutenant-colonel; Matthew Jones, major.

The militia law required all white male inhabitants of the State (except the extreme western counties)

above eighteen years old to take an oath of allegiance before July 1st, subscribing in presence of a magistrate. The oath renounced George III. and gave allegiance to the free and independent State of Pennsylvania. The subscriber besides swore not to do anything to the prejudice of the independence declared by Congress, and to expose all conspiracies and treasons coming to his knowledge. Persons neglecting or refusing to take this oath were declared to be incapable of holding office, serving on juries, suing for debts, electing or being elected, buying, selling, or transferring real estate, and were liable to be disarmed by the county lieutenants and deputies. Non-jurors unprovided with passes were liable to arrest as spies if traveling out of the city or county of their immediate residence; and forgery of certificates was punished with fifty pounds fine and a flogging.

The Board of War (David Rittenhouse, Owen Bidle, William Moore, Joseph Dean, Samuel Morris, Sr., Samuel Cadwalader Morris, John Bayard, George Gray, John Bull, and Richard Bache) organized shortly after March 13th, and, failing a grant from Congress, received a grant from the Assembly of £100,000. In April already the energies of the new board were put to the test, for Gen. Putnam wrote of an unusual activity among the enemy at Amboy and vicinity, betokening some sort of movement, of which Philadelphia was suspected to be the object. Immediate exertions were made to mobilize the city's military resources again, the Supreme Executive Council co-operating with a committee of Congress and the Continental officers in town to that end. The Executive Council published an address, stating that the city had once before been saved by the vigorous manly efforts of a few associators, whose lives Providence had wonderfully spared; "confiding, therefore, in the continuance of his blessing who is indeed the God of armies, let every man among us hold himself ready to march into the field whenever he shall be called upon so to do; if the enemy really intend to make an attack on this State, no time should be lost; every moment should be employed in putting ourselves in perfect readiness to repel them." Patriotism must make up for the defects of imperfect methods. Congress would establish a camp near Philadelphia, and the militia of the State were expected to repair to it at once. The county lieutenants were urged to enroll the people forthwith; wagons were sent for to move the stores, and Congress proposed to fix the new camp on the west side of the Delaware, under the command of Gen. Benedict Arnold.

It was found that the authority of the Supreme Executive Council was not adequate, under the Constitution, for such emergencies, and, by advice of Congress, the Council and War and Navy Boards simply assumed the necessary powers to provide for the public safety, looking to the people to indemnify them. The Board of War appointed ward committees to take stock of all the provisions in private hands in the city,

turning over the names of the persons refusing to permit their houses to be examined. Another committee of fifty was given charge of the removal of all goods and provisions at Trenton and other places along the Delaware, to safer magazines elsewhere. An embargo was proclaimed, to prevent the sailing of shallops, flats, or vessels of any kind, without special permission from the Navy Board.

Gen. Schuyler was at this time in command in Philadelphia. He called on the Board of War for blankets for the Continental troops,—four thousand being the number required,—the city and county being assessed for six hundred and sixty-seven, which were collected by county lieutenants and their deputies. On April 24th, by order of Congress, three thousand militia were called out, exclusive of the city troops, and two camps were ordered, one at Bristol the other at Chester. The organization of these camps not proceeding very rapidly, the Council and Board of War in May authorized the enlistment of apprentices and servants over sixteen years of age, the Assembly being asked to indemnify masters. This step, however, was speedily reconsidered, as it caused great discontent, without corresponding benefits. In this matter Congress and the Assembly were at variance, but the local interest and custom prevailed.

On June 10th, Gen. Mifflin appeared before the Assembly with a message from Gen. Washington, to assure them that it was his firm opinion that "the enemy's army meditated a sudden and immediate attack upon some part of this State," and he therefore asked that the militia be got ready at once to march at a moment's notice. The Supreme Executive Council were forthwith notified, and a meeting of citizens was held next day at the State-House. Gen. Mifflin addressed them, giving them notice of the enemy's movements, which threatened the plunder of the city. He advised citizens to give efficiency to the new militia law by turning out under its provisions instead of the old association. The representatives of the citizens opposed to the Constitution pledged their hearty concurrence in defensive measures and a suspension of all opposition during the emergency. On the 13th, Mifflin spoke to a large body of militia on the commons. They received him with enthusiasm, but would not go into camp at once and unconditionally. They had their affairs to set in order, and besides, they wished the militia to be drawn in classes, according to law.

The Assembly considered the question of removal from Philadelphia in case the movements of the enemy made it necessary. A series of resolutions was adopted covering at once the obligations of obstinate defense and such a removal of goods, stores, and persons in the final extremity, as would deprive the enemy of as many resources as possible. The Supreme Executive Council was instructed to make proclamation to the inhabitants to hold themselves ready to

move at shortest notice; it was resolved that wagon-masters should be appointed, and that it was the duty of the authorities to transport the families and effects of poor militiamen at the public expense, any distance within thirty miles; that persons should not be allowed to leave the city with the intention of abandoning the public defense; families remaining in town not to be allowed more than two weeks' provisions, and the lieutenants to make search and seize all private stores in excess of this allowance. All grain within twenty miles of the Delaware was to be taken account of, and owners were not to allow its removal except at their peril; cattle and live stock to be looked after in the same way, and persons appointed to drive it off if necessary. The president and the Council were directed to remove the bells of the several churches and public buildings, and all the copper and brass in the city to places of safety. Having passed these comprehensive resolutions and voted to invest in the Supreme Executive Council sufficient power for the prosecution of all necessary measures, the Assembly, on June 19th, adjourned to meet again on September 3d. An application to Congress for one hundred thousand dollars was authorized, and the Council asked fifty thousand dollars additional.

A systematic scheme of defense was now put in operation. The completion of the fortifications on the Delaware had been committed by Congress to Gen. Mifflin and M. Du Coudray, a French engineer. Their report condemned Billingsport as too large for the garrison which could probably be spared, and moreover it could not be furnished in less than six weeks or two months. The fort on Fort Island was badly constructed; half the guns were placed so as to be useless; at Red Bank, a well-built fort, the river was too wide. Du Coudray recommended reducing Billingsport fort to two redoubts, and supporting it by the floating-batteries and with a battery at the opposite extremity of the *chevaux-de-frise*. Red Bank should be defended, but not depended upon to command the channel.

On June 24th the Council ordered out the Philadelphia and Bucks Counties militia of the first and second classes, and the Berks and Northampton first class; other classes through the State to hold themselves in readiness. Arnold stationed Stewart's Continental regiment and one thousand militia at Billingsport, Red Bank, and Fort Island, and two thousand militia between Coryell's Ferry and Bristol, to fortify and guard the passes. Howe advanced from Brunswick, but his retreat to Amboy and embarkation aboard his transports was soon known. What was his destination,—New England, the Hudson, the Delaware, or the South? Washington was sorely puzzled to tell, and until it was known no definite movements could be made. The orders calling out some of the militia were countermanded. The North Carolina Brigade, under Gen. Nash, and some Virginia troops, were ordered to Billingsport,

where Bradford's and Delaney's regiment of city militia and five hundred New Jersey militia were occupied in completing the works. Col. Bull's regiment, long time there, and Proctor's artillery, were assigned by Congress to guard the powder-mill.

Every preparation was made to meet the enemy, and to get prompt and certain intelligence of the line on which he would advance. The committees for driving off cattle were increased, with orders to act upon the first appearance of the enemy. The shores of the Delaware, and the chief roads from it westward, were ordered to be surveyed, as far south as Christiana Creek, and on the east bank to Salem, and all the topographical peculiarities of the ground to be carefully noted, swamps, natural obstacles, cover for marksmen, etc. Circulars were issued to wagon-masters to hold themselves ready to remove stores and provisions under the direction of the Committee of Fifty. The outlook at the Delaware Capes was the centre of a painful interest at this time, and the feint of entering made by Howe's fleet, with the subsequent steady course southward, made things still more uncertain. Washington moved his army to the Delaware; it lay at Coryell's Ferry, Howell's Ferry, and Trenton, and there waited. The march to Germantown one day was followed the next by a march back to Coryell's. It was merely marching to occupy time. The enemy's movements must be more developed before any movements of Washington could be made in one direction or the other.

We miss Christopher Marshall's record of these times and the months of excitement which followed them. The honest Quaker had a severe attack of pleurisy in the spring, was invalided to Lancaster, and his diary contains only hearsay at second-hand about Philadelphia. On the other hand, however, we have Robert Morton's diary, recently published by the *Pennsylvania Magazine*, full of interesting particulars of events after the British occupation, while there is quite an abundance of bright contemporary record of occurrences in and around Philadelphia in the latter half of 1778, and during the continuance of Howe's occupation of that city.

Soon after the beginning of the year there were twenty-two hundred militia in the city awaiting arms, and fourteen hundred sick in the hospitals. It became necessary to classify the many sick and separate them, and a convalescent hospital was established at Peel Hall (now part of the Girard College estate). Carpenter's mansion, Chestnut Street, between Sixth and Seventh, where the old Arcade stood, was used as a hospital, and there camp-fever carried off hundreds of Virginia and Pennsylvania militia. The sufferers were well cared for by the ladies, in the way of soups and dainties. Washington sent them a cask of Madeira wine. Mrs. Logan relates that the mother of a Pennsylvania soldier had come from the country to seek him at the hospital, and found him among the dead, prepared for burial. As she bewailed her loss

and sobbed over the silent form she detected signs of life, and with the usual remedies in such cases, her son was soon restored to her, really from the grave.

The first anniversary of the Fourth of July was celebrated in Philadelphia with a degree of effusiveness. The vessels in the harbor displayed all their bunting, manned their yards, and fired salutes; Congress gave a dinner to civil and military notables at the City Tavern, the ironical feature of which was that Rahl's captured Hessian band furnished the music, and a corps of deserters from the British army, now in the service of Georgia, fired *feux de joie*. After the banquet the members of Congress reviewed an artillery battalion, the Maryland light horse, and a North Carolina brigade on Second Street, and at night the bells rung, the houses were illuminated, and fireworks displayed on the commons. Lights, however, were ordered out at eleven o'clock, and unusual precautions taken to guard against fire and prevent riots. Some windows were still broken by the mob in houses tenanted by obnoxious persons, and there was disorder enough to give the Quakers a pretext for lodging complaints. A bard, writing of this night after the British were in possession of Philadelphia, says of this war upon the windows, that the unarmed Quakers and Tories "sustained the horrors of the night,—

"See General Gates and Dicky Peters,
With Jimmy Mease of noted worth,
Richard and Tom—the prince of eaters,—
Like ancient heroes sally forth!

"Our true Don Quixotes, by false guessings,
Direct their calls and lead the van,—
Mistook the Tories for the Hessians,
And Quakers for—pah—Englishmen."

The corps of invalids, of which Lewis Nicola was made colonel, was organized on June 16th, to consist of eight companies of one hundred men each, men and officers to be taken from convalescents unfit for field service, but capable of garrison duty. The plan was Nicola's, and his object was further to make this regiment the school of the recruits and young officers in marching regiments, for which end there was to be a library of military books and instruction in mathematics for the cadets.

A movement was begun in July which might have led to trouble if the city had not changed hands so soon. It originated in a meeting at the Indian Queen Tavern (kept by Francis Lee), and the object was to insist on exemption from military duty for such as had furnished substitutes. Lawrence Birnie presided, and John Hall, Robert Bell, John Stille, John Graisbury, John James, Peter January, and Hugh Henry were appointed a committee to carry out the meeting's aim. There was another meeting at John Cunningham's Centre House on July 28th, Robert Bell, chairman; James Fisher, secretary; and Bell, Clement Humphreys, Robert Fitzgerald, Thomas Tisdale, William Woodhouse, and Nicholas Brooks, committee to address the General Assembly. The point of equity

made was that if they were not exempt, the substitutes ought to be discharged. Arrangements were made to get the names of all persons who were in the army in this vicarious way, with what ulterior object is not known.

On July 31st Congress resolved that it was expedient to arrest all late proprietary and crown officeholders, and all other disaffected persons in and near Philadelphia. Under this resolution the Supreme Executive Council issued warrants for the apprehension of John Penn, Benjamin Chew, Jared Ingersoll (late judge of admiralty), James Tilghman (late member of Provincial Council), Capt. Gurney, Dr. Drummond (custom-house officer), John Smith, — Welsh, — Bartlett, — Sullivan (small officials, the latter a druggist and half-pay British officer), and James Humphreys, Sr. (late clerk of the Orphans' Court). Penn and Chew were paroled, not to go more than six miles from their houses; Ingersoll was to be sent to Winchester, Va., on parole; Tilghman and Humphreys to remain on west side of and within six miles of the Delaware; Gurney, Smith, and Drummond to keep their own houses; the others to go to prison.

Towards the latter end of July it became known that Howe intended to attack Philadelphia while Burgoyne descended upon Albany to cut through the Highlands, with Clinton's assistance. Howe's feints and manœuvres had never misled Washington on this point, but his extreme caution led him, while calling out the Pennsylvania militia, to call out those of Connecticut at the same time, and send Sullivan's division back to Morristown to support George Clinton in case of a *coup de main* upon the fastnesses of the Hudson. Four thousand of the Pennsylvania militia were called out at once, and twelve fire-ships fitted up in the Delaware by Congress. On the 30th the enemy's fleet was seen at Cape Henlopen, and Congress ordered the live-stock to be driven off from the Delaware borders to the interior. Howe's plans were fully developed by the middle of August, when his war-ships and transports approached Elk River and the debarkation began at the head of the Chesapeake Bay. This movement rendered the river defenses of Philadelphia useless as against Howe's army, though they were still an obstruction to his fleet,—such an obstruction that, if he had been defeated at Germantown, he would have been forced to make a disastrous retreat or submit to be absolutely cooped up in Philadelphia as Gage was in Boston. Still, it enabled him to force Washington to fight him in the open field, or yield Philadelphia without a struggle, and the result was the two battles of Brandywine and Germantown.

On Sunday, August 24th, the main body of the Continental army, ten thousand strong, under Washington's personal command, marched into Philadelphia, proceeded to the common, crossed the new floating bridge over the Schuylkill at the Middle Ferry, and took the road to Chester and Wilmington. Washington

desired to make this as imposing a spectacle as possible, for the sake of the impression upon the Tories, the Quakers, and other disaffected persons. He wrote the evening before that, "I expect to encamp this evening about five or six miles of Philadelphia. To-morrow morning it will move again, and I think to march it through the city without halting. I am induced to do this from the opinion of some of my officers and many friends in Philadelphia, that it may have some influence on the minds of the disaffected there, and those who are dupes to their artifices and opinions. The march will be down Front and up Chestnut Street, and, I presume, about seven o'clock." It could not have been a very imposing sight, if contemporary accounts are to be credited. "I had been extremely anxious to see our army," says Graydon; "here it was, but I could see nothing which deserved the name. . . . It had been humorously stated in the English prints that upon a gentleman, who had been in America and seen our troops, being asked what was their uniform, he replied, 'In general it is blue and buff, but by this time it must be all buff.' The period for this unity of color, however, had not yet arrived, though from the motley, shabby covering of the men it was to be inferred that it was rapidly approaching. Even in Gen. Wayne himself there was, in this particular, a considerable falling off." Lafayette's impressions were not more favorable. "Eleven thousand men, but tolerably armed, and still worse clad, presented," he said, "a singular spectacle. In this parti-colored and often-naked state, the best dresses were hunting-shirts of brown linen. Their tactics were equally irregular. They were arranged without regard to size, excepting that the smallest men were the front rank. With all this, there were good-looking soldiers conducted by zealous officers." "Though indifferently dressed," said a spectator of the march, "they held well-burnished arms, and carried them like soldiers, and looked, in short, as if they might have faced an equal number with a reasonable prospect of success."

The order of the day issued by Washington shows the pains he took to make a good, forcible impression. Officers were "strongly and earnestly enjoined" to make all their men capable of bearing arms march in the ranks and prevent straggling. "The army is to march in one column through the city of Philadelphia, going in and marching down Front Street to Chestnut, and up Chestnut to the Commons. A small halt is to be made about a mile this side of the city till the rear closes up and the line is in proper order. The divisions will march as follows: Greene's, Stephens', Lincoln's, and Lord Stirling's; the horse to be divided upon the two wings, Bland's and Baylor's regiments upon the right, Sheldon's and Mailand's upon the left. The following order of march is to be observed: First, one subaltern and twelve light horse. Two hundred guards. In the rear a complete troop. Two hundred yards in the rear of

the troop the residue of Bland's and Baylor's regiments. One hundred yards in the rear of these a company of pioneers, with their axes in proper order. One hundred yards in the rear of the pioneers a regiment from Muhlenberg's brigade. Close in the rear of that regiment all Muhlenberg's artillery. Then his brigade, followed by Weedon's, Woodford's, and Scott's, in order, with all their field artillery in their respective fronts. Parks of artillery and the artificers belonging thereto in the centre. Lincoln's and Lord Stirling's divisions following, with all their brigade artillery in the rear of their respective brigades. A regiment from Lord Stirling's division for a rear guard, with Sheldon's and Mailand's light horse one hundred and fifty yards in the rear of this regiment, and one troop one hundred and fifty yards in rear of the horse. The whole is to march by subdivisions at half distance, the ranks six paces asunder, which is to be exactly observed in passing through the city; and great attention to be given by the officers to see that the men carry their arms well and are made to appear as decent as circumstances will admit. It is expected that each officer, without exception, will keep his post in passing through the city, and under no pretense to leave it. And if any soldier shall dare quit his ranks, he shall receive thirty-nine lashes at the next halting-place afterwards. The field-officers of the day will prevent any of the men who are allotted to attend the wagons from slipping into the city. As the baggage will be but a little while separated from the column, very few men will be sufficient to guard it, and the general wishes to have as many of them as are able to appear in the ranks in the line of march. The drums and fifes of each brigade are to be collected in the centre of it, and a time for the quick step played, but with such moderation that the men may step to it with ease, without dancing along or totally disregarding the music, which has been too often the case. The men are to be excused from carrying their camp-kettles to-morrow."

Washington rode at the head of the troops attended by his numerous staff. Lafayette, who had received Gates' command, rode by his side. The troops wore sprigs of green in their hats, to give them something of a uniform appearance. The sight was an unusual and animating spectacle to the Whigs, the more so as Nash's North Carolina brigade and Proctor's artillery followed next day, and the new militia were pouring in. "The disaffected," says Washington Irving, "who had been taught to believe the American forces much less than they were in reality, were astonished as they gazed upon the lengthening procession of a host, which, to their unpracticed eyes, appeared innumerable."

Lead pipe was seized all over town to make bullets, and the houses of all citizens who had not showed their attachment to the American cause, and taken the oath of allegiance to the State, were searched for

arms. There was additional reason for this, as it was alleged that the Quakers were in active communication with the enemy. The day after the march through Philadelphia, Gen. Sullivan sent to President Hancock some papers and memoranda captured by him during his recent raid on Staten Island. These embodied a series of regular queries as to the number and position of the different commands, with answers to some of them, from the "Spanktown Yearly Meeting," etc. These were entitled "intelligence" from New Jersey and other places, and the information they gave was important to the enemy and injurious to Washington. The Philadelphia Yearly Meeting, in September, 1780, denied that they had furnished this intelligence. It was believed they were guilty at the time, however, and Congress took up the matter at once. A committee to whom it was referred showed by a series of citations that the "testimonies" of the several Quaker meetings had been invariably hostile to the American cause, and that they were quite capable of surreptitious dealings with the enemy for the injury of "the councils and arms of America," whether guilty in that particular instance or not. On the strength of this report Congress adopted the resolutions offered by the committee, to the effect that—

"It be earnestly recommended to the Supreme Executive Council of the State of Pennsylvania forthwith to apprehend and secure the persons of Joshua Fisher, Abel James, James Pemberton, Henry Drinker, Israel Pemberton, John Pemberton, John James, Samuel Pleasants, Rees Wharton, Sr., Thomas Fisher (son of Joshua), and Samuel Fisher (son of Joshua), together with all such Papers in their Possession as may be of a Political nature.

"AND WHEREAS, There is a strong reason to apprehend that these Persons maintain a Correspondence and Connection highly prejudicial to the Public Safety, not only in this State, but in the respective States of America:

"Resolved, That it be recommended to the Executive Powers of the respective States forthwith to apprehend and secure all Persons as well among the people called Quakers as others, who have in their general conduct and Conversation evidenced a Disposition inimical to the Cause of America; and that the Persons so seized be confined in such places and treated in such manner as shall be consistent with their respective Characters and the security of their Persons."

It was also resolved that the Board of War should remove John Penn and Benjamin Chew to some place of security out of Pennsylvania. These things were published, together with extracts from the proceedings of Quaker meetings of different dates, showing discontent, dissatisfaction, and a disposition to complain of the way Friends had been and were being treated by "the rabble" and the "licentious mob." The list of charges, complaints, and recriminations, republished by Congress, was long and conclusive as to the fact that the Friends neither acquiesced in nor recognized the existing government, and would be glad of its overthrow. The object of the publication was doubtless to justify the harsh measures that had been determined upon by Congress and the Supreme Executive Council, which in this matter went hand in hand.

The Council called to their aid Cols. Bradford and

Delaney, Capt. Peel, and Mr. Rittenhouse, and a list was made out of persons to be arrested as dangerous to the State. It was determined, besides the persons named by Congress, to arrest also Miers Fisher (son of Joshua, a lawyer), Elijah Brown, Hugh Roberts, George Roberts, Joseph Fox (late barrack-master), John Hunt (a lawyer), Samuel Emlen, Jr., Adam Kuhn, M.D., Phineas Bond, Rev. William Smith, D.D. (provost of the college), Rev. Thomas Coombe (rector of Christ Church), Samuel Shoemaker, Charles

BENJAMIN CHEW.

Jervis, William Drewitt Smith, Charles Eddy, Thomas Pike (dancing-master), Owen Jones, Jr., Jeremiah Warder, William Lennox, Edward Penington, Caleb Emlen, William Smith (broker), Samuel Murdock, Alexander Stedman, Charles Stedman, Jr., Thomas Ashton (merchant), William Imlay, Thomas Gilpin, Samuel Jackson, and Thomas Afflick. Some of these were ordered to be arrested at once, but the Council said that it desired to "treat men of reputation with as much tenderness as the security of their persons and papers would admit." It was directed, therefore, to spare some the mortification of arrest if they would give a sort of parole to stay in their homes, subject to order of Council, and do nothing in any way injurious to "the united free States of North America." As the jails were full, the Masonic lodge was secured as a prison, and a committee was appointed to carry out the decision of the Council. This committee consisted of William Bradford, Sharpe Delaney, James Claypoole, William Heysham, John Purviance, Joseph Blewer, Paul Cox, Adam Kimmel, William Graham, William Hardy, Charles W. Peale, Capt. McCulloch, Nathaniel Donnell, Robert Smith, William Carson, Lazarus Pine, Capt. Birney, John Downley, John Galloway, William Thorpe, John Lisle, James Loughhead, James Cannon, James Carr, and Thomas Bradford. The town-major furnished a guard; the Stedmans and Lennox were arrested and confined on September 2d. Three-fourths of the men named refused to give their parole, and were arrested and confined. Some had taken the oath; two or three could not be found, and no return

was made in Joshua Fisher's case and that of Rev. Dr. Smith.

Israel Pemberton, John Hunt, and Samuel Pleasants sent for their lawyers, and demanded a hearing. Council declined, as they were arrested by order of Congress. They persisted, but Council was firm, and the same day resolved to send the prisoners to Staunton, Va., for safe-keeping. Jared Ingersoll was ordered to go to Connecticut forthwith, and Lennox was released on bail.

Congress agreed to release all who would swear or affirm fidelity and allegiance to Pennsylvania as an independent State. Imlay gave his parole to return to New York. The congregation of Christ Church appealed on behalf of Coombe and Smith, and it was agreed the former should be allowed to go to Virginia on parole, and thence to the island of St. Eustatius. Howe's advance hastened the departure of the others. They were told they might provide their own vehicles and the Supreme Executive Council would pay expenses, but very little satisfaction was given them as to route or destination. They were sent off on September 11th, under escort of the City Guard, with carriages and wagons, to the music of a drum and fife. The indomitable Quakers took out a writ of *habeas corpus*, in Chief Justice McKean's court, and stopped the procession at Pottsgrove. The Assembly at once passed a law commanding the escort to take the prisoners on to Virginia. A second writ was served at Reading; but the Assembly passed an act suspending the *habeas corpus* and the guards ignored the writ. The journey was rough and fatiguing, and the most of the prisoners were elderly men, unused to such fatigues. Their spirits, however, could not be tamed. They filed a protest at the Maryland line; another when the Potomac was reached; but on the 29th they were brought into Winchester, and there tarried. In December, Owen Jones and the others were ordered to be sent to Staunton, and confined as close prisoners unless they gave their parole to do nothing injurious to the United States.

Congress and the Supreme Executive Council were afterwards anxious to retrace their steps, as the treatment of the prisoners had awakened sympathy for them. They denied the charges against them, and Congress ordered their release upon giving an oath or affirmation of allegiance and fidelity to Pennsylvania. On April 18, 1778, they heard of the order for their discharge. Two were dead,—Gilpin and Hunt. Pike, the dancing-master, absconded from Winchester and was never heard of again. On April 29th they passed the American picket lines at Valley Forge, and reached their homes after an imprisonment of nearly eight months.

It was on June 14, 1777, that Congress resolved, "That the flags of the thirteen United States be thirteen stripes, alternate red and white; that the union be thirteen stars, white, in a blue field, representing

a new constellation."¹ The flag was a modification of the so-called "Great Union flag," used since Jan. 2, 1776, when it was raised in the camp on Prospect Hill. Before that different flags had been used under authority of the different provinces. Connecticut, April 23, 1775, had her flag,—the colony arms, with "Qui transtulit sustinet" for motto, in gilt letters around the arms. July 18, 1775, Putnam unfurled a flag with a red ground, on one side Connecticut's motto; on the other, the "An Appeal to Heaven" of Massachusetts. Moultrie, on James Island, S. C., Sept. 13, 1775, hoisted a blue flag, crescent in the corner, for the union. In autumn, 1775, Philadelphia's floating-batteries used a white flag, tree in the field, motto, "An Appeal to Heaven." The "Great Union" flag had the thirteen alternate stripes of red and white, with the union of the British Union Jack. In February, 1776, Christopher Gadsden presented to the South Carolina Congress the flag of the commander-in-chief of the American navy, "being a yellow field, with a lively representation of a rattlesnake in the middle in the attitude of going to strike, and the words underneath, 'Don't tread on me.'" The Massachusetts Provincial Congress, April 29, 1776, voted that the flag of the cruisers of that colony should be white, with a green pine-tree and an inscription, "An Appeal to Heaven." The "Great Union" flag was generally used; the stars and stripes first in Gates' army against Burgoyne. It may have been used at Brandywine and Germantown; and it was in full use at Valley Forge."²

Howe's army began disembarking at Head of Elk, August 25th, and the State government of Pennsylvania was active in measures for the general defense. The main body of the State militia was sent forward to Gen. Armstrong, at Wilmington. Col. Jonathan Bayard Smith's regiment was posted at the Robin Hood Tavern, on the Ridge road. The third class of militia was called out in Philadelphia City and County, and in the counties of Chester, York, Cumberland, and Northumberland. Commodore Seymour, enfeebled by age, was superseded in the command of

¹ This "new constellation," meaning no more than a new grouping of stars different from any of those mentioned in astronomy, has proved a stumbling-block for the hyper-critics, eager to seek some hidden symbolism in the most indifferent things, and they have supposed the constellation to mean *Lyra*, because *Lyra* is a symbol for union. *Lyra*, however, is an old constellation, and the resolution calls for a *new* one. It was a period when European, and especially English, astronomy, such as Rittenhouse studied, was fond of naming new things in the skies in compliment to common or old things and dignities on the earth. Thus there were Charles' Wain, "Robus Caroli," "Sentum Sobieski," "Honores Fredericki," "Cor Caroli," "Taurus Poniatowski," "Harpa Georgii," "Spectrum Brandenburgium," etc. Bode, Frederick the Great's astronomer, had just named a new constellation in honor of Franklin's printing-press; it was easy for Rittenhouse to think and speak of the starry union of the flag as introducing another new constellation, more worthy of honor than the "Georgium Sidus" discovered by Herschel four years later, and the "Harpa Georgii" named by Bode fourteen years later.

² The first stars and stripes is said to have been made by Mrs. Elizabeth Ross, in a house afterwards No. 80 Arch Street. (See paper by William J. Canby, read before the Pennsylvania Historical Society in 1870.)

the fleet by Commodore Hazlewood. The Navy Board arranged to flood Hog Island and the Delaware meadows; to make a bridge of boats from Fort Island to Province Island; to throw a garrison into the fort at Darby Creek and the lines of Bush Island; and to get Col. Jehu Eyre's regiment of militia to garrison Fort Island and other adjacent works. Boats were collected and detained, but not so as to embarrass families taking flight by water, and the Middle Ferry bridge had a guard assigned to it, with orders to remove it when the word came. The Supreme Executive Council issued a stirring proclamation under date of September 10th, announcing that the crisis had come, that "Gen. Howe, at the head of a British army, the only hope and last resource of our enemies, has invaded this State. Dismissing his ships and disincumbering himself of his heavy artillery and baggage, he appears to have risked all upon the event of a movement which must either deliver up to plunder and devastation this capital of Pennsylvania, or forever blast the cruel designs of our implacable foes." Every one is adjured to turn out in this emergency to enable Washington to "environ and demolish the only British army that remains formidable in America or the world."

Howe moved slowly and with caution at first. He landed on the 26th, and advanced to Elkton with his army in two divisions, at Elkton and Cecil Court-House. His force comprised seventeen thousand picked men, Washington's eleven thousand. The latter, at Wilmington, was in danger of being driven into the Delaware or down the peninsula by Howe's movements, when he did begin to move, on September 3d, by his left flank, seeking to turn the American right and occupy the upper fords. It was only by active motions that Washington was able to extricate himself from this *cul-de-sac*. After a succession of skirmishes the two armies found themselves, on September 11th, on opposite sides of the Brandywine, the British planning to force the passage of the stream, the Americans seeking to hold the fords and attack the enemy wherever he tried to cross. The Brandywine is a historic river, yet not much more than a mill-stream in its dimensions, after all. Its source is a double stream, uniting in Chester County, seeking the Delaware lowlands, and emptying into Christiana Creek. There were numerous fords, especially on the upper stream, with hills on either side. The main road from Delaware to Philadelphia crosses the Brandywine at Chadd's Ford; below it, at the distance of a mile and a half, was Pyle's Ford; above it, two miles distant, was Brinton's; above that, fords to choose. The situation was not unlike that at the first battle of Bull Run. Howe's army was massed at Kennett Square, several miles south of the Brandywine, on the road to Chadd's Ford. Washington's army was divided: Armstrong, with the Pennsylvania militia, held Pyle's Ford; Washington, with Wayne and Greene, held the centre; Weeden's and Muhlen-

berg's brigades, Greene's division, held the heights in the rear of Chadd's Ford, as a reserve. On a hill at the ford was Proctor's artillery, sheltered by a rude redoubt and supported by Wayne's brigade. Maxwell's light infantry were in the advance, holding the south side of the ford and the approaches to it. On the right, connecting with Wayne and Greene, and with pickets, videttes, and light cavalry thrown out up-stream to the forks, was Sullivan's division, and those of Stephen and Stirling, holding Brinton's Ford. Sullivan was charged to look to the security of that flank; but he had not the means to do it, and, besides, was not competent to command the entire wing of an army. He had only some light cavalry, under Bland. Stirling was brave, but dull; Stephen was a superannuated veteran, and dull besides. The country was disaffected in the extreme,—full of Tories and Quakers,—and while Howe, guided by Galloway, had all the intelligence he needed, Washington not only did not know of the enemy's movements, but seemed to be only partly acquainted with the lay of the land. He was very anxious for Howe to attack him at Chadd's Ford, confident that he would be able to defeat him there, and that was precisely what Howe did not intend to do.

Howe's right, under Knyphausen, advanced to Chadd's Ford, as if to attack it, and made such a successful demonstration as to cover the real attack. The left, under Cornwallis, with Howe in person, and the greater part of the army, made a detour of twelve miles, crossing easily and unopposed at Trumbull's and Jeffrey's Fords, and descending the river on the crest of the north bank, took Sullivan in the flank and routed him, doubling his divisions one upon the other. Just as this movement was developing, Washington was preparing to attack Knyphausen in front, while Armstrong crossed below and Sullivan above. But Howe's flank movement took precedence. Sullivan's dispositions were bad, in addition to his being surprised and flanked. Howe's columns pressed in between the American divisions, drove all before them, and were rapidly gaining the main road in the rear of Washington, when the reserve, under Washington and Greene, came up and checked the enemy long enough to prevent a rout and cover the withdrawal of the army.

It was a badly fought battle and a bad defeat for the Americans, though the British were too worn out by their long march to pursue. The enemy, however, reaped all the fruits of victory. They took Washington's cannon, they occupied the field of battle, and the road to Philadelphia was now opened before them. The losses, however, even in *morale*, were not fatal, nor even heavy. The army was reformed at Chester, and did not retreat precipitately as Howe advanced. The officers, and soldiers too, were for renewing the combat.

Philadelphia, anxious, excited, uneasy, prepared for a final defense even before the issue of the battle

was known. The militia still in town were ordered to turn out with intrenching tools as well as arms. During the progress of the battle the Council was in session, as the minutes show. "The two armies being now engaged, and the event doubtful, Ordered, That all shops and stores be immediately shut up, except those only where workmen are employed in making or repairing the public arms, and that every man capable of bearing arms or repairing arms repair to his captain's quarters at two o'clock this afternoon. The commissioned officers are hereby commanded to exert themselves in the execution of this order, and order that the drums beat to arms immediately." The guards at Gray's Ferry, Robin Hood Ford, Upper Ferry and bridge were strengthened, to protect the cannon at those points. Boats were sent down the river to bring up the wounded. The gunpowder and stores were removed from French Creek, and, at Washington's request, Maj. Casdorp removed the Schuylkill bridge at High Street to the Delaware, all other boats being put where the enemy could not reach them. Col. Flower, aided by carpenters James Worrell, Francis Allison, and Evans, took down the bells of the churches and public buildings. They were carried to Trenton and thence to Bethlehem. The cattle were driven off by the committee charged with that duty, and the money and papers of the loan office and the records of the State removed to Easton.

On September 3d there was no quorum of the Assembly, and none till the 13th. Meantime the Assembly minutes, papers, and a press were sent up the Delaware, in the shallop "Sturdy Beggar," to Col. Kirkbride. On the 18th the Assembly fled, to meet at Lancaster on the 25th. If Howe had marched to Darby the morning after the battle of the Brandywine, said Lafayette, Washington's army would have been destroyed. This is rather too sweeping a statement; but a prompt movement would have been undoubtedly injurious to Washington. But Howe delayed, to forage and to put the wounded out of the way; they were sent to Wilmington on the 14th. In the meanwhile, Washington himself marched to Darby, crossed the Schuylkill quietly, and reorganized his forces at Germantown, ready for battle again on the 18th.

Howe pushed some brigades out into Chester County, and occupied Wilmington on the 12th and 13th. On the 17th, Lord Cornwallis held the Lancaster road and the column of Knyphausen united with him at the White Horse Tavern, pushed on to Tredyffrin, and destroyed the stores and magazines at Valley Forge. Washington had recrossed the Schuylkill on the 15th, and attempted to turn Howe's left. Howe's object was to take Philadelphia, with a battle, if he could get one on favorable terms. He faced about and the two armies confronted one another again, no river between them. The militia held the fords and ferries of the Schuylkill. The

main body was encamped at the junction of the Lancaster and Swedes' Ford roads, in the township of East Whiteland, northeast of the Admiral Warren Tavern, and between that and the White Horse. Howe advanced by way of the Chester road, Rocky Hill and Goshen meeting-house, West Chester and the Boot Tavern. On the 16th the two armies took positions on high ground between the White Horse and Goshen meeting-house and prepared for action. All accounts agree that both sides expected a serious engagement, and that neither antagonist despised the other. The advance parties had already begun to skirmish—Wayne having to lead the attack on the American side—when a storm of great severity set in and damaged Washington's ammunition seriously, his cartridge-boxes, unlike those of the British, not being water-proof. The storm equally prevented the British from attacking. Washington withdrew to the Yellow Springs, and then to Warwick furnace, on French Creek, where fresh ammunition was obtained. The British went into camp around the Boot Tavern. Joseph Galloway insisted that Howe should have attacked in spite of the rain. Tom Paine, who was on the field, says, in a letter to Dr. Franklin, that the storm was "most violent and incessant,"—weather of "almost irresistible fury,"—the equinoctial storm, in fact; and the British did not move until the evening of the 17th.

On the 18th the British columns united at the White Horse, moved into Tredyffrin township, and encamped on the south side of the road to Swedes' Ford, east of where Howellville now is. Gen. Smallwood, with the Maryland militia gathered on the Eastern Shore prior to the battle of Brandywine, was in Howe's rear, cutting off detachments and obstructing foragers. Wayne was sent out by Washington from French Creek on the 17th with his division, fifteen hundred men and four guns, to co-operate and unite with Smallwood, harass and annoy the enemy, cut off his baggage, impede his march, and, if possible, by attacking his rear, prevent him from crossing the Schuylkill before Washington could cross the river higher up and place himself in Howe's front.

Wayne, with his usual daring, closed up almost immediately on the enemy's rear, and scarcely four miles away. He was familiar with the country, and he did not believe Howe was aware of his proximity. He was sure Washington had only to join him to be able to attack the British rear successfully, and, as he phrased it, "complete Mr. Howe's business." On the contrary, however, Howe was acquainted with all of Wayne's motions, and was prepared to profit by them, not only punishing Wayne's temerity, but securing his leading object, the passage of the Schuylkill undisturbed. Wayne had word on which he trusted that Howe would attempt to cross at two A.M. on the 21st, and prepared to attack him at that hour. Smallwood would act with him, and Maxwell and Potter, at Pott's Forge, were also to attack. Wayne put out

his pickets and his men went to sleep, lying on their arms. Meantime Howe, instructed by the Tories as to Wayne's precise camp, ordered Gen. Grey to surprise and cut him off.

Musgrave, with the Fortieth and Fifty-fifth Regiments, moved up the Lancaster road to the Paoli Tavern to cut off retreat by that route, while Grey, marching from Howellville along the Swedes' Ford road, massed his brigade almost within gunshot of Wayne's force, and dashed upon the sleeping camp with fixed bayonets and every musket unloaded.

PAOLI MONUMENT.

The surprise was complete, the force of the assailants overwhelming. Grey had two regiments, a body of light infantry, and the Second and Tenth Dragoons, —and when the enemy struck him at one o'clock in the morning, it was practically *sauf qui peut* from the first. The cannon, indeed, were hurried off the field and saved, but the bayonets and sabres of Grey's troops made such terrible havoc in Wayne's ranks that the surprise has ever since been known as "The Massacre of Paoli."¹ Smallwood's men, just about to join Wayne, ran away in consternation, and the American loss was severe. The Americans reported one hundred and fifty killed, and seventy or eighty captured; but Howe, in his official dispatch, says, "Killed and wounded not less than three hundred on the spot, taking between seventy and eighty

prisoners, including several officers, the greater part of their arms, and eight wagons loaded with baggage and stores."

This surprise and defeat enabled Howe to cross the Schuylkill undisturbed, as his rear was now secure from any attack. In the morning he marched towards Swedes' Ford; breastworks were there, held by Pennsylvania militia. He turned up the river northward, and at Parker's Ford found Washington confronting him, having crossed over from Warwick.

Howe turned northward again, as if to pass Washington's right, or seize the invaluable stores at Reading by a *coup de main*. Washington, to prevent this, once more crossed to the eastern bank and interposed at Pottsgrove, whereupon Howe, wheeling suddenly, marched swiftly back again, and, dividing his force into two columns, crossed practically unopposed at Gordon's Ford (now Phoenixville), and Fatland Ford, below Valley Forge, proceeding by easy marches thence to Philadelphia. Washington's men were not in condition to march and countermarch like Howe's, and he gave up the attempt to keep Howe out of the city, which he entered on the 26th. The honors and the fruits of the campaign, it must be conceded, were so far with Gen. Howe. He had outmanœuvred Washington; his tactics were better, and his soldiers had out-fought the Continentals. But these had fought well enough to make Howe cautious, and he did not venture again to take such risks as he had taken at the passage of the Brandywine.

Howe's grenadiers were the first to cross the Schuylkill, on the 22d, at Fatland Ford, supported by the light infantry guard. They were part of Cornwallis' column under Grey and Agnew. The chasseur battalions crossed next at Gordon's Ford, and on the 23d the whole army went over, Cornwallis in the van, and Grant, with the baggage, bringing over the rear guard before night. That night they encamped with the left on the Schuylkill, the right on the Ridge road, and Stony Run in front. A battalion dislodged the militia at Swedes' Ford, where there was a small re-doubt with six pieces. On the 25th the British moved towards Philadelphia in two grand divisions, one taking the Germantown road, the other passing down the Schuylkill towards the falls.

The city was at their mercy, and Washington's ill-clad, ill-shod, ill-fed, scanty battalions no longer interposed to defend it. General despondency prevailed; Congress was honeycombed with cliques; the army was full of conspirators; the city itself was overrun with malcontents and traitors. "Now, Pennsylvania," was Parson Muhlenberg's despairing cry, "bend thy neck and prepare to meet thy God!" "Oh, heaven, grant us one great soul!" shrieked captious and impatient John Adams, "one leading mind would extricate the best cause from that ruin which seems to await it!"

In this crisis, the authorities behaved well. Congress did not run away, but stayed in the city until

¹ A Quincy granite monument, twenty-two feet and a half in height, was erected as a memorial to the Americans who fell a sacrifice to the massacre, and was dedicated at the centennial anniversary on Sept. 20, 1877.

the 18th, when it adjourned to meet in Lancaster. Stores and magazines were removed, and blankets, shoes, and clothing were impressed from the Philadelphians in spite of Tory protests. Washington, indeed, sent his aide-de-camp, Hamilton, into the city on the 22d to secure these needed contributions. It was impossible to do without them, and Washington insisted upon the impressment, "painful as it is for me to order and as it will be to you to execute the message." The Supreme Executive Council remained in the city until the end of the 23d. They compelled the removal of all provisions except a bare subsistence for families. There was a court-martial at the jail, and all the military prisoners who could be trusted were sent to the army as recruits. All vessels in the Delaware were ordered to Burlington and Fort Mifflin, on pain of being burnt if not moved next tide, and small craft ordered to the New Jersey creeks. The Whigs all abandoned the city; the Whig press suspended; the last number of the *Pennsylvania Gazette* was printed September 10th, and *Bradford's Journal* September 9th, and the Tories were left to welcome their masters.

They were willing and anxious to do this. Marshall's *Remembrancer* notes as follows: "News of the day to be depended upon was that the day before Genl. Howe entered Philadelphia, being the 25th of last month, a number of Tories, said to amount to four or five hundred, went out in parade to Germantown, returned and triumphed through the streets all the night, taking, securing, and sending to prison all they could find that they looked upon or termed friends to the Free States of America, amongst whom was and is the parson, Jacob Duché." Robert Morton's diary begins at this time. The first entry is September 16th, when he went to Reading about the Quakers detained at Winchester. On the 19th he writes: "This morning about one o'clock an express arrived to Congress giving an account of the British army having got to the Swedes' Ford on the other side of the Schuylkill, which so much alarmed the gentlemen of the Congress, the military officers and other friends to the general cause of American freedom and independence, that they decamped with the utmost precipitation and in the greatest confusion, insomuch that one of the delegates, by name Fulsem, was obliged in a very fulsome manner to ride off without a saddle. Thus have we seen the men from whom we have received, and from whom we still expected, protection, leave us to fall into the hands of (by their accounts) a barbarous, cruel, and unrelenting enemy. . . . Oh, Philadelphia, my native city, thou that hast heretofore been so remarkable for the preservation of thy rights, now sufferest these who were the guardians, protectors, and defenders of thy youth (the Quakers), and who contributed their share in raising thee to thy present state of grandeur and magnificence with a rapidity not to be paralleled in the world, to be dragged by a licentious mob from their near and dear

connection, etc. Alas, the day must come when the avenger's hand shall make thee suffer for thy guilt, and thy rulers shall deplore thy fate. . . . 23d. In the evening the inhabitants were exceedingly alarmed by an apprehension of the city being set on fire. The British troops being within eleven miles of the city caused the disturbance, and gave rise to those womanish fears which seize upon weak minds at those occasions. Sat up till one o'clock, not to please myself but other people."

As Morton's diary notes, next entry, an attempt was even made by the galleys to obstruct the British entry, they being anchored in the stream and their guns trained to enfilade the streets. The next day (25th) the British commander notified the people through a communication sent to Thomas Willing that they did not desire to molest any one in person and property, and all were enjoined to remain peaceably and quietly in their own dwellings. There was another panic this day about burning the city. Patrols were formed and arrests made. Morton notes that he "set up till one o'clock patrolling the streets for fear of fire. Two men were taken up who acknowledged their intentions of doing it."

On the 26th a detachment of the royal army marched into the city. It was about 11 A.M., says Morton. The force was Cornwallis' division of British and auxiliaries, about three thousand men. The foreigners comprised two battalions of Hessian grenadiers. They marched in by the Second Street road, proceeded down Second Street, and, after placing guards, encamped at the south end of town, on Society Hill. As they came in, says Morton's diary, they were accompanied by Joseph Galloway, Andrew and William Allen, "and others, inhabitants of the city, to the great relief of the inhabitants, who have too long suffered the yoke of arbitrary power, and who testified their approbation of the arrival of the troops by the loudest acclamations of joy." The general report, however, is that there was not much rejoicing, nor many demonstrations. Town's *Evening Post*, a Whig paper that turned Tory as swiftly as Bonnivard's hair turned white, said that "the fine appearance of the soldiery, the strictness of the discipline, the politeness of the officers, and the orderly behavior of the whole body immediately dispelled every apprehension of the inhabitants, kindled a joy in the countenances of the well affected, and gave a most convincing refutation of the scandalous falsehoods which evil and designing men had long been spreading to terrify the peaceable and innocent." The head of the column was Col. Harcourt (the same who took Gen. Charles Lee), with his light dragoons, Cornwallis in command, attended by Sir William Erskine, Com.-Gen. Wier and staff, with a band playing "God Save the King." The bright, well-clad, imposing troops of the enemy made patriots' hearts sink, the contrast was so great.

The artillery were quartered in Chestnut Street,

between Third and Sixth; the State-House yard was made use of for a park; the Forty-second Highlanders were on Chestnut Street below Third; the Fifteenth Regiment were in quarters on Market Street, about Fifth. Morton, on the day of entry, says they were quartered at the Bettering House, State-House, and other places, "and already begin to show the great destruction of the fences and other things, the dreadful consequences of an army, however friendly.

The army have fortified below the town to prevent the armed vessels in our river coming to this city; likewise have erected a battery at the Point. This day has put a period to the existence of Continental money in this city. *Esto perpetua.*" The officers at once quartered themselves upon the wealthiest people. Mrs. Deborah Logan says, "Early in the morning Lord Cornwallis' suit arrived and took possession of my mother's house. But my mother was appalled by the numerous train which took possession of her dwelling, and shrank from having such inmates, for a guard was mounted at the door and the yard was filled with soldiers and baggage of every description; and I well remember what we thought of the haughty looks of Lord Rawdon and the other aid-de-camp as they traversed the apartments. My mother desired to speak with Lord Cornwallis, and he attended her in the front parlor. She told him of her situation, and how impossible it would be for her to stay in her own house with such a numerous train as composed his lordship's establishment. He behaved with great politeness to her, said he should be sorry to give trouble, and would have other quarters looked out for him. They withdrew that very afternoon, and he was accommodated at Peter Reeves', on Second Street, near Spruce. We felt glad at the exemption; but it did not last long, for directly the quartermasters were engaged in billeting the troops, and we had to find room for two officers of artillery, and afterwards, in addition, for two gentlemen, secretaries of Lord Howe."¹

¹ Westcott, with his untiring industry and research, has made out a list of the quarters of the British officers, so far as they can be ascertained. Gen. Howe lived first in Gen. Cadwalader's house, Second Street, below Spruce; then in Market Street, between Fifth and Sixth, house of Richard Penn, afterwards the property of Robert Morris, and occupied by Washington when President. Admiral Lord Howe lived in John Lawrence's house, Chestnut Street above Fourth, afterwards the Farmers' and Mechanics' Bank. Gen. Knyphausen, Cadwalader's house. Cornwallis, Peter Reeves' house, Second Street; afterwards in David Lewis' house, Second Street above Spruce. Gen. Mathew, Front Street. Col. Abercrombie (afterwards killed in Egypt), Whitehead's house, Vine Street, second door west of Second. Maj. André, Dr. Franklin's house, court on Market Street, between Third and Fourth.

Watson describes the personal appearance of some of the British officers, as follows: "Sir William Howe was a fine figure, full six feet high and well proportioned; in appearance not unlike his antagonist, Gen. Washington. His manners were graceful and dignified, and he was much beloved by his officers for his generosity and affability. Sir Henry Clinton, his successor in command, was in a good degree a different man. He was short and fat, with

RESIDENCE OF LORD HOWE, AFTERWARDS OF WASHINGTON, MARKET STREET BETWEEN FIFTH AND SIXTH STREETS.

[From an old drawing in Philadelphia Library.]

a full face and a prominent nose. In his intercourse he was reserved, and he was not so popular as Howe. Lord Cornwallis was short and thick-set; his hair somewhat gray; his face well formed and agreeable; his manners remarkably easy and affable; much beloved by his men. Gen. Knyphausen has much of the German in his appearance; always very polite in bowing to respectable citizens on the streets; not tall, but slender and straight; his features sharpened, martial; very honorable in his dealings. Col. Tarleton was rather below the middle size, stout, strong, heavily made; large, muscular legs, and an uncommonly active person; his complexion dark, and his eyes small, black, and piercing." Bancroft describes Howe as saturnine and sluggish, a torpid, easy-tem-

Lord Rawdon, at Mrs. Swords', Lodge Alley. Sir William Erskine, quartermaster-general, William West's, Front Street. Lieut.-Col. Sir John Wrottesley, Poole's bridge, Front Street and Pegg's Run. Col. Sir Henry Johnston (who married a daughter of David Franks, of Philadelphia), at Edward Pennington's, northwest corner Race and Crown Streets. Maj. David Ferguson, in Union Street. Capt. Gouldney, of the King's Own (Fourth Regiment), at Mrs. May's, Walnut Street, between Second and Third. William Cunningham, provost-marshal, corner of Second and Walnut Streets. Edward Madden, town major, Arch Street. Capt. Richard Hovenden, Philadelphia Light Dragoons (Tory), Mrs. Ducature's, Chestnut, between Front and Second Streets. Capt. Sanford, Bucks County Light Dragoons (Tory), George Inn, Second and Arch Streets. Surgeon Robert Boyes, Fifteenth Regiment, Mrs. Brink's, Fourth Street. William Wood, commissary of the Royal Artillery, Walnut Street, between Second and Third Streets.

pered sensualist, coarse in tastes and venal. Cornwallis was the ablest officer, and man too, of all the command. He distinguished himself by his administrative abilities as governor-general of India.

The fortifications and batteries spoken of in Morton's diary were begun on the day of Howe's entry; there was a redoubt at where Reed and Swanson Streets intersect; the old association battery was manned with three guns; one was built near Swanson and Christian Streets; one in the upper part of town, on a wharf above Cohocksink Creek, all manned with medium twelve-pounders and howitzers. On the 27th, before these works were completed, Commodore Hazlewood sent up the "Delaware" frigate, 20 guns, the frigate "Montgomery," sloop "Fly," and many galleys, to engage them. The "Delaware" anchored within five hundred yards of the lower battery and opened fire, and the other vessels engaged the other batteries. The fire was returned, but no execution was done on either side. The "Delaware," badly manœuvred, was left by the tide and got aground, whereupon Brig.-Gen. Samuel Cleveland, of the British army, brought a battery to bear on her, forced her to strike her flag, and she was taken possession of by Averte's marine company of grenadiers. The other vessels were beaten off, one, a schooner, being run ashore and lost; and the fleet, thus crippled, attempted to run past the batteries and up the river, passing between the Jersey shore and Windmill Island. The Cohocksink battery drove them back in confusion, and in passing the lower batteries the "Montgomery" had her masts shot away. A schooner, crippled in the same way, was run ashore and captured, and the rest got safe under the guns of Mud Fort. Town's paper declared they had come up under the cruel orders to batter the city without mercy. Light parties, meanwhile, of the Continentals hovered about the city to harass the enemy, and on the 27th there was a skirmish, with some casualties, at Israel Pemberton's plantation, Gray's Ferry road, between small parties.

Howe issued his proclamation on September 28th, from his headquarters at Germantown, guaranteeing protection and security to all who came in and behaved themselves under his proclamation of August 27th. This amnesty was further explained and extended under another issued four days later. These promises were fair enough, but the British hardly waited till they were settled in the city before making the Philadelphians conscious they were a conquered people. Plundering was punished, but not prevented. Robert Morton, on September 28th and 29th, mourns over his mother's house and his uncle Pemberton's, broken into and ransacked and robbed. He complained, was given a guard, and told the men would be severely dealt with if caught, but that did not make amends for beds ripped open and wine and silver stolen. He saw a man hung, heard of four hundred lashes given to another. His mother and

he interceded for others arrested for robbing him, but the plundering did not cease. Gen. Howe himself took and kept Mary Pemberton's coach and horses for his own use, and Morton complains that the quartermaster gave him receipts for hundreds of pounds of hay where thousands had been taken. Sir William Erskine, the quartermaster-general, issued orders to all people who had stores or provisions belonging to the rebel army to report the same, under pain of being treated with the utmost rigor. Rewards were held out to informers revealing the hiding-places of such stores. Removing goods from the city without permit was to be severely punished, and all persons having rum or spirits were required to report the fact and quantity without delay. A return was required of all wagons, and the army proposed to hire them by the day at three shillings, New York currency. Wagons not tendered voluntarily at that rate were to be seized. Forage-yards were established next to Potter's Field and on the Delaware, where hay and straw were to be brought. Grain was to be delivered at Willing & Morris' store, and paid for in gold and silver.

On September 29th the Tenth and Forty-ninth Regiments were detached, under Lieut.-Col. Stirling, in order to make a movement against the fort at Billingsport, which still protected the lower *chevaux-de-frise*. The fleet now in the river found this an obstacle to their further progress, and Capt. Hammond, of the "Roebuck," asked help from the land forces. The troops were sent to Chester and made preparations to cross the Delaware. The officers and men of the galleys, thinking their situation desperate, were deserting, whole crews at a time. Col. Bradford, of the city militia, had thrown himself into the Billingsport lines when the British entered Philadelphia; but this garrison was inadequate for such a work, consisting of only one hundred city militia, Capt. Massey's company of artillery, one hundred men, and one hundred and fifty Jersey militia. The British troops landed, October 1st, near Raccoon Creek. Gen. Newcome, with a party of Jersey militia, was sent to meet them, but failed to prevent their march, and retreated. Thereupon Col. Bradford sent the garrison to Fort Island, took off all the ammunition and some of the cannon, spiked the rest, and set fire to the barracks and bakehouse. Bradford's men got away safely, and Stirling took possession of Billingsport, enabling Capt. Hammond to remove the lower *chevaux-de-frise*.

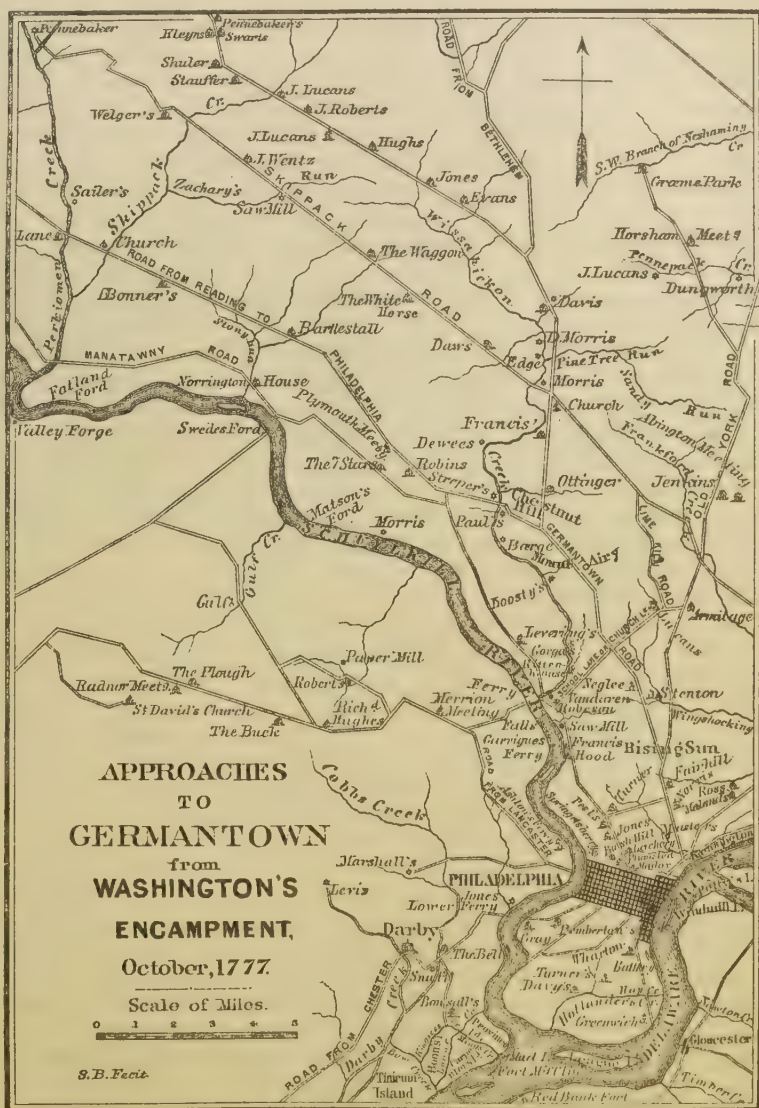

Meantime, Washington had been reinforced and was in motion. After the royal army crossed the Schuylkill he had taken post between the Perkio-men and Skippack Creeks, twenty miles to the north of Philadelphia, with his headquarters near Pennibecker's (Pennypacker's) mill. He had proposed to attack the enemy as early as September 28th, and submitted his plans to a council of officers, but they decided adversely to the attack, Brig.-Gens. Small-

wood, Wayne, Scott, Potter, and James Irvine voting in favor of the offensive movement, Maj.-Gens. Sullivan, Greene, Stirling, Stephens, Armstrong, and Brig.-Gens. McDougall, Knox, Muhlenberg, Nash, and Conway voting to defer the advance until the reinforcements from Peekskill came up. It was recommended, however, to move closer to the enemy, so as to be in a position to attack should opportunity offer.

About October 1st the troops from the Hudson came up, and fresh bodies of militia also, and Washington learned, through intercepted letters, of the detachment sent against Billingsport. The forts on the Delaware were part of Washington's offensive against Howe, and he thought a battle could be risked by way of diversion in their favor. The force sent against Billingsport was probably overestimated; anyhow, Washington counted that and the detachment under Cornwallis in Philadelphia as reducing Howe's army to a numerical equality with his own. Upon that view of the case he prepared to attack Howe at Germantown, and, if possible, to surprise him.

The village of Germantown then consisted of a single street of houses about two miles long, built on both sides of a public road, which ascended, over rolling hills, from Second St. to Chestnut Hill, there branching in one direction towards Reading, in the other towards Bethlehem. The street of the town ran northwest and southeast; the houses were chiefly stone hamlets, low, substantial, with steep roofs and projecting eaves; they stood detached from one another, but close to the highway, each with its inclosure, gardens, fences, palings or walls around it, and in the rear cultivated orchards and fields. From Chestnut Hill to Naglee's Hill, the northern and southern extremities of the German settlement and of the field of action, the distance along the Skippack road (for so the street was called) is between two and three miles. Southeast of Naglee's Hill, and under it, is Stenton, the house built by James Logan, where Howe had his headquarters at this time. Between the Skippack

road and the Schuylkill, parallel to both in effect, crossing the Wissahickon at its mouth, cutting the Reading road at Barren Hill, and nearing the Germantown road as the two approached the city, was the Manatawny, or Ridge road, traversing a rough, wild country, with mills near it along its whole length. Nearly parallel to the Skippack road, but diverging from it and from each other as they extended north-

ward, were the old York road and the Limekiln road, the latter, at Lukens' mill, turning southwest and cutting the Skippack road at right angles, and under the name of the Church Lane, at the German Reformed Church in Germantown, the former passing to the east of Naglee's Hill and Stenton. Fisher's Lane, running east from the summit of Naglee's Hill, joined

the Skippack to the old York road. The Church Lane, west of the Skippack, becomes the School-House Lane, and extends to the Ridge road and the Schuylkill. A quarter of a mile southeast of this Church Lane, at the market-house, Shoemaker's Lane cuts the Skippack road at right angles; the eastern branch runs to the old York road, the western, Indian Queen Lane, to the Ridge road. A quarter of a mile west of Church and School-House Lanes another lane cuts the Skippack road once more at right angles, the eastern section called the Bristol, or Meeting-House road, the western the Rittenhouse, or Paper-Mill road. Northwest of this road, on the right, or east side of the Skippack road, stood the Mennonite meeting-house; northward of it again, on the same side of the main road, was Chew's house, a fine, large stone mansion, with extensive outbuildings; beyond it, the Lutheran Church, then Beggarstown, Mount Pleasant, Mount Airy, Cresheim Creek, and so on to Chestnut Hill.

Such, in brief, is the general topography of Germantown as it was in October, 1777. On the west of the village the land rolled away to the high bluffs of the Wissahickon at its confluence with the Schuylkill, giving protection to Howe's left wing. The ground on the east, cut up by the Wingohocken and other streams running into the Delaware, defended his right wing from attack. The British army, in fact, lay encamped in order of battle on the general line of the School-House and Church Lanes, at right angles to the Skippack road, its centre resting on that road at the market-house, its left at Robeson's house and behind the Wissahickon where the Ridge road crosses it, its right at Lukens' mill and behind Kelley's hill. The position was a strong one, and it covered all the approaches to Philadelphia by the peninsula between the Delaware and the Schuylkill.

The left wing, under Lieut.-Gen. Knyphausen, extended to the Schuylkill; it comprised the Third Brigade, Maj.-Gen. Grey, the Fourth, Brig.-Gen. Agnew (seven British battalions in all), three Hessian battalions under Maj.-Gen. Von Stirn, and the mounted and dismounted chasseurs, under Col. Von Wurmb. The chasseurs were in front and on the flank, and the extreme left was guarded by a small redoubt on the bluff at the debouchure of the Wissahickon, where School-House Lane touches the Ridge road. Upon the right of Knyphausen, Brig.-Gen. Mathew, with six British battalions and two squadrons of dragoons, held the line; upon his right, and crossing the Skippack road, was Maj.-Gen. Grant with the corps of guards, extending to the woods near Lukens' mill. The flank of this wing was covered by the first battalion of light infantry encamped upon the Limekiln road, the extreme right being held by a provincial corps, the Queen's Rangers, afterwards commanded by Lieut. Simcoe and famous for partisan service. They were thrown out towards Branchtown, on the York road. The front, along the Skippack

road, was held by the Fortieth Regiment, Col. Musgrave, encamped in the field opposite Chew's house, on the west of the main road; the advance was the Second Battalion of light infantry, stationed, with a battery of artillery, on the east of the main road, at Mount Pleasant, while there was an outlying picket, with two six-pounders, at Allen's house, Mount Airy.

Washington, on September 29th, marched from Pennypacker's mills down to the Skippack, on the 2d, to Worcester township. Thomas Paine, in his letter to Franklin, says, "The army had moved about three miles lower down that morning. The next day they made a movement about the same distance to the twenty-first milestone on the Skippack road. Headquarters at J. Wince's (John Wentz's). On the 3d of October, in the morning, they began to fortify the camp as a deception, and about nine at night marched for Germantown." There was no attempt to keep the *movement* secret,—it would have been impossible to conceal the movement of ten thousand men, and it was generally known. Parson Muhlenberg heard of it on the 3d. On the 2d an officer of the light infantry in the British advance wrote that "Mr. Washington, by the accounts of some who came in to-day, is eighteen miles distant, with his main body. They also say he intends to move near us to try the event of another battle." But the part which was sought to be concealed was the attack in force that morning of the 4th; and that concealment was successfully accomplished. To bring it about, Washington had sent scouting parties to beat up the enemy's pickets three or four nights in succession; he had pretended to fortify his camp at Worcester township, and he marched fourteen miles after nine o'clock at night, so that he was at daybreak on the 4th only four miles away from the light infantry officer, instead of eighteen miles. The object was to surprise Howe, and that object was successfully secured. The strategy was good,—the battle was lost by bad tactics on the field.

Washington prepared his order of battle upon the basis of his accurate information of the enemy's position. The fault of it was, it was too elaborate. The country was rough and broken; the converging lines were six or seven miles apart; the only communication was by couriers; yet all the divisions were expected to co-operate, to attack simultaneously, to be within supporting distances of each other at critical stages of the battle, and each division was to accomplish something which was to be necessary to the success of each of the other divisions. "Each column was to make its dispositions so as to get within two miles of the enemy's pickets by two o'clock, there halt till four, and attack the pickets precisely at five o'clock, with charge-bayonets and without firing, and the column to move to the attack as soon as possible." Battles are not fought by any such clock-work system nowadays, even with the telegraph, the railroad, and a perfected signal service.

The plan of Washington was for Wayne and Sullivan, with their divisions, flanked by Conway's brigade, to strike at the enemy's centre by way of Chestnut Hill and the Skippack road; Armstrong, with the Pennsylvania militia, was to descend the Manatawny road to Van Deering's mill at the Wissahickon crossing, carry off the chasseurs, and get on the left and rear of Knyphausen; Greene and Stephen's divisions flanked by McDougall's brigade, making a *détour* to the Limekiln road, were to strike at the enemy's right and centre, with the market plaza for their objective; Smallwood and Forman, with the Maryland and New Jersey militia, were to cross to the old York road and turn the enemy's extreme right; Stirling, with Nash's and Maxwell's brigades, was to act as a reserve; and a detachment of militia, on the west side of the Schuylkill, were to demonstrate against the Middle and Lower Ferries, to prevent Cornwallis from reinforcing Howe. But it is obvious from the enemy's position that if the British advance at Pleasant Hill and Chew's house could occupy the division advancing by the Skippack road for an hour or two, Greene, Stephen, and McDougall would find themselves engaged with the whole British army, except so much as Armstrong's militia could occupy on the extreme left and Smallwood's militia on the far left. In other words, of two columns sent to attack the British centre and main body, one would be fully engaged while the other had a mile and a half to traverse before it could be got up.

Smallwood's orders, if carried out, would have brought his militia into Greene's rear, instead of on the flank of the Queen's Own; practically, however, Smallwood did not get up at all until the action was over or nearly so, and he was in time to join in the retreat. Armstrong did nothing on his side but "divert the foreigners with the militia," without bringing them to close action at all, or making any attack that could affect the fortunes of the day one way or another. The militia on the west side showed themselves opposite Market Street and fired a few shot with a cannon, but did little else. They were Gen. James Potter's militia; they formed in three columns, with two field-pieces; there were only thirty dismounted dragoons at the ferry, says Morton, in his diary, and they sent express for reinforcements. Thus far, then, this movement may have had some effect.

It was a dark night before the battle, not raining, but threatening to do so. At daybreak of a foggy, thick morning the column of Sullivan, the right wing, which Washington accompanied, reached Chestnut Hill. The sun arose, but disappeared behind heavy clouds as the column approached Mount Airy, Conway's brigade in the van, Sullivan next, then Wayne, Sullivan commanding the corps. A regiment of Conway's and the Second Maryland Regiment were thrown to the front, while Capt. Allen McLane, the Philadelphia light horseman, dashed upon the outlying picket at Allen's house. The picket fell

back, with loss, but not before they had fired their two six-pounders and sounded the alarm; Sullivan's advance moved forward and was immediately engaged with the battalion of light infantry, which had formed at once upon the first alarm, its line being upon the east of the road at Mount Pleasant. The Americans pressed forward, deploying in succession as they advanced, Wayne upon the east of the main road, Sullivan upon the west, with Conway, supported by a regiment of Wayne's, one of his own brigade, and Moylan's light horse, upon the extreme right, Armstrong not having come upon that side. In the mean time, the British light infantry fell back, severely pressed by the heavy fire and by bayonet-charges, but "making a stand at every fence, wall, and ditch as they retired, and supported successively by the advance of Musgrave's regiment and by other reinforcements. The Americans took the camp of the light infantry and that of Musgrave's Fortieth Regiment, and continued to advance. Howe, who had come upon the field as soon as the alarm reached him, saw at once that he had a general battle on his hands, and that his centre was in peril of being crushed. Turning his horse, he galloped back and ordered Grey and Agnew to advance against Sullivan and Conway, leaving some British troops to support the Hessian jägers and chasseurs, who now began to find Armstrong's militiamen opposite them at Van Deering's mill, and cannonading them from the other side of the Wissahickon. A part of Grant's and Mathew's men, on the British right, were in the same way sent forward to oppose Wayne's advance.

In the mean time, Greene, with his own division and that of Stephen, had reached the Limekiln road and were hastening to meet the enemy, whose outposts they expected to strike at Lukens' mill. Howe seems to have expected an attack of some sort upon his right, however (there is testimony to that effect from several witnesses), and either on the night of the 3d or before daybreak on the morning of the battle had advanced the First Battalion of light infantry northward upon the Limekiln road to a position about opposite that of Maxwell's Fortieth Regiment,—the Chew mansion, on the main road. Greene, finding the enemy thus soon in his front, deployed his command, Stephen to the right of the Limekiln road, McDougall to the left, while his own division held the road. Thus aligned, Greene rapidly advanced, and drove the battalion of light infantry before him from the field. At this moment the battle was general, and the British were yielding at every point before a pretty symmetrical line of battle, extending, with one or two breaks, from the left or east side of the Limekiln road to Conway's right, halfway between the Skippack and the Manatawny roads. So certain was Washington of the victory that he ordered up the reserve, while Conway, Sullivan, Wayne, and Greene pressed forward, using the bayonet liberally. In this way the British were driven back south of the Chew house, at least as far

as the Mennonite Church; and it is said that orders were given, in case of a rout, to rendezvous at Chester.

But the character of the American advance led to confusion and disorder, and this was increased by the fog, which thickened as the morning advanced. The accident of Musgrave with his six companies, throwing himself into the Chew house and barricading and holding it, thus became a serious and finally fatal obstacle to the progress of the American arms, and the indirect cause of the defeat which ensued.

THE CHEW MANSION AT GERMANTOWN.

Under ordinary circumstances this occupation of a house in the line of advance would have been a trifling episode. The attack of the Americans had indeed disregarded it and passed it by. But Greene's command had become seriously misplaced, McDougall working too far to the left, could not keep up with Greene's column, found himself involved in the bad ground on Rock Run and Sawmill Creek, and was practically out of the fight. Stephen, drunk himself and confused by the firing upon his right and rear and Chew's house, separated his division from Greene and brought it diagonally down upon the left flank and rear of Wayne's command, who mistook the division thus astray for the enemy. Greene, unsupported, followed the light infantry down the Meet-

ing-House Lane and found himself at once entangled with the entire British right, advancing in the direction of the Chew house, and at the same time the Hessians and the Fourth Brigade gave check to Sullivan. Thus, at one and the same moment, Greene and Sullivan were stayed by superior forces in their front. Wayne was checked and disordered by Stephen's command, mistaken for the enemy, and Stephen equally disturbed, McDougall was "in the air," and Armstrong doing nothing. Then it was that the reserve discovered the enemy in Chew's house and paused to deal with them instead of hastening forward to the support of Greene or Sullivan. From that moment the tide turned and victory was wrested from Washington's grasp.

To show how nearly complete that victory was, it is proved that Col. Mathew's Ninth Virginia Regiment, in the advance of Greene's command, not only took the redoubt at Lukens' mill, but, charging down the School-House Lane, reached the market-house and found themselves in the centre of the British position, where, set upon by Grant and the two battalions of guards, they were forced to surrender. At the same time, Lieut.-Col. Stewart, of McDougall's command, pushed still farther eastward, "to the left of the whole," he says, and he too reached the market-house and by some is thought to have got to Armstrong's mill on Shoemaker's Lane, in the rear of Grant and Mathew.

Hence, until the fog lifted and Washington's army was discovered to be in retreat, Howe and his generals would scarcely believe that they had not sustained a defeat. The Americans still less could understand why they were retreating, nor did they, though disordered and confused, fall back in a way indicative of panic and consternation. On the contrary, Wayne speaks of checking the ardor of the enemy's pursuit with a few shots, and Thomas Paine, who was on the field, and, by his own account, walking about like a gentleman of leisure, says particularly in his letter to Franklin, that "I never could, and cannot now, learn, and I believe no man can inform truly the cause of that day's miscarriage. The retreat was as extraordinary. Nobody hurried themselves. Every

one marched his own pace. The enemy kept a civil distance behind, sending every now and then a shot after us and receiving the same from us. . . . The men appeared to me to be only sensible of a disappointment, not a defeat; and to be more displeased at their retreating from Germantown than anxious to get to their rendezvous."

Exactly when, or with whom, the retreat began, has not been ascertained. There are conflicting statements in the several accounts of the battle which cannot be reconciled. Sullivan admits that his men were nearly out of ammunition; there is a report (Graydon gives us authority for it) that Reed and Cadwalader found Conway taking shelter in a barn; Sullivan avers that Wayne by withdrawing uncovered and exposed his left to the enemy on the Germantown road. Stephen was cashiered for his conduct in the fight, and it is said that Greene fell under the commander-in-chief's displeasure; yet Greene's steady retreat and stubborn resistance enabled the rest of the army to withdraw safely. Sullivan must have been pressed hard, since Nash and his brigade, sent to that general's relief, were forced to the front. The firing at Chew's house palpably did not begin until Wayne and Sullivan had passed it; then a part of Sullivan's men turned to engage it in front until Maxwell's brigade relieved them, while Woodford's brigade, of Stephen's division, attacked the house without orders.

The retreat was slow; it was made general by Washington's orders, who sent his couriers to call off every division. And all the cannon were brought away, though none of the guns from which the enemy had been driven were carried off. The pursuit was not eager; the disordered ranks were restored in a great measure in the presence of the enemy, who ceased to follow at all when White Marsh Church was reached. The army retired behind the Perkiomen, and Washington returned that night to Pennypacker's mill.¹

¹ So much has been written about the battle of Germantown that it is difficult to collate a distinct and intelligible account of the action, the more so that many of the earlier narratives had some personal or partisan object to serve, and by which they are more or less biased. The authorities most consulted in the above description of the contest have been Bancroft, Washington Irving, William B. Reed, Westcott (who is as usual very full) and Dr. A. C. Lamibdin's address on the one hundredth anniversary of the battle (*Pennsylvania Magazine*, vol. i. No. 4), which is very complete, and on the whole very satisfactory. Errors seem to have crept into all accounts, however; Westcott unaccountably represents the Tenth British Regiment as being with the Fortieth, in supporting the light infantry at Mount Pleasant, although he tells us, in the same chapter, that this regiment had been sent to Billingsport with the Forty-second to attack the fort there. Irving and Bancroft, and all the earlier accounts, seem to be in error either as to time or to distance, and if these things are not carefully balanced, mistakes cannot be escaped from. Wayne and Sullivan are wrong about the distance the enemy were pursued, and Wayne says the battle lasted till ten o'clock, whereas Armstrong, two miles away, mentions that he was recalled at nine. Wayne and Sullivan both claim to have pursued the enemy from one and a half to three miles. From Allen's house, the station of the outside picket, to Fisher's Lane is only two miles and a half, and no Americans went to Fisher's Lane or near it. The order of battle and the accounts of the fight must be studied together, in order to separate fact from fiction.

The losses in this battle were not excessive, when we consider the extent and the time of the engagement. The British lost Brevet Brig.-Gen. James Agnew (said to have been shot by bushwhackers in

"The divisions of Sullivan and Wayne to form the right wing and attack the enemy's left, *they are to march above [i. e., east of] Monitony [Munatwney] Road.* The divisions of Greene and Stephen to form the left wing and attack the enemy's right, *they are to march down the Skip-pack road.* Gen. Conway to march in front of the troops that compose the right wing and file off to attack the enemy's left. Gen. McDougall to march in front of the troops that compose the left wing, and file off to attack the enemy's right flank." It is obvious that these directions were not obeyed. From Chestnut Hill, at any rate, Sullivan marched in the bed of the Skip-pack road, Greene far to the left of it. Sullivan did not debouch to the right of the main road until the light infantry were met, and then Wayne's brigade was on the left of the road. It is possible that Greene mistook the way and followed the White Marsh into the Limekiln road, but hardly probable. The order continues: "Gen. Nash and Gen. Maxwell's brigades to form the *corps de reserve*, and to be commanded by Maj.-Gen. Lord Stirling. *The corps de reserve to pass above [i. e., east of] the Skip-pack road,* Gen. Armstrong to pass down the Ridge road and pass by Liverin's tavern and take guides to cross *Wessahocken Creek above the head of John Van Deering's mill-dam so as to fall above Joseph Warner's new house.*

"Smallwood and Forman to pass down the road by a mill into the White Marsh road at the Sandy Run, thence to White Marsh Church, where take the left hand road which leads to Jenkin's tavern in the Old York Road below Armitage's beyond the seven mile stone, *half a mile from which a road turns off short to the right hand, fenced on both sides, which leads through the enemy's encampment to Germantown market-house.*

"Gen. McDougall to attack the right wing of the enemy in flank and rear. Gen. Conway to attack the enemy's left flank, and Gen. Armstrong to attack their left wing in flank and rear.

"*The militia who are to act on the flanks not to have cannon.* . . .

"Every officer and soldier to have a piece of white paper on his hat. *The piquets will be left at Van Deering's mill to be taken off by Gen. Armstrong, one at Allen's house on Mount Airy by Gen. Sullivan, one at Lukens' mill by Gen. Greene.*"

The italicized directions were not obeyed. The reserve did not pass above but west of the Skip-pack road; it gave no support to Greene, but left one brigade at the Chew house and with the other aided Sullivan. Armstrong did not leave the Ridge road and crossed the Wissahickon at the point indicated; he kept on down to the mill, and did not cross at all. Besides, instead of leaving his cannon behind, he took two with him and left one, which Col. Jehu Eyre afterwards brought off.

Smallwood, obeying his orders, would have taken the church road across to the old York road, descended that to Shoemaker's Lane, following which he would have found himself on the Germantown road, at the market-house, in the rear of Grant, after having fought the Queen's Own rangers. If the dispositions had been carried out (doubtless they were but the skeleton of abundant oral instructions) the order of battle would have been as follows: Greene, opening on the right, after driving in the picket at Lukens' mill (the work set to McDougall to do) would have thrown his two divisions upon the front of Grant and Mathews, McDougall on their flank, Smallwood working round to cut off their retreat in the rear; Sullivan, after driving in the picket at Mount Airy, was to throw himself upon the fronts of Grey and Agnew, while Conway engaged the Hessians in front, and Armstrong, driving the chasseurs before him, struck the Hessians on their left flank and rear. Such an attack, as we now know, made suddenly, would have defeated Howe.

But such an attack was not possible; first, because the battalions of light infantry were advanced both in the path of Greene and Sullivan, and did not give at once; second, because the Fortieth Regiment stood in the way of Sullivan and Wayne, and finally, by taking possession of Chew's house, became an insuperable obstacle.

Sullivan's account, in his letter to Weare, seems now to become intelligible. After speaking of the rout of the Second Battalion of light infantry, he says, "They, however, made a stand at every fence, wall, and ditch they passed, which were numerous. We were compelled to remove every fence as we passed, which delayed us much in pursuit. We were soon after met by the left wing of the British army, when a severe conflict ensued; but, our men being ordered to march up with shouldered arms, they obeyed without hesitation, and the enemy retired.

Germantown; the claim was made for one Hans P. Boyer), Lieut.-Col. Bird, and Ensign Frederick, grandson of ex-King Theodore, of Corsica. Agnew's body was buried in the Germantown lower cemetery,

... At Chew's house, a mile and a half from where the attack began, Wayne's division came abreast with mine, and passed Chew's house, while mine were advancing on the other side the main road.

"Though the enemy were defeated, yet they took advantage of every yard, house, and hedge in their retreat, which caused an incessant fire through the whole pursuit. At this time, which was near an hour and a quarter after the attack began, Gen. Stephen's division fell in with Wayne's on our left, and soon after, the firing from Gen. Greene's was heard still farther to the left. The left wing of our army was delayed much by Gen. Greene being obliged to counter-march one of his divisions before he could begin the attack, as he found the enemy were in a situation very different from what we had been before told. [I.e., Greene was instructed he would find the First Battalion light infantry at Lukens' mill; they were in fact on the Limekiln road in advance of Batten's woods. It was necessary to change the order of march to dislodge them, and hence, perhaps, the disaster to Mathews, and the failure of both McDougall and Stephen to take part in Greene's attack.]

"The enemy (in Chew's house)," continues Sullivan, "defended themselves with great bravery, and annoyed our troops much by their fire. This, unfortunately, caused many of our troops to halt, and brought back Gen. Wayne's division, who had advanced far beyond the house, as they were apprehensive lest the firing proceeded from the enemy's having defeated my division on the right. This totally uncovered the left flank of my division, which was still advancing against the enemy's left. The firing of Gen. Greene's division was very heavy for more than a quarter of an hour, but then decreased, and seemed to draw farther from us. . . .

"My division, with a regiment of North Carolinians, commanded by Col. Armstrong, and assisted by part of Conway's brigade, having driven the enemy a mile and a half below Chew's house [not half a mile, in fact], and finding themselves unsupported by any other troops, their cartridges all expended, the force of the enemy on the right collecting to the left to oppose them, being alarmed by the firing at Chew's house so far in the rear, and by the cry of a light-horseman on the right, that the enemy had got round us, and at the same time discovering some troops flying on our right [Conway's?], retired with as much precipitation as they had before advanced, against every effort of their officers to rally them. When the retreat took place, they had been engaged near three hours. . . ."

Wayne's account is, in brief, "The fog, together with the smoke occasioned by our cannon and musketry, made it almost dark as night. Our people, mistaking one another for the enemy, frequently exchanged shots before they discovered their error. We had now pushed the enemy near three miles, and were in possession of their whole encampment, when a large body of troops were advancing on our left flank, which, being taken for the enemy, our men fell back, in defiance of every exhortation of the officers to the contrary; and, after retreating about two miles, they were discovered to be our own people, who were originally intended to attack the right wing." Wayne also wrote to Gen. Gates that "the enemy were broke, dispersed, and flying in all quarters; we were in possession of their whole encampment, together with their artillery park, etc. A wind-mill attack was made on a house into which six light companies had thrown themselves to avoid our bayonets; this gave time to the enemy to rally; our troops were deceived by this attack, taking it for something formidable, they fell back to assist in what they deemed a serious matter. The enemy finding themselves no further pursued, and believing it to be a retreat, followed. Confusion ensued, and we ran away from the arms of victory ready to receive us."

Gordon's history says, "The battle, by Gen. Knox's watch, held two hours and forty minutes." In other words, it was over before nine o'clock, though Wayne said it lasted till ten. Wayne was equally mistaken in saying that Greene's command included "two-thirds at least" of the army. Sullivan's column had about as many Continentals as Greene's, and the Pennsylvania militia under Armstrong outnumbered those under Smallwood. Bancroft condemns Greene for failing to be up in time, from some unexplained cause, "Greene's letter to Marchant gives no explanation,"—and variously assigns Sullivan's explanation; Lacey's, that the command mistook their way; Macdougall's, the great distance; Heth's, mismanagement; Walter Stewart's, dark night and bad roads, as the cause for Greene's having fallen under the commander-

but has no monument over it. His grandchildren visited the spot some forty years ago, but it remains unmarked. The total number of British casualties were 70 killed, 450 wounded, 14 missing. By the official dispatches, of British and Hessians, 2 lieutenant-colonels, 2 ensigns, 7 sergeants, 1 drummer, 58 rank and file killed; 1 lieutenant-colonel, 6 captains, 13 lieutenants, 10 ensigns, 24 sergeants, 1 drummer, 395 rank and file wounded; 1 captain, 13 rank and file missing.¹

The Americans lost Brig. Francis Nash, of North Carolina, Col. Boyd, Maj. Sherburne, Maj. White, and Maj. Irvine. The total loss was: Continental officers killed, 25; wounded, 102; missing, 102; militia officers, 3 killed, 4 wounded; rank and file killed, 152; wounded, 521; prisoners, 54 officers, 346 men. Nash (from whom Nashville gets its name) was buried in the Mennonist graveyard at Culpstown, twenty-six miles from Philadelphia, with Col. Boyd and Maj. White. A monument was erected to their memory in 1844, by citizens of Germantown and Norristown.

The Americans were mortified at the result of the battle of Germantown; yet it encouraged them. In Europe it caused a sensation, since no one dreamed of an American army of equal numbers taking the offensive against British regulars. In his report to Congress on the 7th, Washington said that our troops retreated when victory was declaring itself in their favor. "The tumult, disorder, and even despair,

in-chief's frown. But it is denied that Washington was dissatisfied with Greene at all, and this, too, on the authority of Joseph Reed, who was not Greene's friend. The attack of Greene was not heard, says Washington, until three-fourths of an hour after the battle commenced at Mount Airy. This was probably Knox's timing. Walter Stewart, who was with Greene, says fifteen minutes; Chief Justice Marshall, who was in Woodford's brigade of Stephens', says half an hour; Pickering says just as the reserve advanced on Chew's house.

There is evidence of fighting on the Limekiln road, in front of Batten's woods; on Shoemaker's Lane, at the mill on the Wingohocking; and that Sullivan's command advanced to within a short distance of School-House Lane, and to the Widow Mackinett's Green Tree Tavern. Mathews and Stewart got very near to the market-house, in the rear of Grant.

Knox was the officer by whose advice the reserve was halted and Chew's house summoned, and then besieged it. The loss of time here, and the halting of men who should have been hurrying on to the front, shows how deficient Washington's officers were in military training. Two companies of riflemen with a field-piece would have sufficed to mask the place and render its occupants harmless. Instead of that it occupied two brigades and neutralized two or three more. Batteries were brought up against it, councils of war held about it, and it was summoned, assaulted, attacked in front and rear with fire and ball, openly and by strategy. Before any impression could be made on it the battle was lost.

¹ The following is the British tale of troops engaged: Second Light Infantry and Fortieth Regiment, sustaining centre pickets; Forty-fourth and Seventeenth, detached to assist Fortieth in Chew's house; Twenty-seventh, Twenty-eighth, Thirty-third, Forty-sixth, and Sixty-fourth, engaged with Greene, Stephen, and Mathews; First Light Infantry, Fourth, Fifth, Fifteenth, Thirty-seventh, Forty-ninth, and Fifty-fifth pursued Wayne and Sullivan after the panic; Hessian Jagers held Armstrong in check; the Seventeenth, Thirty-third, Forty-fourth, Forty-sixth and Sixty-fourth (Grey and Agnew) advanced towards Chestnut Hill; Du Corps, Donop, and battalion of Hessian grenadiers, on the left, were not in action, but held as a reserve.

which it seems had taken place in the British army, were scarcely to be paralleled; and it is said so strongly did the idea of a retreat prevail that Chester was fixed as a place of rendezvous. I can discover no other cause for not improving this happy opportunity than the extreme haziness of the weather." There was a panic in the city. "The Tories were in the utmost distress, and moving out of the city; and our friends confined in the new jail made it ring with shouts of joy." This is what Capt. Heth wrote to his friends in Virginia. Deborah Logan, who remained in the city, says that the day was passed by the Philadelphians in great anxiety. "We could hear the firing, and knew of the engagement, but were uninformed of the event. Towards evening many wagons full of the wounded arrived in the city, whose groans and sufferings were enough to move the most inhuman heart to pity. The American prisoners were carried to the State-House lobbies, and had of course to wait until the British surgeons had dressed their own men; but in a very short time the streets were filled with the women of the city carrying up every kind of refreshments which they might be supposed to want, with lint and linen and lights in abundance for their accommodation. A British officer stopped one of these women in my hearing, and not ill-naturedly, but laughingly, reproved her for so amply supplying the rebels, whilst nothing was carried to the English hospitals. 'Oh, sir,' replied she, 'it is in your power fully to provide for them; but we cannot see our poor countrymen suffer, and not do something for them.' They were not denied that poor consolation."

Every convenient place was occupied as a hospital; the Pennsylvania Hospital and Betering House were already in use; the First Presbyterian Church and the Second, having lost their pastors, who had fled, were taken for the wounded; Cornman's sugar refinery, and Zion and St. Michael's Lutheran Churches were also taken, as well as the "play-house." Private houses were also turned into hospitals, and Morton, the diarist, who was fond of going about and seeing the surgeons amputate limbs, confesses, Tory as he was, that the American wounded prisoners were not as well taken care of as they should be.

Three days after the battle of Germantown a deputation of Quakers, consisting of Nicholas Waln, Samuel Emlen, Joshua Morris, James Thornton, William Brown, and Warner Mifflin, came out of Philadelphia and went through the British to the American camp. They had an errand to Washington and to Howe,—to both a testimony on the ungodliness of war; to Washington, besides, in defense of the society in general and the Friends imprisoned in Virginia in particular. Armstrong, in a letter to President Wharton, dated October 8th, says, "We lost a great part of yesterday with a deputation of Quakers from their Yearly Meeting—Wall, Emlen, Joshua Morris and two others, declaring their own

and the innocence of their Body, desiring prejudices agst them might be removed as a society, seeking in the world only peace, truth, and righteousness, with equal love to all men, &c. And asking, in a dark manner, his aid for their brething in exile, &c. The General was fir sending them to you and to Congress who had banished their friends; they then retracted that part of their embassy respecting the banished friends, said that rather lay with their Committee of Sufferings. The General gave them their dinner and ordered them only to do penance a few days at Pott's-grove, until their beards are grown, for which they seemed very thankful."

The Tories in Philadelphia were less humble. James Humphreys revived the publication of the *Pennsylvania Ledger*, with the royal arms for a heading. Dr. Drewitt, whom the Whigs had imprisoned, reopened his drug-store; Joseph Stansbury opened a china shop on Front Street, between Market and Chestnut, and Nicholas Brooks, who had been for two years confined in Lancaster, in a room comfortably adjoining one powder magazine and under another, for his complicity with Dr. Kearsley's plots, escaped and showed himself in Philadelphia.

Howe set a strong night-watch to keep order in the city, one hundred and twenty all told, eighty-three in the city, ten to Southwark, and ten in the Northern Liberties, in addition to the seventeen ancient watchmen. A sort of police commission, to select the men and the superintendents to put over them, was appointed by Howe. George Roberts, James Reynolds, James Sparks, Joseph Stansbury for the city; John Hart, Southwark; Francis Jeyes, Northern Liberties; the city wardens being added to the commission. As money was scarce, loyal citizens were called on for subscriptions (not exceeding ten pounds each) to a loan, and James Delaplaine was appointed constable of the watch, and Edward Madden town-major. The attempt was made at once to raise a corps of loyalist soldiers in the city. This was one of Howe's vain illusions, which his brother, Lord Howe, shared with him, that the strong loyal sentiment in the country could be moulded into an army strong enough to relieve the home government of the great strain put upon it by foreign enlistments. The unnatural rebellion would soon be suppressed, he proclaimed, and to hasten that desirable event he offered to the inhabitants an opportunity to "co-operate in relieving themselves from the miseries attendant on tyranny and anarchy, and in restoring peace and good order with just and lawful authority." Recruits in the provincial corps for two years or the war were promised fifty acres of land, every non-commissioned officer two hundred acres. Deserters from the royal army coming in before Dec. 1, 1777, were offered a free pardon; those continuing in arms were assured they would receive no mercy. A liberal attempt was made to get a crew also for the captured frigate, "Delaware." In fact, Howe wanted men,

and he had just written home for five thousand reinforcements, "at the least."

The loyalists, however, did not respond cordially. Joseph Galloway, who was with Howe at this time, and afterwards criticized his methods bitterly and malignantly, without suggesting better ones, testified before Parliament that there were, within the lines in Philadelphia, when Howe occupied it, four thousand four hundred and eighty-one males capable of bearing arms; one-fourth Quakers,—leaving three thousand, and of these Howe got only nine hundred and seventy-four men in all, chiefly deserters, because, as Galloway says, he selected the "most unpopular men to recruit." Galloway also showed that during Howe's occupancy two thousand three hundred deserters from the Continental army came in and were registered and qualified, besides seven hundred or eight hundred who never reported. Of this number, he says that one-half were Irish, one-fourth Scotch or English, one-fourth native Americans. The exceptionally unpopular persons of whom Galloway speaks were people whom he did not like—William Allen, James Chalmers, commander of the "Maryland Loyalists," Col. Clifton, commander of "the battalion of faithful Catholics"—all respectable men and who had had great influence. Galloway himself proposed to raise a regiment, but only got warrant for one troop of light-horse of eighty men, in a battalion of three troops, who, all told, under Lieut. Hovender's command, did not outnumber one hundred and thirty-two men. Galloway was very angry, and abused Sir William roundly about pretty much everything. Howe, in return, did not give the renegade lawyer a very good character. He said he had expected great things of a man in Galloway's position and was therefore very liberal to him, gave him two hundred pounds a year at the start, made him police magistrate of Philadelphia with a salary of three hundred pounds a year, and six shillings per diem for his clerk, and also made him superintendent of the port, with twenty shillings per diem,—in all seven hundred and seventy pounds a year. "Had his popularity or personal influence in Pennsylvania been as great as he pretended it was, I should not have thought this money ill-bestowed," said Howe. "I at first paid attention to his opinions, and relied upon him for procuring me secret intelligence; but I afterwards found that my confidence was misplaced . . . in future I considered Mr. Galloway a nugatory informer." Allen never succeeded in getting together a strong corps, and the best as well as the most of the loyalist recruits went into the Queen's Rangers, Simcoe's corps.

Howe's position in Philadelphia was one capable of exciting the liveliest anxieties of a prudent commander-in-chief. On the north was Washington's main army, which had just shown itself bold enough and strong enough to attack him in his camp; south were the forts, galleys, *chevaux-de-frise*, and other obstructions, shutting him out from the navigation of

the Delaware; the New Jersey militia patrolled all the east bank of the Delaware; on the west of the Schuylkill the country was held and guarded by the Pennsylvania militia under Gen. Potter. The capture of Billingsport had by no means opened the river. There were *chevaux-de-frise* and sunken ships at Fort Mercer and Red Bank, and behind these were fire-ships, galleys, and floating-batteries.

In consequence of these things the commissariat of the army in Philadelphia was in a very poor condition, while the people of the city were greatly distressed for proper food. The militia prevented the farmers, who were willing to barter their goods for British gold, from taking in the products of their farms and dairies. Flour, salt, coffee, and vegetables were scarce and high, and butcher's meat also. Watson notes that the drove of cows killed in the battle of Germantown sold on the field for fifty cents a pound for beef. Commerce was totally destroyed, and Howe found himself in a state of siege. Paper money was valueless, those without hard money could not buy anything at all, there was privation and famine among the poor, and the scarcity of food increased every day as the weather grew colder. Rev. Dr. Muhlenberg, under date of October 22d, hears that there is no more fire-wood in the city; people are beginning to tear down fences and old houses for fuel, and flour was scarce at six pound per hundred.

It was necessary to resort to vigorous measures to restore communications. Howe at once built a strong chain of fortifications across the peninsula on the lines marked out by Putnam for the American defenses prior to the battle of Trenton, and then perhaps begun, but never completed. A description of this network of redoubts will be found in the chapter on topography. They extended in an irregular line from river to river, from the debouch of Cohocksink Creek to the summit of Fairmount, with abatis, stockades, and small batteries in between, and may be considered a very strong line of defense for an army. To have forced them successfully the assailing party must have had fully double the number of the defendants. This chain of works was supported by batteries at vulnerable or important points within the line, and by other engineering devices, such as ditches, dams, and abatis. The floating bridge over the Schuylkill was replaced by another, which was well defended by a *tête du pont* and by flanking batteries.

As soon as these lines were defensible Gen. Howe withdrew his army from Germantown, and took post in the city, thus contracting his defenses and setting free a large force with which to operate against the American fortifications and obstructions. This "change of base" was made on October 19th. The new British camp was still on the north side of the city; the Hessian grenadiers were bivouacked between Fifth and Seventh, Callowhill and Noble Streets, in the present city nomenclature; west of them was the camp of the Fourth, Fortieth, and Fifty-seventh

British grenadiers, and the fusiliers; eight regiments were upon Bush Hill; a body of Hessians were encamped where they could support the redoubt at the Upper Ferry; the jägers, infantry, and dragoons were on a hill near Twenty-third Street, and the present bed of the Reading Railroad; infantry were stationed where the Ridge road intersects Thirteenth Street, and in Eighth Street near Green; three regiments and the dragoons were posted hard by a pond on Race and Vine Streets, between Ninth and Twelfth; the Seventy-first guarded the redoubt at the Middle Ferry, and the Queen's Rangers, now under Simcoe, held Redoubt No. 1, at Kensington, patrolling the roads above.

The American commander-in-chief knew the importance of holding the forts on the Delaware, and preventing Admiral Howe from joining forces with his brother. He withdrew the New Jersey militia from the fort at Red Bank, which was now named Fort Mercer, and gave the defense of it to two regiments of Varnum's Rhode Island brigade, under the command of Cols. Christopher Greene and Israel Angell, who were instructed to hold the post to the last extremity, as the key to the Delaware and the

Washington, anxious for the defense of Mud Fort, as well as Fort Mercer, ordered Lieut.-Col. Simms, with the Sixth Virginia Regiment, to reinforce it. He crossed the Delaware below Bristol, and reaching Moorestown at eight o'clock P.M., heard that a body of the enemy was crossing at Cooper's Ferry. He reconnoitered the ferry himself with some dragoons and found no enemy, only a detachment of American militia, who were asleep. They were aroused and put on the *qui vive*. Simms then marched on to Red Bank and offered to remain in the fort and aid Greene in Donop's impending attack, now known; but Col. Greene, thinking it better for Simms to obey orders, sent him across the river to Mud Fort at daybreak. Meantime the Hessians were approaching by way of Haddonfield. At Timber Creek the bridge had been taken up, compelling them to make a *détour* of four miles. The advance was slow, but in the afternoon of the 22d the Americans saw the front of the enemy's columns emerging from the woods on the north and on the east of the fort.

Greene determined to husband his resources. His force was less than a sixth of the enemy's; his fort had but fourteen cannon mounted, and the outworks

"MUD ISLAND" IN 1777, BEFORE THE BRITISH ATTACK.
[From an old drawing made by Colonel Downman, of the British Army.]

pivot on which the success of the campaign depended. The French engineer, Mauduit Du Plessis, accompanied Greene. The lieutenant-colonels were Shaw and Olney, the majors, Thayer and Ward, and the surgeon, Dr. Peter Turner. Some of the privates were negroes. The fort was constructed on too liberal a scale for the garrison which could be spared for it, which did not exceed three hundred and fifty men, and Greene and Du Plessis set to work at once to contract the area of the outworks by a rampart, ditch, and strong abatis, which bisected them, reduced their size one-half, and doubled their power of resistance.

It was necessary for the British to reduce Red Bank before their vessels could get up the river to attack Fort Island. A combined naval and military attack upon the fort was therefore planned, and the admiral sent up a squadron of flatboats from below, under command of Capt. Clayton, which passed the forts, *chevaux-de-frise*, and gun-boats undiscovered and undisturbed. In these boats, Gen. Howe sent Col. Count Donop across the river to Cooper's Point, with the regiment of Myrbach, the infantry, chasseurs, and three battalions of Hessian grenadiers,—two thousand five hundred men.

were unfinished; but the galleys were anchored so as to protect the flanks of the fort in part, both above and below. Greene determined to resist at the outworks, but to reserve his main stand for the interior fort, in the southern angle of the works. The enemy halted at half cannon range, and sent an officer, with a flag, and a drummer to summon the garrison. The officer called a parley; Lieut.-Col. Olney went out to meet him, and was told that the King of England commanded his rebellious subjects to lay down their arms; if they resisted, they were to expect no quarter. Olney replied, "We shall neither ask quarter nor expect it, and we will defend the fort to the last extremity." The Hessians then began to throw up a battery at close range, and Greene, after making his final dispositions, mounted the ramparts and inspected the enemy through his field-glass. "Fire low, men," he said, "they have a broad belt just above the hip. Aim at that." At four o'clock the Hessian battery opened briskly. The fire was returned with spirit, and the American galleys joined in, the Hessians being within range of their guns. Under cover of the fire Donop divided his force into two columns for the assault,—the left, directed against

the south of the works, under his own command, the right, under Lieut.-Col. Minnegerode, directed against the northern outworks. The latter, marching first, were received with severe volleys from the ramparts and a galling enfilading fire from the galleys. They reached the parapets and scaled them, only to find them abandoned and to imagine the victory already their own. Shouting "victoria" and waving their hats they advanced with jubilant quickstep towards the inner redoubt. A volley welcomed them, in which the officer who had summoned the fort and his drummer both fell, with many another brave man. Those who were unhurt pressed forward to the abatis, and while they strove to force their way through this they were swept by a deadly fire from the ramparts and from an enfilading masked battery held by Du Plessis in an angle of the outworks and covered by a trench and loop-holed bank. They fell back, but rallied to the charge, only to be desolated by the withering fire from the fort, volley after volley. They wavered, fell back, rushed round to the river front and essayed to enter there, but the galleys quickly drove them thence with grape-shot, and they finally retreated in disorder to the woods, pursued by the effective cannonade of the galleys. Meantime, the southern column, under Donop, had advanced to the assault, while Greene's main body was still engaged with the column under Minnegerode. They encountered a destructive fire, but not enough to check them. They pressed onward, into and through the abatis; some crossed the fosse; some mounted the berme bank and were met by the palisades, smooth, nine feet high, not to be surmounted except with scaling-ladders, which Donop had not. The defenders of the north front now rushed to the aid of their comrades, and poured in such a fire that Donop's column, shattered and broken, fled routed.

The assault was not renewed. The garrison, after a pause, cautiously reconnoitering for fear of a surprise, at last sent out a repairing party under Du Plessis. Twenty Hessians, sheltered under the palisade, surrendered at once; beyond them, in the darkness, there was nothing but a confused mass of dead and wounded. The voice of Donop, calling to be drawn forth out of the heap, caught the ear of Du Plessis. The Hessian's hip was shattered, and some of his captors reminded him that no quarter was to be given. "I am in your hands; you can avenge yourselves," said Donop. But Du Plessis had him borne to the redoubt, where, as his wounds were being dressed, he noticed Du Plessis' accent, and finding him to be a French officer, murmured, "Je suis content; je maurs entre les mains de l'honneur même." This is Du Plessis' account. But Maj. Thayer claimed to have received Donop's surrender, and to have brought him in from the edge of the woods in a blanket. He was next day removed to the house of Whitall, a Quaker, southeast of the fort, where he died at the end of three days, lamenting a

glorious career, cut short in his thirty-eighth year by his own ambition and his sovereign's avarice. His son, and others also, said that Donop and other Hessians were sacrificed by Howe, who always assigned them the part of danger to spare his own compatriots. Lieut.-Col. Minnegerode, his second in command, was also wounded in this assault, with fourteen other officers. The Hessians left all their wounded upon the field, retreating a distance of five miles, and the next day returning to Philadelphia as they had come. They had lost four hundred killed and wounded, while the American loss was eight killed, twenty-nine wounded, and one taken prisoner,—a captain, who was surprised while reconnoitering.¹

The naval co-operation in the assault upon Red Bank was almost as dismal a failure as the military attack. Lord Howe sent up the "Augusta," Capt. Reynolds, afterwards "Lord Ducie," a 64-gun frigate, the "Roebuck," 44, Capt. A. S. Hammond; the "Liverpool," 28, Capt. Quelest; the "Pearl," 32, Capt. O'Hara; the "Merlin," 18; and the "Cornwallis Galley," 32, all of which continued to get through and above the *chevaux-de-frise*. The channel, however, had been altered by the obstructions; the "Augusta" grounded near the mouth of Manto Creek, and the "Merlin" just beyond her; and before morning the "Roebuck" also was aground. The other vessels cannonaded the fort, without doing it hurt, and the galleys coming down with the darkness, the firing ceased. The tide had not floated the British vessels when morning came and disclosed their perilous predicament to the Americans. Commodore Hazlewood at once advanced to the attack with twelve galleys and two floating-batteries. Four fire-ships were also sent against the "Augusta," but, being in a good defensive position, this frigate plied her batteries so lustily as to cripple the fire-ships, so that they passed her by unharmed. The "Roebuck" got afloat; the firing became hot and furious, the forts joining in, and other British vessels warping up, when the "Augusta" took fire, either from hot shot or from her own guns, and her magazine exploded before all the crew could be removed, involving a considerable loss of men. The other ships were driven back, and the "Merlin" was abandoned and burnt by her own crew.

The signal failure of these attacks did not make it less imperative for the British general and admiral to open the Delaware to the fleet. That must be done, or Gen. Howe must abandon Philadelphia, for he could not supply his army. The main attack was now directed against Fort Mifflin, on Mud Island, and was pushed with great vigor. On the land side the works on Fort Island were weakest, and batteries

¹ A monument was erected, in 1829, within the northern angle of the old redoubt at Red Bank, in commemoration of its gallant and skillful defense. Donop was buried between the fort and Whitall's house, where Chastellux saw his tombstone in 1780. The grave was long ago rifled, however, and the brave Donop's bones distributed as relics.

were erected against them on every available point on the adjacent shores. These were begun before Donop's assault had failed. One battery, two guns, was in Schuylkill Neck, by Penrose Ferry; on Province Island were five batteries, twenty-six guns, twenty-four- and thirty-two-pounders, borrowed from the ships of the line in the Delaware. The garrison of the fort was not idle. Lieut.-Col. Smith, in command since September 27th, had not only strengthened the place as much as possible, but had also taken the offensive, in conjunction with the galleys and gun-boats, against one of the batteries on Province Island, which was captured by assault. Greene, Potter, Reed, and other American officers also planned to relieve the fort by attacking the British batteries in the rear, but the swampy nature of the ground prevented, and Washington was unable to make any strong demonstration against Philadelphia, owing to the ambition of Gates, silly if it had not been criminal, to figure as commander-in-chief, which led him to withhold reinforcements from Washington after Burgoyne's surrender. Two brigades of new troops would have prevented the Delaware from being opened, and would have compelled Howe to evacuate Philadelphia and retreat to New York or the Chesapeake.

When the first week in November arrived the British were ready for a combined attack upon Fort Mifflin. In addition to the batteries mentioned, and the mortars and howitzers in position, an East India-man, the "Vigilant," had been cut down and formed into a floating-battery, carrying sixteen twenty-four-

PLAN OF FORT MIFFLIN.¹

hundred guns, besides mortars, to be trained against Mud Island. That post had not been planned for any other end than to command and sweep the chan-

nel, and its defenses on the north and west were indifferent. On the southern front a strong and effective battery of eight guns commanded the channel from Hog Island to the Jersey shore; but the other sides and corners of the work were defended simply by wooden block-houses, mounting four guns each, with stone walls, embankments, and stockades for sheltering the men, faced with wet ditches, but not defended by artillery. There were not near guns enough, or of the needed calibre, to hold their own against the British batteries. The garrison consisted of three hundred men, under command of Lieut.-Col. Samuel Smith, of Maryland, a host in himself. He was aided by Maj. Fleury, a gallant and competent French engineer, and Lieut. Treat, of Lamb's Regiment, commanded the artillery. The fort was not without other support. Opposite, on Brush Island, was a two-gun battery; there were twelve galleys and two floating-batteries under Red Bank, with twelve armed boats, the sloop "Province," the brigs "Convention" and "Andrew Doria," and some other craft, while Greene still held Fort Mercer; there was a three-gun battery below, at the mouth of Manto Creek, and Varnum's Rhode Island Brigade had been sent down to sustain the fort against a land attack.

The batteries on Province Island opened fire on Fort Mifflin on November 10th, killing Lieut. Treat, wounding many, and damaging the defenses and barracks. The garrison responded with spirit, but the firing slackened at nightfall, to be renewed next day with greater violence, doing great injury to the fort on the north side. That night the garrison was kept busy repairing their breaches, during which time the British found a channel between Province Island and the Pennsylvania shore (ordinarily very shallow, but now scoured out by the jetty action of the *chevaux-de-frise*), and three vessels passed up to prove it. Col. Smith, Maj. Fleury, and Capt. George had been wounded in the previous day's cannonade, and the command devolved upon Lieut.-Col. Russell, of the Connecticut troops, and fresh troops from Varnum's command were sent over from Red Bank, as well as working-parties to repair the fortifications at night. On the 12th the fire from the batteries dismounted two eighteen-pounders, while the enemy, approaching in boats, alarmed the garrison at night. Col. Russell threw up the command, and it now devolved upon Maj. Simeon Thayer, of Rhode Island, who volunteered. More British guns opened on the fourth day, the sentry walk was ruined, the block-houses crumbled to dust and splinters, the garrison was exhausted "with fatigue and ill-health." The enemy continued their fire all night, and under cover of it the British floating-batteries were brought up the channel between Hog Island and the main, at the southwest angle of the fort, overtopping it, and close enough to make every shot tell. The ships of the royal navy were also brought up within range, the "Somerset" and "Isis" to engage the fort, the "Roebuck,"

¹ EXPLANATION.—a, the inner redoubt; b, b, b, a high, thick stone wall, built by Montrossor, with indentations, where the soldiers boiled their kettles (this wall was pierced with loop-holes for musketry); c, c, c, c, block-houses, built of wood, with loop-holes, and mounting four pieces of cannon each, two on the lower platform; d, d, d, barracks; e, e, e, stockades; f, f, f, trons de Loup; g, g, ravines. On the southeast side were two strong piers and a battery mounting three cannons.

"Pearl," and "Liverpool" to silence the three-gun battery at Manto's Creek, and then a terrible cannonade was opened, exposing the defenders of Fort Mifflin to a cross-fire of dreadful intensity. They stood to their guns; the galleys and ships came to the rescue, and the fort silenced the "Vigilant" floating-battery before noon. On the 14th the "Vigilant" battery got into a new position, commanding the garrison at their guns, and near enough to use musketry and hand-grenades, and in twenty-four hours Fort Mifflin, or Mud Fort, as it was then called, no longer existed as a defensive work,—its guns were dismounted, its parapets leveled, its block-houses destroyed. On the morning of the 16th, Thayer, disdaining to surrender, evacuated his no longer tenable post, carried off his wounded, stores, and garrison, set the ruins of the fort on fire, and retired in the blaze to Red Bank. It was the most gallant defense of the war; yet Congress, while voting a medal to Smith, gave no token to Thayer of recognition of his services. Fleury was promoted, but Thayer was not. The British loss was small; that of the Americans was two hundred and fifty killed and wounded in the fort, and a fourth as many in the fleet. Gen. Knox, writing to Col. Lamb, said that the fire the last day of the attack "exceeded by far anything ever seen in America," and that the defense was "as gallant as is to be found in history." The defenders were Lieut.-Col. Samuel Smith, commander September 27th to October 11th, wounded and removed to Fort Mercer; Col. De Arandt, a Prussian, sent to supersede Smith, but withdrew, slightly wounded; Lieut.-Col. Russell, commander October 11th and 12th, retired; Maj. Thayer, in command from November 12th till evacuation; Maj. Louis de Fleury, engineer till evacuation; Lieut.-Col. Green, of Virginia, with reinforcements, in November; Maj. Ballard, went in with Smith, remained till evacuation; Dr. Skinner, surgeon, of Maryland, during siege;¹ Lieut. Treat, killed; Capt. Hazzard, of Delaware, wounded; Capt. George, wounded; Capt. Lee, went in with Smith, and remained till evacuation; and Sergt. Moses Porter (afterwards major-general in the war of 1812), in the fort until the evacuation.

The Pennsylvania fleet in the Delaware found itself in a *cul-de-sac* by the evacuation of Fort Mifflin. It could not maintain its present position, nor could it pass up the Delaware except under the guns of the British batteries in Philadelphia. A council of war was held aboard the "Chatham" galley on the 14th, and another at Fort Mercer on the 18th. At the latter,

Gens. St. Clair, De Kalb, and Knox were present. The final result was that the fleet would be of no more service in its present position, and Commodore Hazlewood was recommended to profit by the first favorable wind to try to pass up the Delaware, above Philadelphia. On the night of the 19th the attempt was made, and thirteen galleys and twelve armed boats succeeded in getting past. The next night the "Province," sloop, some ammunition craft, and others with cannon made their way up, but the "Convention," schooner, "Delaware," sloop, and other vessels were fired on and the "Delaware," schooner, and a shallop were driven ashore. The Continental fleet, the "Andrew Doria," the xebecs "Repulse" and "Champion," sloops "Racehorse" and "Fly," ship "Montgomery," and floating-batteries "Putnam" and "Arnold," would not follow. The wind baffled them; they were exposed to a heavy fire, and at Gloucester Point were set on fire and abandoned. "I walked down to the wharf at 4 o'clock this morning" (is Robert Morton's entry for November 21st) and seen all the American navy on fire coming up with the flood tide and burning with the greatest fury. Some of them drifted within two miles of the town, and were carried back by the ebb tide. They burned nearly five hours. Four of them blew up."

Meantime, Gen. Varnum evacuated Fort Mercer. Cornwallis, with two thousand men—the Fifth, Fifteenth, Seventeenth, Thirty-third, and Fifty-sixth Regiments, Hessians light infantry, twelve guns, and some howitzers—was sent by Howe, as soon as Fort Mifflin was captured, against Fort Mercer. He marched on the night of the 18th, crossed the Schuylkill at the Middle Ferry, and took the road to Chester. At the Blue Bell Tavern, near Darby, the American picket, of thirty-three men, was surprised. They made resistance, killing an officer and two privates, and losing several men wounded and captured. Cornwallis marched all night, reaching Chester on the morning of the 19th, crossed the Delaware and united with a division of three thousand men, under Sir Thomas Wilson, just sent by Sir Henry Clinton from New York. Washington had sent Greene down to the relief of Red Bank, but Varnum did not wait, but evacuated the fort while Cornwallis was yet at Billingsport, though he had eighteen hundred men with him; Huntingdon's brigade, Greene's advance, twelve hundred men, was coming right up, having crossed at Dunk's Ferry, and Greene and Lafayette, crossing at Burlington, with a division of troops, were not far in the rear.

Varnum went to Haddonfield. Cornwallis marched up the river bank, demolished the works at Fort Mercer, and took post at Gloucester, intrenching himself. When Huntingdon and Greene had come up with Varnum at Haddonfield, the propriety of attacking Cornwallis was considered. There was no battle but some skirmishes. Lafayette, with some of Morgan's riflemen, a few militia and light-horse, ac-

¹ This is that Alexander Skinner, of Maryland, who figures so humorously in Graydon's "Memoirs" and in "Light-Horse" Harry Lee's "Memoirs" as the duelist doctor who would not go under fire, and who served as the original for Cooper's portrait of Dr. Sitgraves in "The Spy." He was evidently a man full of oddities and eccentricities, and Lee would not have perpetrated so many jokes about his courage had he not known the many proofs to which it had already been put. The Skinner family are of old establishment upon the Eastern Shore of Maryland.

accompanied by Col. Armand, Col. Laumoy, and Du Plessis and Gimat, attacked a picket and drove in an outpost of Hessians on the King's road, on the 25th. After this Cornwallis returned to Philadelphia and Greene rejoined Washington. The Delaware was open.

None too soon, for inhabitants and troops in Philadelphia were both on short allowance and in great distress. The leaguer had been very close. Simcoe's rangers, patrolling the Frankford road, to enable the Bucks County farmers to come in with their produce, had found plenty of skirmishing to do, but a very close and vigilant picketing within the sphere of their operations. Once they marched as far as the Red Lion; another time they attempted, but failed, to surprise the American picket in Frankford, a third time they captured a militia outpost,—an officer and twenty men. But the Americans still prevented the market-people from coming down below Frankford, and often Pulaski's light horse beat up Simcoe's quarters in Kensington. On the south of the city Greene, with Potter and McDougall, kept equally close watch. At the time of the attack upon Red Bank a detachment of the British, fifteen hundred strong, with one hundred and thirteen wagons, crossed at Gray's Ferry, on a floating bridge, and proceeded to fortify on the other side of the Schuylkill. Greene planned an attack upon them which forced them to withdraw to the east bank and remove the bridge to the Middle Ferry. Potter and his militia kept watch so close that there was neither exit nor entrance to the city on south or west side, and provisions became very scarce and high. Salt brought four dollars per bushel in hard money; butter one dollar per pound; sugar one shilling sixpence sterling (equal to six dollars in Continental money); beef, of milch cows, one shilling sixpence to two shillings sixpence per pound.

The attempt was made to conceal the extent of these distresses, but it was clumsily done, and even the subsidized local newspapers, like the *Pennsylvania Ledger*, when describing the British army rolling in plenty, could not abstain from reproving the rebels for leaving their families to suffer and cutting off provisions from them in the moment when they were subsisting upon British charity. This paper boasted that deserters were coming in so rapidly that Howe would soon be able to fight Washington with his own army. Surely, said the *Ledger*, "they will not have less heart and courage upon hard dollars, good clothes, good provisions, a good cause, and good officers than they had with paper stuff, ragged clothes, stinking provisions, and bad officers." Still, the British had to call on the inhabitants for six hundred blankets for the use of the troops, cut down the groves within the city for firewood, forbid citizens from purchasing clothes from soldiers, and permit the circulation of colonial currency. This was granted upon a petition of citizens,

the colonial currency of the old province being allowed to be taken at the rate of two for one of specie.

The names of the signers to this petition show who were the Tories, Quakers, and non-combatants remaining in Philadelphia during the British occupation. The list is as follows:

Joseph Galloway, William Fisher, Jeremiah Warder, Joseph Fox, John Head, James & Drinker, Abel James, John Reynell, Samuel Shoemaker, Abraham Mason, John Brighthurst, James Stuart, James Brighthurst, Benjamin Titly, Peter Howard, Jos. An easier money arrangement could not relieve actual scarcity of the necessities of life, and it was a great boon to the troops as well as the inhabitants, when the fall of the forts and the opening of the *chevaux-de-frise* at last raised the blockade of Philadelphia. The meat-ration of the soldiers had been cut down to a quarter of a pound per man. The prisoners suffered great privations. At the very beginning

of their captivity they had been limited to a fourth of a pound of beef and four and a half pounds of biscuit every three days,—that is to say, one and one-third ounces of meat and one and one-half pounds bread per diem. Soon they were reduced to four ounces of salt pork and six pounds of biscuit every eight days,—one-half ounce of meat and three-quarters pound bread per diem. This was famine diet, and many enlisted in the British army to escape starvation. In the markets beef was a dollar a pound, and a chicken sold for ten shillings. Potatoes were sixteen shillings hard money per bushel. But on November 26th thirty sail of transports and supply-ships came up, with horses, provisions, and fresh troops, and some of the frigates came up also.

The storeships, however, were not allowed to break bulk until some regulations for trade had been fixed. Gen. Howe made John Henderson and Joseph Galloway wardens of the port. The latter was further named "superintendent-general" for the security of the inhabitants, the suppression of vice, the preservation of peace, support of the poor, maintenance of the watch and lamps, and regulation of the markets and ferries, with power to appoint a police, assisted by the city magistrates. He at once issued an order regulating terms of buying and selling. Common rum and spirits could not be sold, except by the importer, the limits being not more than a hogshead nor less than ten gallons to a single person at one time. To sell more than a hogshead of molasses required a permit, and those who retailed these goods were punished. To sell more than a bushel of salt required a permit, and so with medicines by the quantity. Taverns had to have licenses from Galloway, who also revived the old city corporation and appointed Samuel Shoemaker mayor. Howe, the contemporary journal said, kept himself secluded. A letter in Dunlap's Lancaster paper said that "the general is seldom seen. His debaucheries and the immorality of his character are disgusting to those who wish to befriend him." Galloway, this letter (which was dated December 10th) said, was already discontented with the way Howe treated him, and the people of the town looked upon the superintendent with distrust, contempt, or hatred. The Allens were reported as "insolent and cowardly;" every little alarm threw them into despair and every little success gives them an opportunity of showing what tyrants they would be had they power equal to their inclinations. Stansbury, who is called a cringing sycophant and the unprincipled Huck, with the Allens and Galloway, made up Howe's Tory *entourage*.

With the transports and the new *régime* arrived a locust swarm of strangers eager to profit by trade openings and plunder the people of the captive city. They took possession of the stores and shops of the absent Whigs, and opened them for the sale of their own goods. James McDowell took Gilbert Barclay's store on Second Street, Bird's London store supplanted

Mrs. Devine's, George Leyburn ensconced himself in Francis Tilghman's store, William Robb sold merchandise where William Redwood had served his customers, Ninian Mangies took Thomas Gilpin's place, John Brander, Isaac Cox's, Thomas Blane succeeded to Mease & Caldwell, and many deserted taverns were reopened by the new Tory adventurers. Christopher Marshall's diary has it that "news is from Philadelphia that there are one hundred and twenty-one new stores, amongst which is one kept by an Englishman, one by an Irishman, the remainder being one hundred and eighteen Scotchmen or Tories from Virginia." These adventurers did not like to be compelled to take paper money under the new regulations. They wanted the solid cash, such as they could carry off with them on any sudden occasion, and the satirists of the town did not let their sordidness escape unlashd. One bard sung in the "Chapman Billy" style,—

"Here you have salt for your broth,
And here you have sugar and cheese-a;
Tea without taxes or oath,
But down with your gold, if you please-a.
Here we go up, up, up,
And here we go down, down, down-a;
Here we go backwards and forth,
And here we go round, round, round-a.
* * * * *
"Then spurn at the wise old Dons
Who make for their paper a route-a;
Here's goods for your gold at once,
Come out with your gold, come out-a, etc.
* * * * *
"Come! surely I've told you enough;
We have all that you want and wish-e;
But pray give us no paper stuff,—
We come for the loaf and fish-e.
Here we go up, up, up, etc."

Joseph Stansbury, the witty and accomplished Tory scribbler, got up a "Petition of Philadelphia to Sir William Howe," in verse, by which it appears that the ground of the rejection of the currency by the strangers was that the notes were issued against landed security, and the rebels held all the lands and mortgages too,—

"And reasoning thence, have so mistook the case,
They hold the money's tottering in its base."

The petition avers that not only did the government sanction the paper money, but "many friends of government in town

"Sold each half-joe for twelve pounds Congress trash,
Which purchased six pounds of this legal cash;
Whereby they have, if you will bar the bubble,
Instead of losing, made their money double!"

The half-joe (johannes) was worth about thirty-five shillings sterling, so that they fetched two hundred and forty shillings in Continental money, and these again one hundred and twenty shillings in provincial currency,—three and three-seventh for one.

Howe had a census of the population of the city taken shortly after his entry. The return was as follows:

WARDS.	Houses (number).	Dwellings (empty).	Stores (empty).	Stores (occupied).	Males (under 18).	Males (18 to 60).	Females.
Mulberry.....	983	113	11	6	884	834	2,293

Total.....	5395	590	240	116	5335	4996	13,403

"The preponderance of women and children in this census," says Mr. Westcott, "is remarkable. In times of peace the ratio of population was different. It is probable that nearly six thousand men—the most active and patriotic of the citizens—were absent. Galloway, in his 'History of the War,' estimates that of the able-bodied men who remained, one thousand were Quakers. The rest, being about one-eleventh part of the population, had fled. This estimate would have made the absent patriots to have been from 2500 to 3000, entirely too small a number." It seems possible to get at the number of persons absent and the actual population of Philadelphia, absentees included, more nearly than this, from the data given above. The preponderance of females in the normal population of a city like Philadelphia would be about five per cent. The stores enumerated do not include shops, nor stores and dwellings combined—the total is too small for that—but only the buildings used chiefly for business purposes. The empty houses, again, were only those from which all the people were absent, male and female. The average of the three enumerations of 1753, 1760, and 1769, gives 6.3 inhabitants to a dwelling-house. If we allow one-half the stores to have been also dwellings in Howe's enumeration, the normal population of Philadelphia in 1777 would have been 35,000; the absentees would be 11,260, of whom (deducting the females left in town) 4600 would be females and 6660 males, the natural militia quota being ($\frac{1}{2}$) 2664. How far Howe's estimates were vitiated by the presence of camp followers and refugees cannot be determined.

The British were guilty of wanton destruction of property after the evacuation of Fort Mifflin, burning the houses north of the line of fortifications. The number of houses burned, as marked down on Col. Nicola's map, was twenty-seven, two being inside the line. Morton says, in his diary, November 22d, "This day the British set fire to the Fairhill mansion house, Jonathan Mifflin's and many others, amounting to eleven, besides outhouses, barns, etc. The reason they assign for this destruction of their friends' property is on account of the Americans firing from these houses and annoying their pickets. The

generality of mankind being governed by their interests, it is reasonable to conclude that men whose property is thus wantonly destroyed, under a pretence of depriving their enemy of annoying them on their march, will soon be converted and become their professed enemies. But what is most astonishing is their burning the furniture in some of those houses that belonged to friends of the government, when it was in their power to burn them at their leisure. Here is an instance that Gen. Washington's army cannot be accused of." He instances Chew's house in Germantown. The Tories who suffered were numerous, only William Henry being spared. Mrs. Deborah Logan wrote to Col. Garden, "From the roof of my mother's house, on Chestnut Street, we counted seventeen fires, one of which we knew to be the beautiful seat of Fairhill, built by my grandfather Norris and owned by his family, but in the occupation of the excellent John Dickinson, who had married my cousin. It was full of furniture and part of a valuable library, which the pressure of the times had prevented the family from securing when they sought their own safety in flight." Stenton was about to be fired, but was saved by a quick-witted negro woman, servant in the house, who caused the two men sent to destroy it to be arrested as deserters. The British were ashamed of this incendiaryism.

On November 24th, Washington came near the city to reconnoiter the British lines, with a view to see whether they might be attacked during Cornwallis' absence. They were found to be too strong, however, to warrant an attack, and the plan was abandoned. As soon as Cornwallis rejoined Howe, the latter determined to attempt a surprise of Washington's quarters. The latter, after a council of war, moved his camp, on November 29th, from the Skip-pack to White Marsh, sixteen miles from Philadelphia, where it was supposed the army would go into winter-quarters. Howe was already preparing for his movement, and Col. John Clark, Jr., chief of the spy service, kept the American commander apprised of the British movements. He wrote on December 1st, "On Friday evening orders were given to the troops to hold themselves in readiness to march. They either mean to surprise your army or to prevent your making an attack on them." . . . December 3d he wrote, "The enemy are in motion," boats were got ready and the men furnished with two days' rations. The movement, in fact, was known in Washington's camp on November 29th, as a letter of Gen. Armstrong's proves, and this destroys the credibleness of the romantic story of Lydia Darrach, the Quaker lady, who is said to have overheard the British officers, who lodged with her, discussing their intended surprise, made an excuse to go to mill next morning, and so rode to the American lines and put Washington on his guard. But if Howe had contemplated a surprise his pickets and sentinels would scarcely have let a woman pass the lines, and enter the enemy's lines and

return, unquestioned. The entire story, in fact, is unworthy of credence. So well assured were the Americans of Howe's purpose to attack that Armstrong ordered Potter's militia to come up and join them.

On December 3d the royal army marched out from Philadelphia fifteen thousand strong, Howe in command. Next morning Armstrong wrote from the camp at White Marsh, "My division is on the march to meet the enemy, as, I presume, is the whole army. I can only add that the advanced guard of the enemy is said to be on this side of Germantown." Capt. Allen McLane, of the Delaware light horse, a most gallant and adventurous officer, and the ancestor of a distinguished family, reconnoitered the enemy on the 3d, attacking their advance on the Germantown road at Three-Mile Run, and causing the enemy some embarrassment and delay. At eight o'clock A.M. on the 4th the British troops arrived at Chestnut Hill, and halted. This was but three miles below the American camp, at which all the troops remained except detachments sent out to skirmish. Potter, with a portion of his brigade, manoeuvred at Barren Hill Church against Howe's left; Gen. James Irvine, with six hundred men, skirmished in his front, having failed to reach Chestnut Hill before the enemy. The general's horse fell with him, he was wounded in the hand, and captured, his militiamen running away. On Howe's side there were a few casualties, but the skirmishing was cautious on both sides. Howe drew up his army for battle with the right resting on the Skip-pack road, at Chestnut Hill, the left on the Wissahickon,—a strong defensive line. Here he manoeuvred to draw Washington out of his Barren Hill and White Marsh lines, but unsuccessfully. Next day Howe moved nearer, but on the same line. Washington held the same impassive front. On Saturday night, December 6th, Howe moved towards the York road, on the American left. Next morning Potter's brigade with Webb's Continentals fell upon and skirmished with the enemy's rear in a woods, but soon fell back. Gen. Joseph Reed had a horse shot under him, and barely escaped capture. Morgan's riflemen, with Gist's Maryland militia, skirmished with Howe's right as it was still being extended, and at Edgehill there was a spirited brush with the enemy, in which each side lost about twenty killed and wounded. On the 8th the enemy manoeuvred about in an apparently indefinite fashion until after night, when, kindling up his camp-fires brightly, he marched silently back to Philadelphia, thus declining the battle which Washington had offered him, except upon his own terms, in spite of the duelist's axiom that the challenged party has choice of weapons and ground. On their rearward march the British burned the Rising Sun Tavern, in Germantown, and all the farm-houses still standing between that place and the city. Washington was surprised at Howe's prompt retrograde, for his officers had boasted they were going to drive

Mr. Washington "over the Blue Mountains." Howe and his officers were mortified, and said very little of the march to Chestnut Hill and back again.

Christopher Marshall says of this abortive performance that news was received "that Gen. Howe left Philadelphia on the 4th inst. at eleven at night with his army, consisting of ten thousand men, marched towards Germantown, attacked and drove our picket guard, which, being reinforced, returned, drove their advance guard back, killed near twenty, among which a brigadier-general, captain, etc., took sixteen prisoners, and that we lost Gen. Irvin, who was wounded and taken prisoner, one colonel, one captain, twelve or fourteen privates killed, and maintained our post that night; that next day a general engagement, it was thought, was unavoidable, as the two armies lay in sight of each other; and that the enemy had burned Beggarstown in their front. . . . 11th. It is said that Gen. Howe, after giving out in Philadelphia that he was going to drive Gen. Washington and his army over the Blue Mountains, after marching his whole army up to Chestnut Hill and staying there some days, last First day decamped and returned to Philadelphia on the Second day, leaving behind him about two hundred of his men, in slain and taken prisoners. It's said they have pillaged and taken with them everything that came in their way that was portable and of any value, besides burning and destroying many houses and effects; also taking with them, by force, all the boys they could lay their hands on above the age of ten years. Thus, this time, has the great boaster succeeded in this vain-glorious expedition, to the eternal shame of him and all his boasting Tory friends." Morton's diary, December 8th, says, "This ev'g, to the great astonishment of the citizens, the army returned. The causes assigned for their speedy return are various and contradictory, but y^e true reason appears to be this, that the army . . . thought it most prudent to decline making the attack. The Hessians on their march committed great outrages on the inhabitants, particularly at John Shoemaker's, whom they very much abused. Bro't off about 700 head of cattle, set fire to the house on Germantown road, called the Rising Sun, and committed many other depredations, as if the sole purpose of the expedition was to destroy and to spread desolation and ruin, to dispose the inhabitants to rebellion by despoiling their property, and to give their enemies fresh cause to alarm the apprehensions of the people by these too true melancholy facts."

On the 11th, Lord Cornwallis, with three thousand men, crossed the Middle Ferry bridge to march into the region northwest of the city on a foraging expedition. Gen. Potter had a picket of militia at the

bridge, who fired on the enemy as they advanced. Two regiments were stationed at Charles Thomson's place in Lower Merion, and three a short distance off. These offered the enemy a rather stubborn resistance, the regiments of Chambers, Lacey, and Murray behaving very well and retiring slowly. Washington had broken camp at White Marsh to go to winter-quarters at Valley Forge the day before, and Sullivan's division, in the van, as they crossed the Schuylkill, found themselves face to face with Cornwallis. It was a mutual surprise. Sullivan retreated, partly destroying the bridge at Watson's Ford, and Cornwallis withdrew with his plunder. Sullivan's men indeed were in no condition either to attack or to pursue. They were half naked, and printed the blazon of their weary march in blood upon the road. The army went into winter-quarters,—the dreary vigils of Valley Forge,—and there were no more operations of consequence by either

WASHINGTON'S HEADQUARTERS AT VALLEY FORGE.

army until the campaign of 1778 opened. Cornwallis reached the city on the 16th, his column embarrassed with the plunder of the upper country. Every farmstead had been stripped and outraged. As Col. Pickering said, "They have committed great devastations, as usual; but 'tis some consolation these calamities have fallen upon their best friends."

On December 19th, Capt. Andrew Cathcart, of the Seventeenth Light Dragoons (he was a "right honorable," a staff officer and favorite of Clinton's, prominent in the Meschianza and wounded at Monmouth), was out with a squadron of his men when they surprised an American picket of eighteen men at an outpost four miles from the city. Seven were cut down at once; the others, being in Wood's barn, Roxborough, near Flat Rock (Manayunk), did not respond to the first challenge to surrender, when, as Rivington said, Cathcart was "constrained" to fire the barn and burn it and the men to ashes. The men were troopers of

Lee's legion, and a monument was erected to their memory in 1860. During Christmas week a party crossed the Delaware and made a raid into New Jersey, carrying off stock, forage, and provisions. Another detachment about the same time crossed at Gray's Ferry and took the road to Chester and Darby, with three hundred wagons. Howe and Erskine were with them; they made a demonstration towards Chester, but the hay on Tinicum Island was their real object. Several pickets and detachments skirmished on their front and flank, under Capt. Potterfield, and Col. Bull with a brigade was sent down to force the foragers to retire by demonstrating against the enemy's lines. His forces were distributed on the Frankford, Germantown, and Ridge roads, and caused the enemy to sound a general alarm. Bull planted his cannon and fired several shots at the heart of the city, then withdrew to Frankford, but did not cause the foragers to return until they had secured all their plunder. Morgan's Rifles, however, worried their flanks in returning and took thirty-four prisoners. The enemy took up the bridge and made no more raids.

During this period, though communications were restricted, there were generally illicit means of correspondence between town and country, and information of importance could always find conveyance through the lines. An employé of Robert Morris came into the American camp in November, found Morris, and told him he bore a message from Gen. Howe, through Thomas Willing, to the effect that if the Americans rescind the independence ordinance, he and Lord Howe had authority to restore all things to the *status quo ante bellum*—the condition existing in 1763, including the paper money. Morris communicated his news to Duer, a member of Congress; Brown was arrested as a spy; he had no credentials nor authority to show, and the Lancaster Committee of Safety clapped him in jail "for aiding and assisting the enemies of this commonwealth, and forming combinations with them for betraying the United States into their hands." Thomas Wharton, Jr., president, issued an address, ridiculing Mr. Brown's self-imposed mission and showing how absurd it was. "Were we a tribe of savages," it says, "this talk would be at least accompanied with a belt of wampum; but to us not even the slightest token is vouchsafed." Brown was kept in jail, though Robert Morris offered to be his parole, and Washington considered him "a worthy, well-disposed person." In fact, the distress of the people was too great to permit any tampering with the notion of a return of peace and plenty.

The Assembly of the State secured its first quorum at Lancaster in the second week in October, and an act was passed creating a Council of Safety, and investing it with extraordinary powers, in view of the enemy's presence, especially to seize property, levy troops, and punish traitors. This committee was made up of the Supreme Executive Council, with the following gentlemen added: John Bayard, Jonathan

Sargeant, Jonathan B. Smith, David Rittenhouse, Joseph Gardner, Robert Whitehill, Christopher Marshall, James Smith, of York, Jacob Orndt, Curtis Grubb, James Cannon, and William Henry, of Lancaster. This council was to sit during the whole of the Assembly's recess; to keep the army supplied and reinforced, prevent the British from getting supplies, and break up the forestalling and engrossing of provisions. It sat from October 17th to December 6th, and was then dissolved. One of its first acts was a confiscation ordinance, directed against the estates of all who had joined or should join the British army, or who supplied it with food. The commissioners to carry this act into effect for Philadelphia County were William Will, Sharpe Delaney, Jacob Schriener, Charles Wilson Peale, Robert Smith, and Samuel Massey; for the county, William Antis, Robert Loller, James Stroud, Daniel Heister, and Archibald Thompson. A general ordinance against the several forms of forestalling was passed, and a regular price of eight shillings sixpence per gallon, Pennsylvania currency, was set for whiskey, other than that sold by sutlers in camp. Committees were appointed to seize blankets and clothing from all who aided the enemy or refused the oaths, an offset price, however, being allowed.

There were no elections in Philadelphia this fall; in the rest of the State they were held at the usual dates, but the Assembly could get no quorum until late in November. Congress called on Pennsylvania to raise \$620,000 by taxation, and the Assembly accordingly provided for a Continental loan office, where interest-yielding certificates were exchanged for money or produce. The loan commissioners for Philadelphia County were Matthew Clarkson, John Evans, John Mitchell, Andrew Bunner, and Marshall Edwards. By act of Congress all grain crops within seventy miles of Philadelphia were required to be threshed out as soon as matured or be subject to seizure. The Assembly did not pass any act to give this law effect, but Washington repaired the neglect by a proclamation from Valley Forge.

Meantime, quiet Philadelphia began to accustom herself to the riot and fever of a garrison town in time of war and on the frontier of hostilities. The soldier, a nomad and unsettled, has a life of dull routine, broken in upon by flashes of wild and exciting adventure. His existence is almost purposeless from day to day, and he pursues with peculiar zest the passing promise of enjoyment. Glory may be his goal, but to kill time is his present and immediate object, and pleasure is elevated in his eyes as the only cure for the dull and deadly ennui of the camp and barracks.

"Das ist ein Stürmen,
Das ist ein Leben!
Münschen und Bürgen
Müssen sich geben.
Kühn ist das Mühen,
Herlich der Lohn!
Und die Soldaten
Ziehen davon."

The town did not impress its conquerors favorably at first. A British officer wrote of it in October: "I cannot say much for the town of Philadelphia, which has no view but the straightness and uniformity of the streets. Till we arrived, I believe, it was a very populous city, but at present it is very thinly inhabited, and that only by the *canaille* and the *Quakers*, whose peaceable disposition has prevented their taking up arms, and consequently has engaged them in our interests, by drawing upon them the displeasure of their countrymen." The Hessian, Capt. John Heinrichs, whose correspondence was unearthed by Professor Schlözer, of Gottingen, wrote that "if the Hon. Count Penn should surrender to me the whole country for my patent on condition that I should live here during my life, I would scarcely accept it. . . . Among one hundred persons, not merely in Philadelphia, but also throughout the whole neighborhood, not one has a healthy color, the cause of which is the unhealthy air and the bad water."

To amuse themselves became the soldiers' duty as soon as they had settled down in Philadelphia, and the resources of the city were at once taxed to their limit, and developed so abnormally in certain undesirable directions that it was called a Capua by the Americans who came in after Clinton's departure.

The officers formed themselves into clubs, with dinner as their *summum bonum*. "The Friendly Brothers," acting upon their motto, "*Quis Separabit Nos?*" dined one month at the Indian King, the next at the Bunch of Grapes, a Montresor or a Brown the lord of the feast. The "Loyal Association Club" met at Clark's, over against the State-House; there was a Yorkshire Club, and a Society of Journeymen Tailors also. Balls were given at the City Tavern, and the Tory ladies soon learned the art of flirting with a red coat. The first ball was given January 29th, Col. Howard, Lieut.-Col. Abercrombie, and Maj. Gardiner, managers. These balls were held weekly until April 30th. The officers set up cricket matches, and established also a cock-pit in Moore's Alley, Front Street, near Carr's store, Thomas Wildman, of the Seventeenth Dragoons, caring for the cocks. Mains were fought here for a hundred guineas, with by-battles besides, on which doubtless a good deal of betting was done. The old South Street Theatre was reopened, and a theatrical season begun under the distinguished auspices of the military. The performances were part amateur, part professional, and the theatrical library of "the martial Thespians" was apparently scanty. The house opened on January 19th, with a comedy, "No One's Enemy but His Own," and the farce, "The Deuce is in Him," "the characters by the officers of the army and navy." The charge for admittance was one dollar to boxes and pit, fifty cents to gallery; tickets sold at taverns and coffee-houses. The performance was "for the benefit of the widows and orphans of the army." A prologue was "delivered by a gentleman of the army,"

the authorship ascribed to Maj. John André. It is brisk and stagy, with no local allusions, except this,—

"Old vaunting Sadlers Wells
Of her tight ropes and ladder-dancing tells;
But Cunningham in both excels."

On the 26th "The Minor" was acted and "The Deuce is in Him" repeated, "for a public charity." No money, it was announced, would be taken at the doors, and gentlemen were requested earnestly not to attempt to bribe the doorkeepers. The troupe, during their season, acted plays of Shakespeare and Cibber, Congreve, Rowe, etc. Their *repertoire* was not extensive. Some of the performances were graced by a professional actress, Miss Hyde; the "star" of the troupe was Dr. Hammond Beaumont, surgeon-general of the royal army in America; his *Mock Doctor* (Molière's "Médecin Malgré Lui," "adapted" by Cibber) was looked upon as a fine performance. He also played *Scrub*, *Iago*, *Hecate*, and *Lovegold*. Dunlap mentions the following officers, besides Beaumont, as performing in New York in 1777. They were doubtless members of the Philadelphia troupe: managers (besides Beaumont), Col. Guy Johnson, Capt. Oliver Delancey; Col. French, *Scrub*; Maj. Edward Williams, *Hamlet*, *Macbeth*, *Richard III.*; Maj. Moncrieff, *Othello*; Capt. Stephen Payne Adye (judge-advocate), *Henry VI.*; Maj. O'Flaherty, *Ranger*, *Douglass*; Capt. Thomas Shreeve (of the Provincials), *Duke of Venice*, *Lord Mayor*, *Freeman*; Lieut. Butler, *Stockwell*; Capt. Hardenbrook, *Belcour*; Maj. Lowther Pennington, *Othello*; Lieut. Pennefather, *Estifania*; Capt. Madden, *Papillon*, *Copper Captain*; Capt. Loftus, *Young Wilding*, *Archer*; Capt. Delancey, *Boniface*. Maj. André also sometimes took a part, but his chief connection with the stage was as scenic artist, in which he was assisted by Oliver Delancey. They are said to have painted some capital drops and other scenes. One scene painted by him is said by Charles Durang to have been used on the stage in 1807, in a play the subject of which was the capture and death of André. The proceeds of these performances were all given to the widows and orphans of soldiers, and other funds were made to contribute to the same object, Lieut. Dunkin raising £290 8s. 7d. by the publication of a book called "Military Remarks," to which Smithers, the engraver (who made plates for Continental bank-notes and counterfeited them for the British), prepared a frontispiece.

In the midst of these shows and festivities the American prisoners were undergoing the severest privations. William Cunningham, a name infamous in history, was an abandoned, hard-hearted wretch. Joshua Loring, commissioner of prisoners, was fit to be his mate. Cunningham had been the executioner of Nathan Hale, and the torturer of Ethan Allen; he was half Carrier, half Marat; a brutal tyrant and a villainous dog. In New York he used to stride into prison at tattoo, whip in hand, shouting, "Kennel ye s—s of b—s! Kennel, d—n ye!" Of Loring, Ethan

Allen said, in his vigorous way, "He is the most mean spirited, cowardly, deceitful, and destructive animal in God's creation below." These were the creatures into whose hands the unhappy prisoners were consigned, to suffer insult and privation, equal measure. Their food was stinted and foul, but not so foul as the abuse daily heaped upon them without measure. Four pounds of bread, mouldy and rotten, and a pound and a half of meat was each man's allowance once in nine days, when the officers and crew of the "Delaware" frigate were first brought in. At the State-House, where both soldiers and sailors were confined, provisions were very scarce. Neither officers nor men were allowed to see their friends, nor open a window for fresh air. A negro was allowed to strike an officer without rebuke. At the provost prison, where only private soldiers were confined, Cunningham amused himself by knocking over the vessels in which the friends of the prisoners brought them food, to see the starved wretches scramble for it. Prisoners fell dead in trying to clutch the uncertain and meagre allowance granted them. Cunningham's whip was busy in his brutal and cowardly hand, and he starved the prisoners as much from cruelty as for pelf. This villain, for so he was by nature, went home with the army to England, and his vicious instincts brought him at last to the gallows, where he made a dying speech and confession before being swung off. This was in London, Aug. 10, 1791. He said he was born in Dublin barracks, his father being a bugler, was bred an officer's servant, then riding-master and sergeant of dragoons. Afterwards he was pimp to a gin-shop drab in a blind alley until the place was broken up because a receptacle for stolen goods. Then he married an exciseman's daughter and became "scaw-banker,"—decoy for kidnapping apprentices and redemptioners to be shipped to America, with one cargo of whom he came over himself in 1774, settled in New York, and became horse-breaker. In Boston, Gen. Gage made him provost-marshal. He admitted selling the prisoners' rations, and having been accessory to hundreds of private, illegal "executions" of prisoners. The crime for which he was hung finally was forging a draft for three hundred pounds.¹ It is not creditable to the British service that such an abandoned wretch should so long have been employed by it and kept in a responsible station.

During the severe winter of 1777-78, large numbers of the prisoners under Loring and Cunningham died of cold and hunger combined. The windows of the jail had been broken and were not restored, nor were fires permitted or covering given out. Every day the victims of this infamous barbarity perished, and were dragged to the trenches in the Potter's Field near by. Howe would not permit the prisoners to receive

clothing and blankets except directly from Washington; he forbade Thomas Willing from supplying them. The Board of War of Pennsylvania called President Wharton's attention to the prisoners' unhappy state, denouncing the savage cruelty of the treatment they met from the enemy. Congress was forced to send in provisions for their support, and Elias Boudinot was appointed commissary-general of prisoners. In Philadelphia, while the prisoners' corpses were covered into the shallow trenches with hasty spades, the body of Molesworth, the executed spy, was ceremoniously exhumed and given a pompous funeral in the Quaker burying-ground.

Galloway, as superintendent, made the citizens of Philadelphia feel as if they themselves were prisoners. By proclamation he forbade any one to appear on the streets between tattoo and reveille—8½ P.M. and sunrise—without a lantern, and all who went out after hours were liable to arrest and detention. A pass was necessary to cross the Delaware, and then only at two ferries; a permit was needed to sell a blanket; wood could not be cut, except for the troops, in the Neck below the city; the citizens were ordered to rake and clean the streets at their fronts every Saturday afternoon; a fine of twenty shillings was laid for foul chimneys; huckstering, peddling, and forestalling of provisions were forbidden; vendues were severely restricted, and only three were authorized, the vendue masters, David Sproat for city and Southwark, and Richard Foobman for Northern Liberties, being appointed by Galloway.

A great number of miscellaneous minor operations from Philadelphia, and against it and the enemy's army and fleet there, belong to the forepart of 1778. Chiefly affairs of posts, they yet sparkle with daring and adventure. The shipping passing to and fro along the river was often assailed, at different points, by the Americans, sometimes from the shore, sometimes with boats and small craft. The vessels in Philadelphia harbor were a temptation to patriotic ingenuity to invent means to destroy them. A collection of kegs for infernal machines was made at Burlington. They were to be charged with powder and fitted with spring triggers, which would explode them upon contact with a hard substance. One of these kegs got adrift and floated to Philadelphia, and upon attempt to secure it by boys in a boat the barrel exploded, killing or injuring one or more of them. This put the British on the *qui vive*, and upon the appearance of other kegs a few days afterwards they were mercilessly bombarded until every head of every keg was beaten in. This caused a huge laugh, and became the theme of Francis Hopkinson's ballad, "The Battle of the Kegs," probably the best satire of the war. The poem was a close paraphrase of a spirited burlesque account of the affair, which was published in the (Burlington) *New Jersey Gazette*, January 11th, the incident having occurred January 5th.

The invention of the kegs was ascribed to David

¹ There have been writers who have questioned the authenticity of this "confession," and pronounced it spurious; but the details fit so well what is known of Cunningham's life in other particulars that the reader will say, "*si non vero e ben travato.*"

Bushnell, who contrived several torpedoes and submarine engines which never were made effective. Mr. Westcott thinks, however, that other inventive men, probably, had to do with this contrivance of the kegs, among whom he names Joseph Belton, of Rhode Island, and Ezra Lee, of New York. These inventors were naturally attracted to the latitude of Philadelphia by the presence of Congress there. Bushnell was a Saybrook man, and his "Turtle," a submarine vessel, was invented by him at Yale College. He it was who tried to blow up the "Cerberus" frigate at New London, in 1778, according to Bishop's "History of Manufactures." Belton offered his machine to the Philadelphia Committee of Safety in 1775.

In December, 1777, Gen. Armstrong withdrew on furlough from his command. He was old and enfeebled by service. Washington, in leaving White Marsh, was anxious to have the upper part of the Delaware-Schuylkill peninsula well guarded. A thousand Pennsylvania militia were nominally assigned to the service, and Col. John Lacey made their brigadier, as the fittest man for the place. On taking command on January 9th he found but four hundred and fifty men actually in his brigade. Of these seventy were at Graeme Park, the headquarters, eighty at Smithfield, and at Springhouse and Plymouth meeting three hundred. There were but very few of the most needed sort of troopers (light horsemen), and he could not keep up patrols between his posts. Lacey withdrew four or five miles farther inland, and, as his force was still more reduced by desertion, consolidated his posts more in order to maintain himself. This opened the county to the Queen's Rangers and James' and Hovenden's loyalists, who foraged and ravaged where they pleased. They were hated by the "rebels," and cordially hated them in return, so that a dash through the American lines was a sport they liked to indulge in. In this way Col. William Coats, lieutenant of Philadelphia County, was captured in February and thrown into the provost prison, where a malignant fever raged.

Other expeditions of the sort were planned and carried out, Lacey having no cavalry, and but sixty men left him of all his brigade. Sir William Erskine, early in the month, marched up Frankford road-way, with eight thousand men, for forage and plunder. They were out three days, harrying Philadelphia County and the borders of Bucks, and bringing in a great quantity of booty. Lacey was himself of Bucks County, but could do nothing to save it from plunder. On February 14th Capt. Hovenden, with "the Philadelphia troop of light dragoons" (loyalists), trotted up the Bristol road, Capt. Thomas of "the Bucks County volunteers" (loyalists also) taking the Bustleton road. Hovenden brought in, on his return, pretty nearly all the representatives of civil authority in the county: Gunning Bedford, once commissary master; Maj. John Snyder, of the militia; Justice John Vandegrift, John Miller, and Benj.

Walton, collectors of militia fines; John Rodgers, mate of the "Randolph" frigate; Lieuts. Thomas Miller and Joseph Allen and eight others; Lieuts. William Preston, John Ogburn, and John Blake, with nine others, were brought in by Thomas. A day or two after Thomas and Hovenden, with twenty-four dragoons and fourteen foot, marched to Jenks' fulling-mill, in Bucks, and captured a guard of Continental soldiers and a quantity of cloth for Washington's army. Then they went to take Maj. Murray at Newtown, took him and routed, killed, or captured his force, and returned with thirty prisoners and the cloth which the Valley Forge army needed so dreadfully. The cloth had been meant to clothe Col. Walter Stewart's regiment. In the latter part of the month, Hovenden, with a detachment of the regular dragoons, captured a drove of one hundred and thirty fat cattle *en route* from Jersey to the camp at Valley Forge.

In the city the poor got no benefit from all these captures, and their distress was so great that Howe sanctioned the collection of contributions for the support of the almshouse. The collectors appointed were Samuel Richards, Henry Lyle, Jos. Allen, Elias Dawson, Andrew Tybout, William Sykes, Mark Freeman, Jon'n Brown, John Wood, Brian O'Hara, Jos. Stansbury, Alexander Tod, James Sparks, Benjamin Shoemaker, Reuben Haines, Thomas Moore, Caleb Attmore, Benjamin Homer, John Jones, Benjamin Gibbs, Nicholas Hicks, Benjamin Stillwagen, Jacob Graefe, Leonard Kressler, Edward Cutburn, Isaac Coats, William Brown, Abram Jones, William Thomas, Jos. Turner, Benjamin Hemmings, and Joseph Lownes. In April, Howe sanctioned (or ordered) a lottery scheme, to draw £1012 10s. for the poor, the managers being Stephen Shewell, James Craig, Reynold Keene, William Morrell, James Sparks, Joseph Stansbury, Robert Shewell, Benjamin Gibbs, Thomas Asheton, Curtis Clay, William McMurtrie, Samuel Murdoch, Richard Rundle, Michael Connor, John Hart, and Thomas Murgatroyd.

About this time Lacey was reinforced with levies from York. In the end of February Gen. Wayne was returning from Southern New Jersey with a convoy of cattle he had been sent by Washington to gather up and bring in for the supply of the camp at Valley Forge. The British heard of his march, and Howe sent Col. Abercrombie from Philadelphia down the Delaware to attack him. Col. Markham held Cooper's Ferry, to cover the rear and forage. The Queen's Rangers and the Forty-second, under Lieut.-Col. Stirling, crossed at Philadelphia, and marched to Haddonfield to intercept Wayne. Simcoe captured the boats, which had run into Timber Creek after the fall of Fort Mercer, loaded them with tow, and sent them to Philadelphia. Then the rangers ravaged the country towards Egg Harbor, robbing farm-houses, but not seeking Wayne. When the latter advanced from Mount Holly, Stirling retreated, and Wayne's

troops followed them closely to Cooper's Creek, where the enemy secured his retreat.

Capt. Thomas, with his dragoons, went down the river in boats to plunder, but had a brush with some volunteers, and came back with neither booty nor glory. Some of his crews were attacked and lost their vessels. There were American galleys and armed boats in Christiana and several other creeks emptying into the Delaware, and they made several captures of transports on the river, retiring with their prizes behind shore batteries; and the British in Philadelphia sent out several expeditions against these annoying cruisers, and destroyed two or three of them.

On March 12th, Col. Mawhood led a foraging-party to New Jersey, comprising the Seventeenth and Forty-sixth Regiment, Simcoe's rangers, and the New Jersey volunteers,—about fifteen hundred men all told. They went down the river, landed at Salem, captured horses from the farmers in that neighborhood, and then began to forage along Salem and Alloways Creeks. The New Jersey militia took up Hancock's and Quinton's bridges, and mustered in considerable force on the other side of the river. Simcoe and Mawhood, by an ingenious ruse, induced the militia to cross at Hancock's bridge, when they were led into an ambushade, and lost between thirty and forty men. Two days later Maj. Simcoe organized another expedition against Cumberland County and Hancock's and Quinton's bridges, in New Jersey. The major had scouted to the vicinity with a patrol, climbed a tree, and made a rough sketch of the country, basing his plan of attack on it. He expected to encounter three or four hundred militia, but found only a guard of twenty, the rest having been withdrawn. The force marched against Hancock's bridge and house was large, the plan of the campaign was intricate, and the men got themselves belated and mired in the swamps, all to surprise a picket of twenty militia. Every man encountered, whether soldier or not, was bayoneted on the spot, the greater part of them in their beds, and thus about thirty persons were massacred. Another raid was made to Thompson's bridge, and then Mawhood and his warriors returned to Philadelphia, much plunder in their possession and many new graves in their train.

Other raids of smaller proportions but like character belong to the chronicles of the day, but are scarcely even of passing moment. When Lacey's forces began to be recruited the British made fewer incursions to the northward, and the farmers of Bucks found that the road to the Philadelphia market and British guineas was less absolutely open to them than it had been. Lacey made many captures of these delinquents, and a practical difficulty arose as to how to deal with them. They were tried by court-martial in camp, and some were condemned to be hung, but this was a severity such as the nature of the offense scarcely warranted. Washington recommended to

send the most dangerous to the Supreme Council for imprisonment during short terms, those with good character to be set free, with notice that they should be hanged if caught offending again. Finally, the law authorizing court-martials having expired, the simple process was adopted of seizing the horses, wagons, and produce of all farmers captured on their way to provision the enemy, the soldiers usually contributing a sound flogging besides. This still did not arrest the traffic, and there were so many Tories among the farmers in the sections adjacent to the city that Lacey recommended that all residents near the line should be compelled to move back into the interior of the country. This plan, he thought, would deprive the enemy at once of his supplies of fresh provisions and of his means of intelligence of American movements. "Every kind of villainy," he said, "is carried on by the people near the enemy's lines; and, from their general conduct, I am induced to believe that very few real friends of America are left within ten miles of Philadelphia." Washington, however, in his wise, calm way suggested that the measure was "rather desirable than practicable."

Another suggestion put forth at this time, with a view to check the depredations of the loyalist refugees and rangers, was the employment of Indians. The proposition originated in camp at Valley Forge, and the Committee of Congress then wrote two letters to the President of Congress about it, signed by Francis Dana, but in the handwriting of Gov. Morris. In these letters the stock argument for and against such a service are discussed, and the Oneidas of New York spoken of as the tribe that could best be employed, the commander to be Col. Mordecai Gist, of Maryland. Gist himself was the bearer of the second letter to Congress, but the matter went no further.

In April there were slight affairs of post at Frankford, at Smithfield, at Dr. Benneville's house, on the York road, at Billingsport, and Haddonfield, mere nameless, aimless skirmishes, such as must always be taking place in the debatable ground between two hostile armies. Both Washington and Howe took some pains to make the country produce for them, the latter reserving pasture grounds in the Neck for his horses, and the former directing all farmers near camp to fatten their cattle. A witty British versemaker sent a squib to the *Pennsylvania Ledger*, thanking Washington for the kind consideration evinced by this order:

"Thy proclamation timely to command
The cattle to be fattened round the land
Bespeaks thy generosity, and shows
A charity that reaches to thy foes.
And was this order issued for *our* sakes,
To treat us with roast beef and savory steaks?
Or was it for thy rebel train intended?
Give 'em the hides and let their shoes be mended,—
Though shoes are what they seldom wear of late,—
'Twould load their nimble feet with too much weight.
And as for beef, there needs no puffs about it;
In short they must content themselves without it,—

Not that we mean to have them starved; why, marry,
The live-stock in abundance which they carry
Upon their backs prevents all fear of that," etc.

Lacey's energy and enterprise, even with his small forces, enabled him to reduce the supplies of Philadelphia so materially that the attempt was made to destroy his command, and an expedition was sent against him. His headquarters were the Crooked Billet Tavern, in Bucks County, on the York road, twenty-five miles north of the city, now called Hatborough. The party was under command of Lieut.-Col. Abercrombie, comprising light infantry, cavalry, and Simcoe's rangers, and started on May 1st. Simcoe was to get in Lacey's rear, and a party was to be placed in ambush, while the mounted infantry and cavalry advanced along the road. Lacey's officers and patrols were negligent, and his force was completely surprised, and surrounded on all sides. They retreated fighting, but without their baggage, and finally got away with a loss of twenty-six killed, eight or ten wounded, and fifty-eight missing. Many prisoners were bayoneted, and some wounded burned to death by Simcoe's, Hovenden's, and James' refugee scoundrels. The British loss was nominal. Among the Americans slain was Capt. Downey, who had been a school-master in Philadelphia, and a gallant volunteer at Trenton and Princeton. He had surveyed the Delaware River for the Committee of Safety, and was acting as commissary for Lacey. He was bayoneted and mutilated while lying wounded and a prisoner at the Crooked Billet.

A monument was erected in December, 1861, to the victims of Lacey's command in this fight, on the battle-field at Hatborough. The Latin motto is "*Defensores libertatis per insidias abrupti*," which is vapid and meaningless. The surprise was a legitimate act of war; the massacre after surrender was a barbarous act, and that the inscription should have emphasized.

Besides Lacey's command on the north, Armstrong was in his old camp with militia on the northwest at White Marsh; Maj. Jameson and Capt. Allen McLane, with cavalry and infantry, were on the west side of Schuylkill; Lee's cavalry, with Morgan's

riflemen, were at different points on the line, while Smallwood and his division were posted at Wilmington, so that the Americans had Philadelphia pretty effectually picketed. Sometimes the enemy broke through the cordon with their own partisan riders, now taking Col. Penrose, another colonel, a major, nine officers, and thirty-two privates at Bristol; now killing three and taking fifty-one; now killing twelve, taking six, and scattering the rest, as DeLancey claims he did,—but we must remember these are the reports of Tory refugees, chronicled in Tory journals. When an American officer, who was keeping back the country people, happened to be made a prisoner, he became the hero of a procession; his vegetables and poultry were hung about him, to garnish his person and his horse, and thus equipped he was paraded about the streets.

In one of these raids Lord Cathcart made some creditable dashes, but he was far eclipsed by the gallant Allen McLane, who was a partisan like Harry Lee, Pulaski, Armand, Sumter, and Marion, like Tarleton, and Simcoe. He was particularly identified with the lines about Philadelphia at this time,—a captain of cavalry and expected to do the most important scouting duty, especially in intercepting the market people. He sent many a spy into the city, disguised as a farmer of Bucks and Chester and loaded down with vegetables and fowls taken from a veritable non-combatant's poultry-yard and garden. Sometimes his men sold horse-meat in Philadelphia for beef,—meat that a British trooper

Allen McLane

had straddled in the flesh until an American bullet dismounted him,—and British gold thus earned must have been doubly valuable to McLane's rough riders.

The gallant captain's feats of war were numerous, and the legends concerning some of them are still fresh and vivid. Once, in 1778, as he was on his way at daybreak to join Capt. Craig in an attack on the enemy, he fell into an ambush near Frankford. His company were far in the rear, only four troopers were with him, one of whom suddenly cried out, "Captain, the British!" and he and his mate spurred their horses and galloped away. McLane saw the enemy drawn up on both sides of the road, and a file

of them fired at him. He dashed away, pursued and fired at, and stumbled upon another large body of dragoons, from whose very front he turned abruptly off at a right angle pursued by a dozen, all of whom but two he distanced. These chased him several miles, all their horses giving out. A trooper now rode up and seized McLane by the collar, whereupon the latter drew a pistol and shot him dead. With the second a fierce conflict ensued, McLane's hand being badly slashed by a sabre-cut, but finally he shot the second trooper also, and killed him, and then took refuge, naked, in a mill-pond, until the cold water stopped the flow of blood from his wound. Another time he was surprised while seeking intelligence in Germantown, by a dozen troopers, but he charged through them and escaped. His most notable feat of arms in other fields was the surprise of Paulus Hook.

McLane was born in Philadelphia on Aug. 8, 1746, and at the beginning of the Revolution, it is said, held an estate in Philadelphia worth fifteen thousand dollars, the whole of which he sacrificed in the service of his country. He removed to Kent County, Del., in 1774, and, as a volunteer, witnessed the repulse of the British at Great Bridge, Va. In 1775 he became lieutenant in Cæsar Rodney's Delaware regiment. In 1776 he joined the army of Washington; distinguished himself at the battle of Long Island; was at White Plains and Trenton, and by his good conduct and gallantry at Princeton, won from Washington the commission of captain in 1777. As we have seen, he commanded the outposts around Philadelphia, and was hotly engaged in the battle of Monmouth. In July, 1779, he was made major of the infantry of Lee's legion, taking a prominent part in the brilliant affairs of Paulus Hook and Stony Point, and was at the siege of Yorktown. He was a member and Speaker of the Delaware Legislature; six years a privy counselor; many years judge of the Court of Common Pleas; marshal of the Delaware District from 1790 to 1798, and collector of the port of Wilmington from 1808 until his death, May 22, 1829. He was father of Louis McLane, the statesman, and grandfather of Hon. Robert M. McLane, the present (1884) Governor of Maryland.¹

¹ Louis McLane, the son of Col. Allen, was born at Smyrna, Kent Co., Del., May 28, 1786, and died in Baltimore Oct. 7, 1857. He entered the navy as midshipman in 1798, and cruised one year in the "Philadelphia" under Commodore Stephen Decatur. He began the study of law in 1804, with the distinguished James A. Bayard, of Delaware, and was admitted to the bar in 1807. He was a member of Congress from Delaware from 1817 to 1827, and on the Missouri question voted against permitting slavery in that State, in opposition to his constituents, but in obedience to his own convictions. He was United States Senator from 1827 to 1829; minister to England, May, 1829 to 1831; Secretary of the United States Treasury, 1831 to 1833; Secretary of State, 1833, and retired from political life in 1834. He was president of the Baltimore and Ohio Railroad Company from 1837 to 1847, and in June, 1846, was entrusted by President Polk with the mission to England during the Oregon negotiations. His last public service was as a delegate to the Reform Convention at Annapolis, in the winter of 1850-51.

Robert Milligan McLane, the distinguished son of Louis McLane, was born in Delaware, June 23, 1815. He began his education at a

By Washington's recommendation the State galleys, which, with the Continental frigates, had been stationed at Trenton and Borden's Ferry, since Red Bank, were sunk in April. The other vessels, however, were kept afloat, and the enemy sent up a force of seven hundred soldiers with armed boats and vessels to destroy them. The troops were Maj. Maitland's Second Light Infantry, the galleys and boats being commanded by Lieut. John Henry, of the navy. They landed at White Hill (Borden's Ferry) in the morning of May 8th, and burned the two Continental frigates, "Washington" and "Effingham," the "Montgomery," two privateers, and a number of other vessels, great and small, killed seventeen militiamen, burnt Joseph Borden's house and store, and did other destruction at Bristol, where Gen. Dickinson, with the New Jersey militia, attacked them. On their return they burned the buildings on Col. Kirkbride's plantation, in Bucks County. Maitland's return of the vessels destroyed in this raid were, one frigate pierced for thirty-two guns, one for twenty-eight, nine large ships, three privateer sloops sixteen guns each, three privateer sloops ten guns each, twenty-three brigs, and a number of small sloops and schooners. Some of these vessels by more prudent management might have been saved for the time when the British

Friends' school in Wilmington, and afterwards attended Washington College, District of Columbia, and St. Mary's College, Baltimore. In 1829 he accompanied his father to England, and studied in Paris for two years, at the end of which time he returned home, and was appointed a cadet in West Point Military Academy by Gen. Andrew Jackson. He graduated in 1837, and was appointed second lieutenant in the First Artillery. He served with Gen. Jessup in the Everglades, Florida, in 1837, and there first formed the acquaintance of Gen. Joseph E. Johnston, who married his sister.

Lieut. McLane served in the Cherokee country of Georgia under Gen. Scott, and was afterwards transferred to the corps of topographical engineers. In 1841 he was sent to Europe to examine the system of dikes and drainage in Holland. While on that trip he married, in Paris, Miss Georgine Urquhart, daughter of a Louisiana merchant. Previous to sailing for Europe, in 1841, in addition to his engineering duties, he studied law in Washington under Gen. Walter Jones, and was admitted to the bar. In 1843 he resigned his army position and started the practice of law in Baltimore. In 1845 he was elected to the House of Delegates of Maryland. In 1847 he was elected to Congress from the Fourth Congressional District of Maryland over the Hon. John P. Kennedy, the Whig candidate. He was re-elected to Congress in 1849, and in 1853 President Pierce appointed him commissioner to China, with the powers of a minister plenipotentiary. In 1855, there being nothing to keep him in China, and the climate not agreeing with him, he was recalled at his own request. Early in 1859 he was appointed by President Buchanan envoy extraordinary and minister plenipotentiary to the republic of Mexico. Diplomatic relations between the two republics had been suspended for several years previous to Mr. McLane's appointment. While in Mexico Mr. McLane negotiated a treaty which gave to citizens of the United States increased commercial advantages. In 1860, Mr. McLane resigned and resumed the practice of law in Baltimore. During the civil war he was counsel for the Western Pacific Railroad and several other large corporations, and during 1864 and 1865 visited Europe upon professional business. In 1878 he was State senator from the Third Legislative District of Baltimore City, and served one session. In 1879 he was elected to Congress, and again in 1881. In the fall of 1883 he was nominated by the Democratic party of Maryland their candidate for Governor, and was elected by nearly twelve thousand majority. James L. McLane, a prominent member of the Baltimore bar and at one time city counselor, and Louis McLane, a leading banker of San Francisco, California, are brothers of Hon. Robert M. McLane.

by evacuating Philadelphia left the river open for their cruisers.

The Assembly at Lancaster, in the spring of 1778, endeavored to aid the military arm by some vigorous legislation. The college property in Philadelphia being in the hands of the enemy, an act was passed suspending the functions of the trustees under the charter. An act of attainder was also passed, requiring certain persons to come forward for trial by a certain day (April 20th), under penalty of forfeiture of their estates, provision for the discovery and seizure of which was made, as well as for the attainting of other persons adhering to the enemy. Those named in this act were Joseph Galloway, Andrew Allen, John Allen, William Allen, the younger; Jacob Duché, the younger; James Rankin, of York; Gilbert Hicks, of Bucks; Samuel Shoemaker, of Philadelphia; John Potts, of Philadelphia County; Nathaniel Vernon, of Chester; Christian Foutz, of Lancaster; Reynold Keen, of Berks; and John Biddle, of Berks. All subjects of the State serving the enemy were declared to be liable to attainder, and debtors of traitors were directed to pay their dues to the Supreme Council instead of to the attainted persons. Another act extended the time for taking the oath of allegiance to June 1st, and required the subscription to be made by every public and professional person, trustees, teachers, professors, merchants and traders, doctors, lawyers, clerks, apothecaries, divines, etc. All who attempted to follow any named occupation before taking the oath were liable to fines of £500. Justices were authorized to summon persons neglecting to take the oath and fine them £10 or imprison them for three months. Every person not taking the oath might be deprived of his firearms. Persons going into Philadelphia without permits were liable to heavy fine and imprisonment. Persons in office under the late provincial government and failing to renounce before June 1st forfeited lands and tenements.

February 25th, Abraham Gibbons, William Jackson, Jr., Jacob Lindley, Warner Mifflin, Joseph Husband, and James Jackson, members of the Society of Friends, asked leave to lay their sufferings before the Assembly. They were admitted, but before they were allowed to speak were required to answer whether they acknowledged the Assembly's loyalty, legitimacy, and authority to pass and enforce laws. The Quakers replied they had not come prepared to answer such questions, and withdrew. Next day they returned, but their answers were pronounced evasive and unsatisfactory, as they certainly were, and they were ordered to petition in writing. They demanded the release of the Quakers in Virginia, and pronounced the test-oaths infringements upon the liberty of conscience. Their request in regard to the prisoners was complied with, and John Penn and Benjamin Chew were also discharged on parole. They had been sent to Hunterdon, N. J., and Governor William Living-

ston had protested vigorously against their sojourn in that community.

Already Howe had found Philadelphia a barren conquest,—a Capua to his men in one sense if not in another,—and the evacuation of the city was felt by Washington to be so certainly only a question of time that as early as March he began to collect wagons and organize teams for the transportation service of his army when it should be required to march after the enemy. Howe's proper point for operations was New York, and Washington felt sure he would return thither. Instead of that, however, Howe, yielding to the complaints at his supineness in England, and desirous to return home, resigned. Sir Henry Clinton, his successor, arrived at Billingsport May 7th, Philadelphia May 8th, and took formal command of the British army May 11th.

Howe's farewell was made the occasion of a *fête champêtre*, which, a splendid folly in itself, has been about as notorious in American history as the Field of the Cloth of Gold used to be in the annals of the three monarchs,—Henry, Charles, and Francis. The *Meschi-anza* was, as the word implies, a medley, but the most salient features were imitated from the Masques, such, for instance, as Ben Jonson used to get up for the amusement of James I.'s court at Theobald's, Whitehall, and Hampton Court. Maj. André, a scholar and an artist, with a vein of sentiment and of chivalry in his composition, was a close student of dramatic effects and the drama. He appears to have been sincerely and warmly attached to Howe, and, as the contriver and chief manager of a *fête* in Howe's honor, he seems to have ransacked his fancy and his memory to combine the bizarre and the picturesque, the roman-

WHARTON MANSION AND WALNUT GROVE, WHERE THE MESCHIANZA TOOK PLACE.

tic and the dramatic. After all, the performance must have been crude, as the features of it also were, some of them, in bad taste and incongruous. The elements of the medley would not mix. As for the folly and mere childishness of such a performance, at such a time and place, that is something which everybody concedes. Conceive of such a tribute offered to Washington by Knox and Greene, Hamilton and Schuyler, Sullivan and Wayne, St. Clair and Gates, and Putnam!

The *fête* took place on Monday, the 18th of May; the place selected for the picnic was the Wharton Mansion and grounds at Walnut Grove (where Fifth and Wharton Streets now intersect), and the best, most complete, and authentic account of the entire performance is that written immediately after it was over, by the contriver of it, Maj. André, and published in the *Gentleman's Magazine* for August, 1778. The cost of the entertainment, André says, was defrayed by twenty-two field officers, four of whom were managers,—Sir John Wrottesley, Col. O'Hara, Maj. Gardiner,¹ and Montresor, the chief engineer. The tickets of admission were engraved, the design, "in a

MESCHIANZA TICKET.

shield, a view of the sea, with the setting sun, and on a wreath the words '*Luceo discedens, aucto splendore resurgam.*' At top was the general's crest, with '*vive, vale!*' All around the shield ran a vignette, and various military trophies filled up the ground."

The entertainment began with a regatta, which must have been a striking and handsome spectacle. It was a military procession along the water-front; boats, barges, and galleys, filled with guests and officers, including Lord Howe, Gen. Howe, Sir Henry Clinton, Lord Rawdon, and Gen. Knyphausen, moving in three divisions down the river, the surrounding vessels decked with flags, and the wharves teeming with spectators. The boats landed at the association battery wharf, a quarter of a mile from the Wharton House, the landing being accentuated by salutes fired by the several men-of-war in the harbor.

"The company as they disembarked arranged themselves into a line or procession, and advanced through an avenue formed by two files of

grenadiers and a line of light-horse supporting such file. This avenue led to a square lawn of one hundred and fifty yards on each side, lined with troops and properly prepared for the exhibition of a tilt and tournament, according to the customs and ordinance of ancient chivalry. We proceeded through the centre of the square; the music, consisting of all the bands of the army, moved in front. The managers, with favors of white and blue ribbons in their breasts, followed next in order. The general, admiral, and the rest of the company succeeded promiscuously. In front appeared the building, bounding the view, through a vista formed by two triumphal arches, erected at proper intervals in a line with the landing place. Two pavilions, with rows of benches rising one above the other, and serving as the advanced wings of the first triumphal arch, received the ladies, while the gentlemen ranged themselves in convenient order on each side. On the front seat of each pavilion were placed seven of the principal young ladies of the country, dressed in Turkish habits, and wearing in their turbans the favors with which they meant to reward the several knights who were to contend in their honor. These arrangements were scarcely made when the sound of trumpets was heard at a distance and a band of knights, dressed in ancient habits of white and red silk, and mounted on gray horses, richly caparisoned in trappings of the same colors, entered the lists, attended by their esquires on foot, in suitable apparel in the following order: four trumpeters, properly habited, their trumpets decorated with small pendent banners; a herald in his robes of ceremony, on his tunic the device of his band, two roses intertwined, with the motto, 'We droop when separated.' Lord Cathcart, superbly mounted on a managed horse, appeared as chief of these knights; two young black slaves, with sashes and drawers of blue and white silk, wearing large silver clasps round their necks and arms, their breasts and shoulders bare, held his stirrups. On his right hand walked Capt. Hazard, and on his left, Capt. Brownlow, his two esquires, one bearing his lance, the other his shield. His device was Cupid riding on a lion; the motto, 'Surmounted by love.' His lordship appeared in honor of Miss Auchmuty.

"Then came in order the knights of his band, each attended by his squire bearing his lance and shield.

"First knight, Hon. Capt. Cathcart, in honor of Miss N. White; squire, Capt. Peters; device, a heart and sword; motto, 'Love and honor.'

"Second knight, Lieut. Bygrove, in honor of Miss Craig; squire, Lieut. Nichols; device, Cupid tracing a circle; motto, 'Without end.'

"Third knight, Capt. André, in honor of Miss P. Chew; squire, Lieut. André; device, two game-cocks fighting; motto, 'No rival.'

"Fourth knight, Capt. Horneck, in honor of Miss N. Redman; squire, Lieut. Talbot; device, a burning heart; motto, 'Absence cannot extinguish.'

"Fifth knight, Capt. Matthews, in honor of Miss Bond; squire, Lieut. Hamilton; device, a winged heart; motto, 'Each fair by turns.'

"Sixth knight, Lieut. Sloper, in honor of Miss M. Shippen; squire, Lieut. Brown; device, a heart and sword; motto, 'Honor and the fair.'

"After they had made the circuit of the square and saluted the ladies as they passed before the pavilions, they ranged themselves in a line with that in which were the ladies of their device; and their herald (Mr. Beaumont), advancing into the centre of the square, after a flourish of trumpets, proclaimed the following challenge: 'The Knights of the Blended Rose, by me, their herald, proclaim and assert that the ladies of the Blended Rose excel in wit, beauty, and every accomplishment those of the whole world; and should any knight or knights be so hardy as to dispute or deny it, they are ready to enter the lists with them, and maintain their assertions by deeds of arms, according to the laws of ancient chivalry.'

"At the third repetition of the challenge, the sound of trumpets was heard from the opposite side of the square, and another herald, with four trumpeters, dressed in black and orange, galloped into the lists. He was met by the herald of the Blended Rose, and, after a short parley, they both advanced in front of the pavilions, when the black herald (Lieut. Moore) ordered his trumpeters to sound, and then proclaimed defiance to the challenge in the following words:

"The Knights of the Burning Mountain present themselves here, not to contest by words, but to disprove by deeds, the vainglorious assertion of the Knights of the Blended Rose; and enter these lists to maintain that the ladies of the Burning Mountain are not excelled in beauty, virtue, or accomplishment by any in the universe.'

"He then returned to the part of the barrier through which he had entered, and, shortly after, the Black Knights, attended by their squires, rode into the lists in the following order:

"Capt. Watson, of the guards, as chief, dressed in a magnificent suit of black and orange silk, and mounted on a black, managed horse, with

¹ Another writer describing himself as "one of the company," and stated to be an "American" (Hazard's *Register of Pennsylvania*, vol. xiv. p. 296), gives the name of Sir Henry Calder, in place of Maj. Gardiner, as one of the managers.

trappings of the same colors with his own dress, appeared in honor of Miss Franks. He was attended in the same manner as Lord Cathcart. Capt. Scott bore his lance, and Lieut. Lytelton his shield. The device, a heart, with a wreath of flowers; motto, 'Love and glory.'

"First knight, Lieut. Underwood, in honor of Miss S. Shippen; squire, Ensign Haverkam; device, a pelican feeding her young; motto, 'For these I love.'

"Second knight, Lieut. Winyard, in honor of Miss P. Shippen; squire, Capt. Boscawen; device, a bay leaf; motto, 'Unchangeable.'

"Third knight, Lieut. Delaval, in honor of Miss B. Bond; squire, Capt. Thorne; device, a heart aimed at by several arrows and struck by one; motto, 'One only pierces me.'

"Fourth knight, Monsieur Montluisant (lieutenant of the Hessian chasseurs), in honor of Miss B. Redman; squire, Capt. Campbell; device, a sunflower, turning towards the sun; motto, '*Jevise à vous.*'

"Fifth knight, Lieut. Hobart, in honor of Miss S. Chew; squire, Lieut. Briscoe; device, Cupid piercing a coat of mail with his arrow; motto, 'Proof to all but love.'

"Sixth knight, Brigade-Major Tarleton, in honor of Miss W. Smith; squire, Ensign Heart; device, a light-dragoon; motto, 'Swift, vigilant, and bold.'

Knights, squires, and ladies are all dust now, and their swords are rust; still, we must arrest André's narrative here to say a word more of these ladies, who were all (except Miss Auchmuty, an English girl) daughters of Philadelphians. Miss Auchmuty married Capt. J. F. Montresor, of the Guards. The second, Miss White, does not seem to have been remembered in tradition. She was, however, probably Miss White, of New York, daughter of Henry White and Eve Van Cortlandt, who was of the family of Chief Justice Jay; there were two daughters of Henry and Eve White, both distinguished belles,—Augusta, married Edward N. Bibby; Margaret, married Peter Jay Munro (according to Mrs. Lamb's "History of New York"). Miss Jane Craig died in Philadelphia, unmarried. She was the lady who furnished

John F. Watson with the materials for his account of the Meschianza. Miss Peggy, or Margaret Chew, who was distinguished by André's having chosen her as his lady in the tilt, was the daughter of Chief Justice Chew, of Cliveden (the Chew house), Germantown. Col. John Eager Howard commanded a regiment of Stirling's forces which deployed in front of this house to meet the Fortieth Regiment at the battle of Germantown, and after the war was over he made Miss Margaret Chew his wife. She lived until 1824, and among her children and descendants have been numbered some of the most estimable citizens of Maryland. Miss N. (Ann or Nancy) Redman was a daughter of Dr. Thomas Redman; Miss B. (Rebecca) Redman, her sister, became the wife of Col. Elisha Lawrence, of New Jersey, on Dec. 1, 1779; Miss Sophia Chew, sister of Miss Margaret, married Henry Phillips, of Maryland. The Misses Bond were

daughters of Dr. Phineas Bond, prominent in Philadelphia society for a long time. One of them, Miss Becky, went to England after the Revolution with Mr. Erskine, the British minister, and died there unmarried. The other became the wife of Gen. John Cadwalader. There were three Miss Shippens at the Meschianza,—Miss Mary (Polly), Miss Sarah (Sally), and Miss Peggy (or Margaret). They were the daughters of Chief Justice Edward Shippen; Miss Polly married Dr. William McIlvaine, Miss Sally married Thomas Lea, and Miss Peggy was the unfortunate wife of the traitor, Benedict Arnold, to whom she was married April 8, 1779. In a careful and brilliant paper by the very capable Frederick D. Stone, librarian of the Pennsylvania Historical Society, on "Philadelphia Society One Hundred Years Ago," read before that society in May, 1879, and published in the *Pennsylvania Magazine* (vol. iii. No. 4), we find that Miss Peggy Shippen was then not eighteen, but an acknowledged leading belle, and very beautiful. It has been denied that the three Misses Shippen were present at the Meschianza, and Mr.

THE MESCHIANZA PROCESSION.

Stone quotes a letter from Mr. Laurence Lewis, Jr., on the subject, in which he says,—

"You stated that Mrs. Arnold and her two sisters (daughters of Shippen, C. J.) were present at the Meschianza. Although all the printed and published accounts of that festivity have made a similar statement, the tradition in the Shippen family has always been to the contrary. The young ladies had been invited, and had arranged to go; their names were upon the programmes, and their dresses actually prepared, but at the last moment their father was visited by some of his friends, prominent members of the Society of Friends, who persuaded him that it would be by no means seemly that his daughters should appear in public in the Turkish dresses designed for the occasion. Consequently, although they are said to have been in a *dancing fury*, they were obliged to stay away. This same story has, I know, come down independently through several branches of the family, and was told me repeatedly, the last time not more than two years ago, by an old lady of the family, who was the niece of Mrs. Arnold and her sisters, and who has since died."

Miss Franks (whose name is said to have been Polly or Mary) was the daughter of David Franks, and married Lieut.-Gen. Sir Henry Johnson, of the British army. Miss W. Smith was Williamina Smith,

daughter of the Rev. William Smith, D.D., provost of the college, who afterwards married Charles Goldsborough, of Long Neck, Dorchester Co., Md.¹

In the costumes of the ladies a uniformity similar to that adopted by the knights was observed. The Ladies of the Blended Rose each wore a white silk polonaise, which formed a flowing robe, and was open in front to the waist. The pink sash, six inches wide, was filled with spangles. The shoes and stockings were spangled; also the veil, which was edged with silver lace. The head-dress was towering, in the

HEAD-DRESS FOR THE MESCHIANZA.

[From a drawing by Major André.]

fashion of the time, and filled with profusion of pearls and jewels. The Ladies of the Burning Mountain wore white silk gowns trimmed with black, and white sashes edged with black, in style similar to that of the Ladies of the Blended Rose. There were about fifty unmarried ladies present; the others were married, but the fair sex was but slimly represented, as most of the ladies had left the city on the approach of the British.

"After they had rode round the lists and made their obeisance to the ladies," continues André's narrative,

"they drew up fronting the White Knights, and the chief of these having thrown down his gauntlet, the chief of the Black Knights di-

rected his esquire to take it up. The knights then received their lances from their esquires, fixed their shields on their left arms, and, making a general salute to each other by a very graceful movement of their lances, turned round to take their career, and, encountering in full gallop, shivered their spears. In the second and third encounter they discharged their pistols. In the fourth they fought with their swords. At length the two chiefs, spurring forward into the centre, engaged furiously in single combat, till the marshal of the field, Maj. Gwyne, rushed in between the chiefs and declared that the fair damsels of the Blended Rose and Burning Mountain were perfectly satisfied with the proofs of love and the signal feats of valor given by their respective knights, and commanded them, as they prized the future favors of their mistresses, that they should instantly desist from further combat. Obedience being paid by the chiefs to this order, they joined their respective bands. The White Knights and their attendants filed off to the left, the Black Knights to the right, and, passing each other at the lower side of the quadrangle, moved up alternately till they approached the pavilions of the ladies, when they gave a general salute.

"A passage being now opened between the two pavilions, the knights, preceded by their squires and the bands of music, rode through the first triumphal arch, and arranged themselves to the right and left. This arch was erected in honor of Lord Howe. It presented two fronts, in the Tuscan order. The pediment was adorned with various naval trophies, and at top was the figure of Neptune, with a trident in his right hand. In a niche on each side stood a sailor with a drawn cutlass. Three plumes of feathers were placed on the summit of each wing, and in the entablature was this inscription: '*Laudis illi debetur, et a me gratia major.*' The interval between the two arches was an avenue three hundred feet long and thirty-four broad. It was lined on each side with a file of troops, and the colors of all the army, planted at proper distances, had a beautiful effect in diversifying the scene. Between these colors the knights and squires took their stations. The bands continued to play several pieces of martial music. The company moved forward in procession, with the ladies in the Turkish habits in front. As these passed they were saluted by their knights, who then dismounted and joined them, and in this order we were all conducted into a garden that fronted the house, through the second triumphal arch, dedicated to the general. This arch was also built in the Tuscan order. On the interior part of the pediment was painted a plume of feathers and various military trophies. At top stood the figure of Fame, and in the entablature this device: '*I, bone, quo te virtus vocat tua; I pede fuso.*' On the right-hand pillar was placed a bomb-shell, and on the left a flaming heart. The front next the house was adorned with preparations for a firework. From the garden we ascended a flight of steps, covered with carpets, which led into a spacious hall, the panels painted in imitation of Sienna marble, inclosing festoons of white marble. The surbase and all below was black.² In this hall and in the adjoining apartments were prepared tea, lemonade, and other cooling liquors, to which the company seated themselves, during which time the knights came in, and on the knee received their favors from their respective ladies. One of these rooms was afterwards appropriated for the use of the Pharaoh-table. As you entered it you saw, on a panel over the chimney, a cornucopia, exuberantly filled with flowers of the richest colors. Over the door, as you went out, another presented itself,—shrunk, reversed, and emptied.

"From these apartments we were conducted up to a ball-room, decorated, in a light, elegant style of painting. The ground was a pale blue, paneled, with a small gold bead, and in the interior filled with dropping festoons of flowers in their natural colors. Below the surbase the ground was of rose-pink, with drapery festooned in blue. These decorations were heightened by eighty-five mirrors, decked with rose-pink silk ribbons and artificial flowers, and in the intermediate spaces were thirty-four branches with wax-lights, ornamented in a similar manner.

"On the same floor were four drawing-rooms, with sideboards of refreshments, decorated and lighted in the same style and taste as the ball-room. The ball was opened by the knights and their ladies, and the dances continued till ten o'clock, when the windows were thrown open, and a magnificent bouquet of rockets began the fireworks. These were planned by Capt. Montresor, the chief engineer, and consisted of twenty different exhibitions, displayed under his direction with the happiest success, and in the highest style of beauty. Toward the conclusion the interior part of the triumphal arch was illuminated, amid an uninterrupted flight of rockets and bursting of balloons. The military trophies

¹ In the account of the Meschianza, written by one of the company said to be an American, and republished from the *United States Gazette* in "Hazard's Register," vol. xiv. pp. 295-7, the names of the ladies are stated thus: Ladies of the Blended Rose,—Miss Auchmuty, Miss Peggy Chew, Miss Jenny Craig, Miss Wilhelmina Bond, Miss Nancy White, and Miss Nancy Redman; Ladies of the Burning Mountain,—Miss Becky Franks, Miss Becky Bond, Miss Becky Redman, Miss Sally Chew, and Miss Williamina Smith.

² The decorations were painted by Maj. André and Capt. Oliver Delancey. The "Sienna marble" walls were of canvas. The mirrors and other ornaments were borrowed from Philadelphia families.

on each side assumed a variety of transparent colors. The shell and flaming heart on the wings sent forth Chinese fountains, succeeded by fire-pots. Fame appeared at top spangled with stars, and from her trumpet blowing the following device in letters of light: '*Tes Lauriers sont immortels.*' A sauteur of rockets, bursting from the pediment, concluded the *feu d'artifice*.

"At twelve supper was announced; and large folding-doors, hitherto artfully concealed, being suddenly thrown open, discovered a magnificent saloon of two hundred and ten feet by forty, and twenty-two feet in height, with three alcoves on each side, which served for side-boards. The ceiling was a segment of a circle, and the sides were painted of a light straw color, with vine leaves and festoons of flowers,—some in a bright, some in a darkish, green. Fifty-six large pier-glasses, ornamented with green silk, artificial flowers, and ribbons; one hundred branches, with three lights in each, trimmed in the same manner as the mirrors; eighteen lustres, each with twenty-four lights, suspended from the ceiling, and ornamented as the branches; three hundred wax tapers, disposed along the supper-tables; four hundred and thirty covers; twelve hundred dishes; twenty-four black slaves in Oriental dresses, with silver collars and bracelets, ranged in two lines, and bending to the ground as the general and admiral approached the saloon,—all these forming together the most brilliant assemblage of gay objects, and appearing at once as we entered by an easy descent, exhibited a *coup d'œil* beyond description magnificent.

"Toward the end of supper the herald of the Blended Rose, in his habit of ceremony, attended by his trumpets, entered the saloon and proclaimed the king's health, the queen's, and the royal family; the army and navy, with their respective commanders; the knights and their ladies; the ladies in general. Each of these toasts was followed by a flourish of music. After supper we returned to the ball-room, and continued to dance till four o'clock."¹

Two addresses in verse, supposed to have been written by André, were to have been delivered, one by the herald, and the other by a person dressed as "Mercury," or some other mythological character, but were omitted.

At night, while the ball was in full progress, an attack on the abatis north of the city, connecting the line of redoubts, was made by the indefatigable Capt. McLane, at the head of one hundred infantry and Clow's dragoons. McLane divided his command into four squads, each of which was provided with camp-kettles, filled with combustibles. The latter were so placed by the soldiers that, at a given signal, the whole line of the abatis was fired. The sudden

blaze took the British by surprise, the long roll was beaten, the guns in the redoubt were fired, the ships-of-war and transports on the river, and the park of artillery in Southwark replied, and general alarm and confusion reigned. At the Meschianza it was represented that the fusillade was in honor of the celebration. The ladies were thus reassured and the entertainment proceeded. In the mean time, McLane having accomplished his purpose, which was to annoy and frighten the British garrison, retreated along the road to Wissahickon, pursued by dragoons as far as Barren Hill, where they captured a picket and an ensign. McLane escaped by swimming his horse across the Schuylkill, and was protected by Morgan's riflemen, stationed on the opposite bank.

Throughout the entire night the festivities of the Meschianza continued with unabated mirth and spirit, and when the dancing ceased the sun was more than an hour high.²

Gen. Howe's participation in the Meschianza was severely criticised by those who regarded it as undignified and unbecoming. Howe, it was said, had accomplished nothing in the campaign that justified laudation, and in permitting himself to be the object of such an extravagant compliment had been guilty of an act of folly not to be pardoned in one who occupied so grave and responsible a post. Galloway was particularly bitter in his strictures, characterizing Howe's "vanity and presumption" as "unparalleled in history."

He had accepted, said Galloway, "from a few of his officers a triumph more magnificent than would have become the conqueror of America, without the consent of his sovereign or the approbation of his country; and that at the time when the news of a war with France had just arrived, and in the very city,—the capital of North America, the late seat of the Congress,—which was in a few days to be delivered up to that Congress."³ But in permitting the

J. André.

¹ In melancholy contrast with the bright scenes of the Meschianza, which André depicts so graphically, was that ill-fated officer's death on the gallows two years later. Captured within the American lines, and convicted of complicity in Benedict Arnold's treason, he was hanged at Tappan, N. Y., on the 2d of October, 1780.

² Bancroft, quoting from the manuscripts of Münchhausen, aide-de-camp of Gen. Howe, adds that a feature of the entertainment was a gaming-table. André speaks of it as a "Pharaoh," or faro bank, which opened with a bank of two thousand guineas.

³ The author of a pamphlet published at London, entitled "Strictures

Meschianza Howe had a purpose to serve, which was to show the ministry that its treatment of him had not received the indorsement of his officers. "Never," says Bancroft, "had subordinates given a more brilliant farewell to a departing general, and it was doubly dear to their commander; for it expressed their belief that the ministry had wronged him, and that his own virtue pointed him out for advancement."¹

Shortly after the close of the entertainment, on the following day, the British commander was informed that Lafayette with twenty-five hundred men and eight cannon had crossed the Schuylkill and was then at Barren Hill. In the hope of capturing this force, and thus signalizing his retirement from the command by a brilliant stroke, Howe, on the night of the 19th, sent Gen. Grant, with Sir William Erskine and Gen. Grey, at the head of five thousand three hundred chosen men, to gain the rear of Lafayette's position by a circuitous route, and himself, accompanied by Sir Henry Clinton, Gen. Knyphausen, and Admiral Howe, set out with five thousand seven hundred troops, on the following morning, expecting to intercept the American army in retreat at Chestnut Hill. Lafayette's forces were posted near the Schuylkill, west of the Wissahickon, on Ridge road, some distance below Matson's Ford, and southwest of the road to White Marsh. In the rear of this position the Ridge road forked, one branch leading to Matson's, the other to Swede's Ford. Below the American camp and near the river the ground was broken and rocky and partially covered by woods, and on the east stone houses intervened between Lafayette's position and the road. Allen McLane, with fifty Indians, was posted on the Ridge road, together with a company of Morgan's riflemen, under Capt. Parr. The White Marsh road was guarded by a detachment of Pennsylvania troops. The British plan of surprise was well conceived. Grant, with the grenadiers and light infantry, undertook to get in Lafayette's rear by marching to Frankford, and thence across country by the White Marsh road. Grey, with the Hessians, was to cross the river and post his men at the fords in order to prevent the Americans from making their

on the Philadelphia Meschianza, or Triumph of leaving America Unconquered," attacked Gen. Howe in the strongest terms. "What are we to think," he asked, "of a beaten general's debasing the king's ensigns (for he had none of his enemy's) by planting all the colors of the army in a grand avenue of three hundred feet in length, lined with the king's troops, between two triumphal arches, for himself and his brother to march along in pompous procession, followed by a numerous train of attendants, with seven silken knights of the Blended Rose, and seven more of the Burning Mountain, and their fourteen Turkey-dressed camels, to an area of one hundred and fifty yards square, lined also with the king's troops, for the exhibition of a tilt and tournament or mock-fight of old chivalry in honor of this triumphant hero; and all this sea and land ovation made—not in consequence of an uninterrupted succession of victories like those of the Duke of Marlborough—not after the conquest of Canada by a Wolfe, a Townshend, and an Amherst, or after the much more valuable conquest of all the French provinces and possessions in India, under the wise and active Gen. Coote—but after thirteen provinces wretchedly lost, and a three-years' series of ruinous disgraces and defeats."

¹ Bancroft's History of the United States, vol. x. p. 119.

escape. Fortune favored the British in so far that the Pennsylvania militia, disobeying orders, abandoned their post near the White Marsh road, and the British advance was mistaken for that of a troop of American dragoons who wore scarlet uniforms. But when the enemy were in possession of the road leading to White Marsh, within a mile of Lafayette's camp, news was brought that British and not American troops were approaching. No time was to be lost. In a few minutes retreat would have been cut off and the army would have fallen an easy prey to the enemy. Lafayette immediately sent forward small bodies of troops with the view of deceiving Grant into the belief that they were the heads of a large attacking force. The ruse succeeded. Grant halted and prepared for action, and during the interval thus gained Lafayette and Gen. Poor, with the main body, conducted a skillful retreat over the country between the Ridge road and the Schuylkill, which he crossed at Matson's Ford. Grey with his intercepting force had cut off the direct retreat to Valley Forge, but had failed to cover Matson's Ford. The detachments which Lafayette had thrown forward as a "blind" retreated in good order, and when the two columns of the British army united near Barren Hill Church, Gen. Howe discovered that his intended prize had outwitted and escaped him.

After a skirmish at Matson's Ford, in which nine Americans were killed or captured and two British troopers killed and several wounded, Lafayette drew up his force in strong position on the west bank of the river, and, having planted his cannon, awaited the enemy's approach. But the British generals made no further movement in that direction, and the army was forced to return to Philadelphia, after a long and fatiguing march, without having accomplished anything.²

Although palpably a failure, the affair was described by the Tory organs in the most favorable light, and an attempt was made to represent Lafayette's retreat as ignominious. But the truth was soon demonstrated by the misfortunes which overtook

² "Howe and the British officers," says Thompson Westcott, "were intensely mortified at this failure. So sure were they of success that it is said that before the troops left town for Barren Hill the general invited some ladies to sup with Lafayette upon his return, while his brother, the admiral, prepared a frigate to send the distinguished prisoner at once to England.

"Nor did Howe's enemies fail to seize upon it as another evidence of his incapacity. Joseph Galloway and Isaac Ogden were especially severe in their criticisms, the former declaring that nothing had been wanting 'but a small share of military exertion or perhaps inclination, to take or destroy the chief force of the American army;' and the latter that the historian would not gain credit who should relate 'that at least twenty-four thousand of the best troops in the world were shut within their lines by fifteen thousand at most of poor wretches who were illly paid, badly fed, and worse clothed, and scarce, at best, deserved the name of soldiers.' But the sole responsibility for the *fiasco* of Barren Hill cannot be laid on Howe. The movement was well contrived, and only failed through the want of proper execution of details on the part of Howe's subordinates. Sir Henry Clinton afterwards testified before Parliament that he was not in command of the army at the time, but that the movement had his unqualified approval."

themselves. One of these journals, the royal *Pennsylvania Gazette*, suspended four days after the publication of an article in relation to the engagement, in which it asserted that "Mr. Washington and his tattered retinue" had fled precipitately back to their camp, "determined to act no further on the offensive than might be consistent with their personal safety," and the *Pennsylvania Ledger* ceased to appear with the issue of the 23d. On the following day (May 24th), Gen. Howe relinquished the command to Sir Henry Clinton, and embarked for England. His departure was marked by unusual demonstrations of affection and respect on the part of his officers. "I am just returned," writes André, in a postscript to his letter, describing the Meschianza, "from conducting our beloved general to the waterside and have seen him receive a more flattering testimony of the love and attachment of his army than all the pomp and splendor of the Meschianza could convey to him. I have seen the most gallant of our officers, and those whom I least suspected of giving such instances of their affection, shed tears while they bid him farewell. The gallant and affectionate general of the Hessians, Knyphausen, was so moved that he could not finish a compliment he began to pay him in his own name and that of his officers who attended him. . . . On my return I saw nothing but dejected countenances." Howe undoubtedly possessed the confidence of his officers and is conceded to have been a brave and experienced general; yet it is none the less true that the Americans profited immensely by his indolence, his blunders, and his failure to grasp his opportunities.

On the day of Howe's departure a council of war was held under Sir Henry Clinton, at which it was resolved to evacuate the city, and on the following day a circular was distributed requesting the attendance of gentlemen, merchants, and citizens, at the British Tavern, formerly the Indian King, "on business of importance." At this meeting, probably, "full information of the intended evacuation of the city was given, so that all those who could not safely remain might prepare for flight. Some time previously notice had been given that all deserters from the American army who desired to be sent to England would receive passage, and many availed themselves of the privilege."¹ Two days later the Supreme Executive Council wrote to Gen. Washington asking that measures be taken to prevent disorder in the event of the reoccupation of the city, as it was feared that mischievous consequences might result from the efforts of the Whigs to revenge themselves for the indignities and wrongs they had suffered at the hands of the Tory inhabitants. A reply was immediately sent promising that suitable precautions would be adopted.

In the mean time, Clinton, anxious to penetrate the

designs of Washington, sent out spies for that purpose, one of whom, Thomas Shank, who had formerly been an American officer, was captured at Valley Forge on the 4th of June, and, having confessed that he was an emissary of Joseph Galloway, was immediately hanged. On the following day, Clinton sent Joshua Loring, the British commissary of prisoners, to the American lines with the request that an exchange of prisoners be made immediately, as the British forces were about to evacuate the city. Elias Boudinot, the American commissary, was accordingly sent to Philadelphia to effect the desired exchange, and, on his arrival there found the British on the point of leaving for New York. The arrival, on the 6th of June, of Earl Carlisle, William Eden, afterwards Lord Auckland, and George Johnston (Governor Johnston, of New York), commissioners appointed under the new conciliatory acts of Parliament for negotiating peace, delayed the departure of Clinton for some days. The commissioners, on reaching Philadelphia, found that they had come on a fruitless errand. Lord Howe and Sir Henry Clinton had each already conveyed the action of Parliament to Congress, which had replied on the very day of the arrival of the peace commissioners, that it had already expressed its sentiments "on bills not essentially different from those acts," and that when the king of Great Britain should be seriously disposed to end the unprovoked war against the United States, it would "readily attend to such terms of peace as may consist with the honor of independent nations." Nor, it would seem, had the British ministry anticipated anything else than a rejection of the terms proposed by Parliament. They had been suggested and the commission created merely for the purpose of pacifying the House of Commons, and reconciling the people of England to a further prosecution of the war. Two of the men who were thus sent to treat with Congress were notoriously hostile to the American cause. Carlisle, the first commissioner, had in the House of Lords "spoken with warmth upon the insolence of the rebels" for refusing to treat with the Howes, and had stigmatized the people of America as "base and unnatural children" of England. The second commissioner was an under secretary, whose chief, a few weeks before in the same assembly, had scoffed at Congress as a "body of vagrants." The third was Johnston, who had lately in Parliament justified the Americans and charged the king with hypocrisy. There was never any expectation on the part of the ministry that the commission would be successful, or it would have been differently constituted. In the certainty that it would not be received, Germaine had given orders for the prosecution of the war and on a different plan, such as a consciousness of weakness might inspire in a cruel and revengeful mind. Clinton was ordered to abandon Philadelphia; to hold New York and Rhode Island; to curtail the boundaries of the thirteen States on the northeast and on the south; to lay waste Virginia by

¹ Thompson Westcott.

means of ships-of-war; and to attack Providence, Boston, and all accessible ports between New York and Nova Scotia, destroying vessels, wharves, stores, and materials for ship-building. At the same time the Indians from Detroit, all along the frontiers of the West and South to Florida, were to be hounded on to spread dismay and to murder. No active operations at the north were expected except the devastation of towns on the sea, and raids of the allied savages on the border.¹

The peace commissioners left England in ignorance of these preparations, and arrived at Philadelphia without the least suspicion that their instructions had been practically superseded in advance. "In sailing up the Delaware they had seen enough 'to regret ten thousand times that their rulers, instead of a tour through the worn-out countries of Europe, had not finished their education with a visit round the coasts and rivers of this beautiful and boundless continent.' The English rivers sunk for them into rills; they predicted that in a few years the opulent 'village' of Philadelphia, which it seemed to them most melancholy to desert, would become a magnificent metropolis." What was their chagrin, however, on reaching Philadelphia to find that Congress had rejected the terms they had come to propose, and that the city was about to be evacuated by the British troops. "He found everything here in confusion," wrote Lord Carlisle, "the army upon the point of leaving town, and about three thousand of the miserable inhabitants embarked on board our ships, to convey them from a place where they thought they would receive no mercy from those who will take possession after us." It was said at the time that if Philadelphia was left to the "rebels" independence would be practically acknowledged, and America lost; but no other course was possible now. The evacuation had been practically determined on, and its effect would be, of course, to encourage Congress in its resistance, and to revive the drooping spirits of Americans everywhere. While recognizing the fact that their mission was ended, Lord Carlisle and his colleagues undertook to effect something in the direction of a peaceful settlement by addressing a letter to Congress, insinuating that France was the common enemy, and offering to recognize the colonies as States, to grant them freedom of legislation and internal improvement, representation in Parliament, and exemption from the presence of military forces except by their own permission. This action was taken without authority, and was resented by Congress as an insult to its honor. "The idea of independence," declared Congress, "is inadmissible," and nothing short of "an explicit acknowledgment of the independence of these States," or the withdrawal of the royal fleets and armies would, it was declared, be accepted as the basis of an amicable settlement.

A portion of the British army had withdrawn from Philadelphia even before the arrival of the peace commissioners. On the 3d of June three regiments crossed the Delaware and encamped in the neighborhood of Cooper's Ferry and Gloucester. The upper redoubts were gradually evacuated, the tents that had whitened the high ground to the north of the city disappeared, and on the morning of the 18th of June, just one month after the dazzling pageant of the Meschianza, the main body of the army moved out of Philadelphia down into the Neck, and embarked for the Jersey shore. By ten o'clock the rear guard had crossed to Gloucester Point, and the evacuation of the city had been successfully accomplished.

During the British occupation of Philadelphia the Tory inhabitants, as we have seen, had not been slow in gratifying their animosity towards the Whigs. Property was seized and used for their personal benefit, and various acts of devastation committed by Tories and British officers. "It would be in vain," writes Pierre Du Simitiere, a Frenchman, who remained in the town, to Col. Lamb, "to attempt to give you an account of the devastation they committed in the environs of the city indiscriminately on Whig and Tory property, but am very certain that you would not know them again. The persecution that numbers of worthy citizens underwent from the malice of the Tories; the tyranny of the police on all those they supposed to be friends to the liberties of America; all these would fill up a volume." From the appraisal of damages made in 1782, in accordance with an act of the General Assembly, it appears that the loss sustained by the inhabitants of Philadelphia amounted to £187,280 5s. 0d., but this sum is believed to have embraced only the more important claims. The British officers also left behind them debts estimated at ten thousand pounds.²

In view of the bitter feeling which these proceedings were calculated to engender among the Whigs, now on the eve of returning to homes from which they had been banished, the more active Tories naturally hesitated to remain behind, and many sought safety in flight. Some three thousand, as has been stated, went on board the British vessels. The rest accompanied the army in its march through Jersey, and

² Gen. Howe was severely criticised for the luxurious manner in which he lived during his stay in Philadelphia. "He passed the winter," says Bancroft, "in corrupting his own army by his example of licentiousness, and teaching the young officers how to ruin themselves by gaming." Hundreds of young men, asserted an English writer in an attack on Howe, "were ruined at the gambling-tables in Philadelphia and New York,—places of certain distinction, protected and countenanced by the commander-in-chief. Our officers were practising at the dice-box or studying the chances of piquet, when they should have been storming towns and crushing the spirit of rebellion; and the harlot's eye glistened with wanton pleasure at the general's table, when the brightness of his sword should have reflected terror on the faces of the rebels. Cleopatra's banquet was in continual representation, and the American Antony at the head of each feast."

Watson, quoting the recollections of a lady, says (vol. ii. p. 285) that Howe's companions were "usually a set of boys, the most dissipated fellows in the army."

¹ Bancroft, vol. x. pp. 123-24.

greatly impeded the movements of the troops in their efforts to carry with them their baggage and effects. Their flight was most deplorable. Compelled to abandon their property to the tender mercies of the Whigs, whom they had insulted, persecuted and driven into exile, and to expose themselves, their wives, and children, to the rigors of a military march, pursued by an active and untiring enemy, without knowing where they would be able to find shelter and food at the end of the weary and uncertain journey, their misery was heightened by contrast with the luxurious ease and abundance, the brightness and gayety of their lives, during the period of the British occupation. Plays, balls, and entertainments of various kinds had made the days glide by for many of them like some fairy dream; and for even the staidest and most sober the nine months during which the British had occupied Philadelphia had been a grateful season of security and peace. But now all was changed. "In the streets that had lately had the air of one continuous market-day," says Bancroft, "the stillness was broken by auctions of furniture which lay in heaps on the sidewalk. Those who resolved to stay roused mournfully from a delusive confidence in British protection to restless anxiety. . . . To the loyalists the retreat appeared as a violation of the faith of the British king. The winter's revelry was over; honors and offices turned suddenly to bitterness and ashes; papers of protection were become only an opprobrium and a peril. Crowds of wretched refugees, with all of their possessions which they could transport, fled with the army. The sky sparkled with stars; the air of the summer night was soft and tranquil, as the exiles, broken in fortune and without a career, went in despair from the only city they could love."¹ The British vessels which had dropped down the river on the 17th were crowded with refugees, and on the following day, those who had decided to accompany the army set out on their journey, pausing, perhaps, on the Jersey shore to take a last look at their homes, but only to see McLane and his hated Whig troopers galloping through the streets of the deserted city.

CHAPTER XVIII.

PHILADELPHIA DURING THE REVOLUTION.

PART III.—FROM THE AMERICAN REOCCUPATION TO THE DECLARATION OF PEACE, JAN. 22, 1784.

WASHINGTON lost no time in pushing into Philadelphia. As the enemy retreated into the Neck, Capt. Allen McLane and his cavalry hovered on their rear, and, advancing to Dock Creek bridge, surprised and captured Capt. Sandford. An unsuccessful attempt was made to seize the adjutant-general on

Second Street, near Chestnut, but turning up Walnut Street, at the bridge over Dock Creek, McLane came upon Frederick Varnum, keeper of the prison under Galloway, whom he took into custody. Having heard that several officers were near the Bettering House, he proceeded in that direction; but they had passed down South Street and effected their escape. Many of the officers lingered so long in town that they came very near falling into the hands of the Americans.²

On the day following the evacuation Philadelphia was formally reoccupied by the American troops and Gen. Benedict Arnold placed in command of the city. Arnold, who was then very popular, owing to his conspicuous services in the campaign which had resulted in the surrender of Burgoyne, established his headquarters at the residence of Henry Gurney, but in a few days removed to Mrs. Master's house, in Market Street, formerly occupied by Gen. Howe, "where he entered upon a style of living but ill according with republican simplicity, giving sumptuous entertainments that involved him in expenses and debt, and most probably laid the foundation, in his necessities and poverty, of his future deception and treason to his country."³ Arnold was accompanied by the Massachusetts Continental regiment, commanded by Col. Jackson. On the day of his entrance into the city he issued a proclamation reciting the resolution adopted by Congress on the 4th of June requesting Washington to take measures for the preservation of order in the town, and to prevent the removal, transfer, or sale of goods or merchandise in possession of the inhabitants belonging to the king of Great Britain. All persons having European, East or West India goods—iron, leather, shoes, wines, and provisions of every kind—beyond the necessary use of a private family were ordered to make return to the town-major at his quarters on Front Street, the fourth door from the Coffee-House (corner of Market Street), by twelve on the 20th. Under these orders the shops were closed, notice being given that the removal, transfer, or sale of goods made without permission would be considered a breach of the regulations of Congress, and that such goods would be seized and confiscated for the public use. All persons having in their possession stores or property belonging to subjects of the king of Great Britain

² "When they [the British] left the city," says Deborah Logan (Watson, vol. ii. p. 286), "the officers came to take leave of their acquaintances and express their good wishes. It seemed to us that a considerable change had taken place in their prospects of success between the time of their entry and departure. They often spoke freely, in conversation, on these subjects. The Honorable Cosmo Gordon stayed all night at his quarters, and lay in bed so long the next morning that the family thought it but kind to waken him and tell him 'his friends, the rebels, were in town.' It was with great difficulty he procured a boat to put him over the Delaware. Perhaps he and his man were the last that embarked. Many soldiers, hiding themselves in cellars and other places, stayed behind. In two hours after we saw the last of them, our own dragoons galloped down the street."

³ Deborah Logan.

¹ Vol. x. pp. 124 and 127.

were directed to make a like report, and a reward was promised to all who should discover the place of concealment of such effects.¹

Harboring or concealing British officers or soldiers, or deserters from the Continental army, in the city or suburbs, was declared to be an offense for which severe punishment would be meted out. On the following day (June 20th) another proclamation was issued notifying the country people that the city was open and that markets would be held as usual. Congress met again at the State-House on the 25th of June, and the Supreme Executive Council held its first meeting on the following day.

The inhabitants who had fled from the city or been driven out during Tory supremacy now began to return, and in the course of a few weeks most of them were again in possession of their homes. They found the city in a wretched condition,—filthy, ruinous, dreary. In his *Remembrancer*, Christopher Marshall vividly depicts the destruction wrought by the enemy. "Within a mile or two" of the city, he says, writing under date of June 23d, "was presented a new prospect; houses ruined and destroyed, fields of fine corn without fences, etc." June 24th, he writes, "Viewing the desolation with the dirt, filth, stench, and flies in and about the town, scarcely credible." June 25th, "Took a walk by myself to our once rural, beautiful place near barracks. Now nothing but a wanton desolation and destruction that struck me with horror and detestation of the promoters and executors of such horrid deeds. My mind was so pained I soon returned into the city." June 26th, "Breakfasted and dined at Stephen Collins' . . . In the interval engaged in viewing some of our and others houses with wonder and amazement on the scenes of malice and wanton cruelty. Yet my late dwelling-house is not so bad as many others. Yet grief seized me on beholding the ruins, viz., houses quite demolished, of which ours, near the Bettering House, was quite gone, with the brick walls, chimneys, etc.; the doors, cases, windows, roofs, etc., either destroyed or carried away entirely."

The spectacle of filth and ruin which presented itself to their eyes, accustomed to the neatness, cleanliness, and good order of the prim Quaker town, as well as the wanton destruction of their property, exasperated the Whigs, who determined to seek reprisals on the Tories. Many complaints of robberies and acts of vandalism were preferred. Whitehead Humphreys gave notice that "Joseph Fox, a noted traitor, had seized and taken away four tons of blistered steel, and all the apparatus belonging to the steel furnace," which he had sold to some persons in the city. Henry Miller, the German printer, suffered the loss

of his printing-office and materials, which were then as complete as any in America. James Robertson, the Tory printer of the royal *Pennsylvania Gazette*, was the person who carried off the printing press and property, using a number of the king's wagons for the purpose. Robertson alleged that Gen. Howe had given him the type as a compensation for the loss of his own printing materials at Albany, taken from him by the Whigs. Rev. Michael Schlatter complained that his dwelling at Chestnut Hill had been "cruelly plundered" by the British troops, who had carried off many valuable books together with a number of household articles.²

Thomas Hale and Nicholas Weaver, on behalf of a large number of Whigs who had suffered at the hands of the British,³ addressed the Supreme Executive

² The following is a list of those who, according to the appraisement of 1782, suffered damages exceeding one thousand pounds:

In Germantown the claims numbered one hundred and thirty-seven. No claim was made for the damage done to the Chew house. The Moravian meeting, East Mulberry Ward, claimed thirty-nine pounds; the German Lutheran Church, Germantown, £156 2s. 6d. The German Reformed Church, in the same place, also claimed damages. No claim was made for the Zion Lutheran Church, in the city, or St. George's, both of which were materially injured by the British.

³ "The following inhabitants of Philadelphia City and County were attainted as traitors, and proclamation made against them during the British occupation of the city:

May 8, 1778.—*Of the City*: Enoch Story, late merchant; Samuel Garrigues, the elder, late clerk of the market and trader; James Stevenson, late baker; Abram Carlisle, house-carpenter; Peter Deshong, miller; Alexander Bartram, trader; Christian Hook, attorney-at-law; Peter Miller, scrivener; Lodowick Korker, butcher; Philip Marching-

¹ Part of the property discovered and seized under this order was a quantity of salt exceeding four thousand bushels in Pritchard's stores, on the south side of Chestnut Street wharf, consigned to Amos Foulke and William Buckhouse, British subjects, who, on the day before the evacuation, sold it to Alexander Wilcocks, John Wilcocks, and William McMurtrie. In December the sheriff was ordered to deliver the salt to George Henry, commissary of stores, for the use of the army.

Council, requesting that more stringent measures be taken for the seizure of the property of Tories; but that body declined to adopt their recommendation on the ground that the laws would not justify them in doing so. Complaints against persons for assisting the British army were preferred before Chief Justice

ton, trader; Edward Hanlon, cooper and vintner; Alfred Clifton, gentleman; Arthur Thomas, breeches-maker.

Of the County: Thomas Livezey, of Roxborough, miller; John Roberts, of Lower Merion, miller; Robert Iredale, the younger, and Thomas Iredale, of Horsham, laborers; Joshua Knight, of Abington, blacksmith; John Knight, tanner; Isaac Knight, husbandman; Albion Walton, of Philadelphia; Henry Hugh Ferguson, commissary of prisoners to Gen. Howe. These were ordered to surrender themselves for trial on or before the 25th of June, 1778.

May 21, 1778.—*Of the City:* Abel James, merchant; James Humphreys, the elder; James Humphreys, the younger, printer; Henry Lisle, John Hart, Chaunces Hart, David Sprout, Thomas Story, Malcolm Ross, William Price, Thomas Roker, and Tench Coxe, merchants; Abel Evans, attorney-at-law; Benjamin Titley and Peter Howard, traders; Coleman Fisher (son of William Fisher); William Clifton, gentleman; James Stevens, late baker; Bowyer Brookes, ship-carpenter; John Allen, carpenter and tallow-chandler; William Austin, yeoman, late keeper of the New Jersey Ferry; Kenneth McCullough, yeoman; Charles Stedman, the younger, attorney-at-law; John Shepperd, stable-keeper; James Delaplaine, late barber; Robert Currie, leather breeches-maker; Thomas Badge and William Compton, tallow chandlers; Peter Sutter, hatter; James Riddle, tavern-keeper; John Parrack, yeoman; John Young, heretofore of Graeme Park, gentleman; Oswald Eve, late of the Northern Liberties, merchant and gunpowder maker.

Of the County: David Potts, of Pottsgrove (son of John Potts); Christopher Saur, the elder, and Christopher Saur, the younger, printers; Joseph Shoemaker and Abraham Pastorius, tanners; Andrew Hathe, innkeeper; Melchior Meng, carter and baker; and Jacob Meng, of Germantown township; Peter Robeson and Jonathan Robeson, the younger; sons of Jonathan Roberts, of White Marsh; Abraham Iredell, surveyor; James Davis; William Christy, mason; John Roberts, laborer, of Horsham; John Roberts, blacksmith; Nathan Carver, wheelwright; Israel Evans, blacksmith, of Upper Dublin; John Huutsman, miller; Robert Conrad, mason; Enoch Supple, farmer; and William Evans, carpenter, of Norriton; Nicholas Knight, lime-burner; John Parker, John Lisle, Robert Lisle, laborers, of Plymouth; Jacob Richardson, carpenter, of Upper Merion; Stephen Stiger, yeoman, of Whitpain; William McMurray, merchant; and Edw. Stiles, mariner and merchant, of Oxford. They were ordered to surrender themselves for trial on or before July 6, 1778.

June 15, 1778.—*Of the City:* James Inglis, trader; Robert Coupar, trader; Carpenter Wharton, late commissary; John Chevalier, merchant; James Club, mariner; Benjamin Towne, printer; James Smyther, engraver; Joel Evans, merchant; Anthony Yeldall, surgeon; Wood Morris, mariner, late constable; John Cunningham, innkeeper; William Taylor, silversmith; Frederick Verner, yeoman; Anthony Thomas, Jr., hatter; Samuel Garrigues, Jr., trader; Joseph Stansbury, dealer in earthenware; John Bray, schoolmaster, late constable; Ross Curry, gentleman, late lieutenant in the service of the American States; John Johnson, coach-maker; John Airy, late of the post-office; John Hales, stable-keeper; Dunnin Irwin, trader; John Pike, dancing-master; John Palmer, mason; James Craig, rope-maker and merchant; John Henderson, mariner; Benjamin Davis, hatter; George Spangler, trader; James Fisher, trader; Hugh Henry, peruke-maker; Jacob Mayer, peruke-maker; Isaac Wharton, merchant; Benjamin Gibbs, merchant; James Gregson and Thomas Bramhall, button-makers; Samuel Jeffreys, watch-maker; Michael Cannon, merchant; Robert Loosely, shoemaker; Henry Youken, trader; Henry Welfing, shoemaker; and Robert Dove, leather-cutter.

Of the County: William Williams, shipwright; Lawrence Fegan, tavern-keeper; John Brown, distiller; William Taylor, shipwright, of the Northern Liberties township; David Gregory, mariner; John Tolley, mariner; David Thompson and Charles Moran, shipwrights, of Southwark; John Buckingham, laborer; Joseph Bolton, joiner; John Butcher, husbandman, of the township of Blockley; Peter Sour, printer, of Germantown; and Stephen Styer, yeoman, of Whitpain.

McKean, who held court several days in order to hear evidence in support of the charges. The press encouraged the Whigs in the prosecution of retaliatory measures. Town's *Evening Post*, which had been the first journal to welcome the British, and had chronicled their departure with no extravagant protestations of joy, now took another tack, and admitted to its columns a communication signed "Casca," in which the writer "hinted" to "traitors and those Tories" who had taken an active part with the enemy during their stay in the city that it would be more prudent for them to lower their heads and not "stare down" their "betters with angry faces," for, it was added, "you may be assured the day of trial is close at hand when you shall be called on to answer for your impertinences to the Whigs and your treachery to the country." Dunlap's *Packet*, which had been removed to Lancaster, now resumed publication in the city, the first number appearing on the 4th of July, and of course espoused the cause of the Whigs with the utmost warmth. The general feeling of dissatisfaction among the Whigs culminated in a riotous attack on the house of Peter Deshong, who, having been proclaimed a traitor, had surrendered himself to the authorities. Deshong thus escaped punishment at the hands of the mob, which accomplished nothing beyond alarming his family. Other Tories were similarly threatened, and an association was formed among the Whigs, the members of which pledged themselves "to support each other in disclosing and bringing to justice all Tories within their knowledge."¹

¹ The following were the signers of this association: Joseph Reed, John Parke, John Coats, Benjamin Randolph, Thomas Woceten, Samuel Nicholas, James Lang, Abraham Markoe, George Wilson, Jr., J. Prowel, W. Humphrey, L. Keen, Thomas Proctor, James Fallow, James Searle, J. Cowperthwaite, George Cottnam, Charles Stewart, Robert Harris, John Campbell, Daniel Dennis, William Drewry, William Price, Peter Browne, Thomas Forrest, Walter Stephens, Stokley Hoffmann, Thomas Dorsey, Joseph Marsh, Arthur Donaldson, James Craig, Jr., Thomas Leiper, Thomas Paine, Frederick Philé, Thomas Bradford, John Barnhill, Lewis Nicola, Paul Fooks, Charles Risk, Charles Miller, Matthias Sadler, George Shofford, George Hoffman, Michael Caner, Henry Deuberger, William Bumper, Jonathan B. Smith, Thomas Pryor, Richard Humphreys, John Chalmer, Joseph Carson, Charles Bensell, Jr., Riloff Albertson, Thomas Rice, Thomas Crumble, William Webb, William Allen, William Moore, William C. Bradford, William Heysham, William Thorn, William Sharp, William Browne, William Gray, William Kerling, William Hall, Benjamin Harbeson, Benjamin G. Eyre, Jehu Eyre, Robert Cather, Robert Harris, Robert Allison, Robert Bayley, P. Scull, Edward Evans, Thomas Douglass, Cad'r Dickinson, Manuel Eyre, William Turnbull, William Cross, William Semple, James Pierson, William Will, Robert McConnell, Abraham Michell, Jr., Nathan Boys, George Feiker, Edward Beach, John Morrell, John Harrison, John Rose, John Cameron, John Melcher, John Brown, John Larimer, John Boll, John Young, Jr., John Boyle, John Mitchell, Sr., John Frumberger, Robert Knox, Lewis Farmer, Jacob Parker, Jacob Shallus, John Kepple, John Brice, John Shute, John Ingram, William Peltz, George Garland, Thomas Goucher, John Laboytenaux, Joseph H. Ellis, George Douglass, James Lloyd, Ezekiel Letts, William Coats, David Chambers, James Armitage, James Robinson, James Loughed, Samuel Hillegas, Adam Alexander, Alexander Henderson, J. Bullock, Rob. Roberts, Samuel Simpson, Isaac Cox, Alexander Nesbitt, James Ash, James Bryson, James Tilton, James Josiah, James Bowman, F. Hassenclever, Samuel Correy, David Pancoast, David Lenox, John Palmer, John Patten, William Adcock, William Bradford, George North, J. Hubler, James Budden, Thomas Hall, William Alricks, P. Baynton, Samuel McLane, Jacob

Nor did the social relations of those who were suspected of Toryism escape the general infection. Even the ladies who had taken part in the Meschianza came in for their share of the general disapprobation, to emphasize which a special entertainment was given at the City Tavern, in honor of "the young ladies who had manifested their attachment to the cause of virtue and freedom by sacrificing every convenience to the love of their country."¹

Leaving Arnold in command at Philadelphia, Washington had set out with the main body of his army to intercept the British retreat across New Jersey. On the 28th of June the battle of Monmouth was fought, resulting in the precipitate flight of Clinton with the wreck of his army to New York. About eight hundred of Clinton's men deserted, of whom seventy, says Marshall, in his *Remembrancer*, came to Philadelphia in one day (July 4th). Under these circumstances the second anniversary of the Declaration of Independence was celebrated at Philadelphia with some elation. The clouds that had lowered over the American cause so long had at length begun to lift. Congress recommended that there should be no illumination on the evening of the Fourth, owing to "the scarcity of candles" and the intense heat of the weather, but made provision for "a decent entertainment" at the City Tavern. A week later (July 12th) the patriotic citizens had additional cause for rejoicing in the arrival of Conrad Alexander Gerard, ambassador from the king of France. M. Gerard had come over in one of the vessels of the fleet commanded by Count D'Estaing. At Chester, where he landed, he was received by a committee of Congress, which escorted him from that point to Philadelphia. On his entrance into the city he was greeted with a salute from Col. Proctor's artillery, and the greatest enthusiasm was exhibited by the citizens. Apartments were provided for him on Market Street, and on the following day he was formally received by Congress

at the State-House.² In the afternoon a banquet was given in honor of the ambassador by Congress, at which the State authorities and many distinguished persons were among the guests. The presence of the French king's representative at the seat of government had a most encouraging effect throughout the country. It was regarded as an earnest of the active interposition of France in behalf of the colonies. Every opportunity was seized upon by Congress, and by other national and State authorities, and by the citizens of Philadelphia generally to testify their gratitude. On Sunday, August 23d, the birthday of the king of France, the president and members of Congress and the principal military and civil officers and a number of gentlemen called upon the French minister and tendered their congratulations. Two days later M. Gerard gave an entertainment at the City Tavern in honor of the same event.³

Arnold's administration of affairs in Philadelphia was marked by gross venality. His salary as an officer being insufficient to support his extravagant habits, he prostituted his position in order to raise the means of gratifying them. The first incident which attracted attention to his conduct was a difficulty growing out of the capture of the British sloop "Active." The "Active," laden with rum and coffee, left Jamaica for New York on the 1st of August, and, when near Cape Charles, fell in with two British cruisers, from whom she learned that Philadelphia had been evacuated by the British. Four American sailors who had been taken on board to work the vessel determined to attempt her capture. They succeeded in confining the officers, passengers, and remainder of the crew below by piling the cable and other obstructions upon the stairway leading from the cabin to the deck. But the prisoners, being well supplied with water, provisions, and ammunition, were not disposed to surrender, and failing to dislodge the barricade, opened fire upon the mutineers. The latter

Shuner, Peter Cooper, Charles Cooper, Nicholas Coleman, Nicholas Miller, Adam Zantzinger, William Thompson, Edward Pole, Green'ly Hughes, John Mease, John Nicholson, John Coburn, John Dunlap, John Stille, John Van Bruce, John Shaffer, John Brice, John Osman, Joseph Rice, Joseph C. Fisher, Thomas Casdrop, Philip Pancake, Christopher Pechin, Walter Cunse, Isaac Rouch, Joseph Robinson, Joseph Dean, Benjamin Loxley, P. Duffy, Paul Cox, Sharpe Delaney, Isaac Craig, James Skinner, Joseph Sutter, William Stretch, Peter Stretch. These associators afterwards formed themselves into "The Patriotic Society."

¹ Thompson Westcott. On the other hand, Watson (vol. II. pp. 292-3) says that "no offense was offered to the ladies afterwards for their acceptance of this instance of an enemy's hospitality. When the Americans returned they got up a great ball to be given to the officers of the French army and the American officers of Washington's command. When the managers came to invite their guests, it was made a question whether the Meschianza ladies should be invited. It was found they could not make up their company without them; they were therefore included. When they came they looked differently habited from those who had gone to the country, they having assumed the high head-dress, etc., of the British fashion, . . . and so the characters, unintentionally, were immediately perceived at a glance through the hall. (It was the Masonic Hall, in Lodge Alley.) But lots being cast for partners, they were soon fully intermixed, and conversation ensued as if nothing of jealousy had ever existed and all umbrage was forgotten."

² Richard Henry Lee and Samuel Adams, a committee appointed for the purpose, waited upon the ambassador at his lodgings. A coach and six horses were provided, in which Lee, Adams, and the ambassador took their places. Gerard's secretary followed in his chariot. When the party reached the State-House they found Congress in session. A chair was provided for the envoy, who, after being seated, rose and gave his credentials to his secretary, who handed them to the president. The secretary of Congress then read them aloud and translated them. When this was done the president, Henry Laurens, and Congress rose together. Gerard bowed to the president and Congress, and they bowed to him, after which all resumed their seats. M. Gerard then rose and addressed Congress in a formal speech, the members sitting, after which his secretary gave a copy of the address to the president. The latter and the members then rose, and the president made a reply, the ambassador also standing. The answer being ended, they were again seated, and the president gave a copy of his address to the secretary of the ambassador. The president, M. Gerard, and Congress then rose, and M. Gerard bowed to the president, who returned the courtesy, and then to the members, who bowed in return. The committee and Gerard then withdrew, and returned in the order in which they had come.

³ A visit to Philadelphia was paid about this time by the French frigate "Chimere," Capt. Le Saire, which, on her return, was preceded by the "State Sloop" in order to ascertain whether any British cruisers were hovering about the coast.

being without ammunition and unable to work the rudder, which had been wedged, proposed a compromise, which was agreed to. By the terms of this truce the Americans were to steer the sloop near to land and effect their escape in boats, their principal object in attempting the capture having been to avoid imprisonment in New York. Before this arrangement was carried out, the American brig "Convention," Capt. Houston, fell in with the sloop and conveyed her as a prize to Philadelphia. At the time of the capture the privateer "Gerard" was near at hand,

Bened. Arnold

and when the distribution of the prize money came to be made, three-fourths was awarded, by a jury of the Admiralty Court of Pennsylvania, to the "Convention" and "Gerard," and one-fourth to Gideon Umstead, one of the American seamen who had preferred a claim for the money, and his fellows. Um-

stead, it was thought at the time, would have accepted the award but for Arnold, who, having purchased the claims of the four seamen, made an application in their names to Congress. That body, ignoring the decision of the Court of Admiralty, awarded the whole of the prize money to Umstead and his comrades, or, in other words, to Arnold. The court refused to execute the order of Congress, and a controversy between the United States and the State of Pennsylvania followed, which was not settled for some years. Arnold's conduct in the matter excited general indignation, and his subsequent course rapidly alienated the respect and confidence which his military services had inspired among the Whigs. Instead of choosing his associates from among the latter, he became a frequent visitor in Tory families, and while obviously making every effort to ingratiate himself with those whose loyalty was more than questionable, observed an attitude of marked reserve and *hauteur* toward those whose patriotic course had given them the right to look for respectful treatment at his hands. Complaint was also made against him for the arrogant manner in which he treated the city militia, compelling them to do guard duty at his residence, and perform services which they considered to be of a menial character. A communication in the *Packet*, signed "A Militia Man," after representing that the writer had been compelled to stand at the door of Arnold's house as sentinel, added that the general was exposed

to no real danger in Philadelphia. "From Tories, if there be any amongst us," it was stated, "he has nothing to fear. *They are all remarkably fond of him.* The Whigs to a man are sensible of his great merit and former services, and would risk their lives in his defense." Shortly after this Arnold employed the wagons furnished by the State of Pennsylvania for the use of the army to transport private property, some of which, belonging to Tories, was conveyed by John Jordan with twelve teams from Egg Harbor to Philadelphia, at a cost to the State of nine hundred and sixty pounds exclusive of forage.¹

Arnold, it was also charged, shut up the stores and shops on his arrival in the city, so as to prevent even officers of the army from purchasing, while he privately made purchases on his own account, and then through his agents sold them again at exorbitant prices. By these means he was able to maintain "a style of living of unprecedented extravagance."² He occupied the house of Richard Penn, formerly the headquarters of Gen. Howe, and afterwards the residence of Gen. Washington while President, on the south side of Market Street between Fifth and Sixth,³ where he lived in great state, maintaining a coach and four, and servants in livery, and giving magnificent entertainments.⁴

¹ Some of this property belonged to Stephen Shewell, a Tory, who had been attainted, and proclaimed a traitor.

² *Arnold's Governors of Pennsylvania*, p. 224.

³ On the 22d of March, 1779, Arnold purchased the Mount Pleasant estate on the east bank of the Schuylkill near the point where the Reading Railroad bridge now crosses the river, from John Macpherson, with the intention of presenting it to Margaret Shippen, his intended wife. On the 3d of April he executed a deed to Edward Shippen, John Shippen, and Samuel Powel, trustees for Miss Shippen for the use of his wife for life, and after her death the remainder to Arnold's three sons by the first marriage, and such children as might have been born after the marriage with Miss Shippen, in equal proportions. After the discovery of Arnold's treason the property was seized by the State of Pennsylvania, Oct. 2, 1780, and confiscated. Subsequently it was sold at sheriff's sale to pay off a prior mortgage. The estate afterwards belonged to Col. Richard Hampton, Blair McClenachan, Chief Justice Edward Shippen (Mrs. Arnold's father), and Gen. Jonathan Williams, from whom it descended to Henry J. Williams. The latter sold the estate, about 1853, to some Germans, who opened at the place a beer garden, which they called Washington's Retreat. The Park Commissioners purchased the old mansion and estate in 1868.

⁴ "When I meet your carriage in the streets," said T. G., a writer in the *Packet*, in an address to Maj.-Gen. Arnold, "and think of the splendor in which you live and revel, of the settlement which it is said you have proposed in a certain case, and of the decent frugality necessarily used by other officers of the army, it is impossible to avoid the question, 'From whence have these riches flowed if you did not plunder Montreal?'"

In Samuel Breck's biographical sketch of Judge Peters, who was commissioner of war during 1779, the following account is given of one of the means employed by Arnold to support his extravagance:

"On the 18th of July, 1778, Mr. Peters entered Philadelphia at the very time the enemy was evacuating the place. He went there under a strong escort sent with him by Gen. Washington. His object was to secure clothing and stores secreted by our friends who had remained in the city, and to purchase everything that he could from the dealers. He succeeded in fulfilling the wishes of the American general-in-chief. Arnold took command of the city a few days after, while Mr. Peters returned to York, in this State, where Congress then held its sessions. 'I left,' says Mr. Peters, in a letter to a friend, 'fifty thousand dollars to the order of Arnold for the payment of the clothing and stores. The traitor seized those articles and never paid for them, but converted the

Having succeeded in ingratiating himself into the good will of the Shippen family, he won the affections of Margaret (or "Peggy") Shippen, the young and accomplished daughter of Edward Shippen, afterwards chief justice of the State, who became

of the complaints against him. Among the most active of those who urged an investigation of the charges was Gen. Joseph Reed, president of the Council, and Arnold retaliated by accusing Reed of having permitted himself to be approached with a

his second wife. His corruption, greed, and ostentation at length became so scandalous that the Supreme Executive Council was forced to take official notice

greater part of the money to his own use, among others, to buy the country-seat of Mr. Macpherson, on the Schuylkill. Col. Pickering and I detected him in ordering stores and provisions out of the public magazines to fit out privateers of his own, and for his extravagant family establishment. An attempt to stop this robbery produced between me and Arnold an open quarrel."

The following agreement, by which the power of purchasing on the part of the United States was arranged to be used for the private advantage of Arnold and his partners, was found among his papers in Philadelphia after his treason was discovered:

corrupt proposition from the British Government. The basis of this allegation was found in the statement of Mrs. Elizabeth Ferguson, of Graeme Park,

"Whereas, By purchasing goods and necessities for the use of the public, sundry articles, not wanted for that purpose, may be obtained, it is agreed by the subscribers that all such goods and merchandise which are or may be bought by the clothier-general, or persons appointed by him, shall be sold for the joint equal benefit of the subscribers, and be purchased at their risk. Witness our hands, this twenty-third of June, 1778.

"B. ARNOLD.

"JAMES MEASE.

"WM. WEST."

relating the substance of interviews between herself and Governor Johnstone, one of the British peace commissioners just before the evacuation of Philadelphia by the British. Mrs. Ferguson had come into the city from the American lines in order to take leave of her husband, who claimed to be a British subject, but who had been attainted for treason by the State of Pennsylvania. In the course of their conversation Johnstone said to Mrs. Ferguson, who was a personal friend of Reed's, that if Reed would exert his influence in favor of an amicable adjustment of the differences between the colonies and the mother-country, he might command ten thousand guineas and the best post in the service of the government. He closed by asking Mrs. Ferguson to convey "that idea" to Reed. While professing to be "hurt and shocked" at the suggestion, Mrs. Ferguson submitted the proposition to Reed, who replied that he was not worth purchasing, but such as he was, the king of Great Britain was not rich enough to buy him.

This effort to blast his character was not calculated to mollify Reed's feelings toward Arnold, and on the 3d of February, 1779, the Supreme Executive Council, following his lead, adopted a series of charges against Arnold, accusing him of illegal and oppressive conduct, of permitting vessels belonging to disaffected persons then voluntarily residing with the British in Philadelphia to come to a port of the United States without the knowledge or authority of the State or the commander-in-chief, of shutting up the stores and privately making purchases on his own account, of imposing "menial offices upon the sons of freemen" when called forth for militia duty, of interposing by an illegal and unworthy purchase of the "Active" prize-claim at a low and inadequate price to prevent an amicable adjustment of the suit and realize a large profit for himself, of appropriating the wagons of the State for the transportation of private property, of giving an unauthorized pass to a person suspected of disloyalty to enter the British lines, of sending an indecent and disrespectful refusal to a request for a statement concerning the use of the wagons, and of exhibiting "discouragement and neglect to civil, military, and other characters who had adhered to

the cause of their country, while preserving an entirely different attitude to those of another character."

It was added that, "If this command had been, as is generally believed, supported at an expense of four or five thousand pounds per annum to the United States, we freely declare we shall very unwillingly pay any share of the expense thus incurred;" and the Council decided that the attorney-general be instructed to prosecute Gen. Arnold for such conduct as was cognizable by the courts of law. It was further ordered by the Council "that, as the wagons sent by Gen. Arnold to Egg Harbor were drawn forth under the law of this State, and the wagoners not being able to procure payment either from the quartermaster's department or from Gen. Arnold, who is de-

parted from this city while the complaint against him was depending, and they being in a great necessity, this board ought to relieve them so far as to advance four hundred and fifty pounds, until they can procure further redress; and that John Jordan, wagon-master, give a special receipt to be accountable therefor."

Arnold, not caring to meet the charges, left the city, but before his departure a certified copy of the proceedings of the Council, it was said, was delivered to him. The Council thereupon made the whole matter public, and Maj. Clarkson, Arnold's aide-de-camp, published a letter alleging that the charges had been given to the world during

MRS. ELIZABETH FERGUSON.

Arnold's absence, and requesting a suspension of public opinion until Arnold could return and defend himself. From Camp Raritan, Arnold himself sent a letter addressed to the public under date of Feb. 9, 1779, in which he stated that since leaving Philadelphia he had learned "that the President and Council of the State have preferred to Congress eight charges against me for mal-administration while commanding in the State; and that, not content in endeavoring in a cruel and unprecedented manner to injure me with Congress, they have ordered copies of the charges to be printed and dispersed through the several States for the purpose of prejudicing the minds of the public against me while the matter is in suspense. Their conduct," he added, "appears the more cruel and malicious in making the charges after I had left the

city, as my intention of leaving it was publicly known for four weeks before." He announced that he had requested Congress to direct a court-martial to be held to inquire into his conduct, and expressed the hope that the issue would show that, instead of being guilty of the abuses of power of which he had been accused, he had been assailed by "as gross a prostitution of power as ever disgraced a weak and wicked administration," and which manifested "a spirit of persecution against a man (who has endeavored to deserve well of his country) which would discredit the private resentments of an individual, and which ought to render anybody who could be influenced by it contemptible."

Arnold's letter was followed by one from Maj. Clarkson, denying the assertion of the Executive Council that a copy of their charges and resolutions had been delivered to Arnold before his departure from the city. The action of the Council, it was said, was taken on the day of Gen. Arnold's departure, but after he had left. It might have happened, however, Maj. Clarkson admitted, that the resolutions were delivered to Gen. Arnold, who, finding the roads bad, had crossed the river again into Pennsylvania, before he had again crossed the line of the State, and this he believed to be the case; but the point he wished to make was that Arnold had not taken his departure after receiving a copy of the charges and in consequence of them.

Arnold had many friends in Congress, and it was with some difficulty that the passage was procured of a resolution directing that a court-martial be held at camp to try him on certain charges selected from those preferred by the Executive Council of Pennsylvania. The trial was delayed until January, 1780, when Arnold was convicted of making private use of the army wagons, but acquitted of any corrupt intent and was sentenced to be reprimanded by the commander-in-chief. The verdict exasperated Arnold, who was still further humiliated by the action of Congress on claims preferred by him growing out of the Canadian expedition. His estimate was materially reduced by the treasury officers, and when Arnold appealed to Congress a committee reported that a larger sum had been allowed him than was really due. Having failed to secure a loan from the French ambassador, he determined to betray his country for British gold. With this end in view he made a proposition through Maj. André, who had known Arnold's wife, Miss Shippen, while stationed in Philadelphia, to Sir Henry Clinton to surrender the important military post of West Point on the Hudson, the command of which he had solicited and obtained from Washington. The failure of this scheme, the flight of Arnold and the death of André, are familiar facts of history which it is unnecessary to dwell on here.¹

When the news of Arnold's treason reached Philadelphia, on the 27th of September, 1780, the sheriff was ordered by the Supreme Executive Council to make search for Arnold's papers and bring them before that body. This was done, and while no direct proof of his treachery was found, the papers disclosed, said the *Packet*; "such a scene of baseness and prostitution of office and character as it is hoped the world cannot parallel." "The illiberal abuse of every character opposed to his fraudulent and wicked transactions," it was added, "exceeds all description." The popular indignation in Philadelphia at the revelations of Arnold's baseness was intense. On the night after the intelligence of his flight was received, a hollow paper figure, with a light inside, and an inscription on it, was carried through the streets, and finally hung upon a gallows.

Two days later, September 30th, a public parade gave expression to the universal detestation of the traitor. The procession was composed of "several gentlemen mounted on horseback, a line of Continental officers, sundry gentlemen in a line, a guard of the city infantry," and drummers and fifers playing the *Rogue's March*, and preceding a cart, with guards on each side, in which was displayed an effigy of Arnold. The escort consisted of about twenty militia and three light-horsemen,—James Budden, John Dunlap, and Thomas Leiper. Each militiaman carried a lighted candle affixed to his musket. The figure of Arnold was seated on a stage, with one leg upon a chair, in imitation of his manner of sitting in consequence of his wound, and the head, which had two faces, emblematic of his treacherous conduct, was made to move continually. The effigy was dressed in uniform. In one hand it held a mask, and in the other a letter "from Beelzebub, telling him he had done all the mischief he could do, and now he must hang himself." Back of the effigy stood the figure of a devil, shaking a purse at the general's left ear, and holding in his right hand a pitchfork, "ready to drive him into hell as the reward due for the many crimes which his thirst of gold had made him commit." In front was placed a large transparency, with pictures representing the consequences of his crimes. On one part, Gen. Arnold on his knees before the devil, who is pulling him into the flames. A label from the general's mouth with these words: "My dear sir, I have served you faithfully." To which the devil replies, "And I'll reward you." On another side two figures hanging, inscribed, "The traitor's reward," and underneath, "The Adjutant-General of the British army and Joe Smith. The

¹ Arnold died at his house in London on the 14th of June, 1801, and his wife in the same city on the 24th of August, 1804. According to the

"Red Book," published in London in 1824, Edward Shippen Arnold, James Robertson Arnold, George Arnold, and Sophia Matilda Arnold, children of Benedict Arnold, received pensions of four hundred pounds sterling, paid by sign-manual of the king of Great Britain at the treasury. Another son, John Arnold, was a brigadier-general on the Bengal establishment in India. Edward S. Arnold also served as an officer on the same establishment.

first hanged as a spy, and the other as a traitor to his country." On the front of the lantern was the following inscription: "Major-General Benedict Arnold, late commander of the fort West Point. The crime of this man is high treason," together with a recital of the facts of his treachery, and the announcement that "the effigy of this ungrateful general" would be hanged "for want of his body," as that of a traitor to his native country and a betrayer of the laws of honor. The procession formed in the rear of St. George's Methodist Episcopal Church, at Fourth and Elm (now New) Streets, and the effigy, after having been drawn through the city, was burnt on High Street hill.¹

Arnold's "address to the inhabitants of America" was produced in the *Pennsylvania Packet*, and a number of epigrams, squibs, and verses were published in Philadelphia, some of which were clever. The Executive Council of Pennsylvania promptly confiscated Arnold's property. His country estate, Mount Pleasant, was seized and rented to Baron Steuben; his horses and chariot were sold at the Coffee-House, and his household and kitchen furniture at the meal-market. In a letter to Washington, Arnold had begged protection for his wife, whom he declared to have been ignorant of what he had done, but the Supreme Executive Council, evidently thinking that she was not altogether innocent,—her family was one of Tory proclivities, and she had been one of the principal belles of the Meschianza,—adopted, on the 27th of October, an order directing her to leave the State within two weeks.²

In addition to the charges preferred against Arnold in that year, the public mind in Philadelphia was agitated, in 1779, by two other incidents affecting individuals high in the service of the colonies. The first of these caused a difficulty between Brig.-Gen. William Thompson and Chief Justice Thomas McKean. Thompson had raised a rifle regiment and marched to Cambridge at the beginning of the war, but was captured during the Canadian expedition under Montgomery and Arnold. After an imprisonment of four months he was released on parole and came to Pennsylvania, where he was forced to remain for more than two years and a half an idle spectator of the contest. Thompson claimed that he should have been exchanged long before and permitted to re-enter the service, and that Congress had treated him in a "rascally manner." He was particularly bitter

against McKean; whom he accused of having hindered his exchange, and denounced for having acted "like a liar, a rascal, and a coward." To this insulting language, evidently used with the view to provoking a duel, McKean replied that, "as chief justice of a new republic" nothing should disturb his steady purpose by his precepts and example to maintain peace, order, the laws, and the dignity of his station, and that he could not "set the precedent, obliging a member of Congress, or a magistrate, to subject himself to a duel with every person against whose opinion he gives his vote or judgment." McKean sued Thompson for libel, and the case was determined in the spring of 1781 by the award of five thousand seven hundred pounds damages in favor of the plaintiff. Dunlap, printer of the *Packet*, in which the libel appeared, confessed judgment. McKean released the damages in both cases, "as he only wanted to see the law and the facts settled."

The other affair alluded to was one of much greater magnitude, involving a charge of corruption against Silas Deane, one of the American representatives at the court of France. Almost all the financial transactions of the mission had passed through the hands of Mr. Deane, who was charged by William Carmichael, of Maryland, who had been secretary to the American commissioners at Paris, but was now a member of Congress from Maryland, with having made improper use of the public money. Carmichael and Deane were examined by Congress, and the investigation resulted in a violent controversy, Robert Morris heading one side of the contest and Richard Henry Lee the other. In an "Address to the People of the United States," which he published in the *Philadelphia Gazette*, Deane severely criticised the official conduct of Richard Henry Lee and of his brothers, Arthur and William, at the same time claiming for himself the credit of having obtained supplies for the colonies through Beaumarchais, the celebrated author of the "Marriage of Figaro." Beaumarchais had been commissioned by the king of France to carry the proposed transaction into effect, but as it was desirable that the French government should not officially appear in the matter, the business was conducted as though it were a commercial transaction under the firm-name of Roderique, Hortalez & Co. After the publication of Deane's article, Thomas Paine, the well-known writer and author of "Common Sense," who, besides receiving five hundred pounds from the State of Pennsylvania, had been rewarded for his pamphlet with the post of secretary to the Committee of Congress for Foreign Affairs, availing himself of papers which had come into his possession in his official capacity, published a statement showing that Arthur Lee and not Deane had consummated the arrangement with Beaumarchais, and that the money had been supplied, not by private parties, but by the French court. As Louis XVI. had intended that the real character of the transac-

¹ Watson's Annals, vol. ii. p. 327.

² "The Council, taking into consideration the case of Mrs. Margaret Arnold (the wife of Benedict Arnold, an attainted traitor with the enemy at New York), whose residence in this city has become dangerous to the public safety, and this board being desirous as much as possible to prevent any correspondence and intercourse being carried on with persons of disaffected character in this State and the enemy at New York, and especially with the said Benedict Arnold, therefore

"Resolved, That the said Margaret Arnold depart this State within fourteen days from the date hereof, and that she do not return again during the continuance of the present war."

tion should not be disclosed to the British government, with which he was then nominally at peace, and had assured the English ambassador at Paris that France was taking no part in the struggle, the allegation of Paine created a sensation. In consequence of a complaint on the part of Gerard, the French ambassador, Paine resigned his position, and Congress passed a resolution denying that supplies had been received from the French court previous to the treaty of alliance between France and the United States, then recently concluded. Deane, however, continued to maintain that the supplies had been furnished by private parties and must be paid for by Congress. In order to protect the honor of the French Court, Congress voted to repay the money, although it was known that the king of France had furnished Beaumarchais with no expectation that it would be refunded by the Americans. Consequently, when Beaumarchais received the money from Congress, instead of paying it into the French treasury, he put it in his own pocket. In the course of the controversy growing out of the matter the Philadelphia newspapers teemed during the greater part of 1779 with statements and counter statements by Deane, Robert Morris, C. W. Peale, and others, and many bitter attacks on Paine.

In view of the strong Tory feeling in Philadelphia, it was deemed advisable, after the reoccupation of the city, to adopt the most stringent and energetic measures for the suppression of treason and disloyalty to the American cause. In August, 1778, Frederick Verner and George Spangler were tried by a court-martial, instituted by Arnold, on the charge of being British spies, and were convicted and sentenced to be hanged. Spangler was executed on the commons during the same month, but an appeal having been made to Congress in Verner's case, the sentence of the court-martial condemning him to death was not carried into effect, and, after lying in prison for some time, he was exchanged for an American in the hands of the British. Lieut. Samuel Lyons, of the "Dickinson" galley, Lieut. Ford, of the "Effingham" galley, Lieut. Joseph Wilson, of the "Ranger" galley, and John Lawrence, gunner of the "Dickinson" galley, were tried by naval court-martial for having deserted to the enemy during the attack upon Fort Mifflin in November, 1777. They went off in boats; were taken by the British, and sent to Philadelphia. Ford went about the city and sold liquor. After the evacuation of the town he accompanied the British army to Monmouth; deserted from it during the battle, and went to the American camp. These four men were all found guilty and sentenced to be shot. The Council pardoned Wilson and Lawrence, but refused to extend mercy to Lyons and Ford, who were executed on board of one of the guard boats in the Delaware River. On the 4th of September, 1778, Patrick McMullin, a deserter from the Pennsylvania troops, was executed on the commons. He had deserted from several Continental regiments and joined others, de-

frauding Congress of the enlistment money. During the same month occurred the trials of persons accused of high treason, the Court of Oyer and Terminer sitting at the college, with Thomas McKean as presiding judge. Peter Deshong, arraigned as one of the persons who had kept the gates of the city under the British, was shown to have been so lenient that he had been deprived of his office, and was therefore acquitted. George Cook, accused of having acted as guide for the British army, was acquitted; William Hamilton, charged with having assisted the British troops, was also acquitted. Abraham Carlisle, a house-carpenter by trade and a native of Philadelphia, charged with having kept one of the gates at the northern redoubt; and John Roberts, a miller of Lower Merion, accused of having enlisted with the enemy and attempting to persuade others to enlist, were convicted and sentenced to be hung. The conviction of Carlisle and Roberts, both of whom were Friends, created intense excitement among the Tories and Quakers, who feared that it was but the precursor of a series of sanguinary prosecutions, and powerful influences were brought to bear to secure a commutation of the sentence. Many leading Whigs interested themselves in behalf of the prisoners, both of whom, well advanced in years, were shown to be men of good character. Twelve of the grand jurors petitioned for mercy. Ten of the petit jury that had found Roberts guilty united in a similar appeal. The entire jury in Carlisle's case asked that leniency and a reprieve be extended to him. The Revs. William Smith, William White, John C. Kunze, Robert Davidson, and Casparus Weiberg pleaded for both Carlisle and Roberts. Three hundred and eighty-seven Philadelphians, among whom were Benjamin Rush, Gen. John Cadwalader, Col. William Coats, Col. Sharpe Delaney, Commodore Hazlewood, Blair McClenachan, Thomas Fitzsimons, and other leading Whigs, signed a petition begging that Carlisle's life might be spared. Strenuous efforts were also made on behalf of Roberts, and a number of Whigs came forward with evidence to show that he had interceded on behalf of prisoners, and protected them when they were being subjected to brutal treatment at the hands of the British and Tories. These appeals, however, had no effect on the Supreme Executive Council, and both Carlisle and Roberts were hung on the 4th of November. Carlisle's body was interred in the Friends' burying-ground, the funeral being witnessed by a large concourse of people. In the following year the property belonging to Carlisle and Roberts was confiscated by the State. Their execution and the seizure of their property appear at this day to have been dictated by the desire to satisfy popular clamor rather than a spirit of justice. The Whigs thirsted for revenge, and it seems to have been deemed expedient to supply them with at least two victims. It was thought desirable, moreover, to intimidate the Friends who were openly accused of aiding the British and of

doing everything in their power to injure the patriot cause.

The term for trials on the charge of treason lasted until December, and many cases were disposed of.¹

On the 3d of September a Dr. Berkenhout was arrested on the charge of having been employed by the enemy to ascertain upon what terms Congress would negotiate a treaty with Great Britain, and upon searching his papers the draft of a letter to Richard Henry Lee was found, offering to act as "a voluntary negotiator between the two contending powers" on the basis of a recognition of the independence of the United States. The Supreme Executive Council, after having examined Berkenhout's papers, ordered him to leave the city and State and go within the enemy's lines.

While the army was engaged in the brief but decisive campaign in New Jersey, active preparations were being made for resuming the offensive on the Delaware River and Bay. The armed brig "Convention" and the galleys, after having been fitted and manned, were ordered down the river to watch the movements of the enemy. Lord Howe's fleet had set sail on the 17th of June, but in consequence of continued calms did not arrive at the Capes until the 28th, the last vessel passing out on the 30th.

As the enemy had manifestly changed his base of operations, it was decided to be unnecessary to retain the naval force in its original strength, and resolutions were adopted for the discharge of all the officers and men except those required to man three galleys, three guard-boats, and the brig "Convention." Thomas Houston was appointed to the command of the latter vessel, with orders to cruise along the coast for the protection of shipping. The "Chat-ham," "Hancock," and "Bull Dog" were kept for future service, but the other vessels were sold. Shortly after the evacuation the British schooner "Lord Drummond," supposing Philadelphia to be still in the hands of the Howes, ventured into the

Delaware and was captured by one of the Pennsylvania galleys. A large number of letters of marque were issued, and commissions as privateers were granted to the sloop "Gerard" and the "Addition," together with supplies of powder and cannon; but no captures of special importance were made by any of these vessels. Embargoes upon the exportation of provisions were laid twice during the autumn of 1778, and the galleys were employed in guarding the river to prevent infringements. The capture of the British sloop "Active" by the "Convention" has already been narrated.

Upon the resumption of authority by the State government the fortifications erected in the Northern Liberties and elsewhere in the vicinity of Philadelphia were dismantled. The bridge at Middle Ferry, laid by the British, was removed to Gray's Ferry; and the floating bridge, originally at Market Street, laid during the time that Putnam was in command, in 1776-77, was towed back from the place where it had been concealed from the enemy, and moored at its old station. An agreement was afterwards made in relation to the bridge belonging to the United States (now removed to Gray's Ferry), that the State of Pennsylvania should pay its value and keep it in repair, and that the United States should pay eight hundred pounds per annum for the privilege of its use by the army. It was determined that, for the defense of the Delaware, four heavy pieces of artillery should be placed at Billingsport and two at Mud Island. An apartment in the old work-house at Third and Market Streets was appropriated to Capt. Hill for casting bullets, and the long room at the State-House was fitted up as a magazine of small-arms.

The scarcity of food, clothing, and other supplies offered a tempting bait to speculators, and the strenuous efforts made to prevent extortion met with indifferent success. While the State government was still at Lancaster a law was passed by which the price of various articles was determined. Wheat was to be sold at ten shillings per barrel, and flour at twenty-seven shillings per hundred. The charges of inn-keepers were to be regulated by the Courts of Quarter Sessions. In November, 1777, a committee of Congress called the attention of the Supreme Executive Council to the fact that "the dangerous practices of engrossers" had increased so rapidly with the public distresses, and had so accumulated them, that "every friend to his country or even of humanity cannot but wish to see some remedy for an evil which threatens the existence not only of the several States, but of the poorer part of the individuals who compose them." It was suggested that the Legislature should not only fix the prices, but should pass laws compelling the dealers to part with their goods at those prices. "Persons in office," it was stated in a later communication, were using "the moneys intrusted to them in the engrossing of articles upon the public." On the

¹ Samuel Piles, Charles Woodfill, James Roberts, Lewis Guion, David Copeland, George Devenderver, John Huntman, Adam Stricker, Joseph Bolton, Aubrey Harrey, and Andrew Hathe, were tried for high treason and acquitted. The bill against David Franks was returned *ignoramus*. There were discharged by proclamation—nobody appearing against them—Ludwig Kercher, Anthony Yeldall, Tench Cox, Carpenter Wharton, John Palmer, Joseph Shoemaker, Peter Robeson, John Wright, William Schneliff, James Davis, Isaac Knight, Samuel Garrigues, Jr., and Stephen Byler. Edward Shippen, Jr., John Lawrence, James Humphreys, William Smith, D.D., Capt. Henry Gurney, Thomas Asheton, and Samuel Murdock, formerly held on parole, were discharged early in August. Rev. Thomas Coombe was granted a pass to New York. On October 31st, William Ross, cordwainer, Walnut Street; Robert White, merchant and mariner; Richard Palmer, cabinet-maker; John Burd, butcher; John Colston, stocking-weaver; William Evans and John Evans, carpenters; Alexander Smith, blacksmith; James Warrel, brewer; David Jones, tavern-keeper and constable; Hudson Burr, butcher; John Burkett, waterman; Alexander Stedman, Esq., of the city; Thomas Green and Thomas Silk, of the township of Hatfield; John Loughborough, blacksmith; Jacob Comly, yeoman; and John Burke, tailor, of Moreland, in the county of Philadelphia, were attainted as traitors, and commanded to come forward and take their trial before December 15th.

10th of December, 1778, the Supreme Executive Council appointed William Heysham, George Schlosser, and William Hollingshead to make inquiry concerning the engrossing of flour and other necessities in all that part of the city northward of the north part of Market Street. Nathan Boys, Jedediah Snowden, and Robert Bridges were commissioned to make like inquiries south of Market Street, and Col. William Coats, Frederick Kuhl, and Emanuel Eyre for the Northern Liberties.

The Assembly, summoned by the Supreme Executive Council to meet in August, 1778, did not secure a quorum until late in October. Some difficulty was experienced in organizing, from the apprehension of members that the oath requiring them to support the Constitution might prevent them from taking measures to ascertain the sense of the people as to proposed alterations. Finally a form of reservation was adopted by which members declared their right of doing anything proper to test the opinion of the people on the subject. Of the city delegation, Michael Shubart alone took the oath unconditionally, while Robert Morris, Thomas Mifflin, Samuel Meredith, and George Clymer made the reservation. Of the county members, John Bayard, Robert Knox, Robert Loller, and Archibald Thompson took the oath. Daniel Huster and Isaac Warner made the reservation. The question of amending the Constitution soon came up before the Assembly, which ordered an election to determine whether a convention for its revision should be held; but such was the popular opposition that the resolution, adopted by the Assembly Nov. 28, 1778, was repealed in the following February.¹

In view of the departure of the British army, the act providing that the courts of Philadelphia, Bucks, and Chester be held at Lancaster was repealed by the Assembly, an Admiralty Court was established, and

the duties of the naval officer defined and regulated. A draft of a bill for the gradual abolition of slavery was prepared and published, but the matter was postponed in order that the fullest opportunity for reflection might be afforded.²

On the 1st of December, 1778, Gen. Joseph Reed was elected president of the Supreme Executive Council, and George Bryan vice-president. After the new officers had been proclaimed at the court-house, the Council and Assembly dined at the City Tavern.

A supplement to the act for the better security of government extended the time for taking the obligation, so as to include persons who had been prisoners with the enemy and to soldiers and sailors who had been in the service of the State for three months from the date of the supplementary act, or after they should come into the State. A further supplement was passed in December, giving any person a right to take the oath of allegiance at any time. James Young, Plunket Fleeson, George Ord, and Isaac Howell were appointed commissioners for the city to take and receive the affidavits. John Moor, Jonathan B. Smith, David Knox, Seth Tull, and John Richards were appointed to the same office in the county. In consequence of the passage of this act the Supreme Executive Council issued a proclamation pardoning all persons who were confined in prison, "convicted of pertinaciously refusing to take the several oaths or affirmations of allegiance to the State."

About the same time the Assembly passed an act vesting the title to the house of Joseph Galloway, the Tory, at the southeast corner of Sixth and Market Streets, in the president of the Supreme Executive Council, to be occupied as his official residence, or giving him permission, if he preferred to do so, to rent it and receive the money for his own use.³

¹ The feeling in Philadelphia in favor of the old Constitution was very strong. Remonstrances against the proposed election poured in upon the Legislature. On the other hand, a "Republican Society" was formed for the purpose of urging the revision of the Constitution, the members of which, in March, 1779, were Richard Bache, *Chairman*; Samuel Morris, Jr., John Cadwalader, Benjamin Eyre, John Murray, W. Humphreys, George Meade, William von Phul, William Alricks, John Patton, John Donaldson, William Govett, Jacob Rush, Peter Scull, J. Mifflin, Jr., Jacob Hiltzheimer, Samuel Howell, Jr., B. Dougherty, James Crawford, John Baker, F. Hopkinson, Ephraim Blaine, Samuel Meredith, George Clymer, James Caldwell, William Allibone, Jacob Shallus, F. Hassenclaffer, Peter Baynton, Stephen Chambers, John Shee, John Lardner, James White, T. Leaming, Jr., Robert Morris, Peter Z. Lloyd, John Benezet, Lewis Weiss, Philip Wager, Samuel Caldwell, Alexander Foster, James Craig, Jr., T. Fitzsimons, John Nixon, George Ross, Thomas Peters, E. Biddle, James Mease, Mark Bird, Alexander Nesbitt, Samuel Nicholas, Robert Roberts, J. Humphreys, Jr., Thomas Franklin, Thomas Mifflin, William Gray, John M. Nesbitt, George Woods, L. Cadwalader, James Read, John White, John Parke, John Wilcocks, J. Cowperthwait, James Wilson, Joseph Moulder, Sharpe Delaney, N. Falconer, Thomas Smith, G. Noarth, Andrew Bunner, Charles Thomson, Benjamin Rush, John Mease, Isaac Melcher, John Chaloner, Henry Hill, John Colhoon, George Campbell, John Brown, Thomas Forest, Samuel Miles. A "Constitutional Society," of which Charles Wilson Peale was chairman, was formed as a counter-move, and the controversy for a time was animated and exceedingly bitter, as, indeed, were most of the political discussions of that day.

² In the message from the Supreme Executive Council to the Assembly, the following passage proves that a strong public sentiment existed in favor of abolition:

"The late Assembly was furnished with heads of a bill for manumitting infant negroes born of slaves, by which the gradual abolition of servitude for life would be obtained in an easy mode. It is not proposed that the present slaves, most of whom are scarcely competent of freedom, should be meddled with; but all importation must be forbid if the idea be adopted. This, or some better scheme, would tend to abrogate slavery—the opprobrium of America—from among us; and no period seems more happy for the attempt than the present, as the number of such unhappy characters, ever few in Pennsylvania, has been much reduced by the practices and plunder of our late invaders. In divesting the State of slaves you will equally serve the cause of humanity and policy, and offer to God one of the most proper and best returns of gratitude for His great deliverance of us and of our posterity from thralldom. You will also set your character for justice and benevolence, in a true point of view, to all Europe, who are astonished to see a people eager for liberty holding negroes in bondage."

³ On the 18th of March, 1779, the Assembly passed an act vesting the title to the property in Plunket Fleeson, Jonathan Bayard Smith, William Henry, George Schlosser, and Isaac Howell, as trustees, to allow the president of the Supreme Executive Council for the time being to have the exclusive care and management of the same, to use it either as a residence or to lease the same and receive the rents, issues, and profits for his own use. The property extended to Minor Street, at the corner of which there was a coach-house and stable. President Reed took possession of this mansion immediately afterwards, and continued

In December, 1778, the campaign being nearly over, Gen. Washington paid a visit to Philadelphia, having been preceded by his wife, who was honored with a ball at the City Tavern on the 17th, at which the French minister and President Reed were among

to reside in it while he had the office. The large mansion of the Rev. Jacob Duché, at the northeast corner of Third and Pine Streets, also confiscated, was, by vote of the Assembly, delivered to Chief Justice McKean, to be used as an official residence. The stables of Thomas Hale, in Lombard Street, forfeited to the State, were appropriated for the accommodation of the horses of the members of the General Assembly. During the same year the forfeited estates of the following Tories were sold by the confiscation agents:

David Sproat, southwest corner of Front and Walnut Streets, nineteen feet on Front Street by ninety feet, sold to Christian Wirtz, of Lancaster, for £14,400.

Samuel Shoemaker, north side of Mulberry, between Front and Second Streets, sold to George Haynes for £39,100.

Henry Jounkin, tract of land in Philadelphia County, sold to Owen Farries for £17,010.

David Thompson, lot from the Delaware to Front Street, one hundred feet by five hundred and sixty feet, sold to Thomas Leaming, Jr., Andrew Bunner, John Munger, and Joseph Coleman Fisher for £68,600.

David Thompson, house and lot, south side of Almond Street, east of Front, twenty-one feet by sixty-six, sold to Charles Baker for £1310.

George Harding, two houses and lots, Southwark, sold to John Compt for £950.

George Harding, lease of lot northeast corner of Front and Catharine Streets, sold to John Compt for £1500.

George Harding, lot, Third Street, Southwark, nineteen feet four inches by eighty feet, sold to Henry Osbourne for £2300.

Arthur Thomas, Second Street, Northern Liberties, fifteen feet six inches by sixty feet, sold to John Sternfield for £5000.

Thomas Shoemaker, Front Street, twenty feet by forty, sold to Thomas Button for £660.

Thomas Mackiness, houses and lot, northeast corner of Third and Vine Streets, thirty-six feet six inches by ninety feet, sold to Rev. David Telfair and wife for £21,000.

John Tolly, house and lot, northeast corner of Second and Christian Streets, forty feet by one hundred and twenty, sold to David Duncan for £5100.

John Smith, two houses and lots, Queen Street, Southwark, fifty-three feet by one hundred, sold to Charles Wilson Peale for £13,010.

Enoch Story, ground-rent of £3, on lot west side of Moyamensing road, Southwark, sold to John Young, Jr., for £120.

Joseph Galloway, three tracts of meadow land on Boon's Island, Kingessing, sold to John Dunlap for £7980.

Joseph Galloway, tract on Schuylkill, east side, near Sepickan Creek, twenty-nine acres, sold to John Little and Ephraim Blaine for £15,520.

Christopher Saur, house, paper-mill, saw-mill, mill-dam, etc., Wissahickon road, Roxborough, sold to Jacob Morgan, Jr., for £5150.

Christopher Saur, house and lot, southwest side of main road, Germantown, corner of Bowman's Lane, sold to Jacob Bay for £4200.

John Parrock, house and tract of fifty-four acres, on the river Delaware, in the Northern Liberties, sold to Jacob Morgan, Jr., for £27,600.

George Enser, two houses and lots, west side of Second Street, between South and Shippen Streets, forty feet by seventy-seven feet six inches, sold to Gottlieb Roll for £11,490.

Peter Arthur, house and lot, east side of Second Street, Southwark, twenty-nine feet six inches by sixty-five feet, sold to James Rowan for £1500.

Alexander Bartram, four houses and lots, northeast corner of Third and Shippen Streets, one hundred feet by one hundred, sold to John Dunlap and George Henry for £7000.

Alexander Bartram, two houses and lots, west side of Second Street, near Christian, forty-seven feet by two hundred, sold to Charles Wilson Peale for £2070.

John Roberts, house and lot, one hundred acres, Lower Merion township, sold to Daniel Clymer for £4000.

Peter Campbell, house and lot, south side of Chestnut Street, between Fourth and Fifth, one hundred and six feet by two hundred and fifty-five feet, sold to Andrew Caldwell for £36,500.

John Bartlett, half of three houses and lots, east side of Second Street, Southwark, sold to James Little for £1100.

the guests. Washington reached the city on the 22d, but "so late in the day," says Dunlap's *Packet*, "as to prevent the Philadelphia troop of militia, light-horse, the gentlemen officers of the militia and others in the city from showing those marks of unfeigned regard for this great and good man which they fully intended, and especially of receiving him on his entrance into the State and escorting him hither." While in Philadelphia, Washington, as a member of the order, participated in a procession of Free and Accepted Masons. The Grand Lodge had been re-organized in December, and a public celebration of St. John's Day was held on the 28th of December. The procession formed at the college and moved from that point to Christ Church, where divine service was held. Prayers were read by Rev. William White, and a sermon was preached by the Rev. William Smith, D.D. After service the procession returned to the college, "the musical bells belonging to the church and the band of music playing proper Masonic tunes." A collection was taken at the church for the relief of the poor, which realized four hundred pounds, and it was stated that additional contributions might be sent to William Ball, John Wood, John Howard, and William Shute, to whom "objects of charity, bringing proper recommendations," were instructed to apply.

Owing to the rapid depreciation of Continental money, persons who had goods for sale were naturally loth to dispose of them, fearing that the currency in which they would have been paid might soon become practically worthless. At length the scarcity of food and other necessities of life became so great the Supreme Executive Council, on the 18th of January, 1779, issued a proclamation against forestalling and engrossing, charging the civil officers to make diligent search for all persons suspected of such offenses and ordering their vigorous prosecution, if detected. In March, 1779, a petition was presented to the Assembly from citizens of Philadelphia complaining of the practice of disaffected persons who injured the Continental currency by taking smaller sums in specie than they would in paper. A similar protest was made by citizens of Germantown. On the 3d of April the Assembly passed a law intended to prevent forestalling, which prohibited purchasing in market, or within four miles of the city, to sell again,—regular butchers and hucksters buying to sell in market alone excepted, and forbade buying or selling with or for hard money; severe penalties being provided for each class of offenses. A law was also enacted providing for the establishment of a police force to prevent the resort of Tories and other agents of the enemy to Philadelphia, with authority to arrest suspicious persons and expel them from the State if necessary.

The popular dissatisfaction at the scarcity and costliness of provisions was greatly heightened by an incident which occurred in May. A polacre, the "Vic-

torious," and some other vessels laden with flour having arrived in port, it was expected that a reduction in the price of flour would follow; but instead of decreasing, the price, it was claimed, had actually risen. Robert Morris, Blair McClenachan, and others who were interested in the vessels, were openly censured, and at a town-meeting on the 25th of May, Gen. Roberdeau presiding, Timothy Matlack, David Rittenhouse, Capt. Blewer, Thomas Paine, Charles W. Peale, and Col. J. B. Smith were appointed a committee to wait on Robert Morris to make inquiries about the "Victorious." At the same meeting Col. William Henry, Col. Bradford, George Schlosser, Col. Will, Col. Jehu Eyre, Capt. Heysham, Maj. Boyd, Philip Boehm, Jedediah Snowden, Nathaniel Donnell, Capt. Robert Smith, Capt. Lang, Dr. Hutchinson, William Brown, Paul Cox, Edward Poole, Thomas Casdrop, Capt. George Ord, James Skinner, John Kling, William Thorn, William Coates (tanner), Joseph Dean, John Young, Cadwalader Dickinson, and Capt. Thomas Moore were chosen as a committee of inspection to determine what the price of various articles should be. The committee to wait on Morris censured him for having given the refusal of the cargo to Mr. Solikoff, of Baltimore, so that the Commercial Committee of Congress were prevented from buying it; but, as Solikoff withdrew and Morris was able to sell the flour to Continental agents at fair prices, the matter was dropped.

The Committee of Inspection adopted a schedule of prices and a regulation forbidding persons to purchase butter at a higher price than fifteen shillings a pound. At a subsequent meeting held on the 26th of June, 1779, the removal of goods from the city exceeding one hundred pounds in value, without a permit, was prohibited. It was supposed that these stringent regulations would prove effective; but such was not the case. Evasions and violations of the law were frequent; and considerable indignation was aroused by the discovery that the French consul-general, Holker, aided by Robert Morris, was clandestinely shipping flour to the French fleet, which had been bought at prices beyond those established by the regulations. A meeting at which Gen. Daniel Roberdeau presided was held, at which Paine, who had taken a prominent part in the newspaper attacks on Robert Morris, was indorsed and declared to be "a friend to the American cause." At this meeting Gen. John Cadwalader, on attempting to speak in behalf of Morris, was interrupted by men armed with clubs. Cadwalader and his friends then withdrew to College Yard, in Fourth Street, where a meeting was held, with Robert Morris in the chair. Resolutions indorsing Holker and Morris were adopted, and a committee appointed, consisting of Andrew Caldwell, James Wilson, Sharpe Delaney, Whitehead Humphreys, Benjamin Rush, Maj. David Lenox, and Maj. Benjamin Eyre, to give effect to the action of the meeting.

Holker complained to the Supreme Executive Coun-

cil, which, after investigating the matter, declared that he was free from any suspicion of carrying on a clandestine private trade, and that the flour which had been seized should be given up to him. Both parties agreed to the election of a new committee for the regulation of the sale of provisions, etc., and, by a vote of 2115 to 284 for an opposition ticket, a committee headed by Blair McClenachan was chosen.¹

Stringent regulations were adopted by the new committee for the enforcement of the measures taken to prevent engrossing, forestalling, secreting supplies, etc. A thousand bushels of wheat were seized in a mill near Germantown; wagons leaving the city with supplies of groceries were stopped and brought back; and Richard Wistar, Thomas Story, — Mason, and B. Humphreys, charged with infringing the rules, were arrested. Goods belonging to parties found guilty of such violation were seized and sold. These efforts to prevent extortion were generally indorsed; and the Philadelphia company of artillery, Capt. John McGinley, which had been on garrison duty at Mud Island fort, marched to the State-House, on being discharged, and assured the Supreme Executive Council of their approval of all that had been done in their absence, after which they proceeded to the college, where the inspection committee was sitting, and announced their intention of supporting the committee in their efforts to reduce the prices of goods and provisions. There was of course great dissatisfaction among the tradesmen at the arbitrary schedule of prices fixed by the committee, and complaint was made that the regulations did not bear evenly upon

¹ The members of this committee (for both city and county) were Blair McClenachan, W. Hollingshead, Capt. Joseph Stiles, Jacob Shriner, Thomas Cuthbertson, Paul Cox, Cadwalader Dickinson, George Pickering, D. Rittenhouse, Owen Biddle, Capt. G. Reinhart, James Skinner, Col. Robert Allison, William Robinson (Southwark), George Henry, Andrew Burkart, Jared Ingersoll, Thomas Willis, James Hood, Lewis Farmer, Nathaniel Donnell, James Rowan, Robert Aitken, W. Smith (druggist), Lazarus Stow, James Pickering, Andrew Kennedy, William Peltz, Robert Barnhill, Philip Hall, Jonathan B. Smith, Dr. J. Hutchinson, William Moulder, Timothy Matlack, Emanuel Eyre, John McCulloch (carpenter), Andrew Caldwell, Michael Shubert, Thomas Paine, Col. W. Bradford, Matthew Irwin, George Schlosser, R. Smith (batter), Capt. W. Coats, Jr., Joseph Marsh, Maj. Joseph Kerr, Benjamin Eyre, William Semple, Anthony Cuthbert, Derrick Peterson, Capt. William Brown, James Dundas, Charles Syng, William Heysham, Jedediah Snowden, Edward Pole, Jeremiah Fisher, Samuel Young, Nicholas Weaver, Frederick Swinkle, William Moore (Northern Liberties), Andrew Doz, William Will, James Wharton, Maj. Alexander Boyd, Benjamin Paschall, William Thorne, Frederick Hagner, T. Fitzsimons, Col. John Rice, Capt. George Ord, Jacob Graffen, John Kling, Capt. R. Saltar, David Puncost, Philip Boehm, Capt. James Craig, William Bonham, Anthony Leckner, Thomas Irwin, Francis Ferris, Joseph Falconer, Alexander Quarrier, Capt. William Price, James Hunter (tallow-chandler), David McCulloch, Thomas Britton, William Van Phul, Isaac Roush, Peter Brown, James Budden, S. Wetherill, Jr., William Collicly, John Shee, John Smith (Southwark), Presley Blackstone, James Millan, Ephraim Falconer, Thomas Casdrop, Thomas Shields, Thomas Leiper, Charles W. Peale, Peter Wykoff, William Jackson (Walnut Street), Joseph Carson (merchant), Samuel McLean, Hugh Hodge, Jr., Isaac Cooper, Thomas Leaming, William Thorpe, George Woelker, Baltzar Steinfeld, Lambert Wilner, F. Hopkinson, Adam Foulke, Robert Knox, Frederick Phile, John Barker, Thomas Humphrey, William Richards (skinner).

all parties. The cordwainers, curriers, and tanners asserted that while the prices of provisions had been enormously increased¹ there had been no corresponding advance in the remuneration of their labor, and an address signed by James Roney, setting forth their grievances, was prepared and published. These complaints were supported in a memorial to the Executive Council presented by the merchants of Philadelphia on the 2d of September, in which the regulations of the committee were attacked as being an invasion of the law of property in compelling "a person to accept of less in exchange for his goods than he could otherwise obtain," and consequently "a tax upon one portion of the community only." It was urged, moreover, that as circumstances were constantly changing it was impracticable to undertake to maintain a fixed and arbitrary scale of prices. It was also pointed out that if prices were to be fixed by the purchaser, as had practically been done through the intervention of the committee, merchants would no longer care to import goods, or if they did continue to do so, the foreigners from whom they purchased would refuse to sell to a community which forced the dealers to part with their goods at certain prices. The address declared further that the limitation of the price of foreign articles could only be accomplished by enabling the merchant to get his goods freighted upon moderate terms, fixing the price of goods he was to export, and opening an insurance for a low premium. "Until these things be accomplished," it was added, "you may, indeed, by power, force away our property at such a valuation as you may deem proper to allow; but, like the owner of the goose which laid golden eggs, you will cut off the source of supplies, and, when you repent, you will repent in vain."

The memorial closed with a series of recommendations as to the measures most likely to bring about an appreciation of the currency.²

¹ Tea, which had sold at 3s. 9d. to 5s. per pound in the beginning of 1777, was now advanced to £4 10s., or about twenty prices. Rum, from 4s. 6d. per gallon, was increased to £6 12s. 6d., or about thirty prices. Sugar was thirty prices in increase, and other articles experienced a like benefit. But sole leather was only put up to 20s. from 1s. 6d., formerly charged, and calf-skins from 11s. to 150s. In reality the advance upon these articles was only about fourteen prices, or less than half what was allowed to others. Under these rates the shoemaker would receive but £3 10s. profit on a pair of shoes beyond the actual cost of materials, and the journeyman's wages would absorb the latter, so that the employer would have nothing. While, therefore, the shoemaker was receiving but fourteen prices advance, he was compelled to pay from twenty to thirty prices for almost every article of food or clothing which he bought.

² The signers of this memorial were John Kean, George Kennedy, John Steinmetz, Philip Wilson, Thomas Moore, Francis Lewis, Jr., J. Cowperthwait, Charles Young, John Murray, John White, James Vanuxem, James Tatter, John Patton, Alexander Todd, Cadwalader Morris, Robert Morris, Isaac Moses, William Turnbull, John Lardner, J. Purviance, William Lawrence, George Meade, William Davis, Thomas Morris, James Caldwell, Joseph Carson, William Alricks, Robert Bridges, Benjamin Davis, Jr., F. Hussenclever, John Barclay, P. Webster, J. Shallus, J. Donaldson, Butler Shee, John Campbell, William Cross, Samuel Meredith, John Wilcocks, Patrick Moore, John Boyle, Charles White, Nicholas Law, Andrew Bunner, David Duncan, Matthew Duncan, Samuel Caldwell, T. White, John Ramsey, Thomas Barclay, Peter Freneau, David Lenox, Thomas Franklin, John Benezet, John Mease, Alexander

Various expedients for relieving the general distress were suggested, and in July a plan "for raising money and stopping the emission of paper currency was set on foot," which received the indorsement of a town-meeting. The features of this plan embraced the stoppage of all issues of Continental money after the 1st of September, and the raising of a revenue by subscription to be solicited from house to house for the service of the United States, the money thus raised to be considered a loan payable in three years and receivable in payment of taxes. A committee to solicit subscriptions³ was appointed, but nothing is now known as to the results of its labors.

In the mean time Congress had been pursuing a policy which could not fail to accelerate the depreciation of the currency and intensify the public distress. Reduced by the withdrawal of many of its abler members who were busy with the affairs of their own States, it was no longer the wise and prudent

³ This committee consisted of the following: *Northern Liberties*,—Col. Rice, Henry Nagles, Thomas Brittain, Benjamin Eyre, Emanuel Eyre, Col. Joseph Cowperthwait, William Masters, and Elias Lewis Treichel. *Mulberry Ward*,—Jacob Schriener, Philip Boehm, William Rush, Capt. James Craig, David Shaffer, Jr., Maj. Ker, Andrew Burkart, William Colladay. *Upper Delaware*,—Andrew Hodge, William Milnor. *High Street Ward*,—William Ball, William Hollingshead, Thomas Francis, Stephen Collins. *Lower Delaware*,—Blair McClenachan, Andrew Caldwell, Matthew Irwin, Samuel Howell. *North*,—Benjamin Harbeson, Jacob Burge, Peter De Haven, John Wilcox, Lambert Willmore, Samuel Wetherill. *Chestnut*,—Richard Humphreys, John Stille, John Shields. *Middle*,—Benjamin Randolph, John Steinmetz, Gen. Wilkinson, Robert Tuckniss, William Falkner, Francis Lee. *South*,—Sharpe Delaney, Andrew Tybout, Isaac Gray. *Walnut*,—Samuel Caldwell, Dr. Duffield. *Dock*,—James Hunter, Thomas Leiper, Thomas Fitzsimons, John Hazlewood, Presley Blackiston, William Turabull. *Southwark*,—William Clifton, Capt. Orl, Col. Robert Allison, Joseph Marsh, William Falkner.

The scarcity of salt and flour in particular occasioned much distress in Philadelphia. In August the Supreme Executive Council succeeded in obtaining from all holders of salt an agreement to give it up for distribution among the inhabitants of the town and country, and the sheriff of Philadelphia was ordered to have the salt stores guarded in order that tumult or disturbance in the distribution might be avoided. All salt that was not needed for the use of inhabitants was ordered by the Assembly to be appropriated to the use of the State, and Charles Pryor, James Hunter, Jr., John Wilson, Robert Hunter, David McCulloch, Anthony Cuthbert, William Will, Adam Foulke, Matthew Irwin, Robert Aitken, James Hood, Maj. Boyd, Paul Cox, John McCullough, Thomas Casdrop, William Robinson, William Thorp, George Henry, and William Heysham were appointed commissioners "to make inquiry into the quantity of salt in the city and liberties, above the allowance of a common family, admitting possessors to retain one peck for every poll in each family above seven years of age, the residue to be considered as public property, and paid for accordingly." They had power to seize all salt above the allowed quantity, and to take into possession whatever cargoes might arrive. Great hopes were entertained with regard to the salt-works established near Tom's River, N. J., but disappointment was the only result. The works, after having been operated at great expense without producing any benefit, were finally sold for fifteen thousand pounds. In order to alleviate the suffering caused by the scarcity of flour, the Assembly, on the 9th of October, in response to a recommendation from the Supreme Executive Council, decided to distribute one hundred barrels of flour among poor housekeepers. A bounty for the supply of firewood was also proposed.

body it had once been. "The number in attendance seldom amounted to thirty, and was often less than twenty-five."¹ One hundred millions of Continental money was already in circulation, but Congress determined at the beginning of the year 1779 to issue fifty millions more; in February, ten millions more, with twenty additional millions of loan certificates; in April, five millions more of bills of credit; and in May and June twenty millions more. The depreciation of the currency which resulted was so rapid that it soon reached twenty for one, and Congress, now thoroughly frightened, called on the States to pay in forty-five millions of the bills, besides the fifteen millions already called for during the current year. It was only natural that the frauds and speculations which were suggested and promoted by the state of the public finances should have excited intense and general indignation. "It gives me very sincere pleasure to find," wrote Washington to President Reed, "that the Assembly is so well disposed to second your endeavors by bringing those murderers of our cause, the monopolizers, forestallers, and engrossers, to condign punishment. It is much to be lamented that each State, long ere this, has not hunted them down as pests to society and the greatest enemies we have to the happiness of America. I would to God that some one of the more atrocious in each State was hung in gibbets upon a gallows five times as high as the one prepared for Haman. No punishment, in my opinion, is too severe for the man who can build his greatness upon his country's ruin." Unfortunately, the very laws adopted for the purpose of putting a stop to these abuses tended only to aggravate them; for, obeyed by the honest, they were violated by the dishonest class whom they were framed to reach, and while patriotic citizens were compelled to suffer because of their fidelity, rogues and Tories prospered and grew rich.

Notwithstanding the arrests and confiscations which had followed the reoccupation of the city by the Americans, the Tory spirit continued unsubdued. Among the most pertinacious British sympathizers was Samuel R. Fisher, a Friend, who was brought before Judge McKean on the charge of having sent information to the enemy at New York. He was convicted and sent to jail without any definite term of imprisonment having been fixed, and remained there until some time in February, 1781, when he was released by the Supreme Executive Council, whom he had tired out by his stubborn refusal to enter a recognition for future good behavior. George Hardy, tried for an overt act of treason in helping to disarm citizens of Southwark, was convicted, sentenced to death, and taken to the place of execution, where, with the rope around his neck, he was relieved until after the sitting of the next Assembly.²

In May of this year a meeting was held at the German school-house, of which Dr. James Fallon was chairman, and George A. Baker secretary, to consider measures for ascertaining whether persons inimical to the United States remained in the city, and William Bonham, Peter Cooper, Benjamin Harbeson, Jacob Keehmle, William Falconer, Francis Gurney, George A. Baker, William Hardy, Theobald Schreibel, Dr. James Fallon, James Rowan, and Thomas Hale were appointed a committee to hear evidence against such persons.³

James Stephens, for keeping watch for the British at the bridge at Schuylkill, and examining persons going in and out, was acquitted, but ordered to give security for good behavior during the war; Samuel Garrigue, accused of the same offense, was acquitted; William Whitefield, tried for going about with British soldiers, collecting arms from the citizens, was acquitted; David Solebury Franks, charged with sending information to the enemy at New York, was acquitted; Robert Strettel Jones, tried for high treason, was acquitted; Edw. Cutburt, tried for high treason, was acquitted; Joseph Wirt, tried for high treason, was acquitted; Peter Miller, tried for high treason, was acquitted; Richard Mason, tried for high treason, was acquitted; Joseph Prichard, charged with having been employed by the British to attend Middle Ferry and inspect persons going in and out, was found guilty of misprison of treason, sentenced to forfeit half his property, real and personal, and to imprisonment during the war; John Elmslie, for refusing to serve as constable, was arrested and imprisoned, but discharged Dec. 2, 1780; Daniel Dawson, for the same offense, was imprisoned until October, 1780; William Cassey, *alias* Thompson, tried for high treason, was convicted, and sentenced to death; Charles Humphreys, for misprison of treason, was acquitted.

There were discharged—no witnesses appearing against them—John Brown, William Williams, Michael Ryan, Christian George, Philip Allebach, William James, and John Pike, upon their giving security for good behavior.

On the 22d of June the following persons were attainted as traitors, and ordered to surrender for trial:

John Bartlett, late clerk in the royal custom-house; George Knappes, baker; Charles Eddy, ironmonger; Thomas York, sail-maker,—late of the city of Philadelphia.

Joseph Greswold, distiller; John Clark, late sheriff's clerk; John Mackinet, merchant; John Kearsley, gentleman, son of Dr. John Kearsley, deceased; John Adams, silk-weaver; and Thomas Mackiness,—of the Northern Liberties.

Peter Arthur, house-carpenter; George Ensor, cooper; Dennis Crocksin, lumber merchant; John Patterson, joiner; William Rhoddon, mariner,—of Southwark.

Jacob Falsterstein, yeoman,—Passyunk.

Nathaniel Roberts, yeoman,—Bristol.

Daniel Jones, yeoman,—Moreland.

John Robinson, cordwainer: Isaac Taylor, yeoman,—Whitpain.

Thomas Gordon, yeoman,—Oxford.

Holton Jones, hatter,—Germantown.

Daniel Williams, yeoman,—Horsham.

Frederick Kesselman was specially proclaimed May 5th.

² In the following month the grand jury made a presentment to the effect that the wives of British emissaries still remain among us and keep up an injurious correspondence with the enemies of the country, by giving them intelligence and propagating the most poisonous falsehoods.

The question as to how far citizens taken on the high seas in arms against the United States were liable as traitors or pirates was presented to Judge McKean in August of this year, and a decision was rendered that "all who did not on the 11th of February, 1777, or since, owe any allegiance, are to be deemed prisoners of war; but that those [not] falling within that description may be proceeded against as traitors on the Act of Assembly, entitled an Act for establishing a Court of Admiralty."

The following prisoners, taken at sea, were under confinement in September, all of whom had been citizens of Philadelphia:

John Papley, taken in the "Pasey," British letter of marque, under a captain's commission.

¹ Hildreth, vol. iii. page 270.

² During the year 1779 the following persons were tried for political offenses:

The committee held sessions at the State-House, but its proceedings did not satisfy the popular resentment against the Tories, and at length the militia determined to take more active measures. Meetings of the different companies were held and a committee formed, consisting of one man from each company, to effect the arrest of British sympathizers. It soon began to be rumored, however, that this committee would not confine its attentions exclusively to Tories, but would also seek the punishment of all engrossers, monopolizers, and those who sympathized with them, as well as certain lawyers who had appeared as counsel for the accused at the Tory trials. On the 4th of October, placards appeared in various portions of the city, denouncing, among others, Robert Morris, Blair McClenachan, and James Wilson, the latter a signer of the Declaration, but one of the lawyers who had defended the Tories accused of treason. On the same day the committee of militiamen went to the Friends' meeting-house on Pine Street, and when the meeting which was being held there had ended, arrested John Drinker. They then searched for Joseph Wirts in his own house, but failed to find him, after which they arrested Matthew Johns, Bauckridge Sims, and Thomas Story, whom they conducted to Mrs. Burns' tavern on the common. Here a meeting of the militia was held, and being in want of a leader, they sent for Charles Wilson Peale, Col. Brill, Maj. Boyd, and Dr. James Hutchinson, who complied with the summons in the hope of preventing a disturbance, but failing to impress their views upon the meeting withdrew. The militia, who numbered about two hundred, with Miles, a North Carolina captain, Faulkner, a ship-joiner, Pickering, a tailor, and a man named Bonham, as their leaders, set out in search of James Wilson. Wilson and his friends anticipating an attack, had made preparations for resistance. A large party had gathered at his house, at the southwest corner of Third and Walnut Streets, and the Philadelphia Troop of Light-Horse (now the First City Troop) assembled for the purpose of protecting those who were threatened. At the hour for dinner, there being no signs of disturbance, the troopers dispersed to their homes. But the militia were now in motion, and marching down Chestnut to Second Street,

down Second to Walnut, and up Walnut to Third, with drums beating and two pieces of cannon, they arrived at Mr. Wilson's house. At Walnut and Dock Streets the rioters were met by Col. Allen McLane and Col. Grayson, a member of the Board of War, who, addressing Faulkner (who appeared to be the leader), requested that they would not make an attack on Wilson. Faulkner replied that "they had no intention to attack Mr. Wilson or his house. The purpose was to support the Constitution and the Committee of Trade. The laboring part of the city had become desperate from the high price of the necessities of life."

During the halt which resulted from this brief interview, Pickering and Bonham pressed to the front, and, inquiring the cause of the delay, ordered Faulkner to move on. In the rush that followed, McLane and Grayson, together with a number of Quakers and Tories who had been arrested, were swept on with the mob. Wilson's house was a large brick building

RESIDENCE OF JAMES WILSON, KNOWN AS "FORT WILSON."

with an extensive garden fronting on Third and Walnut Streets. Among those in the house at the time were James Wilson, Robert Morris, Mark Burd, John Lawrence, Jr., George Clymer, Daniel Clymer, Col. Stephen Chambers (of Lancaster), John F. Morris, Matthew McConnell, Capt. Campbell, Gen. Thomas Mifflin, Maj. Francis Nichols, and Gen. Thompson. They were armed, but had not much ammunition; their whole supply consisting of some cartridges with which Maj. Nichols and Daniel Clymer had hastily filled their pockets at the arsenal at Carpenters' Hall, while the mob was on its way from the common. On reaching the corner of Third and Walnut Streets, the militia gave three cheers and continued up Walnut Street. But for the imprudence of Capt. Campbell, one of the party in the house, no trouble, probably, would have resulted. After the rear of the procession had passed, Campbell opened a window, commenced some conversation with persons in the mob,

William Ryan, captain of marines on board the privateer "Jenny," of New York.

Joseph Moffat, taken on board a schooner, prize to the "Bayard," privateer, of New York.

Joseph Paxton, taken on the privateer "Intrepid," of New York.

Jacob Gatchens, captain of the British privateer "Impertinent."

Samuel Saunders, pilot of the British privateer "Impertinent."

James Thompson, seaman, of the British privateer "Impertinent."

Charles McClain, seaman, of the British privateer "Impertinent."

John McDonald, seaman, of the British privateer "Impertinent."

Zachariah Hutchins, prize-master of the British privateer "Impertinent."

James Dawson, Edward Hollan, John Shannon, Charles McBride, John Nardin, Thomas Guthrey, Robert Dodd, and William Hughes, deserters from the Pennsylvania State fleet, taken on board of British privateers.

and, it is said, shook a pistol "at those in the street." According to the narrative of Philip Hagner, Campbell having discharged his weapon from a third story window, the party in the street immediately facing about, "opened a brisk fire into the house, and Campbell fell mortally wounded." Col. Allen McLane afterwards stated that he heard Campbell "call out to those in arms to pass on," and that "musketry was immediately discharged from the street and from the house." The mob gave way and fled in all directions; but some of the militia passing round into Third Street, Gen. Mifflin opened a second story window in Wilson's house and attempted to address them. He was fired at, the ball striking near the sash and breaking it, whereupon he discharged both his pistols into the street. An unsuccessful attempt was made to force the door of the house, but a sledge-hammer, procured by a rioter, named Huler, from a blacksmith's shop in Pear Street, was used with such effect that the door soon gave way, and Huler, accompanied by a German who had aided in procuring the sledge-hammer, rushed in. They were confronted by Col. Chambers, who fired upon them, wounding the German. Huler rushed forward and seizing Chambers by the hair, dragged him down stairs, and pierced his body with a bayonet; but before he could inflict further injuries was pulled off by Hagner, a non-combatant. Chambers was borne off in safety to Willing's house by Hagner and Col. Mifflin. Several others who entered the house, according to Col. McLane's statement, were wounded by the inmates from the stair-case and cellar windows. During the temporary check thus given to the mob Wilson's friends barricaded the doorway with tables, chairs, etc., and, before the rioters had rallied, Gen. Joseph Reed, president of the Supreme Executive Council, made his appearance on the scene, followed soon after by Maj. Lenox, the two Majors Nichols, Thomas Morris, Alexander Nesbitt, Isaac Coxe, and Thomas Leiper, of the troop of light-horse, who, together with the troopers belonging to Col. Baylor's regiment, whom they had met on the way, wheeled suddenly round Chestnut Street, and charged upon and dispersed the mob.¹

¹ On his way down Third Street President Reed overtook Gen. Benedict Arnold, who, in his carriage, was being driven towards the place of riot. Mr. Reed forbade him to proceed further, "which order was sullenly obeyed." "After the riot was quelled," says Philip Hagner, in his narrative, "and Gen. Reed had left the ground, Gen. Arnold came down Third Street in his carriage, and stopped at the door of Mr. Wilson's house. Some of the gentlemen from the house assisted him out of his carriage, he being lame. In getting out I heard him say, 'Your President has raised a mob, and he cannot quell it.' He then went up-stairs into the house and showed himself at the window with a pair of pistols."

Samuel R. Fisher, then a Tory prisoner in the jail at Third and Market Streets, thus relates his experience of the riot: "From the jail I saw Joseph Reed, Timothy Matlack, James Claypoole, and John O. Kelly, on horseback, come down Market Street, the two first with drawn swords in their hands. They rode round the corner of Third Street and proceeded to Wilson's house, where, with a number of those called the City Light-Horse, they dispersed and took up those called Militia, some of whom they brought to jail. They then returned to Market Street,

Many of the rioters were arrested and sent to jail, a number having been wounded by the sabres of the cavalry. A man and a boy were killed in the street, and of the party in the house Capt. Campbell was killed and Messrs. Mifflin, Chambers, and S. C. Morris were wounded. A guard was placed at the powder magazine and arsenal, and the streets were patrolled by the City Troop during most of the night. Owing to the active part taken by the troop in the suppression of the riot, the feeling against them was very bitter. Maj. Lenox especially was singled out for destruction. An attack upon him at his residence in Germantown by a midnight mob was only frustrated by means of a pledge which he gave to open the door at daylight and the prompt arrival of some of his comrades, whom, in the mean time, he had contrived to summon to his aid from Philadelphia. Owing to the excited state of public feeling the persons who had defended Wilson's house were advised to leave the city, but after considering the matter at a meeting held at Mr. Gray's house, about five miles below Gray's Ferry, they decided to return to town. It was deemed expedient, however, that Mr. Wilson should absent himself for a time. The others made their appearance in Philadelphia as usual, and attended the funeral of Capt. Campbell.

On the day following the riot a meeting of militia officers was held at the court-house, at which violent measures for the release of the militiamen confined in jail were proposed, and would doubtless have been carried into effect had not a compromise been reached by which the soldiers were admitted to bail. The twenty-seven prisoners, on being released, drew up in front of the jail and gave three cheers, after which they marched to the court-house, where they were addressed by President Reed. On the same day a large meeting was held in the Supreme Court room, at the State-House, at which many of the clergy and principal citizens were present, including Robert Morris and Sharpe Delaney, who had assisted in the defense of Wilson's house. President Reed spoke at

at the corner of which I saw them meet some of the militia, who had got two brass field-pieces, and were going with them to join their companions. With much difficulty Reed, Matlack, Claypoole, and Kelly, with sundry assistants, forced the militia into the jail, not without many strokes of their swords, and, taking hold of the horses, led away the field-pieces. Reed's party, with the Light-Horse, were frequently putting some into jail this afternoon, till the number amounted to twenty-seven. Reed's party all went away, when an attempt was made by a collection of people in the street to break the jail and let out the militia, and, had not Hossman [the keeper] got a hint of it, and very suddenly shut the outer door, they might have accomplished their purpose. But in a short time a portion of the Light-Horse returned, and a parcel of the bucks and blades of the town were stationed under arms, also some artillery-men and field-pieces, both of which remained all night, as it was said a party from Germantown were coming to assist. A little before dark, John Drinker, Buckridge Sims, Thomas Story, and Matthew Johns came into my room and informed me they had been under guard in the street near Wilson's house during all the firing, and were afterwards taken out a second time to Burns' Tavern, and from thence had been on their way home by order of some of the Light-Horse, but accidentally meeting Joseph Reed in Arch Street, they were ordered by him to jail, as they said, for the safety of their own persons from violence."

this meeting also, and by his prudent and conciliatory course succeeded in soothing the passions of both parties. On the following day, however, some of Wilson's friends paraded with cannon and insulted members of the opposing faction; but although there was considerable excitement, no outbreak followed. Meanwhile, on the 5th, the Assembly offered its assistance to the president and Council in any measures that might be necessary to restore tranquillity, and on the 6th the Council issued a proclamation calling on the rioters and the inmates of Wilson's house to surrender themselves to the sheriff or some justice of the peace until an examination could be made under due process of law, and ascribing the disturbances to "the undue countenance and encouragement which has been shown to persons disaffected to the liberty and independence of America by some whose rank and character, in other respects, gave weight to their conduct. The unweaned opposition, and the contempt manifested in many instances to the laws and public authority of the State," it was added, "have also contributed; and justice also requires us to declare that some licentious and unworthy characters, taking advantage of the unhappy tumult, artfully kindled by themselves, have led many innocent and otherwise well-disposed persons into outrages and insults which, it is hoped, on cool reflection, they will condemn."

On the 10th the Assembly formally thanked President Reed for his exertions in suppressing the riot, and assuring him of their support in all similar crises. The proceedings growing out of the affair finally ended in a compromise. Neither the militia nor Wilson's friends were prosecuted, and on the 13th of March, 1780, an act of amnesty and pardon to all the persons implicated was passed by the Assembly. The sanguinary character of the attack on the Wilson house caused it to be known as "Fort Wilson," a name which it kept as long as it remained standing.

An outbreak among the sailors in January, 1779, was of much less consequence. Complaining that their wages were too low, they undertook to force the merchants to increase them, and with that object paraded the streets, displaying clubs and other weapons. At the wharves they compelled workmen to suspend their labor, and undressed some of the vessels in order to prevent them from sailing. In this emergency, Gen. Arnold was called upon for military aid, but after fifteen of the rioters had been arrested, order was restored without further trouble.

Owing to depredations on vessels belonging to Philadelphia by British privateers from New York it was decided by the Supreme Executive Council, in March, 1779, to procure a cruiser to be employed in the service of the State. A new vessel, the "General Greene," was purchased, and placed under the command of Capt. James Montgomery. Blair McClenachan and Matthew Irwin were appointed agents to fit out the vessel, and in order to obtain seamen

with which to man her, an embargo upon the sailing of any commercial vessel was proclaimed about the 1st of June. The sum of £20,000 was subscribed by citizens of Philadelphia towards fitting out the "General Greene," and £40,000 was contributed by the State. About the 1st of June the vessel set sail, with a crew of one hundred and twelve men. On passing the Capes the "General Greene" fell in with the schooner "Humming Bird," laden with tobacco, which had been captured by the British privateer "Bayard," and retook her. The privateers "Impertinent" and "Bayard," of New York, were subsequently captured by the "General Greene," which in October took another New York privateer, besides recapturing two American vessels. On the return of the "General Greene" to Philadelphia, the Council ordered her to be sold, the increase in the number of privateers belonging to Philadelphia merchants having rendered it unnecessary to retain her in the service. The armed galleys "Fame," "Franklin," "Hancock," "Chatham," "Lion," and "Viper," and the "Dragon," look-out boat, were employed on the bay and river. The "Experiment," "Dickinson," "Burke," and "Effingham," armed boats, and the hulls of the "Washington" and "Effingham" frigates, burned by the British at Bordentown in 1778, were sold. The "Holker," a privateer commissioned during this year, and commanded by Capt. Geddes, made many important captures, including the snow "Diana," from London for New York, with eighty cannon, sixty swivels, ten coehorns, powder, ball, and ammunition; supplies which were of great value to the Continental army.¹

¹ Geddes was succeeded by Matthew Lawlor as captain of the "Holker" in the latter part of the year. It was probably after the return from the first voyage of the latter that the following circumstance happened, as related by Richard Peters, who was commissioner of war in 1779: "Gen. Washington wrote to me that all his powder was wet, and that he was entirely without lead or balls, so that, should the enemy approach him, he must retreat. I received this letter while I was going to a grand gala at the Spanish ambassador's (Don Juan de Miralles), who lived in Mr. Chew's fine house on South Third Street. The spacious gardens were superbly decorated with variegated lamps, and the edifice itself was in a blaze of light. The show was splendid, but my feelings were far from being in harmony with all this brilliancy. I met at this party my friend Robert Morris, who soon discovered the state of my mind. 'You are not yourself to-night, Peters. What's the matter?' asked Morris. Notwithstanding my unlimited confidence in that great patriot, it was some time before I could prevail on myself to disclose the cause of my depression, but at length I ventured to give him a hint of my inability to answer the pressing demands of the commander-in-chief. 'The army is without lead, and I know not where to get an ounce to supply it. The general must retreat for want of ammunition.' 'Well, let him retreat,' replied the high and liberal-minded Morris, 'but cheer up. There are in the "Holker" privateer, just arrived, ninety tons of lead, one-half of which is mine, and at your service. The residue you can get by applying to Blair McClenachan and Holker, both of whom are in the house with us.'

"I accepted the offer from Mr. Morris," said Mr. Commissioner Peters, "with many thanks, and addressed myself immediately to the two gentlemen who owned the other half for their consent to sell, but they had already trusted a large amount of clothing to the Continental Congress, and were unwilling to give that body any further credit. I informed Morris of their refusal. 'Tell them,' said he, 'that I will pay them for their share.' This settled the business. The lead was de-

The schooner "Mars," Capt. Taylor, captured an English transport, having on board a Hessian colonel and two hundred men, together with a cargo of dry goods, and after a spirited fight, the British privateer "Active." The "Mars," which took several commercial vessels during the summer, frequently cruised in company with a vessel commanded by Capt. Spencer, and assisted in taking several additional prizes.

After her capture by the "General Greene," the "Impertinent" was sent out under the American flag in charge of Capt. Young, and falling in with the British cruiser "Harlem," gave chase. The "Harlem" was abandoned off Lewes by her crew, who made their escape. The privateer "Hunter," a schooner under the command of Capt. John Douglass, when off Cape May, having captured a schooner from St. Kitts laden with rum, was engaged by a large ship of twenty-two guns, and so badly damaged that she was compelled to draw off. The schooner "Addition," Capt. Craig, made several captures, and the "Comet," Capt. Stephen Decatur, took a packet-boat from England, but accomplished little else during the several cruises which she made. Capt. John Macpherson now became active in the privateering business again, and fitted out a little squadron, consisting of the sloop "Tiger," Capt. Martin Parkinson; the schooner "Cat," Capt. Macpherson; and the schooner "Jackal," Capt. Inslee Anderson, of which Macpherson wished to be commodore. The other officers, however, refused to submit to his authority, and when Macpherson, his own vessel having been upset, went on board the "Tiger," and attempted to take command, Parkinson resisted, and the enterprise was abandoned. On returning to port, Macpherson sued Parkinson for fifty thousand pounds damages for breaking up the voyage.¹

About this time four sailors of the sloop "Terrible," of New York, rose on the captain and the rest of the crew, took the vessel, and brought her into Philadelphia. The "Trial," a British privateer of ten guns, was sent in by the "Boston" and "Deane" frigates. The privateer "Pole," of New York, a ship carrying twenty-four six and nine-pounders, surrendered to

the "Boston" without resistance, and was sent to Philadelphia.

Of vessels bearing letters of marque, the ship "General Mercer," Capt. Robinson, brought in the ship "Minerva," of sixteen guns, captured after a smart engagement. The brig "Hibernia," Capt. Angus, had two sea-fights in October, and lost ten men killed and wounded. The "Intrepid," Capt. Gardner, brought in four prizes in December.

On the 21st of April, George Ross, of Lancaster, was appointed judge of the admiralty, but died on the 13th of July, and was succeeded by Francis Hopkinson.

Having determined to occupy the fortifications at Billingsport and Mud Island, the Supreme Executive Council sent Col. Bull to repair the banks and sluices at the latter place, to complete barracks for fifty men and their officers, and to make, as soon as possible, six *chevaux-de-frise*, to be sunk at different depths. The plans for these works were furnished by Gen. Du Portail, a French engineer. Col. Proctor was sent to Billingsport on the 29th of March, 1779, with thirty men, twenty being stationed at Mud Island. Proctor was to stop inward-bound vessels, and if the result of the examination was favorable, he was to signal Mud Island to that effect. The forts were provided with cannon, and in April two companies of the Philadelphia militia (artillery) were ordered to be sent down to Billingsport and Mud Island to relieve Proctor, who was transferred to another point. In October the workmen at these points were discharged, and in consequence of the unhealthiness of the posts the troops were withdrawn with the exception of a sergeant and fifteen men, who were to be relieved every week by a new party.

Some uneasiness was created in Philadelphia, in June, by the impression that the British contemplated a sudden movement on the city, and orders were issued to the lieutenants of the different counties to put the battalions in an efficient condition. The alarm was only temporary; but in October the Assembly received a letter from Gen. Washington requesting the co-operation of the State authorities in raising a force to assist in an attack upon New York in conjunction with the fleet. President Reed issued a proclamation calling on the militia to hold themselves in readiness to march at short notice. The light-horse were divided into two squadrons, and Col. Eyre was appointed to command the artillery. President Reed announced that he intended to take the field at the head of the Pennsylvania troops, and Col. John Bull was appointed adjutant-general; David Jackson, quartermaster-general; Dr. James Hutchinson, surgeon- and physician-general; James Searle, Jared Ingersoll, and Mr. Shields, aides-de-camp; and Maj. Eustace, extra aide-de-camp. In consequence of the failure of Count D'Estaing to arrive with the fleet, the projected movement was abandoned.

livered. I set three or four hundred men to work, who manufactured it into cartridge bullets for Washington's army, to which it gave complete relief."

¹ Capt. Macpherson's son, Maj. William Macpherson, a Philadelphian by birth, was an officer in the King's Sixteenth Regiment of Foot. He was a brother of Capt. John Macpherson, who was killed at Quebec. At the first opportunity he sold out his commission and succeeded in effecting his escape from the British lines to Philadelphia, where he tendered his services to the Board of War and the Supreme Executive Council. He was commissioned a major in the Pennsylvania line, and, after the war, became the commander of the celebrated volunteer corps, "Macpherson Blues." Capt. Alexander Fowler, of the Eighteenth British Regiment, came to Philadelphia about the same time. His sympathies were strongly with the Americans, and he determined, on the breaking out of hostilities, to quit the British service. Having sold his commission he went with the family to France, and brought them to America, with the intention of becoming a citizen of the United States.

The agitation for the abolition of slavery, whose progress has been traced in these pages, was now about to be crowned with success. On the 5th of February, 1779, the Supreme Executive Council in a message to the Assembly suggested that a plan be adopted "for the gradual abolition of slavery, so disgraceful to any people, and more especially to those who have been contending in the great cause of liberty themselves, and upon whom Providence has bestowed such eminent marks of its favor and protection." "Honored will that State be in the annals of mankind," it was added, "which shall first abolish this violation of the rights of mankind; and the memories of those will be held in grateful and everlasting remembrance who shall pass the law to restore and establish the rights of human nature in Pennsylvania." The draft of a law was adopted by the Council, but the Assembly passed a resolution to the effect that, while it was strongly impressed with the policy of abolition, it could not consent to receive the proposed law from the Council, as the Constitution had committed the power of originating laws to the Assembly. It was moved to amend that "the House, having full power, will in due time appoint a committee to bring in a bill for that valuable purpose;" but the amendment was lost by a vote of twenty-two yeas to twenty-seven nays. A motion to dismiss the subject entirely was carried by a vote of twenty-nine yeas to twenty-one nays, and a resolution adopted that as the Constitution vested in the General Assembly the whole powers of legislation, all bills proposed to be enacted into laws ought to originate in the House. A bill was shortly afterwards introduced in the manner designated, which was read twice. Nothing more was done with it, although the Council called attention to the matter in September.

A new Assembly was elected in the following month, and George Bryan, formerly vice-president of the Executive Council, who was a member of the newly-chosen body, moved that the subject of emancipation be referred to a committee. His motion was agreed to, and Mr. Bryan prepared a new preamble and the draft of a law for gradual emancipation, which, on the 29th of February, 1780, was adopted by a vote of thirty-four to twenty-one.¹

"Our bill," wrote George Bryan to Samuel Adams, "astonishes and pleases the Quakers. They looked for no such benevolent issue of our new government, exercised by Presbyterians." The bill declared that no child born thereafter in Pennsylvania of slave parents should be a slave, but a servant until the age of twenty-eight years, at which time all claim of service on the part of the master should cease. All slaves then in the State were required to be registered before the 1st of November under penalty of their becoming immediately free, as none were to be deemed slaves unless registered. Negro slaves were to be tried

in the same manner as other persons; and, in case of sentence of death, to be valued, and the price paid out of the State treasury.²

We have seen that stringent measures had been taken against individual Philadelphians who sided with the British, but the hostility of the Whigs was now extended to corporate bodies, and the first to feel the weight of their displeasure was the College of Philadelphia. The provost, Rev. William Smith, a Scotchman by birth, and a clergyman of the Church of England, who had received the degree of D.D. from the University of Oxford, was suspected of Tory proclivities. Before the war he had taken part with the proprietaries in their disputes with the Legislature, and his course in this respect had rendered him objectionable to a large and influential party. He was frequently attacked in the newspapers and openly accused of leaning to the British side. Several of the trustees were known to be unfriendly to the American cause, and some of them had actually gone over to the enemy. In fact, the college was generally regarded as a Tory institution, and as such was constantly exposed to the interference of the Whig authorities. By their discreet and prudent course, however, its officers succeeded in averting the danger for a time. When the Continental Congress first assembled in Philadelphia it was invited to attend the commencement exercises, and, the invitation having been accepted, the members proceeded in a body from the State-House to the college. Through the influence, it is supposed, of Benjamin Franklin, who was a strong friend of the institution, a clause was inserted in the State Constitution of 1776, which provided that all "societies incorporated for the advancement of religion and learning, or for other pious and charitable purposes," should continue to enjoy the rights and privileges which they had formerly possessed; but on the 2d of January, 1778, an act was passed by the General Assembly suspending, for a limited time, the power and authority of the trustees of the college and academy, and depriving them of all their powers under the charter. In the "act for the better security of government," passed at Lancaster, on the 1st of April following, it was provided that "all trustees, provosts,

² To George Bryan belongs the chief share of credit for the passage of this humane and enlightened measure. His services in this direction are given special prominence in the inscription upon his tombstone, which was originally in the burying-ground of the Second Presbyterian Church, Arch Street near Fifth. The inscription is as follows:

"In memory of GEORGE BRYAN, who died 27th January, 1791, aged sixty years. Mr. Bryan was among the earliest and most active and uniform friends of the rights of man before the Revolutionary war. As a member of the Assembly of Pennsylvania, and of the Congress of New York in 1765, and as a citizen, he was conspicuous in opposition to the Stamp Act and other acts of British tyranny. He was equally an opponent of domestic slavery. The emancipation of the people of color engaged the feelings of his heart and the energies of his mind, and the Act of abolition [which] laid the foundation of their liberation issued from his pen. He filled several important offices during the Revolutionary contest, and for the last eleven years of his life he was one of the judges of the Supreme Court. In his private deportment he was exemplary,—a Christian in principle and practice."

¹ Bancroft, vol. x. p. 360.

rectors, professors, masters, and tutors of any college or academy, and all schoolmasters and ushers . . . should be prohibited from acting in those capacities unless they took the oath of allegiance,"—a measure directly aimed at the college faculty.

In February, 1779, the growing hostility to the college showed itself in the passage of a resolution appointing a committee to inquire into the rise, design, and condition of the college, with power to send for persons and papers. The queries propounded by this committee were answered by Provost Smith, at the desire of the trustees, in a paper defending the course of the trustees and officers, and refuting the charges against them. No decision was reached by the Assembly at that session, but at the opening of the following session the matter was again brought up in the message of President Reed, and on the 27th of November, 1779, a law was enacted abrogating the proprietary charters of the college, and removing from office the provost, vice-provost, professors, and all others connected with the institution. The rights and property vested in the trustees were transferred to other hands, and it was provided that the college should thereafter be known as "The University of the State of Pennsylvania." A practically new institution was thus created, which the Assembly endowed with an annual income of fifteen hundred pounds, to be derived from confiscated lands. As an excuse for the adoption of this radical measure it was alleged that the academy and college had been founded in a spirit of "free and unlimited catholicism," but that the trustees had, by action taken on the 14th of June, 1764, "departed from the plan of the original founders, and narrowed the foundation of the said institution." The object of the act, it was claimed, was to restore the foundation to its original character.¹

A new board of trustees was appointed by the Assembly, consisting of three classes. The first class consisted of persons holding offices under the govern-

ment who were *ex officio* members of the board. These were, when the act was passed: 1, The president of the Supreme Executive Council, Joseph Reed; 2, the vice-president of the Council, William Moore; 3, the speaker of the General Assembly, John Bayard; 4, the chief justice of the Supreme Court, Thomas McKean; 5, the judge of the Admiralty, Francis Hopkinson; 6, the attorney-general, Jonathan Dickinson Sergeant. The second class consisted of six clergymen,—the senior ministers of the Episcopal, Presbyterian, Lutheran, German Calvinist, Baptist, and Catholic Churches, viz., Rev. William White, an earnest friend of the college under the old management; Rev. John Ewing, Rev. John Christopher Kunze, Rev. Caspar Weyberg, Rev. William Rogers, and Rev. Ferdinand Farmer. The third class was composed of thirteen individuals,—Dr. Benjamin Franklin, then United States Minister at Paris; William Shippen, Benjamin Searle, and Frederick Muhlenberg, members of Congress from Pennsylvania; William Augustus Atlee and John Evans, judges of the Supreme Court; Timothy Matlack, secretary of the Supreme Executive Council; David Rittenhouse, State treasurer; Jonathan Bayard Smith, Samuel Morris, George Bryan, Dr. Thomas Bond, and Dr. James Hutchinson. As was to have been expected, these individuals, chosen more on account of their prominence in public affairs than because of any special fitness for the duties, paid but little attention to the details of management, and the administration of affairs soon became feeble and inefficient.

Another important measure with which the Assembly was called upon to deal about this time was the extinguishment of the proprietary interest in the commonwealth. Quit-rents to a large amount and a number of manors and other real estate were still the property of the Penns, although their government had been formally superseded by that of the people's representatives, and a settlement with the Penn family had been rendered necessary. Chief Justice McKean having been applied to by the Assembly, expressed the opinion that the quit-rents were legal reservations for the private use of William Penn, and that the pre-emption right of buying land from the Indians was a proper one, under the charter from Charles II., to be exercised by Penn and his successors; but that by the Revolution those rights as well as the charter totally ceased, and could not be executed again. Judge McKean's views were opposed, except in one particular, to the wishes of the Whigs, who decided not to adopt them. The matter had been under consideration since February, 1778, and John Penn having been notified was represented by counsel. During the early part of 1779, after the subject had been debated for five days, the Assembly adopted a series of resolutions to the effect that the charter of Charles II. was general in character and "ought to be considered as containing a public trust for the benefit of those who should settle in the State of Pennsylvania,

¹ The assertion of the Assembly that the foundation had been narrowed was not warranted by facts. The resolution of the trustees referred to was taken in connection with a letter signed by the Archbishop of Canterbury and Thomas and Richard Penn in reference to the Rev. Dr. Smith's collections in England in behalf of the college, in which, after alluding to the fact that the institution had been originally founded and carried on "for the general benefit of a mixed body of people," and that "people of various denominations" had "contributed liberally and freely" to its support, the hope was expressed that the foundation would not be narrowed, whereby some party "might endeavor to exclude the rest, or put them on a worse footing than they have been from the beginning or were at the time of this collection, which might not only be deemed unjust in itself, but might likewise be productive of dissension unfriendly to learning and hurtful to religion." It was therefore recommended that the trustees should "make some fundamental rule or declaration to prevent inconveniences of this kind," etc. The trustees, after inserting this letter in their minutes, added a resolve "that they would keep this plan closely in view, and use their utmost endeavors that the same be not narrowed, nor the members of the Church of England or those dissenting therefrom . . . be put on any worse footing in this seminary than they were at the time of obtaining the royal brief." So far from narrowing the foundation, therefore, the trustees took especial pains to preserve it in its original breadth and liberality.

coupled with a particular interest accruing to the said William Penn and his heirs, but in its very nature and essence subject and subordinate to the great and general purposes of society mentioned in the said grant;" that the quit-rents and payments of money upon land other than their own tenths or manors imposed by the proprietaries, were in violation of the original charter and concessions; that the re-establishment of the powers and claims of the heirs of William Penn as they had been exercised both in property and government was "not to be admitted in a government founded upon equal liberty and the authority of the people; that all the property of the proprietaries in Pennsylvania other than the quit-rents arising from lands allotted to servants at the end of their servitude, and the reserved lands known by the names of proprietaries, tenths of manors, and such purchases as may have been made by them or either of them in their private right or capacity, should be vested in the Commonwealth of Pennsylvania for the use and benefit of the inhabitants; "that commissioners be appointed, who shall hold a board, to be called the board of property, which shall be vested with full power to demand, receive, and collect all papers, books, records, maps, draughts, surveys, and other papers, now in the possession of the said proprietaries, or any persons heretofore holding offices under them, touching, or in anywise respecting the administration or management of the lands within this State, and also to be vested with power to grant patents, confirm suspended titles, under a seal of office to be by them devised, to appoint deputy surveyors in each county (the surveyor-general and receiver-general being appointed by Council) and such other officers as may be necessary, and to receive such moneys as may hereafter arise from the sale of the lands within this State that are not yet surveyed or located;" and that, finally, "all quit-rents heretofore reserved by the proprietaries of Pennsylvania, other than the quit-rents before mentioned, being badges of slavery, and reserved without any just authority, shall be abolished, and be no longer demanded of the free citizens of this State."

In compensation for the rights of which they were thus deprived, it was determined that the Penn family should be paid one hundred and thirty thousand pounds in five years after the passage of the act. The Penns also retained their manors and other real estate, their ground-rents, and quit-rents derived from the manors, and were still the largest landed proprietors in Pennsylvania. From the British government they received in addition an annuity of four thousand pounds for the losses resulting to them from the Revolution.

In January of this year, 1779, Washington paid another visit to Philadelphia, remaining about two weeks, as the guest of Henry Laurens, president of Congress, and Mrs. Washington came on from Mount

Vernon to meet him. The Supreme Executive Council adopted a resolution requesting Washington to sit for his portrait. The invitation was complied with, and the portrait was painted by Charles Wilson Peale.¹

On the 18th Congress celebrated the alliance with France by a banquet to the French minister, at which thirteen toasts were drunk, accompanied by salutes of artillery. Various other public occasions were celebrated during the year,—St. Tammany's Day, the first recorded observance of a noted anniversary, on the 1st of May by the Sons of St. Tammany, "and their adopted brethren of St. Patrick, St. Andrew, and St. George," with a dinner at the old theatre, Southwark; the Fourth of July, which, falling on Sunday, was observed on the 5th (Congress having on the previous day attended services at Christ Episcopal Church and the Catholic Chapel) by an oration in the Dutch Calvinist Church by Mr. Brackenridge, an entertainment given by Congress to the French minister, president, and chief officials of the State, French consul, and others, and a display of fire-works in the evening; the birthday of Louis XVI., on the 23d of August, with salutes from the vessels in the harbor and the city artillery, ringing of bells, and pyrotechnics from a stage erected before President Reed's official residence, at Sixth and Market Streets; the arrival, in less than a month later, of M. de Luzerne, the new French minister, and M. Marbois, secretary of the commission, who were escorted into the city by the light-horse and citizens amid firing of cannon and ringing of bells, and honored by a dinner given by Congress in the following month; the departure of Henry Laurens, president of Congress, who set out for Charleston November 10th, on his way to Holland as an envoy from Congress, and was escorted as far as Gray's Ferry by members of Congress and others,² and the election of Joseph Reed as president, and William Moore as vice-president of the State, celebrated in November by the usual procession, with a dinner afterwards at the City Tavern, at which M. de Luzerne, the French minister, was present. Another incident of a different character was the burial of William Henry Drayton, member of Congress from South Carolina, on the 4th of September,³ which was followed on the 11th of Oc-

¹ Don Juan Miralles, then spoken of as "a Spanish gentleman of distinction and high character," but who afterwards appeared in his true rôle of ambassador from the court of Spain, ordered five copies, of which four were sent to Europe. The original was placed in the Council chamber. Peale published a mezzotint engraving of this picture the next year, of the size fourteen by ten inches. It was the largest and most authentic portrait of Washington that had yet been engraved. This fine painting of Peale was not suffered to remain long in the possession of the Council. In September, 1781, some Tories broke into the Council room, in the State-House, and totally defaced this portrait, as also a curious picture, entitled, "A Monument to General Montgomery."

² Laurens was captured by the British on the voyage out, and thrown into the tower as a prisoner of state.

³ The funeral service was performed at Christ Church, by Rev. William White, D.D., and the body interred in the cemetery adjoining.

tober by that of Joseph Hewes, member of Congress from North Carolina.¹

Now that the authority of Congress and the State government had been firmly re-established, home manufactures began to revive. Works for drawing wire were erected by Nicholas Garrison, Valentine Eckert, and Henry Voight, but were soon relinquished owing to the defective character of the iron furnished by the manufacturers. In August John Marshall unsuccessfully petitioned the Executive Council for aid to set up a manufactory of thread, and Hewson & Long re-established a linen-printing factory in Kensington adjoining the glass-works.

The year 1780 opened in Philadelphia under rather discouraging circumstances for the patriot cause. Considerable difficulty was experienced both in city and county in levying taxes, and divers means were resorted to in order to evade the law. The Quakers were particularly troublesome, declining to furnish any information as to the extent of their property, although liable to fourfold taxes in case of concealment.² Great embarrassment was also caused by the depreciation of the Continental currency, whose value had become almost nominal. The State currency was affected by the general distrust, and as one of the measures for maintaining its credit, a list of officers of the State and lawyers and others who agreed to take the paper money of the issue of March, 1780, as equivalent to gold and silver, was published.³

The pall-bearers were President Reed and two members of the Executive Council, Judge Hopkinson, Jonathan Dickinson Sergeant, and Gen. Hogan. The president and members of Congress as mourners, and the French minister and suite were present.

¹ Mr. Hewes was buried at Christ Church, next to Mr. Drayton.

² Thompson Westcott.

³ The following were the signers of this agreement: Joseph Reed, president; William Moore, vice-president; John Lacey, Jr., Joseph Gardner, John Hambricht, Thomas Scott, Jacob Arnt, members of Council; P. Matlack, secretary of Council; John Ord, Plunket Fleeson, Isaac Howell, David Kennedy, William Rush, Benjamin Paschall, William Adcock, justices of the peace; Samuel Miles, Joseph Dean, J. Miller, John Purviance, auditors of accounts; Thomas McKean, chief justice; George Bryan, fourth justice of the Supreme Court; James Searle, Jared Ingersoll, Frederick A. Muhlenberg, delegates in Congress; Jonathan Sergeant, attorney-general; J. B. Smith, prothonotary of Common Pleas; Andrew Robeson, register of Admiralty; William Bradford, Jr., register of Court of Appeals; John Morris, Jr., register of deeds; John Haley, clerk of Sessions; Frederick Phile, naval officer; Edw. Burd, prothonotary of Supreme Court; Ephraim Bonham, Frederick Haguer, William Bartram, Benjamin Dungan, sub-lieutenants; Francis Hopkinson, judge of Admiralty; John Armstrong, delegate in Congress; James Claypool, sheriff; William Henry, lieutenant of city; Matt. Clarkson, marshal of Admiralty; Thomas Paine, clerk of General Assembly. Practitioners of law who will take the bills at par: James Wilson, Asheton Humphreys; G. North, George Campbell, Henry Osborne, John Vannost, William Lewis. Merchants and traders who will take the paper money issued by Act of Assembly of the 25th of March, 1780, as of equal value with gold and silver: Robert Morris, J. M. Nesbitt & Co., Meredith & Clymer, Blair McClenachan, Hugh Shiell, John Nixon, William Richards, Mease & Caldwell, John Dunlap, John Donaldson, Thomas Leiper, David Duncan, William Alricks, F. C. Hassenclever, Thomas Fitzsimmons, P. Whiteside & Co., Manuel Eyre, G. Clarkson, William Hall, Andrew Tybout, R. Humphreys, James White, George Henry, Ephraim Blaine, David Lenox, Francis Nichols, John Benezet, Cox & Lawrence, S. C. Morris & Co., Paul Fooks, George Meade, John Wilcocks, Sharpe Delaney, Thomas Irwin, Joseph Carson, James Ash,

On the 31st of May the Assembly passed an act suspending the law making Continental bills a tender for three months. Subsequently the suspension, after having been prolonged by the Assembly for a specified time, was continued indefinitely. On the 1st of June the Assembly authorized the passage of an act to redeem the Continental bills to the amount of twenty-five millions of dollars by the collection of taxes at the rate of one million of dollars to forty millions. Three days previously (May 29th) the Assembly had passed resolutions authorizing a loan of two hundred thousand pounds to be effected on behalf of the State and payable in ten years. Hon. James Searle was appointed agent to negotiate the loan in Europe, with instructions, if he succeeded, to purchase clothing for the troops, military stores, etc., and one hundred chests of Bohea tea and twenty-five chests of green tea. Searle, however, failed to negotiate the loan, and was recalled in the summer of 1781.

In the mean time the outlook for the American cause grew rapidly darker. In its winter-quarters at Morristown the army was undergoing privations and sufferings equal to those of Valley Forge, and in the South the British generals seemed to be carrying all before them. But notwithstanding the general anxiety and gloom, the patriotic citizens of Philadelphia continued their labors in behalf of the cause without relaxation, and when news was received of the surrender of Charleston to the British, on the 28th of May, the announcement, instead of discouraging them, seemed to infuse new life and vigor into their efforts. The ladies were the first to move. Among themselves they instituted subscriptions for a fund to supply destitute soldiers with clothing, and in a few weeks had raised three hundred thousand six hundred and thirty-four dollars, equal in specie to seven thousand five hundred pounds. The wife of Lafayette contributed one hundred guineas in specie, and the Countess de Luzerne six thousand dollars in Continental paper and one hundred and fifty dollars in specie.⁴

John Mease, John Shee, Budden & Lawrence, Isaac Wikoff, James Crawford, John Pringle, Bertles Shee, Samuel Inglis, Matthew Irwin, William Semple, William Turnbull, Jacob Morris, A. & H. Hodge, A. Hodge, Sr., Michael Hillegas, Isaac Melchor, Melchor & Vandever, John Peters, Jr., Nathan Bush, J. Lawerswyler, Andrew Forsyth, John Rupp, Robert Werr, Peter Paris, Styner & Cist, William Will, J. Pickering, Jacob Schreiner, David Boehm, D. Schaffer, Jr., John Schaffer, Isaac Moses, Lewis Farmer.

⁴ Mrs. Esther Reed, wife of Gen. Joseph Reed, was the chief officer of the committee under whose direction these contributions were obtained. The members of the committee, who made the collections were, Mrs. G. B. Eyre, Mrs. Coates, and Mrs. J. B. Smith, for the Northern Liberties; Mrs. F. Wade, for the district from Vine to Race Streets; Mrs. Hutchinson, Mrs. Hassenclever, Mrs. Hillegas, and Mr. and Mrs. Clarkson, from Race to Arch Streets; Mrs. Thompson Richards, Mrs. J. Blair, and Mrs. T. Smith, from Arch to Market Streets; Mrs. R. Bache, Mrs. T. Francis, Mrs. J. Mitchell, Mrs. J. Caldwell, and Mrs. B. McClenachan, from Market to Chestnut Streets; Mrs. S. Caldwell and Mrs. Dr. Rush, from Chestnut to Walnut Streets; Mrs. J. Mease and Mrs. James Wilson, from Walnut to Spruce Streets; Mrs. T. McKean, Mrs. J. Searle, Mrs. J. Mease, Mrs. Dr. Shippen, and Mrs. R. Morris, from Spruce to Pine Streets; Mrs. W. Turnbull and Mrs. J. Benezet, from Pine to South

The money thus obtained was employed, at the suggestion of Gen. Washington, in furnishing shirts to the army, and many of these garments were made up by Philadelphia ladies. The patriotic action of the women was followed by an organized movement among the men for obtaining supplies for the army through the agency of a bank. This institution was known as the "Bank of Pennsylvania," and its object was declared to be the supplying of "the army of the United States with provisions for two months." Each subscriber gave his bond to the directors of the bank for such sum as he desired, obligating himself to pay it in specie in case such payment became necessary to meet the bank's engagements. The securities amounted to the sum of three hundred and fifteen thousand pounds, Pennsylvania currency, at the rate of 7s. 6d. to the dollar. The directors were authorized to borrow money on the credit of the bank for six months or any shorter period on special notes at six per cent. interest, and were to receive from Congress such sums as might be appropriated for the reimbursement of the bank. When the latter source and the amounts occasionally borrowed or interest failed to afford sufficient funds, the directors were authorized to demand from every subscriber to the general loan such part of his subscription as might be needed, a note bearing interest being given for the amount so advanced. The purchases of supplies for the army were to be made by a factor appointed by the sureties of the bank, who was also to forward them to points where they were required. All moneys borrowed or received from Congress were to be applied "to the sole purposes of purchasing provisions and rum for the use of the Continental army, of transporting them to camp to be delivered to the order of his excellency the commander-in-chief or of the Board of War, and of discharging their notes and the expense of conducting their business" and for no other purposes.¹

Streets; Mrs. Marsh, Mrs. Ord, Mrs. Blewer, Mrs. Knox, and Mrs. Penrose, for Southwark; Mrs. H. Hill, Mrs. Hillegas, Mrs. M. Clarkson, Mrs. Hassenclever, and Mrs. R. Bache, for Germantown and Bettlehausen. Among the names of the subscribers is that of Lady Christiana Griffin, for two thousand dollars.

¹ The officers were: Directors, John Nixon, George Clymer; Factor, Tench Francis; Inspectors, Robert Morris, J. M. Nesbitt, Blair McClenachan, Samuel Miles, Cadwalader Morris. The subscribers were: For £10,000 each, William Moore, Robert Morris, Blair McClenachan; for £6000, Bunner, Murray & Co.; for £5500, Tench Francis; for £5000, James Wilson, George Clymer, William Bingham, J. M. Nesbitt & Co., Richard Peters, Samuel Meredith, James Mease, Thomas Barclay, Samuel Morris, Jr., John Cox, Robert Lettiss Hooper, Jr., Hugh Sheill, Emanuel Eyre, Matthew Irwin, Thomas Irwin, John Philip De Haas, Philip Moore, John Nixon, Robert Bridges, John Benezet, Henry Hill, John Morgan, Samuel Mifflin, Thomas Mifflin, Thomas Willing, Samuel Powell; for £4000, Benj. G. Eyre, William Coats, John Dunlap, James Budden, Michael Hillegas, John Mease, Joseph Carson, Thomas Leiper, Kean & Nicholls; for £3000, John Pringle, Samuel Miles, Charles Thompson, Isaac Moses, Jonathan Penrose, Samuel Morris; for £2500, Cadwalader Morris; for £2000, Joseph Reed, Thomas McKeau, Isaac Bass, Owen Biddle, John Gibson, Charles Pettit, John Mitchell, Robert Knox, Joseph Bullock, Francis Gurney, George Campbell, William Lewis, John Wharton, Benjamin Rush, Thomas Lawrence, Joseph

The bank was opened at its quarters on Front Street, two doors above Walnut, on the 7th of July. Meanwhile the Continental money had continued to sink in value, although repeated efforts had been made to sustain it. At a meeting held at the State-House in November (John Bayard, Speaker of the Assembly, presiding), it was decided that the value of Continental money, as compared with specie, be fixed at seventy-five to one; that a voluntary association be entered into by the people of the city and liberties "to pay and receive this money as freely as specie" at the rate agreed upon; all who refused to do so, to be "exposed to the public" as enemies to the independence of America and to the peace and good order of the city; that a committee, consisting of Col. Benjamin G. Eyre, H. Kamerer, John Dunlap, Thomas Fitzsimmons, John Shee, Capt. Blewer, Dr. Hutchinson, Col. Knox, Col. Cowperthwaite, John Bayard, B. McClenachan, Andrew Tybout, and Samuel Caldwell, be appointed to draw up articles of association, to appoint committees for obtaining signatures to that instrument, and generally to carry the purposes of the meeting into effect. The committees to obtain signatures were to be composed of two persons in each ward and district in the city and liberties, who were "to carry round the association, and present the same for subscription to every householder, trader, and tradesman within their respective districts; and to take a memorandum in writing of the name and description of every person who refuses to sign the association, and any remarkable circumstance of such refusal, and report the same to the committee aforesaid, that they may be known to the associators."²

The necessities of the army at this time were extreme. "I assure you," wrote Washington to Reed on the 28th of May,

"every idea you can form of our distresses will fall far short of the reality. There is such a combination of circumstances to exhaust the patience of the soldiery that it begins at length to be worn out, and we see in every line of the army the most serious features of mutiny and sedition. All our departments, all our operations, are at a stand, and unless a system very different from that which for a long time has prevailed be immediately adopted throughout the States, our affairs must soon become desperate beyond the possibility of recovery. . . . The Court of France has made a glorious effort for our deliverance, and if we disappoint its intentions by our supineness, we must become contemptible in the eyes of all mankind; nor can we after that venture to confide that our allies will persist in an attempt to establish what it will appear we want inclination or ability to assist them in. . . . Now, my dear sir, I must observe to you that much will depend on the State of Pennsylvania. She has it in her power to contribute, without comparison, more

Blewer, Matthew Clarkson, William Hall, John Patton, B. Fuller, B. Randolph, Abraham Bickley, George Meade & Co., John Donaldson, John Steinmetz, Andrew Hodge, Henry Keppele, Francis C. Hassenclever, Isaac Melcher, John Schafer, Alexander Tod, John Purviance, John Wilcox, Samuel English, Nathaniel Falconer, James Caldwell, Gerardus Clarkson, Abraham Shoemaker; for £1000, John Lacey, James Thompson, John Hambright, Samuel Caldwell, Samuel Penrose, William Turnbull, John Shee, Benjamin Davis, Jr., Sharp Delaney, Andrew Doz, Peter Whiteside, Andrew Robinson. Total subscriptions, £315,000.

² In December the committee "published" Richard Powell, a shoemaker, living in Front Street, for asking of Lieut.-Col. John Nevell twenty-five shillings, hard money, or three hundred and twenty Continental dollars, for a pair of shoes.

to our success than any other State in the two essential articles of flour and transportation. . . . Pennsylvania is our chief dependence. From every information I can obtain she is at this time full of flour. I speak to you in the language of frankness and as a friend. I do not mean to make any insinuations unfavorable to the State. I am aware of the embarrassments the government labors under from the open opposition of one party and the underhand intrigues of another. I know that with the best dispositions to promote the public service you have been obliged to move with circumspection; but this is a time to hazard and to take a tone of energy and decision. All parties but the disaffected will acquiesce in the necessity and give their support. The hopes and fears of the people at large may be acted upon in such a manner as to make them approve and second your views. The matter is reduced to a point, —either Pennsylvania must give us all the aid we ask of her, or we undertake nothing. . . . I wish the Legislature could be engaged to vest the executive with plenipotentiary powers. I should then expect everything from your abilities and zeal. This is not a time for formality or ceremony. The crisis in every point of view is extraordinary, and extraordinary expedients are necessary. I am decided in this opinion. I am happy to hear that you have a prospect of complying with the requisitions of Congress for specific supplies; that the spirit of the city and State seems to revive and the warmth of party decline. These are good omens of our success."

Lafayette also wrote to Reed, under date of May 31st, urging that energetic measures be immediately taken in behalf of the army, and that in particular the Continental battalions be filled up by militia drafts. In consequence of these appeals the Assembly on the 1st of June authorized the president or vice-president in Council during the recess of the House, should the circumstances of war make it necessary, to declare martial law; and on the 5th of June, President Reed was enabled to write Gen. Washington that the Assembly had passed a law for raising two men out of every company of militia, which arrangement would produce about one thousand men, of whom about six hundred might be used to fill up the ranks of the Continental army. In the mean time strenuous efforts had been made to increase the effectiveness of the militia. On the 20th of March the Assembly passed an act providing for the appointment of one lieutenant for the city and each county, and two sub-lieutenants or more, not exceeding the number of the battalions, who were to make out lists of all white males between the ages of eighteen and fifty-three years who were fit for military duty. Southwark, Moyamensing, Northern Liberties and Passyunk were incorporated with the city for military purposes. It was also provided that there should be one battalion of artillery in the city, and that corps of light-horse should be formed in the counties not exceeding in number six men for each battalion of infantry, the troop in the city being restricted to fifty men, exclusive of officers. On account of a provision allowing the hiring of substitutes, the bill met with considerable opposition, but was finally adopted under a protest from many members of the House. In May a petition from citizens of Philadelphia, who had served in the army, requesting permission to form an independent company of infantry, was laid on the table by the Assembly, which during the same month passed an act "for the ease of the militia," directing that each company in the State should procure or hire one man to be embodied with the others from other

companies, into companies to be called "the Pennsylvania Volunteers," which would be available for service at any time. Under this act William Henry was appointed lieutenant for Philadelphia, and Ephraim Bonham and Frederick Hagner sub-lieutenants. Col. William Coats was appointed lieutenant for the county, and Lieut.-Col. Jacob Engle, Col. George Smith, Col. William Deane, Peter Richards, Abel Morgan, and Llewellyn Young sub-lieutenants for the county.

A meeting of the militia of the city for the choice of officers was set for the 17th of April, but on the 14th a placard appeared, requesting the militia to assemble at Byrne's tavern on the 17th, to take into consideration "the present militia act and its consequential bad effects on the laboring poor, as all the fines and forfeitures, together with their own tour of duty, will centre on themselves. Also the partiality exhibited in said act to those least entitled to it." The placard being regarded as seditious, the Supreme Executive Council offered a thousand pounds for the detection of the author, printer, or publisher. William Young, apprentice of Benjamin Town, printer, was arrested on suspicion, but after having been confined in jail three days was discharged. The meeting summoned by the placard did not take place, and the militia elected their officers without further molestation.¹

To add to the difficulties of the situation, the Tories began to be troublesome, and the effect of their intrigues was such that Gen. Wayne, Col. Walter Stewart, Lieut.-Col. John Stewart, and Maj. Henry Lee, Jr., the principal Continental officer then in the city, found it advisable on the 6th of April to publish an address, declaring their "fixed and unalterable resolution to curb the spirit of insolence and audacity, manifested by the deluded and disaffected," and that, to effect this, they would not associate or hold communication with any person or persons who had exhibited by their conduct "an inimical disposition, or even lukewarmness to the independence of America," nor with any person "who may give countenance or encouragement to them, however respectable his character or dignified his office." They also announced that they would "hold any gentleman bearing a military commission who may attempt to contravene the object of this declaration in the smallest degree as a proper subject for contempt. "On the 6th of June the Supreme Executive Council adopted resolutions to the effect that as extraordinary measures for the supply of the army had become necessary, discrimination should be made between citizens who had shown themselves to be friends of the country, and those who had appeared in a different character. All persons who

¹ The militia, to the number of two thousand nine hundred and sixty men, were reviewed in May by President Reed, in the presence of Gen. St. Clair, Gen. Wayne, the Chevalier de Luzerne, and other distinguished persons.

had taken the oath of fidelity and abjuration were notified to keep their certificates ready for production at the shortest notice, and those who had lost them were advised to get duplicates. In consequence of the intercourse and correspondence which had been kept up between persons who had joined the enemy, and their wives and children, the residence of the latter in the State was declared to be inconvenient and dangerous, and the Council ordered that notice be given all such persons to quit the State within ten days. The carrying of letters to and from the enemy's lines, except under certain conditions, was forbidden under penalty of imprisonment. On the same day a proclamation was issued, announcing that an "office of inquiry" would be opened for the examination of all strangers entering the city, and for the arrest of suspicious persons; that in view of the exigencies of the situation, the ordinary forms of procedure would be dispensed with, and martial law enforced, and that persons would be appointed to proceed as specially directed from time to time, for whose actions the proclamation would be considered sufficient authority. An embargo was laid on all outward-bound vessels except those in the service of France, in order that the collection of provisions might be facilitated; seizures of horses, the property of Quakers and Tories, were made for the use of the army, and the houses of persons suspected of disloyalty were searched for arms.¹

These stringent measures had been precipitated by a sudden movement of the British into New Jersey. On the 16th, Washington wrote to the Executive Council requesting that the city light-horse should march as soon as possible to the camp. They left Philadelphia on the 24th, but returned on the 29th, Sir Henry Clinton having moved off up the Hudson. On the receipt of this news the embargo was removed, and active proceedings under martial law suspended.

The arrival at Rhode Island of the French army under Count Rochambeau led to the formation of a plan for a combined attack upon New York. Washington's army, however, was in no condition for an offensive movement. "We are now," wrote Gen. Greene to President Reed, on the 29th of June, "in the greatest distress imaginable. The army without tents and the officers without baggage for want of teams." Pennsylvania was urged to come to the rescue, and energetic measures were taken by the State authorities for furnishing additional troops and supplies.² On the 28th of July a circular was issued

requiring the county lieutenants to call out and organize the militia, four thousand being the quota demanded from Pennsylvania. Dr. James Hutchinson was appointed director-general of the military hospital, and Trenton, N. J., was chosen as the rendezvous. Here a camp, commanded by President Reed in person, was established, but on the 2d of September it was broken up, on account of the abandonment of the projected attack on New York.

A memorial from Friends, adopted Nov. 4, 1779, and signed by Isaac Zane as clerk, was presented to the Assembly of 1780, which complained of injurious laws affecting their liberties and privileges, and asserted that they were restrained by divine principles from complying with requisitions made on them for "tests and declarations to either party who are engaged in actual war." It was also asserted that members of the society had been abused and vilified, and that some of them had suffered hardship and oppression at the hands of officers of the law, particularly in the enforcement of the militia law. The Council passed a resolution discountenancing these severities, and requesting that offenders be presented for punishment. In the Assembly the committee to whom the memorial was referred prepared a series of queries designed to draw from the Friends an official declaration of their sentiments towards the State government and the established order of things. The reply, signed by Isaac Zane, Jr., on behalf of the committee of Friends, was so vague and unsatisfactory that the committee of the Assembly characterized it as being "couched in language so incomprehensible that it could be considered only as an evasion of the questions proposed." At the suggestion of the committee no further consideration was given to the matter, and not long after the Friends found it advisable to adopt an address in vindication of their political course.³

The proceedings against the Tories were still conducted with unabated vigor. David Dawson, of Chester County, convicted of high treason in having visited Philadelphia while in possession of the British, was hanged, and a number of Tory estates were confiscated during the year.⁴

Streets to be used for casting shot and shell, the establishment was seized and used for that purpose. Prompt action was also taken for raising additional troops. From the city five hundred, and from the county five hundred and fifty, militia were drafted.

³ This address, which was agreed to on the 24th of August, appeared in the *Pennsylvania Packet* of September 2d. It professed to emanate from "a meeting of the representatives of the people called Quakers, of Pennsylvania and New Jersey," and was signed by John Drinker, clerk. After a general defense of the course pursued by Friends, the document stated that, while some members of the society were in Virginia as prisoners, it had been intended to prepare a defense and submit it to Congress, then sitting at Yorktown; but, being shortly afterward called to Lancaster, they were told that they might have certificates of discharge. They solicited to be allowed to clear their characters, but were not permitted. They looked upon their discharge as a complete acquittance of the impeachment against them, and that the occasion of their defense was removed. They therefore declined making it public.

⁴ During 1780 the following sales of confiscated property were made: Samuel Shoemaker, ground-rent, £42 10s., on lot southeast corner of Water and Callowhill Streets, sold to Thomas Britton for £1520.

¹ Christopher Marshall, in his diary, mentions the following seizures of horses at this time: William Allen's two coach horses, four from Jeremiah Warder, three from Joshua Howell, two from Samuel Emlen, three from — Pusey, two from William Garrigues, one from John Parrish, two from James Pemberton, etc.

² Philadelphia was directed to furnish a monthly quota of three hundred barrels of flour and three thousand bushels of forage; Philadelphia County, two hundred barrels of flour and one thousand bushels of forage. Wagons and horses were also to be supplied. Nancarrow, a founder, having refused to permit his air-furnace at Eighth and Walnut

Notwithstanding the prohibition against communicating with residents of New York and other points within the enemy's lines, it was discovered in November that a number of persons in Philadelphia, in concert with others in New Jersey and the city of New York, were carrying on an illicit trade with the latter place, and bringing British goods into Pennsylvania.¹

Christopher Saur, tract Ridge road, Roxborough township, to Daniel Clymer for £17,610.

Christopher Saur, Jr., tract 19 acres 118 perches, Bristol township, to Abraham Rex for £2820.

Christopher Saur, three lots, Germantown Street and Bowman's Lane, to Col. John Bull for £9930.

Samuel Shoemaker, lot Shackamaxon Street and Frankford road, one acre and twenty perches, to Benjamin George Eyre for £3700.

Samuel Shoemaker, 76 acres, Point-no-Point road, life estate, sold to Peter Wikoff, Isaac Wikoff, and James Hutchinson for £12,400.

Samuel Shoemaker, life estate in three ground-rents, amounting to 90 Spanish milled dollars and one-third of a dollar, sold to Jacob Geiger for £4050.

Peter Arthur, one-half of lot north side of Plumb Street, Southwark, sold to James Hendry for £110.

Joseph Galloway, tract of 100 acres, Blockley township, to Thomas Lawrence, James Budden, and John Dunlap for £25,000, subject to ground-rent payable to University of Pennsylvania of twelve and a half bushels merchantable wheat.

Joseph Galloway, tract of 58 acres 35 perches Germantown road and Turner's Lane, sold to Thomas Lawrence, James Budden, and John Dunlap for £60,000, subject to ground-rent 30 bushels wheat.

Joseph Comley, tract 100 acres, manor of Moreland, sold to Charles Walker for £25,100, subject to ground-rent 12 bushels and 11-20 wheat.

John Parrock, house and lot northeast corner Second and Sassafras Streets, 19 by 100 feet, to Christopher Wertz, John Schaffer, and John Geiger for £40,000, subject to ground-rent 20 bushels of wheat.

George Harding, lot Third and George Streets, Northern Liberties, 22 by 200 feet, to William Lawrence for £900.

George Knapper, house, bake-house, stable, and lot, west side of Front, between Mulberry and Sassafras Streets, 19 by 169 feet 9 inches, to Francis Lee for £44,000, subject to ground-rent 22 bushels of wheat.

John Potts, tenement plantation tract of 235 acres, Douglas township, to Jonathan Potts for £20,100.

John Roberts, two plantations and tracts of ground, Lower Merion township, containing together 378 acres, to Edward Milner for £271,600, subject to ground-rent 135 4-5 bushels of wheat.

John Wright, tract of land, 50 acres, Hatfield township, sold to Owen Faries for £5100.

Abram Carlisle, house and lot, west side of Front, between Sassafras and Mulberry Streets, 16 by 106 feet, sold to Capt. Robert Bethell for £20,000, subject to ground-rent 10 bushels of wheat.

¹ The following political offenders were arrested during 1780:

April 1. Dominick Joyce, charged with having accompanied the British army to New York; discharged on condition of leaving the State.

April 6. John Kugler, charged with ferrying Burgoyne's escaped soldiers across the Delaware thirty-five miles from Philadelphia; released September 1st, on £60,000 bail for good behavior.

April 13. George Harrington, charged with illuminating his windows at the time the British entered the city; found guilty of misprision of treason; imprisoned until December, when he enlisted on the "Confederacy" frigate.

April 29. John Wilson, charged with enlisting with the British; sentenced to be hung. Edward Greswold, charged with enlisting with the British; sentenced to be hung. John McCarty, charged with enlisting with the British; sentenced to be hung. These three were pardoned afterward.

April 30. Francis Nelson, found guilty of misprision of treason.

June 18. Jacob Corlies, for getting British goods from New York; arrested and imprisoned.

June 20. Thomas Hutchinson, for getting British goods from New York; arrested and imprisoned. Nathan Field, for getting British goods from New York; arrested and imprisoned.

June 27. David Dawson, of Chester, charged with visiting the city

By this arrangement lumber, which was in great demand in New York, was shipped to the latter city in vessels which left Philadelphia ostensibly for some other port. If overhauled by British cruisers, they exhibited papers secretly furnished them by the British admiral, and proceeded unmolested to New York; but if they fell in with American cruisers, their regular papers procured in Philadelphia were produced, and they were allowed to continue on their way. On arriving at New York the captains and crews were treated ostensibly as American prisoners, and as such exchanged at the first opportunity.

while in possession of the British; goods confiscated; sentenced to be hung October 26th; hanged December 25th.

July 4. Daniel Offley, for refusal to pay taxes on military account; imprisoned. Caleb Offley, for refusal to pay taxes on military account; imprisoned. Henry Shaw, for refusal to pay taxes on military account; imprisoned.

September 19. Alpheus Brooks, charged with conveying British refugees. Joseph Perkins, charged with conveying British refugees. Both discharged on giving bail for good behavior.

September 29. John Lindley, for misprision of treason while the British were in Philadelphia; sentenced to forfeit one-half of his goods and estates, and undergo imprisonment. James Scott, for going with the British army to New York; imprisoned; released on bail for good behavior December 24th.

October 3. David Franks, William Hamilton, and James Seagrove, arrested as suspicious persons and imprisoned. Seagrove afterwards released. Franks and Hamilton released on giving security in £200,000 each to go within the enemy's lines, and stay there during the war.

October 28. James Sutton, for running away with the American privateer "Luzerne," and taking her into Bermuda; found guilty at the Court of Admiralty and ordered to be hung; executed on the lower part of Windmill Island, December 30th.

November 5. William Constable, arrested as suspicious; admitted to surety in £25,000. James Reed, passing counterfeit Congress bills; sentenced to be hung, but pardoned. Richard Chamberlain, passing counterfeit Congress bills; sentenced to be hanged December 25th. William Cassady, charged with enlisting in the British army; pardoned on condition of enlisting in the Continental frigate "Confederacy." Philip Swartz, charged with being inimical to the American cause; discharged after many months' imprisonment. Samuel Chapman, of Bucks, for entering into the British service as an officer; found to be an English subject; permitted to go to New York.

November 22. Joshua Bunting, of Chesterfield, N. J., charged with trading to New York. Samuel Clark, of Stony Brook, charged with trading to New York; bail, £4000. John Cummings, of Philadelphia, charged with trading to New York; bail, £4000. Patrick Garvey, of Philadelphia, charged with trading to New York; sent to New Jersey for trial. Joseph Stansbury, of Philadelphia, charged with trading to New York; discharged on condition of going to New York. Joseph Greswold, of Philadelphia, charged with trading to New York; bail in £2000.

November 25. James Stillman, of Philadelphia, charged with trading to New York; sent to New Jersey for trial. William Black, of Philadelphia, charged with trading to New York; sent to New Jersey for trial. John Shaw, of Philadelphia, charged with trading to New York; sent to New Jersey for trial.

The following residents of Philadelphia City and County were proclaimed traitors by the Supreme Executive Council, and ordered to appear and stand their trials:

August 28. Thomas Eddy, ironmonger; James Talbert, trader; John Fox, cutler; Daniel Rundle, Matthias Aspden, John Warder, and Benjamin Booth, merchants; Phineas Bond, attorney-at-law; Joseph Fox, blacksmith; William Pyle, mariner, of the city; William Corker, cooper; James Waln, yeoman, Northern Liberties.

September 30. Benedict Arnold, late a major-general in the army of the United States; Anthony Yeldale, druggist; William West, Jr., merchant, late a major in the army of the United States; Thomas Lightfoot and John Turner, merchants, of the city; John Hutchinson, yeoman. Kingsessing: John Wright and Jonathan Wright, Hatfield township.

With the proceeds from the sale of the lumber goods were purchased in New York and sent to Shrewsbury, N. J., whence they were secretly conveyed to Philadelphia. British agents and spies went back and forth by the same route. When the plot was discovered, the following persons were arrested on the charge of being concerned in it: Joseph Stansbury, china merchant and Tory poet; Patrick Garvey, assistant apothecary in the Continental service; Samuel Clark, living near Princeton, N. J.; Joshua Bunting, of New Jersey, who kept the stage-house where the emissaries and agents stopped; John Cummings, merchant; and Joseph Greswold Atkinson, of Moorestown; James Steelman, John Shaw, and William Black, captains of vessels engaged in the traffic. The discovery gave rise to an organization known as the "Whig Association," which was formed for the purpose of preventing all intercourse with Tories and suspected persons. Capt. John Shee was president, and H. Osborne secretary. The Executive Committee consisted of Col. Joseph Reed, Maj. Boyd, Maj. Eyre, Maj. Salter, Col. Will, Maj. Kerr, Maj. Pancake, Col. Shee, Maj. Rees, Col. Knox, Maj. Casdorp, Col. Marsh, Maj. McCullough, Capt. Budden, Dr. James Hutchinson, Mr. Dunlap, Mr. Markoe, Mr. Lieper, Dr. Shields, Mr. Kamerer, Mr. Wade, Mr. Sergeant, Col. Semple, Mr. Foulke, Blair McClenachan, Capt. McDowell, Col. Farmer, Capt. Barker, Maj. Powell, Dr. Phile, Capt. Burkhard, and Capt. Huston.

Several women, the wives or relatives of Tories with the enemy in New York, were arrested, but were nearly all released on condition of removing within the British lines.

In consequence of depredations committed in the Delaware Bay and River this year by picarooning boats belonging to Tories, Capt. Boys was sent down with one of the State galleys to chase off the marauders. The packet "Mercury" was also ordered by Congress to assist in clearing the bay and river, and commissions were issued to the pilot-boats "Randolph," Capt. Abraham Bennett; the "George," Capt. Daniel Hand; and the "Hell Cat," Capt. Joseph Jacques. In November the "Fair American," Capt. Stephen Decatur, captured one of the enemy's craft near New Castle. Notwithstanding the activity of the vessels thus fitted out, the British marauders succeeded in inflicting considerable damage on Philadelphia commerce. Privateering continued to be prosecuted with energy from Philadelphia during this year. The "Holker," Capt. Matthew Lawler, cruised generally with the "Fair American," Capt. Decatur, and the "General Greene," Capt. Samuel Hollinshead, and, with those vessels, captured in May the ship "Commerce," of Liverpool, loaded with rum, sugar, and coffee, and subsequently the ship "Lady Margaret" and some smaller craft. In August the "Holker," "Fair American," and "Enterprise," Capt. Rufus Gardner, captured the packet "Mercury,"

having six British captains on board. While on her way to Philadelphia in July the "Holker" fell in with a British privateer off Little Egg Harbor, supposed to have been the "Active," formerly of Philadelphia, which had been captured by a British cruiser. A sharp engagement followed, resulting in a loss to the "Holker" of six killed and eighteen wounded, the latter including Capt. Lawler and his first lieutenant. The British privateer, which finally sheered off and abandoned the fight, returned to New York, where she reported the captain and lieutenant killed, with six or seven others, and twenty wounded. Capt. Keane succeeded Capt. Lawler in command of the "Holker," Lawler having been transferred to the "Ariel." Under Keane the "Holker," with the "Fair American," captured the English brigs "Rodney" and "Richard," and the ship "Richmond." The "Fair American," Capt. Decatur, and the "Argo," Capt. Ridge, captured the letter-of-marque brig "Elphinstone," and the privateer "Arbutnot;" and a Philadelphia vessel, commanded by Capt. Thomas Truxton, brought in the "Clyde," a large and valuable prize. The "Comet," Capt. Kemp, made prizes of some smaller vessels, and the "Ariel," Capt. Lawler, took a ship and schooner. Prizes were also sent in by the Continental frigates "Saratoga," "Trumbull," and "Confederacy," and by the "Viper" and other privateers. A new Court of Admiralty was constituted by act of Assembly passed on the 8th of March, 1780, and Francis Hopkinson, former judge of the admiralty, was appointed judge of the new court. The law provided that a prize-agent should be appointed to take charge of the interests of vessels during their absence, and growing out of the appointment of an agent under this clause, charges were brought against Hopkinson, which resulted in his being impeached by the Assembly in December. The charges were, first, that Hopkinson had offered to appoint Blair McClenachan prize-agent if he would make him a present of a suit of clothes, but that upon McClenachan's refusal to do so he appointed some one else; second, that he had improperly issued a writ for the sale of the prize ship "Albion's" cargo; and third, that he had taken illegal fees. The Assembly presented its charges before the Supreme Executive Council through a committee and the attorney-general; the accused was represented by James Wilson and Jared Ingersoll. After a trial lasting three days the Council unanimously acquitted Judge Hopkinson on all the charges.

Among the local incidents of the year were the funeral of Don Juan de Mirailles, the Spanish agent, who was buried at St. Joseph's Catholic Church, on the 4th of May, in the presence of the French minister, M. de Luzerne, Congress, military officers, and others; the visit of Mrs. Washington in June, her reception by the light-horse, who escorted her into the city, and a regatta on the Delaware given in her honor, accompanied by a display of colors from the vessels in port;

the parade on the Fourth of July of Col. Nicola's invalid regiment and the artillery regiment, who marched to the State-House, and, in the presence of Congress and the President and Executive Council of the State, performed various evolutions, amid the firing of guns, ringing of bells, etc.; a celebration by the Chevalier de Luzerne, on the 25th of August, of the birthday of the King of France, by an entertainment given to Congress and others; the proclamation of President Reed's re-election, at the court-house, followed by "a cold collation" (substituted for economical reasons in place of the costly entertainment usually provided) at the City Tavern, after which a dinner was given by President Reed; the visit, on the 30th of August, of Gen. Washington and Count Rochambeau, accompanied by his aide-de-camp, the Chevalier de Chastellux, who were received by the light-horse and escorted to the City Tavern, and thence to the house of Robert Morris, on Market Street, between Fifth and Sixth.¹ The difficulties experienced by the State authorities of Pennsylvania in raising troops and military supplies culminated in the summer and fall of 1780, and at one time seemed to threaten the utter ruin of the colonial cause. On the 15th of July, President Reed, who had been fiercely attacked with charges of incompetency and lack of energy, wrote to Washington in a strain of profound discouragement. "Comparisons of former taxes, burdens, etc.," he says, "are now frequent, and it is my firm opinion, sanctified by that of many gentlemen of more knowledge and experience, that the people of this State would, if too heavily pressed, more readily renew their connexion with Great Britain than any State now in the Union." "Should there be a want of provisions," wrote Gen. Greene to President Reed, "we cannot hold together many days in the present temper of the army." Greene's anticipations were speedily realized, at least in part. In May, 1780, two Connecticut regiments, rendered desperate by the want of clothing, food, and pay, announced their intention of returning home in order to procure subsistence for themselves, but through the influence of Washington were induced to stand by their colors. On the night of the 1st of January following (1781) occurred a much more serious revolt, the mutiny of a part of the Pennsylvania line at Morristown. The soldiers, having been detained in service after the terms of the enlistment had ceased, were unwilling to submit for a longer period to the usual privations of poor and uncertain pay, scanty food of bad quality, and wretchedly inadequate camp equipage and clothing. On the night in question they broke out into

open revolt, and during the disturbance one of their officers was killed and another wounded. Under the lead of their non-commissioned officers they commenced a disorderly march for Philadelphia, but at Princeton were met by President Reed and Gen. James Potter, who had been deputed by the Supreme Executive Council of Pennsylvania, together with Messrs. Sullivan, Witherspoon, Matthews, Atlee, and Bland, a committee appointed on the part of Congress.

A conference between these committees and the mutineers resulted in the adoption of a compromise, some of the soldiers being discharged at their request and others induced to remain in the service by the promise that their claims would be paid and their just wants satisfied. Sir Henry Clinton, seeking to take advantage of the apparent disaffection of the men, sent emissaries among them with offers of pay, provision, clothing, and a free pardon if they would join the British army; but the soldiers, though mutinous, had no intention of betraying their country. They spurned Clinton's offers and voluntarily surrendered his agents, James Ogden and John Mason, to the State authorities, by whom they were hanged as spies. During the absence of President Reed at Princeton, Vice-President Moore and the Council set on foot a subscription in the hope of raising fifteen or twenty thousand pounds in specie, or its equivalent, to meet the emergency, but to their great mortification only fourteen hundred pounds was subscribed. On his return President Reed issued a proclamation stating the circumstances under which the loan was asked for, calling for more subscriptions, and threatening to lay an embargo if the desired assistance was not forthcoming. The proclamation had the effect of procuring additional subscriptions, but not enough to enable the authorities to redeem their promise to the troops. In view of complaints that he had exercised a power not authorized by the Constitution, President Reed, whose resolution seems to have yielded under the pressure of continuous assaults upon it and the many discouragements of the crisis, determined to make no further efforts to raise the sum required, but to excuse, as best he could, his failure to carry out the agreement with the soldiers. The mutiny of the troops, the subsequent negotiations, and the failure of the State authorities to redeem their promises had a disastrous effect on the Pennsylvania line, which was nearly broken up, and encouraged a spirit of insubordination in the army which immeasurably aggravated the difficulties and embarrassments of Washington. In April considerable uneasiness was caused in Philadelphia by the embarkation of British troops at New York, whose destination was reported to be the Delaware River. It was decided to raise two companies of seventy men each for the defense of the river, and Capt. Isaac Roach was sent to the Capes for the purpose of keeping a lookout for the enemy. A com-

¹ At three o'clock they proceeded to the State-House and paid their respects to Congress, after which they returned to Mr. Morris', where they dined in company with Samuel Huntingdon, the president of Congress, Gens. Knox, Moultrie, and other distinguished officers. In the evening the city was illuminated. M. de Chastellux, who was a distinguished writer and a member of the French Academy, visited the city again in December, accompanied by Baron de Montesquieu, son of the great Montesquieu, Capt. Lynch, and Col. Du Plessis.

pany of artillery was ordered to Mud Fort and Billingsport, and efforts were made to man the frigate "Trumbull" with seamen for service in the river only. It soon became apparent, however, that the enemy had no intention of operating on or near the Delaware, and the preparations for an attack were abandoned.

The movements of the British forces in the South had now become so formidable that Washington and Rochambeau determined to transfer their operations from New York to that section of the country. Notice of the intention to march southward was given to the Executive Council of Pennsylvania in August, and, in order to supply the army with transportation for ammunition and stores down the river from Trenton to Christiana Creek, an embargo was laid upon all vessels of one hundred tons and upward. Washington, Rochambeau, Chastellux, Gen. Knox, Gen. Moultrie, and other prominent officers arrived at Philadelphia on the 30th, and were received by the militia and light-horse on the outskirts and escorted into the town. Washington stayed at the City Tavern, whence he proceeded to the State-House, and had an interview with Congress. At the house of Robert Morris, where he lodged, Washington and the other officers, with Thomas McKean, president of Congress, were entertained at dinner. In the afternoon the vessels in the Delaware displayed their colors and fired salutes, and in the evening there was an illumination, during which Washington, with his suite, walked through the streets, which were filled with a vast concourse of people, "eagerly pressing to see their beloved general."¹

On Sunday, September 2d, a large detachment of the American army passed through Philadelphia on its way to the South, followed on the 3d and 4th by the French, whose fresh appearance and bright uniforms excited general admiration.² The French encamped on the commons, and, as they marched past the State-House, having come down Front or Second Street, they were reviewed by Thomas McKean, president of Congress, who on this occasion appeared in black velvet, with a sword at his side, and his head covered. On his left hand were Washington and Rochambeau, uncovered, and on his right, M. de Luzerne, the French minister. As the officers saluted in passing, McKean responded by removing his

hat. After the ceremonies, McKean sent a letter to Rochambeau expressing his satisfaction, and that of Congress, at "the brilliant appearance and exact discipline of the various corps." At the dinner which followed, given to the officers by M. de Luzerne, the latter announced that he had just received intelligence of the arrival in the Chesapeake of the French fleet under Count De Grasse. When the news came to be generally known a large assemblage gathered in front of M. de Luzerne's residence and cheered for Louis XVI.

On the 4th of September the regiment De Soissonois, one of the finest in the French army, was exercised on the common in the presence of Congress, M. de Luzerne, and the military officers. Twenty thousand spectators witnessed the manœuvres, which were executed by the regiment with a spirit and precision that excited great enthusiasm. Public confidence was still further stimulated about this time by the arrival from Europe of Henry Laurens and Thomas Paine with the cheering news that a loan of four hundred thousand French crowns had been obtained. After the departure of the troops it was feared that the unprotected state of the country might tempt the British to make a descent upon Philadelphia from New York, and the Pennsylvania militia were ordered to hold themselves in readiness for instant service. A portion of the Philadelphia troops, including the light-horse, together with commands from other portions of the State, were ordered to rendezvous at Newtown, Bucks Co., and a lookout was established at Cape May. Preparations were also made for the removal of the public records in case of necessity, and on the 21st of September the plan was proposed and advocated of raising revenue by a compulsory collection of a quarter's rent from the inhabitants of Philadelphia. The Assembly also vested large powers in the Executive in order to enable him to cope with the emergency. About the middle of October, however, it having become apparent that the enemy intended to attempt the relief of Cornwallis, who had been shut up in the trenches at Yorktown by Washington, De Grasse, and Rochambeau, the preparations for the defense of Philadelphia were suspended, and the camp at Newtown broken up. About three o'clock on the morning of the 22d of October, an express-rider, bringing the news of the surrender of Cornwallis, reached the city and was conducted to the residence of Thomas McKean, president of Congress, by an old German watchman,³ who, after the dispatches had been delivered, proclaimed in a loud, sonorous tone, "Basht dree o'clock and Gornwallis isht daken."⁴ The news spread rapidly through the town, and when daylight came the rejoicing was general. By order of the Executive Council, however, the public celebration of the victory was delayed until the arrival of official confirmation of the news.

¹ The Tories naturally did not see anything to admire in Washington. "I saw this man" (Washington), says Samuel R. Fisher, "great as an instrument of destruction and devastation to the property, morals, and principles of the people, several times walking the street, attended by a concourse of men, women, and boys, who huzzaed him, and broke some of my father's windows, and others near us."

² Cromot Du Bourg thus describes the entry of the troops: "The army marched, September 3d, from Red Lion Tavern to Philadelphia, which the First Division entered in full column at eleven o'clock." On the 4th the Second Brigade arrived, nearly about the same hour, and produced no less effect. "The Regiment De Soissonnais, the facings of which were rose color, carried upon the caps of the grenadiers a white and rose-colored plume, which struck with astonishment the beauties of the town."—*Les Français en Amérique, par Thomas Balch.*

³ His name is said to have been Hurry.

⁴ Thompson Westcott.

On the 24th, Col. Tench Tilghman, aid to Gen. Washington and a Philadelphian, arrived with dispatches from the commander-in-chief, announcing the capitulation. At eleven o'clock the vice-president of the State and Executive Council waited upon President McKean, the members of Congress, and the French minister, in order to exchange congratulations on the great event. The standard of the State was raised, and at twelve o'clock salutes were fired by the artillery in the State-House yard and by the vessels in the harbor, which also displayed their colors. In the afternoon, Congress, the State Council, M. de Luzerne, and others, went in procession to the Dutch Lutheran Church, where a service of thanksgiving was performed by the Rev. Mr. Duffield, one of the chaplains to Congress. In the evening there was a general illumination, and on the following evening a display of fire-works.¹ Congress voted honors to Washington, Rochambeau, and De Grasse, and special acknowledgments to the officers and troops. On the afternoon of Saturday, November 3d, twenty-four stands of British colors reached Philadelphia, were escorted into town by the local volunteer cavalry, and were carried down Market Street, preceded by the French and American colors, to the State-House, where they were presented to Congress, and "laid at their feet." During the latter part of the month, Gen. Washington and his wife arrived in Philadelphia from Virginia, and were received with marked demonstrations of popular affection and respect. A number of "addresses" were presented to Washington during his stay, and a concert was given in his honor by the French minister, at which "an original oratorio, composed in honor of the chief and set to music by an amateur, a citizen of Philadelphia," was performed.

The Philadelphia privateers rendered good service to the Revolutionary cause during 1781. One of the most gallant feats of the war was the capture of the British sloop "Savage," Capt. Stirling, twenty guns, by the privateer "Congress," Capt. Geddes, of Philadelphia, after a desperate engagement. The "Savage" was afterwards recaptured from the prize-crew of the "Congress." Capt. Lawler, in the "Ariel," captured the "Cornwallis" galley of the royal navy, the fire-ship "Resolution," laden with sugar, and a brig and schooner. Capt. Joseph Jackaways, in the "Fair American," took two brigs, a sloop, and some smaller craft, and Capt. Phineas Eldridge, who succeeded Jackaways in command of the vessel, captured

the privateer brig "Porcupine," which had done much mischief, recaptured the American privateer "Ramblor," and made a number of other prizes. In the fall of 1781 the "Fair American" was sold and withdrawn from the privateer service. The "Holker," Capt. Keane, captured the privateer "Fame," of New York; and the "Rising Sun," Capt. Casson, took the privateer "Rattlesnake," and a ship, schooner, sloop, and some smaller vessels. The ship "Revolution," of twenty guns, commanded by Capt. John McNachtane, made her first cruise in the summer, and after taking the British privateer "Maltin," one sloop and one large ship, was captured by British cruisers. The "Royal Louis," a new ship of twenty-two guns, of which Capt. Stephen Decatur took command during the summer, captured the British brig-of-war "Active," Capt. Delaney, and the sloop "Phoenix," of New York. In October, however, Capt. Decatur was compelled to strike his colors to a British frigate, two others being in sight at the time. The letter of marque "Dove," Capt. Lyons, and another letter of marque commanded by Capt. Sutton made several important captures. Prizes made by other vessels were sent into Philadelphia during the year, among them the ship "Revolution," and a British schooner captured by the Continental frigate "Saratoga." The famous Paul Jones visited Philadelphia with his vessel in February, and was the recipient of marked attention. The French frigate "Hermione," Chevalier La Touche, arrived at Chester on the 26th of March, and after remaining there several weeks came up to Philadelphia. In May La Touche gave an entertainment to Congress and the President and Vice-President of the State, at which the French minister and others were present, and soon after a ball and supper to the citizens of Philadelphia with a display of fire-works on Windmill Island.

The financial difficulties resulting from depreciation of the currency, instead of being alleviated by the measures taken for that purpose had become more serious, and the Continental money was destined during this year to reach the lowest point of depression. In view of the depreciation of the State issues and the frauds which had been practiced under the system, the Assembly, on the 20th of February, passed a law repealing the former acts which made the paper issues of Jan. 29, 1777, and March 20, 1777, legal tender in all cases. On the 6th of April, however, the Assembly authorized an issue of five hundred thousand pounds, to which it was attempted to give value by providing that "if any person refused to receive any of the bills of credit thereby authorized when tendered in payment of any debt, bargain, contract, or demand whatsoever, if for the whole debt or contract, such person or corporation refusing should forever be barred from suing for or recovering the same, and that if any person should refuse to take the bills of credit in payment for anything he should sell or expose for sale, or offer the

¹ Several patriotic citizens testified their joy by the exhibition of designs emblematic of the event at their dwellings. Alexander Quesnay de Glovay, a French teacher, displayed at his lodgings, in Second Street between Chestnut and Walnut, pictures of Washington, Count de Grasse, and Rochambeau, accompanied with appropriate mottoes, emblems, etc.; Mr. Peule, at his house, on the northwest corner of Third and Lombard Streets, exhibited a picture intended to typify the surrender of Lord Cornwallis, together with portraits of Washington and Rochambeau, and the inscription "For our Allies, Huzzah! Huzzah!"

same for a less price or a smaller sum of money, to be paid in gold or silver, or should give or receive a greater nominal sum of said bills of credit for gold or silver, every person, on conviction before a justice, or, if above five pounds forfeiture, in Quarter Sessions, should forfeit and pay the value of the articles so exposed to sale, one-half to the prosecutor, the other half to the use of the poor."

Robert Morris, Thomas Mifflin, and others protested against the act on the ground that value could not be given to money by laws imposing penalties for its rejection, that such laws were iniquitous and not to be justified, and that every measure to enforce the acceptance of money rendered it to the interest of debtors to depreciate it, and enabled bad men to take advantage of such depreciation, "to the injury of the honest and the absolute ruin of many who were once in easy and affluent circumstances." A number of other arguments were employed to induce the Assembly to reconsider its action,¹ but nothing was done, and on the 11th of May the Council published a proclamation stating that one-third of the money had been issued and taken by the State troops, that goods had been sold for it to the public commissioners, and that great loss and injury would result if depreciation followed. All citizens were therefore urged to accept the paper, with the understanding that no more was to be issued, and that the Assembly, when it met again, would be requested to secure the holders of it from loss. Notwithstanding this appeal there was still exhibited much repugnance toward the money, and at a conference of leading business men at the Coffee-House it was decided to take the old and new paper money at such rates as it held on the 1st of May, thus leaving every one to fix his own value upon it.

This arrangement was opposed by the friends of the government, who held a meeting at the State-House, Col. Robert Knox presiding, at which resolutions were adopted declaring it to be the duty of every good citizen to discourage the efforts which were being made by "evil-disposed and disaffected persons," who had endeavored to depreciate and now altogether refused to receive the new issue of paper money, to discredit that currency, "thereby causing distress to the public, and the greatest hardship to the well-affected individuals who have relied on the public faith." It was further agreed that those present would each take and receive, and as far as possible promote and encourage the circulation of the money in all their dealings and transactions; that they would enforce the laws of the State on all such as refused to receive it, and consider them as enemies to the country; that papers containing the resolutions

of the meeting be carried through every ward by two members chosen from each company of militia, for the purpose of obtaining signatures, and that the names of those who refused to sign be set down in a separate column and published; "that the disaffected people shall not live with us," and that a petition, to be drawn by Jonathan B. Smith, Mr. Cannon, and Mr. Hutchinson, who were also to obtain signatures, be presented to the Assembly to invest the Supreme Executive Council with power to drive them out of the State. When the Assembly met, however, the promise of the Council that no more paper money should be issued was respected, and measures were taken for the redemption of that already in circulation. For this purpose the lots in the city formerly the property of the Proprietaries and Province Island were ordered to be sold, and on the 21st of June an act was passed levying a tax of not more than six pounds, nor less than forty-five shillings, at the discretion of the assessors, on single persons, for the purpose of assisting the redemption. All laws making Continental bills a tender were repealed, as was also the provision that bills issued by the State or colony, with the exception of the issues of March 25, 1780, and April 7, 1781, should be received as legal tender. The provision for determining fines, penalties, and salaries by the price of wheat was also done away with, and gold and silver alone were declared to be the legal standard.

In consequence of the passage of this law there was an immediate rise in the value of the State's paper money. The difficulties relating to the Continental money² were not so promptly nor so easily removed, and after various expedients had been suggested,—among them one from a writer in the *Packet* in February recommending the coining of plate in the possession of private families and individuals,—Robert Morris, then superintendent of finance, submitted to Congress in May "a plan for establishing a national bank for the United States of North America," with a capital of four hundred thousand dollars, in shares of four hundred dollars, payable in gold or silver, the notes of the bank to be receivable in payment of duties and taxes. Congress approved the plan, and books were opened for subscriptions to the stock, which were not confined to Pennsylvania. The stock having been subscribed and directors chosen, Congress on Dec. 31, 1781, passed an act creating the stockholders a perpetual corporation.

The bank enjoyed high credit, and the circulating

¹ The signers of the protest were Henry Hill, Adam Reigart, George Gray, Thomas Lilly, John Allison, Robert Morris, Thomas Mifflin, David Thomas, John Patton, Moses McClean, Evan Evans, Mark Bird, Joseph Park, James Jacks, William Harris, John Steinmetz, Joseph Powell, James Dickson.

² Samuel R. Fisher, in his journal of May 5th, states that Continental bills were then held at two hundred and fifty dollars for one dollar of silver. Some sailors, with Continental money in their hat-bands and wrapped around the necks of their dogs, had gone around the town, and a mob had for several days been going about the city, compelling individuals to promise that they would work for nothing but gold and silver. The value of the Continental money fell so rapidly that during the month, which opened with the rate of exchange two hundred dollars of Continental money for one of specie, the rate fell, by the end of the month, to five hundred dollars for one dollar in specie, so that Continental money went out of circulation after May 31st.

medium not being sufficient to meet the wants of the community, its issues soon largely exceeded its capital. It rendered important aid to the government at a serious crisis, and without its assistance the business of the department of finance could not have been successfully accomplished.¹

On Thursday, the 1st of March, a memorable day in the history of the country, the articles of confederation and union between the States were formally ratified by Congress. The act was announced to the people of Philadelphia at twelve o'clock, with ringing of bells and firing of salutes from the land batteries and vessels in the harbor. The frigate "Ariel," whose commander was the famous Paul Jones, made a gallant display of colors and fired a *feu de joie*. In the afternoon the President of Congress received the congratulations of the State authorities, military officers, etc., and at night there was a display of fireworks. The Fourth of July was celebrated this year in rather sober fashion. Congress, the State officers, and the French minister attended the graduation ceremonies at the college,² after which a "cold collation" was served at the State-House. The celebration of the king of France's birthday, on the other hand, was marked by more imposing demonstration, including a royal salute at dawn, and the ringing of bells throughout the day. The President of the State, accompanied by the militia officers of the city and liberties, waited on the French minister to present their congratulations, after which they proceeded to Spring Garden, where a handsome entertainment was provided.

¹ William M. Gouge, in his "History of Paper Money and Banking in the United States," thus describes the straits to which the officers of the bank were sometimes reduced in order to inspire public confidence in its operations:

"The individual subscriptions being about seventy thousand dollars, Morris, after the bank was organized, took the responsibility of subscribing for the stock on behalf of the United States, and applied about two hundred and fifty-four thousand dollars (then remaining in the treasury from the proceeds of a French loan) to that purpose, and the United States thereby became the principal stockholder.

"As is remarked by Mr. Gouverneur Morris, the sum subscribed by government may be said to have been paid in with one hand and borrowed with the other, leaving the bank but seventy thousand dollars at most for its proper operations. On this amount it undertook to make advances to the government and to individuals; but, as the experiences of the evil of Continental money was fresh in the minds of the people, some difficulty was encountered in giving currency to the notes of the bank. To remove this prejudice the gentlemen who were interested were, as we have learned from undoubted private authority, in the practice of requesting people from the country and laboring men about town to go to the bank and get silver in exchange for notes. When they went on this errand of neighborly kindness, as they thought, they found a display of silver on the counter, and men employed in raising boxes containing silver, or supposed to contain silver, from the cellar into the banking-room, or lowering them from the banking-room into the cellar. By contrivances like these the bank obtained the reputation of immense wealth, but its hollowness was several times nearly made apparent, especially on one occasion, when one of the copartners withdrew a deposit of some five or six thousand dollars, when the whole specie stock of the bank did not probably exceed twenty thousand."

² An unfortunate incident of the exercises was the withholding of his diploma from F. W. Murray, one of the graduates, owing to the fact that in his oration, while censuring Arnold, he deplored the fate of André.

In July of this year a large number of citizens of Charleston who had been taken prisoners by the British upon the capture of that city, were brought to Philadelphia, under flag of truce, in a destitute condition. Their families had preceded them long before, having been sent to Philadelphia immediately after the capitulation, which had occurred in May of the previous year. Altogether there were nearly a thousand persons thus cast upon the charity of Philadelphians.³

On the 13th of July the Supreme Executive Council ordered Deputy Quartermaster-General Miles to find accommodations for the exiles, and a subscription paper was circulated among the Whigs in order to ascertain how many could be accommodated by private individuals. On the 23d, Congress passed a resolution that five suitable persons be appointed to open a subscription for a loan of thirty thousand dollars for the support of "such of the citizens of the States of South Carolina and Georgia as have been driven from their country and possessions by the enemy;" and the delegates from those States pledged themselves that as soon as possible their Legislatures would make repayment of the amount thus borrowed. William Bingham, John Bayard, George Meade, Jacob Barge, and Dr. Hutchinson were appointed commissioners for effecting the loan. It was proposed to assess the Tories for the support of the exiles, and one writer suggested that Samuel Powell be called upon to yield liberal contributions from his rent-rolls. Robert Morris suggested a lottery for raising money, and appealed to Hugh Roberts, John Reynolds, James Pemberton, John Pemberton, Samuel Emlen, Owen Jones, and Nicholas Waln, leading members of the Society of Friends, to raise among their people a loan to the United States at six per cent. interest, to be used in relieving the wants of the exiles. These Friends, however, replied declining the loan, on the ground that the society's "capacity for the exercise of benevolence" had been much diminished, "not only through the general calamity prevailing, but most particularly by the very oppressive laws which have been enacted in Pennsylvania, and the oppressive manner in which they have been frequently executed, to the impoverishment of many innocent and industrious inhabitants, so that there are divers instances of many families in the city and county who are already nearly stripped of their substance;" that they had been called upon to aid their friends in the Carolinas, and that they were in no condition to contribute to the support of the exiles in Philadelphia. The Assembly, in order to aid the latter, passed a law

³ Among the exiles were Gen. Moultrie and other prominent men. The families of Governor Rutledge, Charles Cotesworth Pinckney, and Thomas Pinckney were cared for by Dr. James Logan, at Stenton, near Germantown, where they remained for six months. Many of the exiles found employment, and were thus enabled to support themselves. James H. Thompson opened a school, and Dr. Noble W. Jones, who had been Speaker of the Georgia Assembly, commenced the practice of medicine.

granting to inhabitants of other States obliged to take refuge in Pennsylvania the right to bring their slaves with them, and to hold them after registry, notwithstanding the abolition law, on condition that they did not sell them to inhabitants of Pennsylvania, and that they would not remain longer than six months after the expiration of the war with Great Britain.

Considerable bitterness of feeling was engendered this year by controversies growing out of local political contests. On the 10th of November a petition was presented to the Assembly from citizens of Philadelphia County, contesting the election held in October, on the ground that the officers of the Philadelphia militia battalions had endeavored to force the private soldiers to vote for certain candidates, and that Gen. Lacey had aided this scheme by ordering the soldiers to march to the polls under their officers, and that they should be subject to military law until after the election. The men, it was alleged, were marched to the polls in battalions, and tickets already prepared having been placed in their hands, they were required to vote. Consultation among them or with citizens outside the ranks was not permitted, and soldiers refusing to vote were threatened with flogging. Gen. Lacey denied having had any sinister motive in doing as he had done, and asserted that as he had no authority to discharge the soldiers in order that they might go to the election, it was necessary that they should proceed to the polls under military command. The House, after hearing many witnesses, finally, in March, 1782, appointed a committee to hear the evidence further. Finally, on the 8th of April, it was resolved by a vote of thirty-two ayes to eighteen nays that the charges were not supported so far as they related to any undue means to carry the election. The subject also came up before the Supreme Council in connection with the election of John Bayard as councilor, and after a long investigation it was decided that the election should not be set aside. Another political incident of the year was an attack upon Chief Justice McKean for holding in addition to the office of judge those of delegate to Congress from Delaware and president of Congress. It was shown that other members of Congress had done the same thing; and although the Constitution of Pennsylvania prohibited him from serving as chief justice and member of Congress at the same time, it was urged that the prohibition did not apply to him, from the fact that he held the offices from different States.

A feeble attempt to revive the corporation of the city—the first since 1776—was made this year, and a petition to that effect with only fifty-four signatures, chiefly of residents of the upper end of Second Street, was presented to the Assembly in June. Distrust of the Tories, who had controlled the old city government, was so strong, however, that it extended to the form of government which they had administered, and, although a committee was appointed to bring in a bill, nothing further was done. The feeling against

the Tories was intensified later in the year by the discovery of a plot to steal and carry off as many of the secret journals and other papers belonging to Congress as could be secured. The plan was arranged by the traitor Arnold, and its execution was attempted by Lieut. James Moody, his brother, John Moody, and Lawrence Marr, assisted by Addison, an Englishman, employed as an assistant by Charles Thomson, secretary of Congress. The plot was discovered and Marr and John Moody were captured, convicted of being spies, and sentenced to death. Lieut. Moody avoided arrest and escaped to New York, but John was hanged on the common. Marr was respited and afterwards released. Thomas Wilkinson, convicted of piracy, was hanged in May of this year at Windmill Island, and his remains taken to Mud Island, where they were gibbeted.¹

¹ The following estates of Tories, seized and forfeited for treason, were disposed of during the year 1781:

Samuel Shoemaker, lot of ground, Poplar Lane, between Third and Fourth Streets, containing 4 acres 48 perches, sold to William Coats for £4900, subject to ground-rent to University of Pennsylvania of $2\frac{1}{2}$ bushels of wheat.

Samuel Shoemaker, house and lot, east side of Fourth Street, above Mulberry, 17 feet 6 inches by 49 feet 6 inches, sold to Eleazar Levy for £3350 Pennsylvania money.

Samuel Shoemaker, three-story brick house and lot, east side of Water Street, above Mulberry, 31 feet 11 inches by 92 feet, etc., to the Delaware, sold to James Lacaze and Michael Mallet for £186,000 Continental money.

Joel Evans, one-half of a tract of land of about $47\frac{1}{2}$ acres in Blockley township, near Cobb's Creek, sold to James Budden, John Dunlap, and Thomas Lawrence for £16,000 Continental money, subject to ground-rent of $7\frac{1}{2}$ bushels of wheat.

Joseph Grieswold, tract of land, Northern Liberties, about 30 acres, sold to James Budden, John Dunlap, and Thomas Lawrence for £27,000 Continental money, subject to ground-rent of $13\frac{1}{2}$ bushels of wheat.

John Henderson, brick house and lot, east side of Second Street, between Walnut and Spruce, 20 feet front, extending to Dock Street 97 feet, sold to Joseph Dean for £49,000 Continental money, subject to ground-rent of $24\frac{1}{2}$ bushels of wheat.

John Loughborough, tract of land, manor of Moreland, 126 acres, 126 perches, sold to George Benner for £20,400 Continental money, ground-rent $20\frac{1}{2}$ bushels of wheat.

Jonathan Wright, tract of land, Hatfield township, 141 acres, sold to Joseph Dean for £11,400 Continental money, ground-rent of $5\frac{1}{2}$ bushels of wheat.

John Butcher, message and tract of land on the Schuylkill, in Blockley township, adjoining properties of — George, Widow Peters, and John Penn (now in Fairmount Park), 56 acres sold to Joseph Dean for £14,800 Continental money, ground-rent of $7\frac{1}{2}$ bushels of wheat.

Holton Jones, house and lot, Main Street, Germantown, 1 acre 40 perches, sold to Joseph Dean for £11,100 Continental money, ground-rent of $5\frac{1}{2}$ bushels of wheat.

John Parrock, lot east side of Water Street, above Mulberry, 25 feet 6 inches to the Delaware River, sold to Capt. Michael Simpson for £560 Pennsylvania currency, ground-rent $16\frac{1}{2}$ bushels of wheat.

John Parrock, two-story house and lot, south side of Sassafras Street, between Front and Second, 14 feet 10 inches by 51 feet, sold to Jonas Phillips for £16,150 Continental money, ground-rent $8\frac{1}{2}$ bushels of wheat.

John Parrock, lot, wharf, and chair-house, northeast corner of Water and Sassafras Streets, 20 feet to the Delaware River, sold to Lieut. John Weidman for £13,500 Pennsylvania currency, ground-rent $39\frac{1}{2}$ bushels of wheat.

John Parrock, stores, lot of ground and wharf, southeast corner of Water and Sassafras Streets, sold to Maj. James Parr for £1850 Pennsylvania currency, subject to ground-rent.

John Parrock, lot east side of Water Street, above Mulberry, 20 feet 6 inches, extending into the River Delaware, sold to Capt. Jacob Bunner for £1090, ground-rent $32\frac{1}{2}$ bushels of wheat.

The year 1782 opened with a dramatic entertainment in honor of Gen. Washington, which sorely offended certain staid and worthy citizens. It was

Oswald Eve, house, two plantations, and powder-mill on Frankford Creek, 270 acres, sold to Capt. John Eve for £108,000 Continental money, ground-rent 54 bushels of wheat.

Henry Welfing, house and lot, north side of High Street, between Fifth and Sixth, 18 feet by 110, sold to James Lang for £16,900 Continental money.

John Wright, tract of ground, Hatfield township, 50 acres, sold to Owen Faries for £5100 Continental money, ground-rent $2\frac{1}{2}$ bushels of wheat.

John Burke, tract of ground, manor of Moreland, on Philadelphia and Newtown road, $33\frac{1}{2}$ acres, sold to James Vansant for £6100 Continental money, ground-rent $3\frac{1}{2}$ bushels of wheat.

Christopher Sauer, the elder, tract of land on the Schuylkill, Roxborough township, 11 acres 156 perches, sold to Benjamin Harbeson for £6000 Continental money, ground-rent 3 bushels of wheat.

Isaac Allen, life estate on two tracts of ground, Hickory Lane and Poplar Lane, Northern Liberties, containing together about 8 acres, sold to William Coats for \$1350 Continental money.

Isaac Allen, house and lot, west side of Fourth Street, between High and Chestnut Streets, 15 feet by 49 feet 6 inches, sold to Benjamin Harbeson for £12,000 old Continental money, ground-rent 6 bushels of wheat.

William Rhodden, house and lot, south side of Catharine, between Front and Second Streets, 20 feet by 101 feet 6 inches, sold to Capt. Charles Alexander for £4100, ground-rent $2\frac{1}{2}$ bushels of wheat.

Andrew Elliot, life estate in house and store and lots, west side of Front Street, below Walnut, extending to Dock Street, sold to Lieut.-Col. Thomas Forrest for £870 Pennsylvania currency.

Joseph Galloway, one-half house and lot, north side of Mulberry, between Third and Fourth Streets, 16 feet by 140, sold to Maj. James Parr for £135 Pennsylvania currency.

Joseph Galloway, house and plantation on the Schuylkill, near Mount Pleasant, 44 acres 122 perches, sold to Dr. James Hutchinson for £24,400 Continental money, ground-rent $10\frac{1}{2}$ bushels of wheat.

John Fox, frame house and lot, east side of Second Street, Southwark, 20 feet by 65 feet, sold to Alexander Powers for £760 Pennsylvania currency, ground-rent $2\frac{1}{2}$ bushels of wheat.

Jacob Duché, Jr., mansion, coach-house, stables, and four lots of ground, east side of Third, between Pine and Union Streets, sold to Thomas McKean, president of Congress, for £7750 Pennsylvania currency, ground-rent $232\frac{1}{2}$ bushels of wheat.

David Jones, lot on Dock Street, between Second and Third, 17 feet by 64, sold to William Power for £2765 Pennsylvania currency, ground-rent $82\frac{1}{2}$ bushels of wheat.

Jonathan Adams, snuff-mill, warehouse, houses, and lot, Wissahickon road, Northern Liberties, sold to Christopher Stewart for £1530 Pennsylvania currency, ground-rent $45\frac{1}{2}$ bushels of wheat.

Peter Campbell, meadow ground, Hollander's Creek, Moyamensing township, 3 acres, sold to Joseph Carson for £600 old Continental money, ground-rent 3 bushels of wheat.

Benedict Arnold, life estate in mansion and plantation of Mount Pleasant, Northern Liberties, on the Schuylkill (now in Fairmount Park), 97 acres 97 perches, sold to Col. Richard Humpton for £850.

William Evans, carpenter-shop and lot, north side of Pine, between Third and Fourth Streets, 20 feet by 160 feet to Union Street, sold to Benjamin Evans for £900 Pennsylvania currency, ground-rent $4\frac{1}{2}$ bushels of wheat.

Nathan Roberts, one-fifth part of tract of 250 acres, Bristol township, sold to Capt. William Rice for £810.

Christopher Sauer, two pieces of ground, Northern Liberties, containing together 3 acres, sold to Joseph Carson for £2560 old Continental money.

Christopher Sauer, two lots of ground, Germantown township, containing $6\frac{1}{4}$ acres, sold to Joseph Carson for £1610 old Continental money.

John Tolly, house and lot, north side of Catharine Street, Southwark, 13 feet 9 inches by 40 feet, sold to Patrick Robinson for £3400 Continental money, ground-rent $1\frac{1}{2}$ bushels of wheat.

The following traitors were attainted during the year, and proclamation made that they should appear and stand their trial: Jonathan Adams, snuff-maker, and Susannah, his wife, of the township of Germantown, county of Philadelphia.

given on the 2d of January, at the Southwark Theatre, under the direction of Alexander Quesnay, and embraced a prologue written for the occasion, Beaumarchais' "Eugenia," and, as an afterpiece, "The Lying Valet." Several dances were introduced, and a transparency, with a painting intended to symbolize the union of the States, was exhibited. The success of the performance encouraged M. Quesnay to announce that a similar entertainment would be given on the 11th, in aid of the poor in the Pennsylvania Hospital and the soldiers in the barracks, but the magistrates of the city interfered, and issued a notice calling attention to the act of Assembly forbidding such performances. Quesnay evaded the prohibition by transforming the theatre into an "Academy of Polite Science," where, although he did not venture to produce plays, he entertained the company with "music, illuminations, transparencies, and a variety of French dances." Notwithstanding their Quaker tastes and prejudices, the people of Philadelphia do not appear to have been slow to avail themselves of the facilities for amusement contrived by the gay and ingenious Frenchman. Hope had once more begun to glow in their hearts, and after long years of wretchedness and gloom they naturally turned with a sense of relief to the recreations suggested by Quesnay.

Fêtes and festivities were numerous during the year, and the different public occasions were celebrated with more than the customary splendor and éclat. On the 13th of May, Luzerne, the French minister,¹ formally announced to Congress the birth of the Dauphin of France. The ambassador was escorted to the State-House by the City Light-Horse, and was there received by the Continental troops and the City Artillery. An autograph letter from Louis XVI., announcing the event, was presented by M. de Luzerne, and after his address had been replied to by the president of Congress, John Hanson, the minister withdrew amid a *feu de joie* of musketry from the troops. In the afternoon he dined with Congress at the State-House, and at night a display of transparencies, with paintings by Peale, was made by order of Congress in the State-House yard. Some days later the president and Supreme Executive Council of the State entertained the French minister and Congress; and on the 15th of July, M. de Luzerne gave a splendid fête in honor of the Dauphin at his residence, the old Carpenter mansion, northwest corner of Sixth and Chestnut Streets.²

¹ During a storm which swept over the city on the 27th of March, 1782, the residence of M. de Luzerne was struck by lightning. M. de Meaux, a French officer, was struck, and so seriously injured that he died a few days later. The building and furniture were seriously damaged.

² A contemporary writer thus describes the entertainment:

"At nine o'clock in the morning his excellency invited to his apartments all the French residents in Philadelphia to return thanks to the Supreme Being for the late blessing he has bestowed on their nation. The *Te Deum* was chanted, after which the Chevalier De La Luzerne

Little did the gay throng which flocked to the brilliant entertainment imagine that the child in whose honor it was given would in a few years be an outcast and a beggar,—the victim of a revolution that found

received the congratulations of the officers of government, citizens, etc. At the same time was presented to him an ode upon the birth of the Dauphin, composed by Mr. Smith, a young lawyer. . . .

"His excellency invited more than fifteen hundred guests from this and the neighboring States to attend at this entertainment, which began at eight o'clock in the evening. In the court-yard belonging to the house he had caused to be built for their reception a hall of the most excellent architecture, and the court-yard itself had assumed, in less than two months, the form of a regular garden—groves formed into arches, and hung over with glass lamps, the prospects judiciously disposed at a small distance, where appeared a splendid illumination representing a palace, ornamented with a great number of pyramids and columns; the fire-works played off at intervals from the most distant part of this perspective; an innumerable crowd of persons that covered the fields round about; a green hall raised in part of the garden, concealed by porches of green; a sky clear and serene—all contributed to render this garden a most romantic and delightful recess. A hall, after the Italian manner, takes up the middle space. It is built upon a plan of seventy-five feet in length and forty-five feet in breadth. It is surrounded with an insulated colonnade, detached from the main building. The Doric order, which is most used in this building, is nowhere neglected.

"At the furthest extremity of the hall, and opposite the principal entrance, are the arms of France upon a globe suspended in the midst of a glory, whose rays break upon the square of the ceiling. At the other extremity the arms of the United States (whose escutcheons are charged with thirteen pieces argent and gules, having upon the top thirteen stars upon an azure ground) are supported by the American bald eagle, having in his right talons an olive branch, and thirteen arrows in his left; in his bill a legend with these words: *E Pluribus Unum*. America is personified by two young savages, who serve as supporters—the one stayed by a staff which bears the cap of liberty, the second surrounded with the natural productions of this country in form of an article of exchange for the riches of Europe. About the middle of the hall are several figures supported by the columns. The cyphers of the Queen of France, crowned with and encircled by garlands by a Cupid, are supported by Hymen, the rays from whose flambeaux shine upon them. The group look toward the cyphers of the Dauphin, likewise crowned with garlands by a genius, and supported by Mercury, who covers him with his wand. The galleries formed by the columns are ornamented with pilasters and panels of a color different from that of the body of the building. The ceiling is flat and set off with sophites. From the midst of that of the architrave, and between each column, hangs a branched candlestick. The rest of the ceiling is enriched with a wide frame, within which light clouds are painted, and also are hung crowns. At the four extremities of the two grand galleries are four figures, resembling white marble, placed in niches, and representing Diana at the instant of discharging her javelin; Flora adorned with garlands; Hebe holding the cup of Jupiter; Mars leaning upon his armor, where is engraved the cypher of his excellency, Gen. Washington. The galleries upon the right side of the entrance have at each of their extremities a sideboard raised pyramidically, covered with refreshments, flowers, and lights. Betwixt these two sideboards and toward the middle of the hall is the orchestra, under which is a close room. The two spaces between that remained on each side are set off with four doors that give entrance into two saloons which open into one behind the orchestra. From the saloon is a passage into the dining-hall, ninety feet long by forty broad, having seven tables proportioned in size to the number of the guests. This hall as well as the saloon was lighted by glass branches; the space between the tables, their situation, that of the serving sideboard, the number of avenues that facilitated the coming in and going out, infinitely increased the splendor of the sight and the magnificence of the attendance. This whole building is covered on the outside with a roof after the Italian mode, supported by pilasters, forming three porticoes at the two ends, and four on the side opposite to the fire-works and the illumination.

"This splendid building, which was finished in less than six weeks, was the work of Monsieur L'Enfant, a French officer in the service of the United States.

its source and inspiration in the revolt of the American colonies, which his father had fostered and made successful. The powerful king and queen, whose virtues were extolled that day in terms of warmest adulation, were fated soon to mount the scaffold, and the child whose coming into the world was thus honored with all the pomp of ceremonial and the enthusiastic acknowledgments of a grateful people was destined to be ushered out of it so mysteriously that history even yet is uncertain as to his fate.

The Fourth of July, 1782, was observed with ringing of bells, firing of salutes, and other demonstrations, and an official visit on the part of M. de Luzerne to Congress in order to present his congratulations. The king of France's birthday falling on Sunday this year, the celebration took place on the following day. The State flag was hoisted at Market Street wharf, an entertainment was given by M. de Luzerne, the officers of the city militia dined at Byrne's tavern, and Charles Wilson Peale exhibited at his house at Third and Lombard Streets the transparencies he had shown in honor of the victory at Yorktown, together with portraits of the king and queen of France and the Marquis Lafayette, and a picture typical of *dependence* on the mother-country as contrasted with independence,—much to the favor of the latter as a matter of course.

The naval operations of vessels sailing out of Philadelphia were marked by one glorious victory and a number of serious disasters during 1782. The Delaware was infested with refugee boats which preyed on Philadelphia commerce and made many prizes. Of these the "Trimmer," an open whale-boat belonging to New York, was one of the most destructive. Being of light draught she was able when pursued to retreat into shoal water and thus escape from the American cruisers. Many captures of Philadelphia

"A detachment of French troops mounted guard within the garden, and several companies of militia were posted in the different avenues, to prevent the excessive crowding of horses and carriages. No accident happened, although more than fifteen thousand persons were present.

"The presence of His Excellency, the President, and all the members of Congress, of their excellencies the Governors of Pennsylvania, of Jersey, and Delaware, and the principal military and civil officers of those States, gave as much solemnity to the entertainment as the dress and beauty of the ladies added to its charms. Their excellencies Gen. Washington and Le Comte de Rochambeau, who had arrived in town the day before, increased the general satisfaction, and seemed to bring the laurels of Yorktown to the cradle of the Dauphin.

"An Indian chief, devoted to France and the United States, had also arrived in Philadelphia to attend the entertainment. He was appareled and adorned in the fashion of his country, and did not fail to express in the three languages—which he spoke well—the sincere part he and his countrymen take in the event that was then celebrated.

"The entertainment began with a concert, succeeded by fire-works of superior and unrivaled excellence and a brilliant ball. At one in the morning supper was served up, followed by a continuation of the ball, and joy did not cease to sparkle in the eyes of every one present. The fire-works were exhibited for the benefit of the people who were invited to the festival on the large lot on the south side of Chestnut Street, opposite the minister's residence. There was no entry to the garden or exit therefrom except by the Sixth Street gate. The carriages arrived only by Chestnut Street, and turned up Sixth Street into Market."

merchantmen were also made by British privateers and men-of-war which were cruising about the Delaware Bay.¹ Among the most troublesome of the enemy's vessels was the "General Monk," formerly the American privateer "General Washington," which had been captured by the British and refitted as a vessel of the royal navy. Such were the losses inflicted on American commerce by the "Monk," that at a meeting of Whigs at Crawford and Donaldson's insurance office on Market Street, it was determined to fit out a vessel to take the offensive against her. Funds were soon obtained, partly from the Bank of North America, and partly from private individuals, and a vessel was purchased which was named the "Hyder Ally," in honor of Great Britain's famous antagonist in India. Capt. Joshua Barney was chosen as her commander, and the crew, which numbered one hundred and ten men, was made up of volunteers chiefly from the regular service. The vessel, mounting sixteen six-pounders, went down the river disguised as a merchantman. The object of the expedition was to convoy a fleet of vessels to the capes, protecting them on the way down from the refugee boats; but Barney had instructions not on any account to put to sea. While the convoy were lying in Cape May road waiting for a fair wind to take them out, two ships and a brig were discovered standing for them. A large cruiser of the enemy soon after made its appearance. Capt. Barney signalled the convoy to return to the bay, but in attempting to do so the brig "Charming Sally" ran aground and was captured.

The "General Greene," an American privateer, also ran aground and was taken. The cruiser "General Monk," which had effected these captures, now pushed on to engage the "Hyder Ally." By skillful manœuvring, Barney succeeded in closing with his enemy, who was greatly superior in force, so that the "Monk's" jib-boom caught in the fore-rigging of the "Hyder Ally," and remained entangled there, thus enabling the American vessel to rake her adversary fore and aft. The British commander had expected to deliver a broadside, which, with his greatly superior weight of metal, would have made short

work of Barney's vessel; but as it happened, the two crews fought on much more nearly equal terms. Twenty broadsides were fired by the "Hyder Ally" in twenty-six minutes, and in less than half an hour the British vessel struck her colors. Capt. Barney still had the frigate to deal with, the brig having passed on, and, without ascertaining the name of the vessel he had captured, placed a prize-crew on board, ordering the lieutenant in command to make all sail up the bay after the convoy, while he covered the rear. In order to mislead the frigate, which was the "Quebec," he hoisted the British flag on his own vessel as though she had been captured. The frigate continued the chase up the bay for some distance, but at length gave it up, and coming to anchor signalled the "Hyder Ally" under the impression that she was in British hands. Capt. Barney was now at leisure to ascertain the name and character of his prize, and to his surprise and delight discovered that she was the "General Monk," mounting twenty nine-pounders, nearly double his own weight of metal, and carrying one hundred and thirty-six men under command of Capt. Rogers, of the royal navy. The frigate was the "Quebec," thirty-two guns. The brig was the "Fair American," once of Philadelphia. The ship was the "Eldridge," once a Philadelphia privateer, but now sailing under British colors. The "General Monk" lost twenty killed and had thirty-three wounded. Among the former were the first lieutenant, purser, surgeon, boatswain, and gunner. Among the latter were Captain Rogers and every officer on board except one midshipman. The "Hyder Ally" had four men killed and eleven wounded. That Barney should have effected this capture within sight of three strong vessels of the enemy, was justly regarded as most remarkable, and the achievement was hailed in Philadelphia with great rejoicing.²

Much of the credit was due to a detachment of Bucks County riflemen, who served as marines on the "Hyder Ally," and whose accurate aim brought down many officers and men, all of whom were found to have been shot in the head or breast, so cool and deadly was the fire. The "General Monk" was purchased by the State of Pennsylvania, and the original name, "General Washington," resumed. After taking the "General Monk" into port, Capt. Barney again sailed for the bay to get the convoy to sea, and while engaged on this duty captured a refugee boat, the "Hook 'em Snivey." After this cruise Capt. Barney took command of the "General Monk," now the "General Washington," and sailed on a spe-

¹ Rivington's *Royal Gazette*, of New York, published in March the following list of privateers or letters-of-marque belonging to Philadelphia which had been captured in eight months by one vessel, the frigate "Medea," Capt. Duncan. The number of merchant-vessels taken during the same time was very great. The privateers named below are not recorded as having taken any valuable prizes, and several of them had doubtless been captured before a single gun was fired:

Ship "Morning Star," 18 guns, 7 men; a privateer of Philadelphia.
Schooner "Eagle," 8 guns, 24 men; a privateer of Philadelphia.
Sloop "Phoenix," 16 guns, 77 men; a privateer of Philadelphia.
Ship "Rover," 20 guns, 80 men; a privateer of Philadelphia.
"King Bird," 10 guns, 30 men; a privateer of Philadelphia.
Schooner "Neptune," 6 guns, 20 men; a privateer of Philadelphia.
Brig "Marianne," 12 guns, 48 men; a privateer of Philadelphia.
Brig "Favorite," 14 guns, 83 men; a privateer of Philadelphia.
Brig "Black Princess," 26 guns, 179 men; a privateer of Philadelphia.

² A song "On Capt. Barney's Victory over the Ship 'General Monk,' April 26, 1782," was written and sung through the streets of Philadelphia, and the Legislature passed a vote of thanks to Capt. Barney, and presented him with a sword which cost seventy-five pounds specie. It was a small sword, with mountings of chased gold. The guard on one side had a representation of the "Hyder Ally," and on the other the "General Monk," the sails of each ship set as in action, the latter in the act of striking her flag. The hulls, sails, masts, spars, and rigging were beautifully delineated in carved open work.

cial errand for Havana. On the way out he captured a brigantine from Jamaica laden with rum, and recaptured a schooner laden with naval stores. In an action near Turk's Island with a privateer the "Washington" had her main and mizzen-masts disabled, which enabled the enemy to escape. At Havana the "Washington" was laden with specie, and conveyed to the Delaware by a French man-of-war of sixty guns. On her way up the bay she recaptured three prizes from refugee boats, which escaped her. After her arrival at Philadelphia she was sold, and for some years sailed as the packet "Washington," under Capt. Barney. The "Hyder Ally" continued in the State service, under command of Capt. Jonathan Starr, who was succeeded by Capt. John Kemp, and took a few prizes. The "Holker," Capt. Keane, captured the privateer "Recovery," of New York, Capt. Downie, and several commercial vessels, and, after being refitted, was placed under Capt. Quillen, who cruised in West India waters. In December he captured a fine ship from Liverpool, which he took into Martinique.

After undergoing some months of imprisonment in New York, Capt. Stephen Decatur assumed command of the letter-of-marque ship "Rising Sun," and on his return from Teneriffe, captured a large and valuable brig, which he brought into Philadelphia. The "St. James," a Philadelphia letter-of-marque, captured a ship, a cutter, and the "Lion," a double-deck ship, mounting forty-two guns and carrying two hundred men. The "Lion," which was captured after a severe engagement, in which the "St. James" was assisted by the privateers "Washington" and "Queen of France," had a cargo worth £8000. The "Commerce," Capt. Thomas Truxton, encountered a brig and schooner in West Indian waters, and after inflicting severe injury on both vessels, was compelled by the appearance of a British brig and frigate to draw off and make her escape. The letter-of-marque "Coghill," Capt. Tinker, captured one vessel. During the latter part of the summer and fall a large British fleet hovered off the capes and inflicted great damage. The French frigate "L'Aigle" and the brig "Sophie" were captured by the British, but the frigate "La Gloire," which was in their company, escaped, to the great chagrin of the British on account of having on board a number of French noblemen on their way to join the French army. Among them were Baron De Viomenil, Duc De Lauzun, Marquis De Laval, Marquis De Champancte, Vicompte De Fleury, Vicompte De Melfort, Compte De Bazouin, Compte De Rue, Compte De Langeron, Compte Leque, Prince De Broglio De Lichthorne, Chevalier De Lameth, Vicompte De Vaudrieul, Baron De Montesquieu, and Vicompte Paleske.

The schooner "Harlequin," Capt. John Earle, on her way up the river from Havana, in September, was attacked by three refugee boats and captured. After she had struck the refugees murdered Bennett, the

mate, and wounded the captain, Earle, and a passenger named Paschel. In consequence of this disaster a light-draught schooner, well armed, was placed under command of Capt. John Snyder, and sent down the river against the refugee boats. The privateers "General Green," "Stark," and "Diana" were captured by British cruisers and taken into New York. The most important prize made by the enemy this year, however, was the "South Carolina," a frigate belonging to that State, but which had been fitted out and manned at Philadelphia. The "South Carolina," formerly "L'Indien," had been built by the American Commissioners at Amsterdam, and presented to the king of France, who loaned her to the Duke of Luxembourg. From the latter Commodore Gillon, of the South Carolina navy, hired her for three years, the State to insure her and sail her at its own expense, rendering one-fourth of the prize money as compensation for her use. She was a frigate in construction, carrying twenty-eight Swedish thirty-sixes on her gun-deck and twelve Swedish twelves on her quarter-deck and fore-castle.

In 1781, under Gillon, she made many prizes, which were sent into Spanish ports, and in the latter part of 1782 came to Philadelphia, where the command was assumed by John Joyner. An advertisement for a crew, which Joyner published and which appeared in Rivington's *Royal Gazette*, attracted the attention of the British naval officers at New York, and the "Diomedé," of forty-four guns, the "Astrea," thirty-two, and the "Quebec," thirty-two, were dispatched to the capes of the Delaware to watch for her. In December the "South Carolina" went down the bay, and, without any suspicion of the trap that had been prepared for her, put to sea. Outside the capes she soon fell in with the British vessels, and after a running fight of eighteen hours was compelled to surrender. The loss of the "South Carolina," the largest vessel and the heaviest in metal that it had yet possessed, was a severe blow to the American navy, and excited general indignation from the fact that it was ascribed to the bad management of Capt. Joyner.

Considerable opposition to the management of the new Bank of North America was developed during the winter and spring of 1782, owing to the choice of Thomas Willing as president. Willing had been named as president under the ordinance passed on the 31st of December, 1781, which also designated those who should act as directors. In March the Assembly took up a bill to grant a charter on behalf of the State, and a clause was suggested continuing Willing as president and Thomas Fitzsimons and others as directors until new ones were chosen. Objection was made to Willing on the ground that his conduct had been lukewarm during the war, but the clause was adopted by a vote of thirty-eight to sixteen. Notwithstanding this opposition the bill passed finally on the 1st of April by a vote of twenty-seven to twenty-

four. Another financial movement of the year in which the people of Philadelphia were largely interested was the attempt to obtain from Congress some provision for the payment of interest on loan certificates. On the 5th of July a meeting of holders of these certificates at the State-House, at which Blair McClenachan presided, and Dr. Benjamin Rush acted as secretary, appointed Blair McClenachan, Charles Pettit, Thomas Fitzsimons, Dr. John Ewing, and Benjamin Rush a committee to address Congress on the subject.

Petitions for the separation of the city and county, and for the removal of the seat of government from Philadelphia (the first attempt to change the location of the capital), were presented to the Assembly during 1782, but failed to obtain a favorable recognition. Another measure of general interest locally was an act in relation to the regulation of party walls, passed in April, which contained a provision that the city commissioners should within three months remove all the trees growing in the streets, lanes, and alleys of the city. The reasons assigned for the passage of this curious law were that the trees obstructed the highways, disordered the water-courses and footways, and broke up the pavements. Protests poured in upon the Assembly, which in September repealed that section of the act.

Notwithstanding the measures which had been adopted for its suppression, the illicit trade with the British in New York still continued to be carried on during 1782. "Wagons were used with false bottoms and sides, each of which had capacity to stow away as much as eight hundred pounds of goods. Many articles were packed in water-tight kegs, which were inclosed in barrels, the latter being filled up with cider outside of the kegs. It was estimated that as much as one thousand pounds a week went to New York in this traffic. To prevent the trade as far as possible, a law was passed in September 'for the more effectual suppression of intercourse and commerce with the enemies of America.' By this law British goods were declared contraband and liable to forfeiture, while the importer was punishable with three months' imprisonment."¹

¹ Thompson Westcott adds that during 1782 the following estates, forfeited for treason, were sold:

John Parrock, east side of Water Street, north of Sassafraz, 20 feet to the river Delaware, valued at £500; sold to Capt. David Zeigler for £1515 Pennsylvania currency; ground-rent, 45½ bushels of wheat.

Richard Yorke and Jonathan Adams (or wife), house and lot, Sassafraz Street, between Third and Fourth, 36 feet by 140, subject to ground-rent of £4 18s. 6d., valued at £700; assigned to the University of Pennsylvania.

Daniel Jeanes, one-third of field of eighteen acres, and one-third of forty acres in the manor of Moreland; sold to Benjamin Harbeson for £8500 Continental money.

Matthias Aspdén, house and lot and stores, Water Street, between Market and Mulberry, extending from the Delaware River, valued at £1400; assigned to the University of Pennsylvania.

Joshua Knight, lot of ground, Abington, 10¼ acres; sold to William Dean for £11,600 Continental money; ground-rent, 5½ bushels of wheat.

Samuel Shoemaker, house and plantation on the banks of the Schuyl-

The feeling in Philadelphia in favor of a vigorous prosecution of the war and against any terms of compromise with England continued unabated. In May the Council, in view of a possible treaty with Great Britain, adopted resolutions to the effect that any propositions that might be made by the British government tending in any manner to violate the treaty existing between the United States and France should be treated "with every mark of indignity and contempt." In the Assembly, which met in special session in August, a resolution opposing a peace with England without the concurrence of France, a reunion with Great Britain on any terms, or a revival of the rights of the proprietary family came before the Assembly. It was supposed that the House was divided as to the last proposition (that offering a revival of the proprietary rights), which had been rejected in committee by a vote of seven to five, but when the news reached the public there was such a strong demonstration in favor of the resolution in its entirety that the Assembly passed it without opposition.

Owing to complaints from Pennsylvanians confined on the prison-ship "Jersey" at New York, to the effect that they were cruelly treated by the British, and were in want of clothing, blankets, and food, the Supreme Executive Council appointed Ezekiel Robbins agent at New York, and forwarded three hundred bushels of potatoes and fifty barrels of flour for the relief of the prisoners. The condition of the latter was found to be dreadful, and their ranks were being rapidly decimated by cruelty, starvation, and disease.² At the election held in November of this year for president of the Executive Council, John Dickinson was elected over Gen. James Potter by a vote of forty-one to twenty-two. For vice-president James Ewing had thirty-nine votes and Gen. Potter thirty-four. The political contests of the year were unusually bitter and vituperative. The *Freeman's Journal*, Oswald's *Independent Gazetteer*, the *Pennsylvania Gazette*, and the *Pennsylvania Packet* were all active and virulent in the warfare, and many prominent

kill, Northern Liberties, sold to Maj. James Parr for £500 Pennsylvania currency.

Joseph Galloway, 105 acres of meadow, part of Hog Island, in the river Delaware; sold to Samuel Caldwell for £175,000 Continental money; ground-rent, 7½ bushels of wheat.

John Parrock, tract of ground, Northern Liberties, 3 acres 66 perches, sold to James Caldwell for £11,900; ground-rent, 5½ bushels of wheat.

John Robeson, tract and plantation, Whitpain township, 75 acres; sold to Edmond Miln for £1715; ground-rent, 21½ bushels of wheat.

John Potts, lot in Pottstown, Douglass township, 60 feet by 300; sold to Maj.-Gen. Arthur St. Clair for £6700 Continental money.

² "The prison-ships are perfect slaughter-houses," wrote Robbins to the Council, Feb. 20, 1783. "Since the commencement of this year near three hundred men are on the dead list. They bury sometimes from six to eight a day. It is impossible for any, unless a spectator, to form an idea of their distressed and horrid situation. Samuel Shoemaker, Esq., formerly of your place, has exerted himself for their relief by frequent applications to the admiral, by which means numbers have been liberated and sent home, so at the present there don't remain of Pennsylvania prisoners to exceed fifty. I am in hopes their continuation on board the prison-ships will not be of long duration."

people were involved in controversies more or less disgraceful to nearly all concerned. Gen. Mifflin was accused of having made a nabob's fortune as quartermaster-general, but his refutation was so complete that his assailants were silenced. Gen. Joseph Reed was also the object of bitter attacks. Among the charges against him was one preferred by Col. Thomas Proctor, the well-known artillery officer, to the effect that Reed had requested protection for himself and family and property from Count Donop, in command of the advance-guard of Hessians at Burlington, in December, 1776. Gen. John Cadwalader was drawn into the controversy in opposition to Reed, and a correspondence, marked by extreme acrimony, between

COL. ELEAZER OSWALD.

Cadwalader and Reed grew out of the affair, which finally degenerated into a war of pamphlets. Reed continued to be the object of attacks until his death. John Dickinson was another of the public men of the day against whom the batteries of detraction were turned. He was charged with hav-

ing opposed the Declaration of Independence and the constitution of the State, with having linked himself with Tories, with having deserted his battalion when it went into the field in 1776, and the American cause until the treaty with France gave a brighter aspect to affairs, and with having endeavored to prevent the passage of Continental money. Dickinson replied *seriatim* to these accusations, and the only weak part of his defense seems to have been his denial of the charge in relation to the depreciation of the currency. His statement on this point was regarded as vague and unsatisfactory.¹

¹ The author of the publication attacking Dickinson was said to be Gen. Joseph Reed. The writers of the articles in the *Freeman's Journal*, edited by Bailey, according to some, were George Osbourne, Jonathan D. Sergeant, William Claifon, Justice Bryan, and Freneau, the poet. Osbourne was an Irish lawyer, who had come to Philadelphia with a certificate of admission to practice in the King's Bench. While in the city he married an American lady, but was confounded a short time afterwards by the arrival of a first wife from Ireland. Leaving his second wife, he fled with the first, and was not heard of again in Philadelphia. In the short time he remained in the city he had contrived to obtain several lucrative positions. He was escheator-general, judge-advocate of the militia, clerk in the contested election of Philadelphia County, and solicitor in the great trial between Pennsylvania and Connecticut regarding the Wyoming lands.

Jonathan Dickinson Sergeant was dubbed "Dark Jonathan" by the writers in Oswald's *Gazetteer*, and Bryan was called "the tallow-faced chronologer, otherwise Judge Grinner." These writers for Bailey's paper were collectively called "the Skunk Association" by their opponents, and Arthur Lee was described as "Peter Paragraphist for the *Freeman's Journal*, and principal scribe to the Skunk Confederation."

Two of the editors, Oswald and Bailey, became involved in a personal controversy, and a duel was at one time thought to be imminent, but was averted by the extreme sensitiveness of each as to points of punctilio.²

² Col. Eleazer Oswald was a man of great courage and perfectly fearless in the discharge of what he thought was his duty. He was born in England about 1755 of good family, being related to Richard Anchen-cruive. At the time of the disputes between Great Britain and the colonies he took an interest in the American cause, and came to the United States about 1770. He was engaged in the earliest movements of the war, and served as captain under Arnold at the capture of Ticonderoga and became his secretary. He exhibited great bravery at Quebec in 1775, where he commanded the forlorn hope after Arnold was wounded. In 1777 he was made a lieutenant in Lanib's regiment of artillery, and soon afterwards distinguished himself with Arnold at Compo. For his bravery at the battle of Monmouth he was highly commended by Gens. Knox and Lee. He was a fine artist,—"one of the best officers in the army," says Gen. Knox. Soon after the battle of Monmouth he left the service, and in January, 1779, associated himself with William Goddard in the management of the *Maryland Journal*, the first newspaper published in Baltimore. Soon after Oswald entered into partnership with Goddard the *Journal* incurred the displeasure of the more radical Whigs, and the friends of Washington generally, by the publication on the 6th of July, 1779, of an article entitled "Queries—Political and Military," which had been written by Gen. Charles Lee, the personal enemy of Washington, who had been suspended from his command in the army for disobedience of orders and misbehavior before the enemy.

The publication of the "Queries" naturally caused great excitement, and the reflections on General Washington particularly exasperated those who believed him to be the proper person to lead the American armies. Growing out of this difficulty a correspondence took place between Col. Oswald and Col. Samuel Smith, of Baltimore, the hero of Mud Fort; which resulted in Oswald challenging Smith to fight him a duel. The latter declined, and Oswald published the correspondence.

After the popular demonstration which destroyed Oswald's efficiency in Baltimore he removed to Philadelphia, and in April, 1782, he issued the first number of the *Independent Gazetteer*, or the *Chronicle of Freedom*, a weekly paper published on Saturdays. Oswald rendered this journal one of the most lively and attractive printed in Philadelphia. He was also at this time public printer.

The dispute between political parties and public men during 1782 ran to a height of detraction that all the invective and bitterness of preceding controversies had not exceeded. Prominent citizens were made targets for attack. The freedom used by the assailants and the method of reply and defense were marked by unequalled acerbity and virulence. Oswald's *Independent Gazetteer* was not as impartial in publishing all sides of political questions as some other papers in Philadelphia, but many articles, personal and vindictive, were introduced to the world in its columns.

In 1783 Oswald reopened the London Coffee-House in Philadelphia, so long kept by William Bradford, founder of the *Pennsylvania Journal*. While conducting the Coffee-House Oswald published once a month for John McPherson the first mercantile paper published in the United States, called the *Price Current*.

In August, 1786, Oswald commanded a volunteer company of infantry in Philadelphia, which was exercised with other companies of town militia on the commons in all the evolutions and incidents of a battle by Baron Steuben and General Du Plessis, of the French army. The baron made them an address after the parade, in which he highly complimented the efficiency of the troops, and assured them that he would immediately employ himself in forming a system of legionary arrangements for the militia of the United States. Oswald's company shortly before this, on August 1st, volunteered to march to the frontier to dispossess the British of the posts and garrisons held by them in violation of the treaty of peace between the United States and Great Britain.

Upon constitutional principles Oswald was an opponent of Alexander Hamilton, whom in 1789 he challenged to fight a duel. Their friends, however, adjusted the matter, and the meeting was prevented. A curious episode in Oswald's life, not made public until recently, shows him to have been the first American Fenian. He was in England in 1792, and being infected with the Gallicism then prevalent, went to France, joined the French army, became colonel, and commanded a regiment of artillery under Dumouriez in the memorable battle of Jemmapes. Then

In October, 1781, Col. Thomas Proctor, upon offering his vote at the poll in the Northern Liberties, was requested by John Cling, the inspector, to show his certificate of having taken the test. Proctor, who had served with conspicuous gallantry in the army, considered the request an insult, and assaulted Cling, who prosecuted him. During the trial in September, 1782, Proctor addressed the court, admitting what he had done and justifying it. "Thus," he added, "I chastised him according to his deserts." He was interrupted at this point by Judge McKean, who prohibited him from continuing his remarks, and said, "You gentlemen of the army hold your heads too high; but I will teach you how to behave. I will bring you down; we shall be overrun else." Proctor was fined eighty pounds, and Col. Francis Nichols, who was tried at the same term for assaulting Joseph Gardner, a member of the Council for Chester County, was fined fifty pounds. McKean's action was severely censured in Oswald's paper, the *Independent Gazetteer*, by a correspondent who signed himself "A Friend to the Army." McKean sent for Oswald, and after reprimanding him, ordered him to be taken into custody by the sheriff and bound over to answer in the sum of seven hundred and fifty pounds. Oswald described the scene in court in such insulting language that McKean sent for him a second time, and demanded the true name of "A Friend to the Army." Oswald refused to give it, whereupon he was ordered to give bail in the sum of one thousand pounds. Oswald retaliated by charging McKean in his paper with being a speculator in distressed soldiers' certificates, and republished the article signed "A Friend to the Army." The first bill of indictment against Oswald was ignored by the grand jury, and a second bill was treated in the same way. The action of the grand jury exasperated McKean, who accused them of having been led away by party considerations and tampered with by Proctor. He even went so far as to ask what the evidence was on which their findings

a crisis approaching in Ireland, the French Minister, Le Brun, sent him across the channel to that island to report its condition and pave the way for the expedition under Gen. Hoke. He had no way to get to Ireland except *via* Norway and Scotland, and when he did reach that distracted land the "United Irishmen" had been betrayed, and were broken up. Oswald, after applying to the French National Convention for further employment, returned to the United States, and died of yellow fever in New York on Sept. 30, 1795. His remains now lie buried in St. Paul's churchyard, in that city, and have over them a marble headstone with the words:

"E. Oswald, Colonel of Artillery in the American Army, an officer of noted intrepidity and usefulness, a sincere friend, and an honest man. Died September 30th, 1795. Erected by his grandson, Dr. Eleazer Balfour, of Norfolk, Va." (A square and compass.)

As will be seen, Oswald was a man of the greatest gallantry, and had fine literary tastes and attainments. Col. John Parke, the translator of Horace, addressed several of the odes to him.

After Oswald's death, his widow continued the publication of the *Gazetteer* about a year. On Aug. 17, 1796, she disposed of the proprietorship of the paper to Joseph Gales, who continued to publish it until late in 1799, when he discontinued it and removed to Raleigh, N. C., and set up a journal there.

Miss Ann L. Oswald, a daughter of Col. E. Oswald, died in Philadelphia on Feb. 4, 1881, aged ninety-one years.

were based. An altercation between the judge and grand jury in open court was the result, and sixteen of the grand jury published an appeal to the public, in which they declared that they had acted within their rights.

On the 4th of February the Supreme Court was called upon to consider the first slave case brought before it since the adoption of the law abolishing slavery. A negro, Alexis, claimed his freedom under the provisions of the act. He was not born in Pennsylvania, nor was he a resident of the State at the time of the passage of the act; but had been brought into it in the summer of 1780. After having been kept six months by a Frenchman he was sold to a Spaniard. The court decided that he was entitled to his freedom, and he was accordingly discharged.

Political controversy continued to run high during 1783, but was not marked by personal disputes to the same extent as during the previous year. James Wilson, the distinguished lawyer, was charged by a newspaper writer in January with holding the position of advocate or councilor of the French crown, and of having charge of the interests of the French government in the United States as far as they were subjects of regulation under local laws. The position was said to be worth one thousand pounds per annum, and it was argued that a pensioner of any foreign government should not be allowed to sit in Congress. The accusation was denied by another correspondent.

In March a memorial was presented to the Assembly demanding a revision of the militia law, with the view more particularly of restricting the privileges of the Tories. The Assembly refused to pass the measures asked for, but enacted a law abolishing the offices of sub-lieutenants for the city and county, and making other changes in the militia system.¹

After a long career of success, during which she had proved a serious annoyance to the commerce of the enemy, the privateer "Holker" was destined to close her career in a sudden and disastrous manner. During the early part of the year 1783 she had a severe engagement in West Indian waters with the ship "General Elliot," of fourteen guns, which surrendered after every man on board, except three, had been either killed or wounded. Within a period of twenty-one days the "Holker" also made prizes of

¹ The officers of the battalion for the city and county at this time were:

City and Liberties.—First Battalion—John Shee, lieutenant-colonel; Rees, major. Second Battalion—Read, lieutenant-colonel. Third Battalion—Eyles, lieutenant-colonel; Brown, major. Fourth Battalion—William Will, lieutenant-colonel; Ker, major. Fifth Battalion—Robert Knox, lieutenant-colonel; Casdorp, major. Sixth Battalion—Deane, lieutenant-colonel; Pancake, major. Artillery—Marsh, lieutenant-colonel; McCullough, major.

County of Philadelphia.—First Battalion—Benjamin McVeagh, lieutenant-colonel. Second Battalion—Matthew Holgate, lieutenant-colonel. Third Battalion—Michael Croll, lieutenant-colonel. Fourth Battalion—Peter Richards, lieutenant-colonel. Fifth Battalion—Matthew Jones, lieutenant-colonel. Sixth Battalion—Robert Correy, lieutenant-colonel. Seventh Battalion—George Smith, lieutenant-colonel.

the "Lion," of Anguilla, ten guns, the ship "Mary," eighteen guns, a brig from Newfoundland, and a cutter from England; and in a six weeks' cruise her captures numbered sixteen. While off Martinique, however, the "Holker" was chased by a frigate, and, in trying to escape, started some butts, filled, and sank. Capt. Quinlen and seventeen men were saved, but the rest of the crew were lost. The armed schooner "Hawk," maintained by the State of Pennsylvania and commanded by Capt. Snyder, also rendered good service by cruising in the Delaware River and Bay, and protecting American commerce from the refugee boats. In March she captured in Delaware Bay the refugee galley "Ladies' Revenge," belonging to New York. The galley, which was well armed and manned by a crew of sixty men, was under the command of Kidd, a Tory refugee from Philadelphia, who, being hard pressed by the "Hawk," ran his vessel ashore and escaped with all his crew but six.

The war was now drawing rapidly to a close. A change in the British ministry had encouraged Dr. Franklin to renew his efforts for a peaceful adjustment; and, after working with the utmost industry and skill throughout the summer and most of the autumn of 1782, he had the satisfaction of seeing his labors crowned with success. On the 30th of November a preliminary treaty was signed, but the news did not reach this country until the 12th of March, 1783, when the packet "General Washington," Capt. Joshua Barney, arrived at Philadelphia with the joyful intelligence that a treaty had been concluded, acknowledging the independence of the United States. On the 28d of March the French cutter "Triumph," commanded by Chevalier Duquesne, arrived at Philadelphia from Cadiz, bringing the news that a preliminary treaty of peace had been signed on the 20th of January, 1783. M. de Luzerne, the French minister, at once issued an official notification of the fact, directing French cruisers to cease hostilities. Intelligence of the state of affairs was also communicated to Sir Guy Carleton, who had succeeded Sir Henry Clinton as the British commander-in-chief at New York. Sir Guy replied that he had hitherto abstained from hostilities, and would continue that conduct as far as his own security would admit; but that until he received orders from England he did not feel himself justified "in recommending measures which might give facility to the fleets and armies menacing any part of the king's possessions to carry their hostilities into execution." Admiral Digby, in command of the British fleet, made a similar reply. On the 11th of April the British officers having received official notice from home that peace had been concluded, Congress issued a proclamation enjoining a cessation of hostilities. On the 16th the Supreme Executive Council of Pennsylvania made proclamation of the fact at the court-house, where the official document was read by the sheriff in the presence of an immense concourse of people.

The State flag was hoisted, as usual on such occasions, at Market Street wharf, and the bells were rung amid general demonstrations of joy at the termination of the war. In the evening Charles Wilson Peale exhibited the patriotic transparencies which had done good service on previous occasions, and one week later Thomas Paine published "The Last 'Crisis,' No. 13," in which he declared that "The times that tried men's souls" were over.¹

On the 3d of September, 1783, a definitive treaty was signed at Versailles in which the United States were formally acknowledged to be sovereign, free, and independent, and New York, the last position held by the British on the American coast, was evacuated on the 25th of November of the same year.

The cessation of hostilities was followed by a general exchange of prisoners. Among the British in the hands of the Americans were a number of soldiers of Burgoyne's army confined at Lancaster, who, in anticipation of the declaration of peace, were transferred to Philadelphia and lodged in the Walnut Street jail. Shortly afterwards they were liberated and sent to New York. The United States then surrendered the new prison to the State of Pennsylvania, and the civil prisoners who had been confined in the old jail at Third and Market Streets were removed by the sheriff to the other building.

Commerce now began to revive and trade with New York was reopened, although that city was still occupied by the British. "A large number of vessels," says Thompson Westcott, "arrived from that place and from ports out of the United States. The first ship under the British flag that sailed into the Delaware after the proclamation was the 'Hibernia,' Capt. Roger Scallion, of Dublin, last from New York. At Gloucester Point a salute of eleven guns was fired by this vessel, and was answered with five guns by Capt. Barney, from the packet 'General Washington.' In front of the city the 'Hibernia' fired thirteen guns. Upon coming to at the wharf Capt. Scallion and his crew were very politely received. By the middle of June two hundred vessels had arrived, and as many had sailed for different parts of the United States, the West Indies, and Europe. The introduction of large quantities of British goods followed, and so plentiful was the supply that the manufacturers complained of the injury which was done them. A meeting of mechanics was held July 14th at the State-House, at which Robert Porter, the chairman, made a speech against the importation of manufactured goods, whereby our own tradesmen were deprived of the right of earning the means of supporting their families. It was resolved to petition the Assembly in relation to the cause of complaint, and the proper committees were appointed to

¹ "The Crisis, No. 1," published in December, 1776, commenced with the words, "These are times that try men's souls."

do so. The memorial was received but laid on the table, and no definite action taken upon it."¹

Considerable feeling was aroused in September by the arrival of agents for the collection of British debts, who, it was said, were preparing to bring suits against the debtors. "If they are," said a writer in one of the newspapers, "it is hoped there will be spirit enough to make them repent of their rashness. Their acts brought ruin upon us." No objection was made to the ultimate payment of the debts, but it was urged that as great destruction to American industries and trade had been wrought by the British fleets and armies, thus crippling the debtor class, a reasonable time should be allowed for the payment of obligations to British creditors. The feeling against the Tories was not immediately removed by the triumph of the American arms. On the contrary, a disposition to exult over and persecute their adversaries was exhibited by the more belligerent Whigs, to whom the provisions in the preliminary treaty giving Tories the right to go to any part of the United States and remain there for twelve months, and forbidding future confiscations or persecutions for the part they had taken in the war, were decidedly unpalatable. The militia were prompt to express their dissatisfaction. At a meeting at the State-House, held on the 29th of May, at which Lieut.-Col. John Shee presided, resolutions were adopted declaring that Tory refugees ought not to be permitted to return or remain among Americans who had remained loyal to their country; that they (the militia) were determined to use all the means in their power to prevent them from doing so, and that they would "cheerfully join with others of the community in instructions to our representatives in the Assembly." It was added that "persons harboring or entertaining those enemies of their country ought to feel the highest displeasure of the citizens of this city and liberties," and that it was the opinion of "this company" that "a town meeting be called as soon as possible to take into consideration the mode of instructing representatives, and such other measures as may appear necessary, and that a committee be appointed

to prepare for carrying this resolve into execution."

In accordance with the latter resolution a general meeting of citizens was held at the State-House on the 14th of June, with Col. Samuel Miles as chairman and Lieut.-Col. John Shee as secretary, at which resolutions similar to those adopted by the preliminary meeting were agreed to, with additions and amendments to the effect that those present pledged themselves to use all the means in their power "to expel with infamy such persons who have or hereafter shall presume to come among us, and that the names of such persons be published in the newspapers of this city by the committee appointed to carry these resolves into execution;" also, "that we consider the restoration of the estates forfeited by law as incompatible with the peace, the safety, and the dignity of this commonwealth," and that "the dignity and interest of this State require that funds be provided for the payment and discharge of the public debt." A committee was appointed, consisting of the field-officers and captains of the militia of the city and liberties, together with certain prominent citizens, which met at the City Tavern and adopted a resolution giving ten days' notice to all persons coming within the description of the resolutions adopted by the town-meeting to quit the State, under penalty of being "dealt with in a proper manner."²

A few days afterwards Capt. Thomas Rawlings, and subsequently Capt. Joseph Crathorne and Thomas Plunket, received peremptory notice to depart in a specified time. Thomas Faro, Launcelot Faro, James Mitchell, Lawrence Fenner, and Thomas Gawney were also denounced to the committee and warned off. Earnest remonstrances were made against the arbitrary and unauthorized course of the committee, which was said to be in conflict with the treaty of peace; but no attention was paid to them, the committee probably deeming itself too strong in public indorsement and support to run much risk at the hands of the legal authorities. The latter, in fact,

² The committee to carry the determination of the city meeting into effect were the field-officers and captains of the militia, and the following citizens:

Northern Liberties.—John Rice, shipwright; John Houston, John Harrison, Zachariah Andrews.

Southwark.—Elias Boys, William Brown, Jonathan Penrose, George Ord.

Mulberry Ward.—Col. Farmer, Jacob Schriener, Capt. Heysham, Col. Bayard.

Upper Delaware.—Andrew Hodge, Jr., William Bright.

High Street.—Capt. McNaughton, Thomas Fitzgerald.

North.—Jacob Barge, Michael Shubart.

Lower Delaware.—Charles Risk, Blair McClenachan.

Chestnut.—Jedediah Snowden, William Pollard.

Middle.—Robert Smith, William Richards.

Walnut.—George Hendy, Mr. Markoe.

South.—Andrew Caldwell, Dr. H. Shiell.

Dock.—Alexander Rutherford, James Hunter, Francis Gurney, William Turnbull.

Resolutions similar to those of the city meeting were adopted by the citizens of Germantown at a meeting of which James Haslett was chairman, and Thomas Norton secretary.

¹ One of the first measures necessary to complete restoration of commerce was the removal of the obstructions or *chevaux-de-frise* in the Delaware. Thirteen of these machines, lying on the Jersey shore, were sold by order of the Supreme Executive Council. There was a passage through these still in place which was known to pilots, but not always safely navigated.

The French ship "Achilles," coming up the river in June, ran upon one of these machines, and was badly injured. Assistance was offered from Southwark, and the vessel finally brought to the wharf. The wardens of the port made representations to the Council in regard to the injurious effects of allowing these obstructions to remain longer, and were authorized to take measures to have them removed. They accordingly advertised for proposals to undertake the work, but none were received within the time specified for presenting them. A survey of the bed of the river was made. At a later time De Brussine and Garrison made some overtures in relation to the business, proposing to remove the obstructions for four thousand pounds. This was finally agreed to, the work to be finished in nine months, but the contractors failed to comply with their undertaking.

would probably have found themselves powerless to enforce their own measures, as proved to be the case shortly after in the second revolt of the Pennsylvania Line. In June of this year a number of the non-commissioned officers and soldiers of the Line, exasperated by the delays in settling their claims, resolved to demand a redress of grievances and a settlement of accounts. A body of them accordingly set out from Lancaster for Philadelphia to lay the matter before the authorities. No measures were taken to check their advance. A committee of Congress requested the Executive Council to call out the militia in order to prevent the progress of the rioters, but the State authorities took no action, in the belief apparently that the troops could be conciliated. Orders were issued from the War Office that the soldiers be received into the barracks and supplied with rations. On reaching the city they marched to those quarters in good order, and without creating any disturbance. Congress and the Executive Council both held their sessions in the State-House at this time. On Saturday, June 21st, Congress not being in session, having adjourned from Friday evening until Monday, a party of about thirty armed men marched from the barracks to the State-House, where the Executive Council was in session. They sent to that body a message in writing, demanding that, as their general officers had left them, they should have authority to appoint commissioned officers to command them and to redress their grievances, the said officers to have full power to adopt such measures as they might think best calculated to obtain justice for the men. If this should be denied they threatened to let the soldiers in upon the Council, who must then abide by the consequences. Only twenty minutes were given for deliberation on the subject.

The Council, not to be intimidated by threats, unanimously rejected the terms proposed. Other bodies of soldiers had in the mean time joined the mutineers, who now numbered three hundred men, under the command of sergeants and petty officers. A guard of fifteen or twenty was posted in the State-House yard opposite the southern windows of the Council chamber, and sentinels were placed at the doors. A special meeting of Congress was called, but a quorum could not be got together. One of the members made a fruitless appeal to the soldiers to moderate their demands, and returning to his associates advised them to think of eternity, as he believed that within an hour not one of their body would be left alive. It was not against Congress, however, but the Supreme Executive Council that the rage of the insurgents was directed. Congress finally adjourned to meet at Carpenters' Hall at a later hour the same day, and when it reassembled a quorum was found to be present. The members seem to have been panic-stricken; for although they had been permitted to leave the State-House without interference on the part of the mob, they adopted a resolution declaring

that they had been "grossly insulted by the disorderly and menacing appearance of a body of armed soldiers about the place of meeting," and that it was necessary that "effectual measures" should be immediately taken to support the public authority. A committee was appointed in reference to the matter, the members of which explained to the Council that "effectual measures" meant "that the militia of the State should be immediately called forth in sufficient force to reduce the soldiers to obedience, disarm them, and put them in the power of Congress."

In the mean time the soldiers had marched back to their barracks without having resorted to violence, and the city was entirely quiet. On Sunday morning the Supreme Executive Council met at the house of President Dickinson, and decided that to call the militia into service without being sure of collecting a sufficient force would only irritate the soldiers, and drive them on to the commission of excesses which might otherwise be avoided. It was not even known whether the militia would respond energetically to the call. There was also a deficiency of ammunition, the State magazine being in the hands of the mutineers. The latter, moreover, had shown a willingness to negotiate, and it was very probable that in time everything might be arranged. Delay was additionally valuable from the fact that opportunity would thus be afforded for applying to the commander-in-chief for Continental soldiers to maintain order. On the following day (Monday) the committee of Congress again met the Council. The latter reported that by inquiry among citizens they were convinced of the pacific disposition of the soldiers, that they would be satisfied with what was just and reasonable, and that the militia were not prepared for service.

On Tuesday a consultation was held with the colonels and majors of the city battalions, who, through Col. Shee, declared that it would be very imprudent to call out the militia; that the measure would prove ineffectual, and that their co-operation could not be expected until some more serious necessity for it should appear to the minds of the citizens. The soldiers, who in the mean time had remained at the barracks, appointed Capt. James Christie and five others a committee "to bring about the most speedy and ample justice." Congress, dissatisfied with the action of the Executive Council, adjourned to meet at Princeton; but no sooner had that body taken its departure than a rumor was started that the insurgents were about to make an attack upon the Bank of North America. A guard was collected, and the building put in a state of defense, but no attack from any quarter was made. In consequence of the statement that the soldiers at the barracks had acted in a disorderly manner, and the apprehension that, as their rations would be stopped on the following day, they might proceed to acts of violence, the lieutenants of the city militia were ordered to call out one hun-

dred men, the headquarters to be at Carpenters' Hall. The officers commanding regiments were also required to hold their respective forces in readiness.

On behalf of the insurgents, Capts. Christie and Symonds presented three papers to the Supreme Executive Council, containing their demands for the satisfaction of their claims; but the Council declined to receive them unless the soldiers placed themselves under the command of their officers and made full and satisfactory submission to Congress. Capts. Christie and Symonds replied "that the soldiers did not think they had offended Congress on Saturday, as their intention was to apply to Council." They added that they could not tell what the consequences of the rejection of the message from the soldiers might be, and advised the Council to prepare for their own safety and for that of the city. The militia guard was accordingly increased to five hundred men. In the mean time two of the leaders among the mutineers, Capt. Carberry and Lieut. Sullivan, had deserted their men, and a note from them urging another member of the committee to seek safety in flight fell into the hands of the Council, and was shown to the committee of sergeants. Information was received that a body of Continental troops was marching toward the city, and as the time seemed propitious for effecting some arrangement, Col. Hampton proceeded to the barracks, accompanied by citizens. After a conference with the soldiers, the latter were finally prevailed upon to leave their arms at the barracks, and to proceed to the residence of the president of the Executive Council in order to hold an interview with that official. On arriving there in a body, they were addressed by the president, who insisted that they should, as a further evidence of their submission and fidelity to the offended majesty of their country and its laws, compel the soldiers who had marched from Lancaster to lay down their arms or set out on their return under the command of their officers within twenty-four hours. After this address the men returned to their barracks, and by noon the next day the soldiers from Lancaster submitted, and soon after set out on their return. Thus by a prudent and temporizing policy a revolt was amicably settled which at one time threatened the gravest consequences, and did actually cause the removal of the seat of national government from Philadelphia. The action of Congress throughout the affair was hasty, undignified, and ill-advised. The movement was not directed against that body at all, but against the State authorities, and the flight to Princeton was simply an act of folly. But, like most acts of folly, it was persisted in with an assumption of dignity that was ridiculous in so grave a body. In August, however, the delegates from Pennsylvania represented to the Executive Council that, as Congress was about to remove from Princeton to some other point, an invitation from the Council to return to Philadelphia would probably be well received. A suitable resolution to

that effect was accordingly adopted and forwarded to Congress.

On the 29th of August the Assembly passed resolutions offering the State-House to Congress if the members would return to the city, pledging itself that "the House will take measures to enable the Executive of the State to support and protect the honor and dignity of Congress, and of those persons who compose the Executive Council." The delegates in Congress were also asked to request Congress to define the jurisdiction which it desired in the place of permanent residence of that body. An address to Congress was circulated among the citizens, and signed by a large number of persons. It represented that the citizens of Philadelphia had from the beginning of the contest distinguished themselves by every exertion which principle could inspire or fortitude support. Upon this city more than upon any other, and more than upon any other part of the country, came the first demands in times of difficulty, alarm, or danger. The signers appealed to the past to show the manner in which the citizens had responded. In conclusion they adverted to the manner in which they had met the impost and other burdens. They asked that Congress would do justice to the army and the public creditors, and promised that the American people would be willing to bear their share of the burdens. In reference to the absence of Congress from the city, so long the seat of their deliberations, promise was made that if the body would return the citizens would try to protect them. Congress replied to the address in terms expressive of pleasure and satisfaction; but, probably ashamed to return to a city from which it had fled so precipitately in the face of purely imaginary danger, that body adjourned on the 1st of November to meet at Annapolis.

Shortly after the interview between the insurgent soldiers and President Dickinson, Gen. Robert Howe marched into the city at the head of fifteen hundred Continental troops. They had been sent by Gen. Washington to quell the mutiny. Carberry and Sullivan, two of the ringleaders, escaped to British vessels, but several of their associates were arrested and tried by court-martial. Christian Naglee and John Morrison, sergeants of the Third Pennsylvania Regiment, were sentenced to be shot. John Lilly, Abner Vanhorn, Thomas Flowers, and William Carman were sentenced to receive corporeal punishment. Naglee and Morrison were led out to the commons, and a file of soldiers drawn up with loaded muskets, as if to shoot them. Their pardon by Congress was then announced to them, and they were released. The arrival of Gen. Howe and the presence of other distinguished officers determined the citizens of Philadelphia in July to give a dinner to the officers of the army at the State-House. Among those present were Maj.-Gens. Gates, Howe, and DuPortail, Brig.-Gen. Patterson, and a number of field-officers. Thir-

teen toasts were drank amid great enthusiasm and hearty demonstrations of good-fellowship.

Peace being now assured, the State authorities turned their attention to measures for the restoration of the trade and industries which had been interrupted by the war. Among the measures suggested by the president of the State to the Assembly in August were the establishment of a mint by the State to offset the fraudulent practices for impairing the value of the current coin; the organization of a chamber of commerce; the removal of the war obstructions in the river; the repair of the public highways; official action to ascertain what highways might be made and how far the Delaware, Susquehanna, and Schuylkill might be rendered navigable, and an act to ascertain the extent of the port of Philadelphia, to prevent insults and disturbances therein, and to define the powers of the sheriff as water bailiff. Among the matters thus urged upon the notice of the Legislature, those relating to roads, canals, and internal navigation were the only ones that received attention. A committee was appointed which, after holding conferences with the merchants of the city, reported that the most important inquiry before them was how the streams of commerce might be conducted from the river Susquehanna to the port of Philadelphia. The easiest way of accomplishing this object was by improving the navigation of the Schuylkill to Reading, and by making durable roads from thence to such parts of the Susquehanna as offered the most easy communication with the fertile lands to the west thereof. The establishment of a town or towns on the east side of the Susquehanna would, it was thought, "be attended with capital advantages to the trade of Philadelphia, as every inhabitant of such town or towns would in some degree be a factor for the Philadelphia market." The committee therefore recommended the appointment of commissioners to view the different roads leading from the Susquehanna to Reading and Philadelphia, and point out the most practicable mode of improving and repairing the same; to consider of the most probable way of opening a communication between the rivers Susquehanna and Schuylkill, and to estimate the cost; also to receive proposals from persons willing to offer lands for the building of a town on the Susquehanna. David Rittenhouse, Thomas Hutchings, and David Sellers were elected for that purpose.

Another set of commissioners—William Maclay, James Wilkinson, and William Montgomery—were appointed to examine the navigation of the Susquehanna to its sources, to ascertain where the northern boundary of the State would fall, and particularly to discover whether any part of Lake Erie was within the State of Pennsylvania. To these commissioners was also assigned the examination of the river Delaware as to its navigable advantages. During the previous year commissioners had been appointed by the States of New Jersey and Pennsylvania, to confer

together in relation to the titles of the islands in the river Delaware between the boundaries of the two States. The result was a treaty by which the islands were assigned to the States according to proximity. Of the islands within the space opposite or near the city and county of Philadelphia, Windmill Island, League Island, Mud or Fort Island, Hog Island, and Little Tinicum were annexed to the State of Pennsylvania, while Petty's Island and Red Bank Island were assigned to New Jersey. It was further agreed that the river Delaware should be a public highway, and that the two States should have concurrent jurisdiction between the shores. Vessels fastened to the shore or aground were to be considered within the jurisdiction of the State where the shore was. Every vessel riding at anchor before the town where it was last loaded or unloaded, or where it was to be loaded or unloaded, was to be considered within the jurisdiction of the State to which the town or city belonged. In capital or other offenses, trespasses, or damages on said river, jurisdiction was to be vested in the State where the offender should be first arrested or prosecuted. This treaty was negotiated on behalf of Pennsylvania by George Bryan, George Gray, and William Bingham, and on behalf of New Jersey by Abraham Clark, Joseph Cooper, and Thomas Henderson. It was ratified by the State of Pennsylvania by an act passed September 20th.

The efforts to procure a division of Philadelphia County and the reincorporation of the city were renewed before the Assembly this year. Residents of the lower part of Berks, the upper part of Chester, and the upper part of Philadelphia petitioned the Assembly to create a new county out of those districts with its seat at Pottstown, but the memorial was laid upon the table. A petition to separate the county from the city was strenuously urged on the score of the heavy taxation which the union imposed upon the county. A petition to incorporate the city led to numerous remonstrances, which were referred to a committee of members from the city. They reported emphatically in favor of the measure, and recommended that the bill for the incorporation be referred to the next Assembly.

The citizens who had exercised arbitrary powers as members of the committees of observation and safety, and of inspection for the regulation of prices, etc., now began to realize that the conclusion of peace and the restoration of constitutional government might have serious consequences for them. Without authority of law they had compelled obedience to the popular demands of the hour in relation to non-importation, the sale of articles at specified rates, and seizures of arms, salt, lead, blankets, ammunition, etc., and in many other matters had acted with no constitutional warrant whatever. Accordingly they petitioned the Assembly for the legalization of their acts, and a law was passed declaring that no person should be amenable for such acts or liable to prosecution or

suit for anything done during the Revolution while in the discharge of a public duty or by assumed powers.¹

On the 14th of October an election was held for members of the Council of Censors, whose duty it was to inspect the acts of the legislative and executive power subsequent to the adoption of the new Constitution. The contest between the candidates was very animated; and after the result was ascertained a protest was presented to the Assembly and to the Council of Censors, contesting the election on the ground of fraud. Soldiers were present in large numbers at the polls, and the judges and inspectors of election, it was claimed, were overawed. Peaceable citizens, it was added, were intimidated and not permitted to vote, and the election was declared to be in every particular fraudulent and unjust. Committees appointed by the Assembly and the Council of Censors, after investigating the charges, declared them unfounded; but the minority of the Council of Censors filed an earnest protest, and the evidence would seem to have justified the opinion that the soldiers were under direction of their officers, and compelled or persuaded to vote for certain candidates. Their presence at the polls naturally had some effect on the more timid citizens.

The popular celebrations of the year derived a special significance from the declaration of peace, and were observed with appropriate ceremonies. On Thursday, the 1st of May, the anniversary of St. Tammany, "the tutelar saint of Pennsylvania," was celebrated at the country seat of Mr. Pole, on the Schuylkill, by two hundred and fifty "constitutional Sons of St. Tammany," who were decorated with buck-tails and feathers. At noon thirteen sachems or chiefs were appointed, who selected a head chief and scribe. The ceremony of burying the hatchet, in token that the war with England had ended, was then performed, each man casting a stone upon its grave, after which the calumet or pipe of peace was smoked. The bowl of the pipe was a huge ram's horn gilded with thirteen stars, and its stem a reed six feet in length decorated with peacock feathers. In a cabin set apart for that purpose a feast was prepared for the members. At the head was a portrait of St. Tammany, above it a design of the siege of Yorktown, and in front were portraits of Washington and Rochambeau. Thirteen toasts were drunk to the accompaniment of artillery salutes and three cheers, which, when the army and Washington were named, swelled spontaneously to thirteen. At the toast to "The friends of liberty in Ireland" and "The tuning of the harp of independence," thirteen cheers were again given and the band struck up "St. Patrick's Day in the Morning." After

the drinking of toasts had ended, the chief sang the first verse of the original song for St. Tammany's day,—a composition in vogue in the social celebrations long before the Revolution,—and the remaining stanzas were sung by Mr. Leacock. Other songs in honor of the saint were sung, and the warriors, highly pleased with the gayety of the chief, bore him on their shoulders from the green into his cabin amid the shouts of all present. The colors of France and Holland and the State flag of Pennsylvania had been raised in the morning on separate staffs. These were struck after sunset by a signal from the cannon. The chief and his sachems marched into the city in Indian file, the band playing "St. Tammany's Day." They saluted the French minister and proceeded to the Coffee-House, where, after giving three cheers, they dispersed and returned to their homes.

The Fourth of July was celebrated by the ringing of bells and the display in the harbor of the flags of all nations except that of Great Britain. At the annual commencement of the University of Pennsylvania in the morning the degree of LL.D. was conferred upon George Washington. At noon artillery salutes were fired, and in the afternoon an entertainment was given by President Dickinson. In the evening there was a torchlight procession arranged by Mason & Co., upholsterers, who had finished a sofa which they considered a triumph of mechanical art. The back was embellished with portraits of Washington, Gates, and Rochambeau. It was placed in a car, decorated with knots and ribbons, and drawn by eight white horses. A band of music preceded thirteen young girls dressed in white, and a large number of boys bearing torches.

It was not until the 14th of January, 1784, that the definitive treaty of peace with England was ratified by Congress. The event was proclaimed in Philadelphia on the 22d by the sheriff at the court-house. The State flag was raised at Market Street wharf, and an artillery salute was fired. In anticipation of this formality, the Assembly had decided to erect a triumphal arch in one of the principal streets of the city, bearing allegorical figures and inscriptions, and so constructed as to be capable of being illuminated. Charles Wilson Peale was intrusted with the execution of the project, and "the upper end of High Street," then between Sixth and Seventh Streets, was selected as the location for the arch. The latter when built was fifty feet six inches wide and thirty-five feet six inches high, exclusive of a balustrade which surmounted the whole. An arch of fourteen feet in width was placed in the centre, on each side of which were smaller arches of nine feet in width. The pillars were of the Ionic order of architecture, and were adorned with spiral festoons of flowers in their natural colors. Above the centre arch was a picture of the Temple of Janus closed; on the south side of the balustrade, a bust of Louis XVI.; on the other side of the balustrade, a pyramidal cenotaph to the memory of those

¹ The Council of Censors in 1784 declared that all the acts of Assembly authorizing the seizure of the goods of citizens for the use of the army, and setting prices thereon, were inconsistent with the Bill of Rights; also, the acts against forestalling, authorizing the seizure of salt, etc. The acts regulating prices were declared to be absurd and impossible.

who had died for their country during the war; on the south side of the frieze, three lilies, the arms of France; on the left of the former, on a shield, a plow, sheaves of wheat, and a ship under sail,—the arms of Pennsylvania; on the left of the preceding, a sun, the device of France, and thirteen stars, the device of the United States; on the left of the last, two hands joined, holding branches of olive and the caduceus of commerce, the device symbolizing the concord of nations; on the south panel, a figure representing "Confederated America" leaning on a soldier, military trophies being on each side of them; on the other panel, Indians building churches in the wilderness; on the die of the south pedestal, a library, with instruments of arts and sciences; on the die of the next pedestal, a large tree, bearing thirteen principal and distinct branches laden with fruit, typifying the growth of the thirteen infant States; on the die of the pedestal upon the right hand, Cincinnatus, whose features resembled those of Washington, crowned with laurel, returning to his plow; on the die of the next pedestal, a representation of militiamen exercising. All the pictures were accompanied by appropriate mottoes. The top of the balustrade was embellished with figures of the four virtues,—Justice, Prudence, Temperance, and Fortitude. The arch was to be lighted with twelve hundred lamps on Thursday evening, January 22d; but after the preparations had been completed, and while thousands of spectators were awaiting the illumination, the paintings, through some accident, took fire. The structure being of framework covered with canvas, was quickly consumed. A large number of rockets which had been placed on the staging were also ignited, and, darting in every direction, created a scene of terror and confusion. Sergt. O'Neill, of the artillery, was killed, and several persons seriously injured. Subscriptions were soon obtained for rebuilding the arch, which was subsequently removed to a position in front of the State-House, where new transparencies were exhibited on the 10th of May.

Although the formal ratification of Congress had been necessary to give full effect to the treaty of peace, the war had ceased many months before, and the country was at length able to settle down to the full enjoyment of the benefits which the long and painful struggle had secured. Philadelphia had suffered cruelly from the Revolution. Her trade had been prostrated; many of her wealthy citizens had been reduced to want and others driven into exile; her industrial, educational, and social development had been interrupted and set back many years, and her future was clouded by the animosities and bitter prejudices which the war had enkindled among her people and which the cessation of hostilities left almost as active and virulent as ever. Throughout the struggle she had borne the burden and heat of the day. It was to Philadelphia, her wealth, her patriotism, her resources, that all eyes were turned during

the darkest hours of the Revolution, and though harassed by the intrigues of the Tories and the bickerings of Whigs, the patriotic men who controlled her affairs throughout that stormy period responded nobly to the demands that were made upon them. The capital of the infant nation, the great depot of supplies for the Continental army, the asylum of exiles fleeing from British oppression, the theatre of most important movements and events, she played a grand and imposing rôle in the great drama of the Revolution. For years she was the pivotal point of the struggle, the centre of greatest interest, the scene of some of the most important acts of the Continental Congresses and of deliberations on the part of diplomatic agents that involved the gravest consequences to the struggling colonies. That she played her part worthily cannot be denied, and, while mob rule sometimes violated the sanctity of her laws, she escaped with wonderfully trifling loss, through the wise and prudent course of those whom she clothed with authority, from those excesses which the violence of the times encouraged and the suffering, misery, and want, which were the most dangerous foes of order, seemed to render almost unavoidable.

CHAPTER XIX.

GROWTH OF PHILADELPHIA FROM THE DECLARATION OF PEACE, JAN. 22, 1784, TO THE PASSAGE OF THE EMBARGO LAWS OF 1794.

No longer occupied with measures for the prosecution of the war, the General Assembly of Pennsylvania was now able to direct its attention to schemes for the restoration of the impoverished trade of Philadelphia. Among the more important of these was an act to make the river Schuylkill navigable, which was passed on the 15th of March. Commissioners were chosen to superintend the work, David Rittenhouse, Lindsey Coates, Anthony Levering, and John Jones being those selected to supervise the section from tide-water below the Falls to Gulph Mill. The filling up of Dock Creek was another matter of great local interest. That stream had long been a nuisance. On each side of it the streets had been left open in the hope that a body of fresh water would be preserved, and that those who owned lands fronting on the stream would keep it in order; but it had generally filled up, and was now a source of annoyance and disease. Petitions from citizens were presented, asking that the stream be covered with a culvert, the street filled up over it, and a market-house and shambles erected in the centre. By act of March 30th, the Legislature directed that the creek be covered with a substantial arch of brick, founded on stone walls, and floored with plank or logs at least

five inches thick along the middle or near the middle of the dock, and at least nine feet high. The arch was to commence at the intersection of the sewer at Walnut Street, and to continue to the main branch of the dock adjoining the public landing. It was to be covered with earth, and the whole was to remain open forever as a public street, to be called Dock Street. The work was commenced shortly afterwards, and carried on to completion. Under authority of a supplementary law the arch was continued to the bridge at Front Street. The barracks in the Northern Liberties being no longer needed, the Supreme Executive Council determined to lay the ground off into lots, define the streets that were needed, and offer the whole property for sale. The money arising from these sales, which were authorized by an act of the Legislature, was appropriated to pay installments on the sums due the former proprietaries. The opening of roads leading into Philadelphia, and the building of an Exchange in the city, were matters which received prompt consideration. Petitions for the establishment of a State lottery to raise thirty-four thousand dollars—one-half to be applied to the making of roads from Philadelphia westward, the other half to building the proposed Exchange—were presented to the Legislature, which passed an act increasing the amount to forty-two thousand dollars, all of which was appropriated to the roads, no provision being made for the Exchange or for improving the Schuylkill. The cost of the latter,—that is, to clear the river from Bosler's mill to tide-water, was estimated by the commissioners at £8120. The commissioners to whom, at the previous session of the Assembly, had been referred the subject of improving the means of communication between the Susquehanna and the Schuylkill, and to receive proposals for laying out a town at some convenient point on the former stream, reported that an offer had been made by John Harris, of Harris' Ferry, to lay out a town of two hundred lots of a quarter of an acre each; that he would convey a lot for a court-house and jail, and give a square of four acres of ground to the State for such purposes as might be thereafter appointed by the government, and would increase the same when necessary. This proposal was accepted; and thus was the town of Harrisburg—afterward to become the capital of the State—commenced. A new county was also authorized to be laid out, of which Harris' town was to be the county-seat.

The efforts to secure the removal of the seat of State government from Philadelphia were renewed this year without effect, a resolution to make Lancaster the place for meeting at the next session being defeated by a vote of twenty-six yeas to thirty-four nays, as was also the proposition to erect a new county out of portions of Philadelphia, Berks, and Chester Counties. On the 10th of September, however, a bill was passed to erect a new county out of part of Philadelphia

County, to be called Montgomery, the county-seat to be at Stony Run, in Norriton township. Much of the Assembly's time was taken up this year in considering propositions for the abolition of the "test laws," or laws in relation to the oath of allegiance. In March a petition requesting the Legislature to abolish them was laid on the table by a vote of thirty-seven to twenty-seven. A resolution was then offered declaring that the happy time had come to heal the divisions among the people, and that unanimity and harmony could not exist at a time when one part of the people were deprived of certain benefits which others enjoyed, and that a committee ought to be appointed to revise the law and report one more adapted to the present times. This was lost by a vote of five yeas to fifty nays. On the question to postpone all further consideration of the subject of the test laws the vote was thirty to thirty, and the Speaker gave his casting vote in the affirmative. In September another resolution was offered, stating that a large number of young men had arrived at the age of eighteen years since the passage of the laws who had not taken the oaths of allegiance, and who were consequently deprived of interest in and attachment to the State. It was contended that all persons should have equal rights, and the resolution concluded with a clause directing that a committee be appointed to consider the subject, and, if necessary, to report a law admitting persons who were under the age of eighteen at the passage of the test laws "to the blessings of liberty and citizenship." This was followed by a petition from non-jurors for admission to the rights of citizenship. The resolution and petition were referred to a committee by a vote of thirty-one to twenty-two. In the course of the debate which followed, a resolution was offered to the effect that no person who voluntarily joined the British army during the war, or who had been tried or convicted of having aided or abetted the king of Great Britain, his generals, fleets, or armies, having before been a citizen of the United States, should be capable to elect or be elected into any office of profit or trust. This resolution was adopted by a vote of forty-six to four.

It was then suggested that a bill be brought in to modify the test laws so as to entitle all male white inhabitants who had not taken the oath of allegiance to take the oath according to the terms of the act of June 13, 1777, and be thereby entitled to be free citizens, providing that no person should be capable of holding office until he had taken and subscribed to the oath directed by the act of Dec. 5, 1778. On the 25th of September a vote was taken on this proposition which resulted in twenty-nine yeas and twenty-two nays. The result caused great excitement both in and out of the Assembly. On the 28th a motion was made to take up the bill entitled, "A further Supplement to the Test Laws." The vote on the motion was twenty-five to twenty-five, but the Speaker, George Gray, gave the casting vote in the affirmative.

When his decision was announced, nineteen members rose and left the Assembly without a quorum. An address to the public was issued by the seceders, who asserted that efforts had been made to press the bill through in violation of the rules and without the usual formalities. They added that those who had not participated in the toils and sufferings should not be permitted to share the benefits of the Revolution, and that if they were admitted to citizenship, "the elections might be carried in the favor of men who execrate the alliance between the United States and His Most Christian Majesty, and who still cherish the hope of a reunion with Great Britain." They also objected to the bill restoring the charter of the college as the precursor of a law to reinstate the Penn family in their hereditary rights.¹ The proposition to restore the charter of the college had come before the public in July in the shape of a memorial signed by Thomas Mifflin, John Cadwalader, Robert Morris, John Redman, Samuel Powell, James Wilson, Thomas Willing, George Clymer, Alexander Wilcocks, and the Rev. William White, which was presented to the Council of Censors. It represented that they were the trustees of the old college, academy, and charitable schools, and complained of the act of 27th of November, 1779, abolishing that corporation. The committee to which the matter was referred reported that the act of Assembly in question was a deviation from the Constitution. This view of the question was strongly antagonized on the ground that a number of the trustees of the college had not taken the test oath; that three of them had been attainted of treason, and that the succession of corporators had not been kept up. Rev. William Smith, D.D., provost of the college, addressed a letter to the Assembly, which was referred to a committee. The latter reported that the college had never forfeited its rights, nor committed any offense against the laws; that the General Assembly had no power under the Constitution to alter or dissolve a corporation for charitable or religious purposes without violating that Constitution under which the Legislature derived its own authority. They therefore reported a resolution to repeal the act of the 27th of November, 1779, which granted the property of the college to the University of Pennsylvania, and to reinstate the college in its rights. The university was by the proposed law directed to surrender the property belonging to the college to that institution; but the university, having by law been vested with many estates forfeited as the property of traitors, was authorized to carry on its business according to the judgment and skill of the trustees out of the remaining estates. A violent debate arose upon this proposition, but it

was finally carried by a vote of twenty-eight yeas to twenty-five nays, and the university and college became separate and rival institutions.

As we have seen, the measure was one of those which received the condemnation of the nineteen members of the Assembly who seceded on the 28th of September. The address issued by them was replied to by the friends of the amendment to the test laws, headed by George Gray, the Speaker of the House, in a paper censuring the seceders and declaring that legislation for the relief of non-jurors was necessary in consequence of the coming of age of many persons who were too young to subscribe to the test act of 1779. Many of those injured by the law, it was added, were people of means who had paid their full proportion of the expense of the war, either directly or indirectly, and the great majority of them had been uniformly peaceable and inoffensive during every stage of the Revolution. The provisions of the test act were quoted to show that no person who had joined the army of the British king, or who had been tried and convicted of aiding or abetting the king of Great Britain was eligible to office, and that, therefore, there could be no danger of any abuse of the privileges granted by an extension of the test act. By the law of 1779, nearly one-half the inhabitants of Pennsylvania, it was estimated, were deprived of the privileges of citizenship. The controversy over this important question entered largely into the political canvass in October, and the popular feeling on the subject was demonstrated in the election of the candidates for the Assembly in both city and county, who were opposed to the extension of the privileges asked for to the non-jurors.

Considerable feeling was also aroused by the failure of the State to make prompt and satisfactory arrangements with public creditors in reference to their claims for reimbursement. Besides their debts at home many of these creditors owed merchants of Great Britain, who were harassing them for payment. The Assembly finally took the matter into consideration, and a committee was appointed to which it was referred. According to the committee's estimate the State debt amounted to £548,279 10s. 8d. with interest, and the payment of £183,232 to the late proprietaries. It was suggested that bills of credit be issued for the amount due by the State to the Penn family, and that the remainder be raised by taxation and by imposts upon goods. The opponents of the test oaths availed themselves of the opportunity presented by the agitation of the public debt question to urge the measures proposed for the relief of non-jurors. When the tax law was before the Assembly in December, Anthony Wayne proposed to amend the test laws so as to admit all citizens of the State, upon the ground that there should be no taxation without representation. A motion to postpone the amendment was carried, and another motion to appoint a committee with instructions to bring in a bill revising the test

¹ The Penns in a memorial signed by John Penn, Sr., John Penn, Jr., and Richard Penn, through his attorney, Tench Francis, had asked that the Legislature would conform to natural equity as far as might be, and not unnecessarily deprive them of rights which had existed since the foundation of Pennsylvania.

laws was lost by a vote of eleven to forty-seven. Another matter of interest before the Assembly at this session was a proposition for the establishment of a financial institution similar to the Bank of North America. The capital stock, which was to be £280,000, divided into seven hundred shares of four hundred Spanish milled dollars each, was rapidly subscribed, and the name "Bank of Pennsylvania" was given to the institution. Edward Shippen, Archibald McCall, John Bayard, Samuel Howell, Samuel Pleasants, John Steinmetz, William Moore, Tench Coxe, George Enlen, George Meade, Jeremiah Warder, Joseph Swift, and Jacob Morgan were chosen directors, and Edward Shippen president. The application of the bank to the Assembly for a charter was resisted by the Bank of North America, but an agreement was effected between the two institutions by which the subscribers to the Bank of Pennsylvania were admitted to share in the privileges of the old institution, the Bank of North America. The application for a charter was then withdrawn, and nothing more was heard of the new project.

The Council of Censors held two sessions during 1784, the first commencing Nov. 10, 1783, and ending Jan. 21, 1784, and the second beginning June 1, 1784, and ending Sept. 24, 1784. During these sessions the Council reviewed the transactions of the Assembly and the executive branch of the government from the time of the adoption of the Constitution, and considered the workings of that instrument. The Council declared that the resolutions and laws passed in times of danger, and intended for special emergencies, contained much that was objectionable and should be condemned. The acts of Assembly for seizing goods of the inhabitants for the use of the army, and setting compulsory prices on them, were declared to be inconsistent with the Bill of Rights, and those against forestalling, against storing salt and regulating prices were declared to be impracticable and absurd.

The St. Tammany's celebration this year was held on the 1st of May at Mr. Pole's country-seat. The State flag was hoisted, with the colors of France and the Netherlands on either side, the ceremony accompanied by a salute of three guns. The usual toasts were drunk, and on their way home from the banquet the Sons of St. Tammany "saluted" Gen. Washington, who was dining with Robert Morris at the latter's country-seat, Lemon Hill, with music, cheers, and firing of cannon. The ministers of France and the Netherlands were complimented in a similar manner.¹

The Fourth of July was to have been signalized by a

balloon ascension, the aeronaut being a Mr. Carnes, of Baltimore. Carnes proposed to ascend from an inclosure in a field near the city. The price of admission was two dollars for the first place and ten shillings for the second. A subscription had already been started for raising a balloon, and persons appointed to receive subscriptions in various sections of the city.²

In order to stimulate the public curiosity and thus aid the work of raising subscriptions a letter was published from Benjamin Franklin, stating that he had seen in France the balloon in which Prof. Charles and the Robert brothers had ascended. Carnes failed to make his appearance on the Fourth of July, but on the 17th he attempted the ascent, not from the field as had been announced, but from the prison-yard. Benjamin S. Coxe was associated with him in the enterprise. The balloon or aerostat was of silk, thirty-five feet in diameter, and was inflated with heated air, the furnace weighing one hundred and fifty pounds. Carnes attempted the ascent from the prison-yard, but when the aerostat had reached a height of ten or twelve feet it struck against the wall which inclosed the yard and he was thrown out. The balloon, thus lightened, shot up with great rapidity. Thousands of persons had gathered in Potter's Field, now Washington Square, and on the appearance of the balloon floating above them at a great height a shout went up from the multitude at the novel spectacle. It soon became evident that Carnes had made a most fortunate escape, for when the balloon had traveled southward until it seemed to the spectators no larger than a barrel it was seen to be in a blaze, having caught fire from the furnace, and in a few seconds was consumed. As the great ma-

² The best evidence of the wide-spread interest taken in the project is found in the following list of persons who signified their willingness to receive the subscriptions:

In Vine Street—Jonathan B. Smith, Jacob L. Howell. *Race Street*—Rev. Casper Welberg, Melchior Steiner, Peter Thompson. *Arch Street*—Bornod & Galliard, Charles Cist, Matthew Clarkson, Daniel Benezet, Jr., James Oellers, Isaac Wharton, Miller & Abercrombie. *Front Street*—Francis Johnston, John Vaughan, Ebenezer Hazard, George Miffin, Joseph Harrison, James Irvine, Benjamin Nones, Haym Solomon, Dr. William Smith, Col. John Bayard, Joseph Palmer. *Fourth Street*—Professors of the University, viz.: Rev. James Davidson, Rev. Robert Davidson, Rev. John Chr. Kuntze, Archibald Gamble. *Cherry Alley*—George Nicola, Joseph Cauffman. *Market Street*—Rev. Henry Helmuth, Dr. Dunlap, Henry Lund, David G. Claypole, Edward Pote, Hall & Sellers, Jonas Phillips, Robert Aitken, Eleazar Oswald. *Chestnut Street*—John Chaloner, William Webb, Roger Flahaven. *Walnut Street*—Peter Le Maigre, Joseph Bullock. *Spruce Street*—John Young, Abraham Shoemaker, Dr. Robert Harris, Dr. John Morgan. *Fifth Street*—John O'Conner. *Southwork*—Hon. Samuel Wharton, Rev. George Duffield, Dr. Benjamin Duffield, Thomas Casdorp, Joseph Blewer, Joshua Humphreys, Richard Tittermary, William Robinson, Jr. *Pine Street*—Rev. Robert Blackwell, Dr. Gerardus Clarkson, John Phillips. *Lombard Street*—Charles W. Peale, Capt. Angus. *Penn Street*—John Swanwick, Robert Bridges. *Water Street*—Woodrop & J. Sims. *Second Street*—John Wharton, Dr. Hutchinson, Vardon & Geisso, Miers Fisher, Dr. Rush, Dr. Phile, Wagner & Habacker, John Morris. *Third Street*—Dr. Robert Magaw, Benjamin Wynkoop, Samuel Caldwell, Andrew Doz, John Wilcocks, John Clifford, John Miller, Dr. John McDowell. *North-ern Liberties*—William Masters, William Coats, Benjamin Eyre.

¹ At the celebration in the following year, 1785, which was held at Beveridge's country-seat on the Schuylkill, "the compliments of Gen. Washington for the respects paid him in the previous year being communicated by the Secretary produced thirteen cheers which came from the heart." One of the features of the celebration was the raising of a new flag with a painting of St. Tammany upon it.

jority of the spectators supposed the aeronaut to be still in the balloon, not having heard of the accident in the jail-yard, they went home under the impression that they had witnessed a fearful catastrophe, and it was not until the following day that the truth became generally known.¹ Notwithstanding this disaster the projectors of the subscription balloon persevered in their efforts and issued an appeal to the citizens of Philadelphia asking for funds, in which it was stated that the machine they proposed to construct would be "every way much larger and more capable of succeeding than that from Maryland." Another interesting event of the season was the arrival of Gen. Lafayette, on the 9th of August, from New York. He was met at some distance from the town by the City Troop, together with a number of militia officers and citizens, and escorted to the London Coffee-House, amid discharges of cannon, ringing of bells, etc. On the following day he was waited on by the commissioned officers of the Pennsylvania Line, headed by Gens. Wayne, St. Clair, and Irvine, and on the day after an address was delivered to him by the President of the State, John Dickinson, the Supreme Executive Council, and the Legislature.

An incident of a decidedly romantic character which occurred in Philadelphia this year led to considerable diplomatic negotiation. Charles Julian De Longchamps, who had been an officer in the French cavalry service, came to Philadelphia and fell in love with a young lady, whom he married. Her guardians, who were strict members of the Society

of Friends, disapproved the match, and various means were resorted to in order to annoy the Frenchman, among them the publication in the newspapers of offensive references, disparaging his titles, and insinuating that he was of ignoble birth. In order to repel these charges he determined to have his title authenticated, and for that purpose took his documents to M. de Marbois, secretary of the French Legation, whom he requested to look over them, and if he found them genuine to certify to the fact. De Marbois declined to do so, whereupon De Longchamps left the hotel in a passion, after notifying the colonel that he would "dishonor" him. Subsequently they met in the street, and De Longchamps struck

De Marbois with a cane. A scuffle ensued, and De Longchamps was afterwards arrested by order of Congress, to which body M. de Marbois complained. De Longchamps escaped from custody, and as it was thought that the French government might regard his escape as the result of inexcusable negligence towards an ally, a reward was offered for his capture. He was soon taken and placed in close confinement. The French consul demanded possession of his person as that of a French subject, but it was decided that he could not legally be given up, and must be punished in the country where the assault was committed. Having been convicted of assault and battery, he was reprimanded by Chief Justice McKean, and sentenced to two years' imprisonment from the date of his original com-

St. Clair

mitment, to pay a fine of one hundred French crowns, and to give security to keep the peace for seven years in the sum of two thousand pounds.

The record of the year 1785 at Philadelphia is mainly of that uneventful character which usually accompanies the peaceful development of industries and trade. The improvement of the navigation of the Delaware was a matter of peculiar interest to the

¹ On the day Carnes attempted his perilous ascent, John Downie and John Martin were executed at Centre Square for street robbery. Such was the interest taken in the balloon ascension, however, that the execution attracted but little attention. During this year also the following executions took place: James Burke, an Irish servant-boy, for the murder, on the 4th of September, of his employer, Timothy McAuliffe, on Water Street below Market, hanged October 16th, at Centre Square; and at the same time and place James Crowder, convicted of burglary, and Peter Brown and George Williams, *alias* One-Armed Tom Robinson, who were convicted of highway robbery and attempt to murder Capt. Tolbert. Under the gallows One-Armed Tom Robinson, *alias* Williams, confessed that he had ravished and murdered a woman near the Gray's Ferry road some seventeen years before, for which offense an innocent man was, upon the circumstantial evidence of having

the bloody knife in his pocket, convicted and executed. While the man who afterwards suffered was drunk, Robinson had slipped the knife in his pocket, and the latter, when arrested, was unable to account for its possession. Robinson declared that he had attended the execution and saw the man suffer for a crime which he was innocent, and that at the same time he picked the pocket of a drover.

merchants at this time, and in January a memorial was presented to the Council in favor of erecting piers in the Delaware for the protection of vessels during storms. Marcus Hook was chosen as the proper location for the piers, and a contract was entered into with Thomas Davis to build four of them, but it was afterwards revoked and given to others. A small lot was also purchased at Cape May "with the view of erecting a beacon thereon;" but in 1787, the original intention not having been carried out, the Council decided that the site at Cape May was unsuitable, owing to the expense involved, and decided that it would be better to place the beacon on Crow's Shoal. The capture of an American vessel by a Barbary corsair caused a sensation among the merchants of Philadelphia, who in February requested the Executive Council to represent to Congress "the necessity of endeavoring to conciliate the States of Barbary to us by presents, as it was practiced by most of the commercial nations in Europe, or by treaties entered into with them." Congress appropriated eighty thousand dollars for the purpose of making the customary presents to the emperor of Morocco, but before they reached their destination the dey of Algiers had declared war against the United States.

The question of providing for the public debt came up again in the early part of 1785, and gave rise to an animated controversy. During the previous year it had been proposed to establish a loan office and pass a funding law. A bill was framed providing for the issue of fifty thousand pounds in paper money, which was to be a legal tender under penalty of barring from the prosecution of any suit for debt of those who refused to take it. After having been considered and generally approved, it was ordered to be transcribed and printed for the further consideration of the Assembly. But in the mean time, the landed interest having realized the burdens upon real estate which the law would impose, a strong opposition to the proposed policy began to be exhibited. While the people of the Northern Liberties in town-meeting signified their approval of the funding bill, delegates from other townships of the county of Philadelphia who met at Germantown on the 14th of February, with Capt. Lang as chairman, and Edward Fox as secretary, decided that "the imposition of a new tax on the virtuous citizens of this State, who have already paid their proportions of former taxes, while a number of individuals and almost entire counties have withheld their part of the public dues, is unjust and oppressive until suitable exertions are made to collect the same, and that the former deficiency ought to be strictly collected, nor ought defaulters to profit by default." It was also resolved that the supplementary bill for opening the land office was unjust; that the lands were placed at rates which were too cheap; that the funding bill was unjust and oppressive; that it bore too hard on landed property, instead of taxing the luxuries of life; that the abrogation of a former

law ordering interest on depreciated certificates to be paid in paper money was a breach of public faith. It was declared to be the duty of Congress to provide the means of redeeming the paper issued by the State in accordance with Congressional requisitions, and that an interference by the State was prematurely loading the government in the dark with a burden from which it could not extricate itself in open day. Joseph Ferree, Dr. Logan, Col. Solomon Bush, Dr. Enoch Edwards, and William Robinson, Jr., were appointed a committee to revise the proceedings of the convention and present them to the Assembly.

Among the resolutions was one declaring that the "imposition of a long—nay, a perpetual—tax in a government before all parties are reconciled to each other, and therefore binding on a large number of the inhabitants before they have a chance of reconciliation, is unjust, cruel, unconstitutional, and impolitic." The language of this resolution gave so much offense that another meeting was held on the 19th of February, at the house of Leonard Nice, with John Nice in the chair. At this meeting it was decided that all the proceedings of the Germantown convention should be adopted, except the resolution quoted, which was ordered to be erased on the ground that it was "an artful insinuation to convey ideas of a wish for a repeal of the test laws." At a meeting of merchants and traders, held at the City Tavern on the 23d of February, the sentiment was almost unanimous in opposition to the emission of paper money, not one-fiftieth of those present voting in favor of it. The chairman, John Maxwell Nesbitt, refused to entertain a motion in relation to the funding law as being unconnected with trade. After Mr. Nesbitt had vacated the chair, Col. Francis Gurney was chosen president of the meeting, and a petition concerning the funding law was authorized. Notwithstanding the popular opposition to the measure, however, the Assembly passed all the acts which had been originally recommended as necessary for re-establishing the public credit, and relieving the holders of State obligations. The financial distress and uncertainty felt at the time were much increased by the operations of the Bank of North America, which, during the preceding year, had pushed out its notes to a very large amount. The solvency of the bank began to be distrusted, and in order to restore the public confidence it became necessary to curtail its loans. As the demands for the redemption of its notes in specie became more urgent, the bank was forced to press its debtors for payment. Distress and ruin resulted to many, and so strong became the popular feeling against the bank that numerous petitions were presented to the Legislature demanding its abolition. On the 28th of March the committee, to whom the matter was referred, reported to the House a bill to abolish the bank and to repeal the act making the counterfeiting of notes a criminal offense. The suffering among the people at this time in consequence of the bank's operations was

very severe, and the laws authorizing imprisonment for debt were appealed to in many cases to the total ruin of families."¹ The defenders of the bank insisted that the distress had been produced by the groundless want of confidence in the institution, which had forced it to call in its loans, and that for this state of affairs the management was in no wise to blame. On the 10th of September, however, the Assembly passed the acts of repeal which annulled the State charter of April 1, 1782, in less than four years after it had been granted. But the officers of the bank, claiming the right to continue by virtue of the charter granted by Congress May 26, 1780, refused to wind up its affairs, and continued the transaction of business as before.

The foreign commerce of Philadelphia, as well as of other ports of the Union, was seriously hampered by the want of some common agreement between the States as to commercial regulations with foreign countries. Each of the thirteen States attempted to regulate its own commerce without reference to that of others, producing confusion and many annoyances to all concerned. At a meeting of Philadelphia merchants, held at the State-House on the 20th of June to hear the report of a committee "to suggest means of relief for the present state of trade and manufactures," it was declared necessary that Congress should have full power over the commerce of the United States, and that the withholding of such power would prove injurious. It was also urged that manufactures interfering with those of the United States should be discouraged, some by absolute prohibiting, others by imposts, and that the Legislature should use the best means of extending the inland navigation of the State, and of repairing and improving the public roads, in order to facilitate and increase the internal trade of the State, and to promote the easy and commodious transport of the country produce to and from the city. Jared Ingersoll, William Turnbull, Francis Gurney, William Jackson, Benjamin G. Eyre, Francis Wade, John Barker, John Barry, Jacob Morgan, Jr., Robert Smith, John M. Nesbitt, and John McCulloh were appointed a committee,—which was increased by adding to it seven mechanics, viz., James Pearson, Joseph Marsh, Anthony Cuthbert, Joseph Roney, Thomas Leiper, Thomas Proctor, and James Lang,—which was directed to prosecute the subject before Congress and the Legislature.

Under the stimulating influence of peace, manufactures had developed rapidly in Philadelphia, and both the Legislature and the public at large were appealed to for protection and encouragement. White lead, glue, pianos, boxes for wheel carriages, fire-engines, rappee snuff, horn imitations of window-glass, yellow paint, soda for manufacturing flint-glass, corduroys and fine jeans, steel made from bar-iron "as good as in England," calico prints, rum distilled

from molasses, and refined sugars, were among the products of Philadelphia industry and skill. A strong feeling had already developed in favor of the protection of home manufactures,² and although the merchants favored free trade, they signified to the Assembly their readiness to submit to any measure which was considered necessary for the public good. A law was finally enacted which was described as being intended "to encourage and protect the manufactures of the State by laying additional duties on the importation of certain manufactures that interfere with them."³

The printing interest was satisfied by the passage of a law granting copyrights to authors, which was to take effect when the other States had passed a similar law. The passage of a copyright law by Congress, however, obviated the necessity for action on the part of the other States.

The controversy over the test laws was renewed before the Assembly this year by Gen. Anthony Wayne, who introduced a resolution directing the appointment of a committee to consider the subject. His motion was agreed to, and the committee thus appointed brought in a report declaring that "the Government had an inherent and unquestionable right to exact a test of allegiance from all persons in the State," and that "it would be impolitic and dangerous to admit persons who had been inimical to the sovereignty and independence of the State to have a common participation in the government so soon after the war." This report was adopted by a vote of forty-two yeas to fifteen nays. When the new Assembly met in November, however, the agitation was renewed and the non-jurors again petitioned for the repeal of the obnoxious laws.⁴

² "Col. Lewis Nicola," says Thompson Westcott, "desiring to set up a line of stages to Reading, declared that he could not do so if, when the enterprise became remunerative, he would be subject to opposition, and he therefore asked a monopoly of the stage-line to that place. Even literary laborers, backed by the printers of books, desired encouragement, and asked for special protection. The tanners and curriers of the city protested by memorial against the exportation of bark to foreign countries. The rope-makers desired the imposition of special duties upon foreign cordage. The sugar-refiners asked for the placing of duties on foreign refined sugars, so that they could contend against the bounty of twenty-six shillings per hundredweight, paid on refined sugars by the British government. The cordwainers made strong complaints against the importation of ready-made boots and shoes, and they held a meeting, whereat it was resolved that they would not mend such articles, nor work for anybody that wore them."

³ In this law duties were laid on clocks, playing-cards, scythes, refined sugar, beer, ale, porter, malted barley, salt and dried fish, beef, pork, soap, chocolate, candles, glue, starch, hulled barley, dried peas, manufactured tobacco, snuff, lampblack, cotton, wool, cards, manufactured leather, pasteboard, men's and women's leather shoes, silk shoes, stuff shoes, boots, saddles, wrought gold, silver, pewter, tin and lead vessels, copper, brass, bell-metal, cast-iron, steel, bar and slit iron, nails, rods, sheet-iron, ready-made clothing, castor and wool hats, beaver hats, blank-books, cordage, ropes, marble and stoneware, earthenware, books, combs, and a large number of other articles. A tax was laid on coaches and four-wheel carriages, chaises, chairs, kitterees, and curricles.

⁴ "So severely did this law operate upon certain districts," says Thompson Westcott, "that the number of freemen who were entitled to all the privileges of citizenship was not sufficient, in some sections, to administer the local government. The freeholders of Byberry, in November, sent a

¹ Thompson Westcott.

In the new Executive Council, of which Benjamin Franklin had been chosen president on his return from France in the previous autumn,¹ the appeals of the non-jurors received a more favorable hearing; and on the 11th of November the Council voted in favor of revising the test laws. In the Assembly the subject was again referred to a committee, which, being equally divided on the question, was discharged and a new one appointed. The latter committee having reported favorably on the measure, was ordered to bring in a bill.

A movement for the revision of the penal laws and a reformation of the system of punishments, so that the latter might be made less sanguinary and less disproportionate to the offenses committed, headed by Chief Justice McKean, Justice Bryan, and the grand jury of Philadelphia, resulted in the presentation of a memorial to the General Assembly, in September, suggesting that if robberies, burglaries, and most other nefarious violations of law—murder and treason only excepted—were punished by continual hard labor, disgracefully imposed on the persons convicted of such offenses, not only in the manner pointed out by the State Convention “for the benefit of the public and the reparation of injuries to private persons, but in the streets of cities and towns, and upon the highways of the open country, and in other public work, the method thus employed would reform the culprits, preserve life, and lessen the number of offenders.” The grand jury, in a separate memorial, represented the evil effects of the “constant influx of vagabonds from neighboring States,” and suggested that “the punishment of laboring hard, chained to barrows,” substituted in New York instead of whipping, had probably driven many of them to Philadelphia. “This punishment,” the grand jury added, “they dread more than a thousand stripes.” The grand jury also complained of the setting-up of billiard-tables and shuffle-boards, to the injury of the morals of citizens; the great increase of tippling-houses, dirty streets, the sawing of wood on the footways, and other evils caused by the want of a city corporation. The members of the Society of Friends sustained this memorial by complaints against intemperance, licentious swearing, dram-shops, and other evils.

petition to the Assembly, stating that there were only *three* freemen among all the freeholders in the township. They had not enough to fill the offices, in consequence of which, assessors and collectors, etc., had been sent to them from other townships, some of whom were unknown to them and rapacious, having seized their property and distressed them much. At that time both the collectors for Byberry were residents of another township.”

¹ Dr. Franklin arrived from France in September, and was received by the ringing of bells and other testimonials of joy. Addresses of congratulation were made to him by the Assembly of the State, by the officers of the University and the American Philosophical Society, by the justices of the peace of the city and county, represented by Plunkett Fleeson, by the officers of the militia, through Maj.-Gen. James Irvine, and by the Constitutional Society, of which William Adcock was president. The latter association nominated him as councillor, and he was elected in October without opposition. On the organization of the Supreme Executive Council he was chosen president of the State.

The inconveniences resulting from the city's being without a charter were strongly urged by the grand jury, and in November, on motion of Gen. Wayne, a committee was appointed to prepare a bill restoring the old charter, but nothing further was done at this time.

Among the local improvements urged upon the Assembly was the passage of a law regulating streets and numbering the houses, which was advocated in a memorial presented by John Macpherson in October. Macpherson stated that he had completed a city directory, which was then in press, but which would be of comparatively little use unless the streets were regulated and the houses numbered. He prayed, therefore, that a law might be passed authorizing the numbering of houses, and that he might be appointed to perform that duty. The petition was laid on the table. Another directory was in preparation at the time under the direction of Francis White, a broker, and both were published before the close of the year. White describes the residences of citizens by giving the streets in which they lived and generally the cross streets between which their homes were located, but Macpherson, wishing to be more exact, adopted a system of numbering of his own.²

White's Directory gives the profession or business of each person, but Macpherson's only those of the subscribers to his book. The former supplies the names of about thirty-five hundred and sixty-nine housekeepers, while Macpherson gives a list of about six thousand houses as being occupied. In the appendix to White's Directory the locations of the State offices in the city are given. David Rittenhouse, treasurer, had his office at the northwest corner of Seventh and Arch Streets. The building is still standing. The office of the attorney-general was in Third Street, between Market and Arch; the custom-house was at the corner of Black Horse Alley and Front Street; the register's office was at the corner of Front and Vine Streets; the sheriff's office was in Front Street, between Vine and Callowhill Streets; the post-office was at the corner of Front and Chestnut Streets; and the health-office was in Water Street, below Spruce. From the same source it appears that

² His system was peculiar. Instead of placing the even numbers upon one side of the street, and the odd numbers upon the other side, he started with No. 1 at a designated point, continuing the numbers in regular succession to a certain extent, which was about what he conceived was the built-up portion limit of the city. He then crossed to the other side of the street and continued on to the corner opposite the starting-point. For instance, No. 1 was on the south side of Chestnut Street, near the Delaware. The houses along the south side of Chestnut Street were numbered Nos. 1, 2, 3, and so on, in regular numerical order, up, probably, to Fifth or Sixth Street, then the western limits of the city. Mr. Macpherson then crossed over to the north side and numbered eastward, making his highest number immediately opposite No. 1. This plan of numbering was objectionable, and fortunately no subsequent attempt was made to carry out the plan. No provision was made for numbers of the houses which might be erected beyond the limits of the buildings then existing. Macpherson's Directory does not state which were the corners of the streets, nor whether the houses were on the north, south, east, or west side.

the physicians, surgeons, and dentists in the city numbered forty-two. Of all these medical men not one was located so far west as Sixth Street. The counselors-at-law only numbered thirty-four, and the ministers of the gospel were but sixteen in number. There were but two insurance companies.¹

Dock Ward was divided in February by an act of the Assembly, and a new ward, known as New Market Ward, was created, extending from the Delaware to the Schuylkill and from the south side of Spruce Street to the north side of Cedar. A proposition to divide Mulberry Ward, creating another new ward to be known as Franklin, was rejected.

The only incident of the year recalling the stirring scenes of the war was the sale in August, at the Coffee-House, of the famous Continental frigate "Alliance," which performed so many brilliant exploits under the command of Paul Jones and the no less gallant Barry. She was purchased with all her tackle and apparel for nine thousand seven hundred and fifty pounds, Pennsylvania currency, by Col. Jehu Eyre, who sold her to Robert Morris. The latter repaired her, loaded her with tobacco at Norfolk, and sent her to Bordeaux, France. In the spring of 1787 she returned to Philadelphia, and in June sailed for Canton, being, it is said, the second vessel from Philadelphia to China, the first being the "Canton," Capt. Thomas Truxton. Under Capt. Reed the "Alliance" took the outside route around New Holland, or Australia, discovering several new islands. She returned to Philadelphia Sept. 17, 1788, was loaded with flour, and sailed in the spring of 1789 for Cadiz, Spain. She returned the same year, and in the spring of 1790 was sold and broken up. Her remains were run upon Petty's Island (now called Treaty Island). Truxton's voyage to China was made in the winter of 1786, and his vessel was the third that left the United States for

that destination. On the 2d of January Congress granted a "sea-letter" to Truxton, addressed in general terms to the various potentates whose domains he might wish to enter. The "Canton" returned to Philadelphia in May, 1787, after having made a successful trip.

The controversy over the operations of the Bank of North America was renewed during the winter of 1786. The stockholders, having failed to induce the Assembly to reconsider the act annulling the charter, applied for a new charter to the State of Delaware, which granted one. The efforts to obtain a charter from the State of Pennsylvania also were renewed, and a committee of the Assembly reported in favor of restoring its former privileges to the bank. The report, however, was rejected by a vote of twenty-seven to forty-one. Robert Morris then proposed the appointment of a committee to prepare a bill suspending the operations of the acts repealing the charter for a certain number of years, but his motion was lost by a vote of twenty-eight to thirty-six. At the session of the Assembly in October, new petitions for a charter were presented, and the matter was referred to a special committee, which reported a bill chartering the bank for fourteen years, with a capital of two million dollars. A clause was inserted making embezzlement by the officers punishable with death, but at the following session in March, the death penalty was stricken out, and the offense made punishable as grand larceny.

The bill as amended was finally passed on the 17th of March, 1787, by a vote of thirty-five to thirty-one.

Another effort was also made this year to ameliorate the test laws. In March an act was brought before the Assembly for securing to the commonwealth the fidelity and allegiance of the subjects thereof, and providing for the admission of certain persons to the rights and privileges of citizenship. One of the clauses of this act provided that a person who had not yet taken the oath of allegiance might do so before any justice of the county in which he resided. The terms of the oath required that the affiant should renounce fidelity to King George III., of Great Britain, and bear true allegiance to the State of Pennsylvania; furthermore, that the affiant would not thereafter do anything injurious to freedom; and that he had not, since the independence of the United States, voluntarily injured, abetted, aided, or assisted the king of Great Britain, his generals, fleets, or armies, while employed against the United States. A motion made by Robert Morris to strike out the words describing the oath as one of "abjuration" was lost, as was also another motion made by Morris to strike out the declaration that the person taking the oath had never assisted the king, or his generals, fleets, and armies. On the 5th of March the bill was passed by a vote of forty-five to twenty-three.

In addition to the usual popular celebrations—St. Tammany's Day and the Fourth of July—the birth-

¹ From the following list of names of streets, alleys, etc., as given in Macpherson's Directory, it will be seen that there have been marked changes in the street nomenclature of Philadelphia:

Long Lane, Peters' Alley, Fleet Street, Shindle's Alley, William's Alley, East George Street, Miss Moore's Alley, Ground Street, Charlotte Street, Tallman's Alley, Walshe's Court, Bailey's Alley, Razure's Alley, Palmer's Row, Clymer's Alley, Whalebone Alley, Harper's Alley, Tapper's Alley, Fourteen Chimneys, Knowles' Court, Hart's Alley, Emlen's Alley, South Church Alley, River Side, Pancake Alley, Syke's Alley, Cobler's Alley, Society Alley, Moll Fuller's Alley, Wharton's Alley, Armit's Alley, Coxe's Alley, Goforth Alley, Bowen's Alley, Ashe's Alley, Discharge Alley, Rudolph's Alley, Sewel's Alley, Hiltzheimer's Alley, Irwin's Alley, School-house Alley, Harris Alley, Leeche's Alley, Burchill's Alley, Hill's Alley, Story Street, Neeman's Alley, Kopley's Alley, Powell's Alley, Holmes' Alley, Stanton Court, Barrett's Alley, Elder Street, De Haven's Alley, Millis Alley, Maiden's Row, Mallison's Alley, Brinhurst's Alley, Cauffman's Alley.

"Long Lane," according to Thompson Westcott, "is now Buttonwood Street; Goforth Alley has become Exchange Street; Moll Fuller's Alley is now Cox's Alley; Rudolph's Alley is now Decatur Street; Ground Street is Crown Street; Society Alley has since become a portion of Penn Street; Story Street was that part of the present New Street which is between Second and Third Streets; Whalebone Alley is a portion of Hudson's Alley, south of Chestnut Street. The 'Fourteen Chimneys' was a locality well known in its time, between Fifth and Sixth Streets, opposite Franklin Square. The same houses are now on the east side of Sassafras Alley, above Race Street."

days of Washington and Franklin were this year made the occasion of formal demonstrations. Franklin's birthday was observed by the printers of the city as that of "the defender of the liberty of the press" by a dinner at the Bunch of Grapes Tavern, and Washington's birthday was celebrated, by a dinner also, by "the Adopted Sons of Pennsylvania," an association mainly composed of Irishmen. The Sons of St. Tammany, on the 11th of April, received at their wigwam on the Schuylkill Cornplanter, *alias* Captain O'Beel, a sachem of the Seneca Indians, and five other chiefs, who had arrived in Philadelphia on their way to New York in order to lay certain matters before Congress. About three o'clock in the afternoon the Tammany sachems waited on Cornplanter and his companions at the Indian Queen Tavern, and attended the chiefs separately to a rendezvous near the wigwam. Three others of the Indians were escorted by a company of militia. On the arrival of the sachems cannon were fired and flags hoisted. Cornplanter then made a speech, in which he expressed himself in strong terms of amity and friendship for the whites; and after a salute of thirteen guns and three cheers from the company, which numbered about two thousand persons, a circle was formed about the "council fire" and the pipe of peace was smoked. A libation of wine was poured out in honor of St. Tammany, after which Cornplanter and the other Indians performed a war-dance, followed by a peace-dance, in which the St. Tammany sachems and militia officers participated. One of the sachems then replied to Cornplanter's speech in fitting terms, a salute was fired, the colors struck, and the Indians were escorted back to town. On the 1st of May St. Tammany's day was celebrated after the usual forms at the wigwam. Charles Biddle, vice-president of the State, was elected chief sachem and hailed as Tammany.¹ A portrait of Cornplanter was presented by Miss Eliza Phile to the sachem Iontonque (Jonathan Bayard Smith), and an ode was recited by Brother Pichard. On the way back to the city the society stopped at the residence of Franklin to pay its respects to the venerable statesman.

The bitter feeling between Whig and Tory was rekindled this year by a difficulty among the members of the Scots' Presbyterian Church, which, on account of the principles involved, attracted general attention. In 1750, on the prayer of the Rev. Mr. Craighead, the Synod of Edinburgh took the Associate Presbytery of Pennsylvania under its jurisdiction. In 1764 a number of persons in Philadelphia built a small frame building for purposes of public worship, which, in 1786, was occupied by the Rev. Mr. Telfer and his

congregation. The Scots' Presbyterian Church, on Spruce Street, above Third, was built previously. Some of the members of these congregations disapproved of the subjection to which they were now liable to a foreign jurisdiction, and they sought from the Legislature a law annulling that portion of the trust upon which the church property was held which made the congregations subordinate to the Synod of Edinburgh. The Rev. Mr. Marshall and a number of the Scots' congregation resisted, and the matter was warmly discussed before the Assembly. A bill was introduced entitled, "An act to discharge and annul the declaration of trust relating to the Scots' Presbyterian Church in the city of Philadelphia as far as said instrument incumbers the same church with subjection to a foreign jurisdiction." The petitions on both sides were numerous, and discussion on the subject was general in the community. The Rev. Mr. Marshall and the resisters were men of influence, and their opposition to the measure delayed its success for several months. Finally, in September, the act was passed by forty-two yeas to fourteen nays, and thus the bond of union between the church in Philadelphia and Scotland was severed. The law was received with much discontent by the Rev. Mr. Marshall and his party, and at the meeting of the new Assembly in November they petitioned unsuccessfully for a repeal of the act and a renewal of their subjection to the mother church.

The military spirit developed by the war was also still active, and in August the entire force of the city, consisting of five light infantry companies under Capts. Semple, Sproat, Hagner, and Oswald, two companies of artillery, commanded by Capts. Connelly and Leonard, and the City Troop, Capt. Miles, were exercised on the commons by Baron Steuben and Gen. Du Plessis.²

² One of these companies (Oswald's) volunteered to march to the frontier to dispossess the British of the posts and garrisons held by them. Their spirited offer was made in the following form:

"To the Honorable the Supreme Executive Council of Pennsylvania: Honored Sirs,—Congress, we are well assured, has lately received an official declaration from the Court of London 'that they will not relinquish the posts and garrisons on our frontiers.' This additional violation of the solemn and sacred treaty of peace on the part of Great Britain, we take the liberty to observe, is generally viewed and considered as a declaration of war, as it manifests a disposition for hostility and reprisal. But as the situation of the public finances does not admit the raising of a regular army, Congress, we understand, have it in contemplation to call on the several States for a portion of militia to dispossess the British troops of those fortresses. Under this idea several volunteers from New Jersey and New York have already tendered their services to Congress; and, as members of the light infantry company belonging to the Second Battalion of Pennsylvania Militia, who wish not to be excelled or outdone in point of zeal and activity in promoting the interest and welfare of our country at large, we take this early opportunity to entreat that your honorable body will be pleased to consider us as the first on the list of volunteers from Pennsylvania whenever Congress shall think proper to adopt so necessary a measure.

"With every sentiment of respect, we remain, honored sir, your most obedient and very humble servants,
"Eleazar Oswald, captain; Samuel Hanse, lieutenant; Peter Wiltberger, ensign; Robert Parry, Robert Crosier, Jacob Mayer, Jr., Thomas Reynold, William Caurre, William Edwards, John N. Hagenau,

¹ The other sachems were Jonathan Bayard Smith (Iontonque), Alexander Boyd (Tataboucksey), Thomas Nevill (Hooowamente), Frederick Phile (Pechemelind), Daniel Heister (Towarraho), William Coates (Deunquatt), Joseph Dean (Shuetongo), William Thorpe (Simougher), Emanuel Eyre (Tediescung), Zachariah Endress (Shanboukin), Thomas Proctor, (Kayashuta), and Elias Boys (Hyngapushes).

In November the militia were exercised by Col. Mentges, inspector-general. At this time the troop of horse was commanded by Lieut. Dunlap, the artillery by Capts. Spencer and Lang, and the infantry by Capts. Semple, Oswald, Hagner, Sproat, Bower, and Robinson.¹

The organization of the "Society of the Lately Adopted Sons of Pennsylvania" led to an acrimonious controversy during this year, which resulted finally in a duel between the two leading journalists of Philadelphia,—Matthew Carey and Eleazar Oswald. The latter denounced the society in unmeasured terms, declaring that it was viewed with suspicion by citizens "who could not but be jealous of their birthrights on this occasion, and who look with abhorrence on such new-fangled schemes which can only hatch the cockatrice eggs of sedition." "Such Arabs and vipers of the organizations of society, such baboons of ingratitude and objects of Pennsylvania detestation, should be treated by every American with the infamy which they deserve." Party feeling ran high in Pennsylvania about this time, the opposing factions being known as Constitutionalists and Republicans. The former supported the Constitution then existing, which conferred the legislative powers upon a single

body—the House of Assembly—and lodged the executive authority in a president and Council. The Republicans, on the other hand, wished to amend the Constitution so as to divide the legislative power between a Senate and House of Representatives. "The Lately Adopted Sons of Pennsylvania" adhered to the views of the Constitutionalist party, and as they numbered among them some persons of influence and writers of ability and zeal, they naturally became obnoxious to the Republican element. Oswald, as we have seen, was especially fierce in his denunciation of the society, and Carey, having replied with publications of a personal nature, was challenged by Oswald. The duel was fought on the 18th of January, 1786, opposite the city, in New Jersey. Oswald's second was Capt. Rice, Carey's was M. Marmie, a French merchant. Carey was shot through the thigh and partially crippled for life.

The growth of the city rendered a division of Mulberry Ward necessary in 1786, and an act was accordingly passed on the 8th of April making Sassafras Street the division line. The upper portion, extending from Vine Street and from the Delaware to the Schuylkill, was called North Mulberry Ward, and the lower part, between Mulberry and Sassafras, of the same width, was designated as South Mulberry Ward. Considerable opposition to the proposed extension of the markets on High Street was developed, but the Assembly nevertheless passed an act on the 23d of March empowering the wardens to extend the market-house from Third to Fourth Street, "and to extend it from time to time, as occasion required, from street to street, westward." On the 8th of April the Assembly passed an act directing the sale of State property situated in the city, and authorizing the Supreme Executive Council to reserve several lots for a burial-ground for strangers. During this year's sessions of the Assembly petitions for rechartering the city were presented; but a bill for the incorporation, laid before the House in March, was taken up on the 22d of September, and lost on the vote upon the first section. Among the other measures before the Assembly, the most important was an act to amend the penal laws, which abolished the death-penalty in a number of cases, and which was passed by the House. The act declared that capital punishment for burglary, robbery, sodomy, etc., should no longer be inflicted, and substituted imprisonment for a period not longer than ten years. It also provided that convicts should be employed in public work, such as repairing the streets, etc., and in pursuance of this law the year 1787 was ushered in with the spectacle, a novel one in Philadelphia, of prisoners at work on the public thoroughfares. In January, Chief Justice McKean addressed a communication to the street commissioners in which he called their attention to the provisions of the act requiring them to employ the convicts in this manner. The commissioners deeming themselves not competent at that time to fix the mode or price

"PHILADELPHIA, Aug. 1, 1786."

¹ "After the Revolution," says Watson, "the most famous company was the 'Bucktail Company,' which was commanded originally by Capt. Sproat, who was viewed at the time by the ladies and others who spoke of him as a model, in his day, of smartness and military elegance on parade. The uniform consisted of a short dark-blue cloth coat, lapped with red, and turned up with red at the skirts, white dimity vest and breeches (tights), white cotton stockings, black knee-bands, short gaiters, sharp-pointed, long-quartered shoes, and buckles. The captain and every member of the company wore a long cue, or club of powdered hair, pendant behind. The head was surmounted by a felt hat or cap, the front presenting a flat surface, being turned up smartly, in an oval shape, above the crown, and ornamented by way of plume or pompon with a tail (bucktail) separated from the dried, undressed hide of the forest buck or deer. The other flank company was of artillery, commanded by Capt. Jeremiah Fisher. He and some of his company had served during the war, having fought in famous battles under the gallant Col. Proctor. The artillery uniform consisted of a long dark-blue coat, lapelled with gilt buttons down the front, and turned up with red at the skirts, and reaching almost to the heels, yellow vest and breeches, stiffened wide ruffles, white cotton stockings, and black leggings, buttoned down the side, sharp-toed shoes, and large buckles almost covering the toes. In conformity with the universal fashion at the time, they all wore long hair, powdered, clubbed or cued, and dangling below the shoulder-blade. They also wore the large 'artillery cocked hat,' square to the front, in marching, with a long black feather waving aloft at every step. Martial music in those days was wholly confined to *drum and fife*,—a band, so called, was then wholly unknown. The whole war of the Revolution was led on by

'The spirit-stirring fife
And soul-inspiring drum.'

The cavalry only had the use of the horn or bugle. Such a bugle, used by Gideon, of Philadelphia, as trumpeter to Washington's life-guard, is still preserved in Philadelphia."

of compensation for the work, decided to employ the convicts for one month, at the expiration of which, it was thought, some definite conclusion might be reached as to the rate of wages and the propriety of longer employing them. The experiment proved successful, and it was decided that the price of their labor should be 1s. 9d. per day. Thirty men were employed. The prisoners, who were popularly known as "wheelbarrow-men," were dressed in a peculiar style, and were constantly guarded by keepers while at work. Individuals who were regarded as dangerous were required to labor with a chain ten or twelve feet long and a heavy iron ball attached to the ankle. Those who were thus weighted down were employed at sweeping and scraping, while those who were free wheeled the barrows. After they had swept or scraped a space around them as far as the ball and chain would permit, the manacled prisoners would pick up the balls and carry them to fresh spots, where they would go to work as before. The more malicious of them would often throw down the balls in such a manner as to injure passers-by. In some instances persons were severely hurt in this way. Most of the convicts were professional thieves, and adroit street robberies were frequently perpetrated by them. Besides cleaning the streets, they were employed at digging ditches, excavating cellars, grading, filling up ponds, etc.

The act of Assembly declared that the services which the convicts might be compelled to perform were repairing and cleansing the streets of the city and suburbs, making and repairing the highways of the county, digging and quarrying stone, sawing firewood, and digging, removing, and leveling earth; but the harder kinds of labor were so obnoxious to the convicts that one of them, Jacob Dryer, convicted of burglary, sooner than undergo them refused to avail himself of the privileges of the act, and declared his preference for hanging. The Supreme Executive Council pardoned him upon certain conditions, but having violated them he was sentenced to be hung. The Council, however, pardoned him a second time.¹

The sufferings of persons confined in prisons attracted the attention of benevolent Philadelphians during this year, and an organization known as "The Society for Alleviating the Miseries of Public Prisons" was formed in May, to take the place of the disbanded "Philadelphia Society for Assisting Distressed Prisoners," established in 1776. Right Rev. William White, D.D., was elected president, Henry Helmuth and Richard Wells vice-presidents, John Swanwick and John Morris secretaries, and Thomas Rogers

treasurer. The society aimed to furnish relief in money and provisions to suffering prisoners, to obtain the release of persons improperly confined, to procure legislative improvement in the penal laws, and to make complaints to the proper officers of offenses against the law in the management of the jail, especially in the sale of spirituous liquors. Important reforms in prison management were soon brought about through the efforts of the society. Spirituous liquors were prohibited, regulations were enforced securing the separation of the sexes and putting an end to immoralities which had prevailed, cleanliness in the cells was secured, arrangements were made by which prisoners were employed at useful labor, receiving a certain compensation, and the cells for refractory prisoners were elevated above ground. The society also secured the passage of an act of Assembly in 1790 providing for inspectors of the prison. Prior to this the sheriff was invested with sole authority, and many abuses were practiced with impunity by the keepers, who were responsible to him alone.

The Legislature named as inspectors a number of the members of the society. Daniel Thomas, Charles Shoemaker, Thomas Paul, James Bayland, James Sharswood, John Connelly, Alexander Henry, Robert Wharton, Joseph Snowden, Caleb Lownes, James Cooper, and Richard Wistar seem to have been the first inspectors appointed, and under their direction important reforms were introduced. Comfortable food and clothing were provided, and jail-fees, "garnish," and the sale of liquor were abolished. Prisoners who had been convicted were not allowed to associate with those who remained untried. Religious instruction was provided, and many clergymen labored under the auspices of the society. The pillory and whipping-post were abolished, and the solitary system of confinement was introduced. The Philadelphia Society, in fact, was the pioneer in America in the great work of prison reform.²

¹ Several riots occurred among the convicts owing to the enforcement of the hard-labor law. On the 19th of March, 1787, the prisoners of the Walnut Street jail attempted to execute a plan for a general escape. It was necessary to call in an armed force, which killed one of the prisoners and wounded another before the disturbance could be quelled. Another riot took place among the wheelbarrow-men in July, in the course of which one of them was seriously wounded.

² The society's efforts naturally met with a determined resistance from those who were interested in maintaining the old order of things. "To visit the prison at all in those days," says the author of a series of papers entitled "Reminiscences of the Old Walnut Street Prison," "required the exercise of a degree of moral courage not ordinarily met with; for, in addition to its grim and forbidding appearance, 'its gloomy front and portal gaping wide,' reports were rife of the desperate, abandoned, dangerous dwellers within, calculated to alarm the fears of even reflecting people. These reports were countenanced and encouraged by the keeper, who resisted the advent of the society with all the art and ingenuity he was master of. He represented to the public that the admission of these gentlemen was not only 'fraught with peril to themselves, but it would involve the risk of escape of all the criminals, and the consequent pillage and murder of all the citizens.' The sheriff, however, constrained him to admit them, and the perils proved to be an *ignis-fatuus* from the corrupt marshes of his own fears of detection and exposure. Defeated in his representations to the public, and compelled to comply, however reluctantly, with the order of the sheriff, yet bent upon preventing the introduction of sharp eyes on his misdeeds, he got up a theatrical exhibition to deter Bishop White and Dr. Rogers from speaking to the prisoners, and to give color to his idea of the danger they would incur.

"Arriving at an appointed time at the prison, these reverend gentlemen, after being urgently solicited to leave their watches and other val-

The last execution in Philadelphia under the old code took place on the 12th of May, 1787.¹ The mitigation of penalties which the new code provided was not followed at first by very encouraging results. Highway robberies were of frequent occurrence,² and the citizens were compelled at last, with the approval of the Supreme Executive Council, to organize themselves into patrols for the protection of property and persons passing through the streets at night.

Besides the Society for Alleviating the Miseries of Public Prisons, two other important associations were organized in Philadelphia during the year 1787,—“The Pennsylvania Society for the Encouragement of Manufactures and the Useful Arts,”³ and “The Society for Political Inquiries, for Mutual Improvement in Knowledge, of Government, and for the Advancement of Political Science.” The Society for Political Inquiries, etc., was composed of fifty resident members, meeting every fortnight except during the summer months for the discussion of governmental and economic questions. Benjamin Franklin was elected

ables on the outside (which they declined doing), were ushered through the two barred gates with great simulation of caution and ceremony, and placed upon the platform of the steps leading from the back door into the yard. A cannon, apparently loaded,—for a man with a lighted flintlock stood by its breech,—was pointed down the path in the faces of an array of all the motley of the establishment. This part of the drama had very nearly proved a failure. The play was likely to fail, for the army of actors did not respond. There had been no rehearsal; the prompter had his hands full elsewhere, and the *dramatis personæ* were at fault. The curious look of surprise and inquiry among the culprits betrayed that this belligerent demonstration was an unaccustomed feature in prison discipline, and the quiet, sober, and respectful attention with which they seemed to listen to the address evinced that they understood the clap-trapery of the keeper, and were not willing by their manner to second his efforts. The ‘keeper’s battery’ was a standing joke for the prison for all time. . . .

“The labors of the Prison Society were manifold and various. While administering to individual comfort in person, their efforts were directed to the fountain-head in procuring the modification of laws and introducing a less sanguinary code than that we inherited from our forefathers. They also took measures for improving the police of the prison, representing to the Legislature the evils that existed,—debtors becoming criminal by their intercourse with convicts; children initiated into debauchery and wickedness by being permitted to be in confinement with their parents; girls and young women, put in through the caprice of their masters or mistresses, associating with women already abandoned; and apprentices and servants mingling with all sorts of vice and infamy.”

¹ The culprit, Robert Elliott, had been convicted of burglary before the passage of the act.

² “On Tuesday night,” says a city newspaper of June 25th, “between twelve and one o’clock, as William Hamilton, Esq., and Miss Hamilton, his niece, were returning from the city to Bush Hill, they were attacked in the neighborhood of Twelfth and Market Streets by six or eight foot-pads, who formed a line across the road and called violently to the postillions to stop. This not being complied with, one of the villains fired a pistol, and another a blunderbuss. One of the postillions being stunned by a ball, which struck his cap, for a moment occasioned the stopping of the carriage, and the whole band immediately closed round to seize their prey. Mr. Hamilton, putting his head out of one of the windows, called loudly for the postillions to drive on, and ordered his servants, two of whom just then came up at full gallop, to fire on the rascals, who immediately ran off with the utmost precipitation through a corn-field, which greatly favored their retreat. The servants, being soon after joined by others from Bush Hill, well armed, made diligent search after the villains until daylight, but without success.”

³ See chapter on the Manufactures of Philadelphia.

president, and George Clymer and William Bingham vice-presidents. In the following year the society offered prizes—plates of gold of the value of ten guineas each—for essays on the two subjects, “What is the best system of taxation for constitutional revenue in a commercial, agricultural, and manufacturing country?” and “How far may the interposition of government be advantageously directed to the regulation of agriculture, manufactures, and commerce?” The “Pennsylvania Society for Promoting the Abolition of Slavery and the Relief of Free Negroes Unlawfully held in Bondage,” which had been organized in 1774, was reorganized on the 23d of April, 1787, with Benjamin Franklin as president; James Pemberton and Jonathan Penrose, vice-presidents; Benjamin Rush and Tench Coxe, secretaries; and James Starr, treasurer. The labors of the society were productive of good results. In 1793 it was stated that its zeal and activity had given rise to many similar societies in other States, had been “instrumental in suggesting to the Legislature most of those improvements in the laws which relate to the complete abolition of slavery which have been enacted since the memorable law of March 1, 1780,” and had been “the happy means of procuring the emancipation of several thousand blacks who were detained in bondage contrary to the laws of the State.”

Among other questions which agitated the public mind of Philadelphia during 1787 were a movement in favor of free education, which resulted in the establishment of a school in the Northern Liberties in October, the renewal of the project for the removal of the State capital from Philadelphia,⁴ and the revival of the agitation on the subject of the test laws. The action of the Assembly had failed to satisfy the opponents of the laws, and in February a remonstrance from citizens of Chester County was laid before that body protesting against that portion of the act of 1786 which required abjuration and a declaration that the affiant had not joined, aided, or abetted the British government, etc. The committee to whom the petition was referred reported in favor of a general repeal of the law, on the ground that “to the security of a government so well established as our own the security of an oath cannot be wanted in the form prescribed by existing laws,” and recommended the substitution for the oath of a general declaration of attachment. Accordingly an act “to alter the test allegiance to this commonwealth required by the act of March 4, 1786,” was passed by the Assembly; but notwithstanding its liberal provisions the Quakers generally omitted or refused to make the necessary qualification. In July, Judge McKean fined two Quakers who had been summoned to serve on the grand jury, but who were found not to have qualified,

⁴ A proposition to make Harrisburg the capital of the State, offered in the Assembly by Mr. Findley in March, was adopted by a vote of thirty-three to twenty-nine, but the bill was shortly after reconsidered and laid upon the table.

for having failed to subscribe to the declaration, which failure he construed as a willful refusal to serve on the jury. One of the Quakers so fined, Norris Jones, refused to pay and was sent to jail. Judge McKean's course was attacked in the newspapers as being arbitrary and tyrannical, and the incident seems to have caused considerable feeling.

Southwark having now become sufficiently populous to require the laying out of streets, etc., the Assembly, on the 29th of September, passed an act in which it was declared that the district had "no regulation for its streets and alleys," which were "irregularly placed," and that there was danger "that in time it would become a heap of confused buildings, without order or design." It was added that there was no road to the south but what was "circuitous and inconvenient." Francis Gurney, Richard Wells, Presley Blackiston, Thomas Shields, and Gunning Bedford were appointed commissioners to regulate the avenues and to lay out new streets at right angles with each other. They were specially directed to lay out a street "from George Gray's ferry, to run in a right line parallel with South Street, as the ground will permit, into some central part of Southwark." The latter improvement was objected to by residents of Moyamensing, who remonstrated to the Assembly.

Notwithstanding the extraordinary efforts that were made to revive the trade and industries of Philadelphia, the exhaustion caused by the Revolution was still too great to be overcome, and business continued stagnant. The depression was increased in July by a sudden and unaccountable panic in relation to paper money. During its existence the currency was generally discredited, for what reason nobody seemed to know; poor people who could not hold it for better times suffered heavily, and sheriff's sales were frequent. On the 1st of March the inhabitants of Germantown held a meeting, at which those present pledged themselves to discourage litigation in all cases of dispute between themselves and others, and to endeavor to have them settled by arbitration, in order that "in this time of general distress" they might present "a shield against the rapacity of the law, which in the increase of costs and delay of justice in our courts has become such an enormous and oppressive evil." The meeting further resolved to study the Constitution to prevent any violation of it "by our servants who may be intrusted with the different offices of government," and to exert their influence in favor of domestic manufactures and against the importation of foreign goods.¹

The delegates to the convention to frame the Federal Constitution began to arrive in Philadelphia in May. On Friday, the 18th, Gen. Washington was

escorted into town by the City Troop, and on Sunday, the 27th, he attended divine service at St. Joseph's Catholic Chapel, in Willing's Alley. In June the city military companies were reviewed on the commons by Gen. Washington, the Speaker of the Assembly, and the members of the Federal Convention. Shortly after this, Washington visited Moore Hall, in Chester County, and his old quarters at Valley Forge.

Delegates representing twelve States assembled at the State-House in the latter part of May and elected Washington president, and William Jackson secretary. The convention remained in session until the 18th of September, when the draft of the Constitution was prepared and submitted for the ratification of the individual States. When the matter came up in the Assembly of Pennsylvania a motion was made to authorize the calling of a State Convention to decide whether the Constitution should be adopted by Pennsylvania. It being evident that there was a majority in favor of the motion, sixteen members united in a determination to withdraw from the body, if necessary, in order to defeat it. The House adjourned until the afternoon, and on reassembling was found to be without a quorum. On the following morning a number of citizens, whose leader is said to have been Commodore John Barry, forcibly entered the lodgings of James McCalmont, a member from Franklin County, and Jacob Miley, a member from Dauphin County, who were among the seceders, and whom they dragged to the State-House and thrust into the chamber where the Assembly was in session without a quorum. McCalmont attempted to secure permission from the House to withdraw, but both he and Miley were forced to remain. A quorum was thus secured, and the resolutions providing for the State Convention were adopted. The announcement of their passage was hailed with three cheers and the ringing of Christ Church bells. Great bitterness of feeling was engendered by the violent course of the Assembly, and an address was issued by the seceding members, in which they protested against the action of the Federal Convention and of the Assembly, and asserted that the Pennsylvania delegates—Jared Ingersoll, Robert Morris, George Clymer, Thomas Mifflin, Thomas Fitzsimons, James Wilson, and Gouverneur Morris—were all from Philadelphia, that they did not, therefore, represent the landed interests of the State, and that they had exceeded their authority. It was contended, on the other hand, that these reasons were merely after-thoughts, that only one candidate outside of Philadelphia (William Findley) had been named as a delegate, and he had received only two votes, that no objection had been made at the time against the delegates chosen, and that the assertion that they had exceeded their authority was unfounded.

On the 6th of November was held the election for delegates to the State Convention, and the brief can-

¹ An association against smuggling was entered into by the merchants and traders of the city in September. They determined that they would not "employ any master, mate, or pilot engaged in contraband trade, or aiding or abetting others in such collusive employment."

vass preceding it was hotly contested.¹ The delegates to the State Convention elected for the city were George Latimer, Benjamin Rush, Hilary Baker, Thomas McKean, and James Wilson. They were the candidates of the Republicans; and Latimer, the highest on the return, received one thousand two hundred and fifteen votes. The Constitutionals had upon their ticket the names of Benjamin Franklin, David Rittenhouse, Charles Pettit, John Steinmetz, and James Irvine. Franklin had two hundred and thirty-five votes, and Irvine, the lowest on the return, one hundred and thirty-two votes. In the county the delegates elected to the State Convention were George Gray, John Hupa, William Macpherson, Enoch Edwards, and Samuel Ashmead.

On the 21st of November the convention met, and organized by the election of Frederick Augustus Muhlenberg, of Montgomery County, president; James Campbell was subsequently chosen secretary. On the 12th of December the question as to whether the Constitution should be adopted was finally put to a vote. The result was forty-six yeas and twenty-three nays. On the following day the members of the convention and of the Supreme Executive Council, with officers of the State and city, and others, went in procession from the State-House to the old courthouse, corner of Second and Market Streets, where the ratification of the instrument was formally proclaimed. A salute of twelve guns was fired, and bells were rung. The convention then returned to the State-House, where two copies of the ratification of the Constitution were signed. At three o'clock the convention met again, and, with members of the Supreme Executive Council and Congress, went to dinner at Eppley's tavern. "The remainder of the day was spent in mutual congratulations upon the happy prospect of enjoying once more order, justice, and good government in the United States."

Efforts were made to induce the new Federal government to establish the capital in Pennsylvania. Philadelphia and Bucks County united in an overture of ten miles square for that purpose. An offer was made in the name of the State to Congress of a district of land ten miles square for the seat of government of the United States, in which exclusive jurisdiction would be ceded to the Federal government, with the consent of the inhabitants. From this offer was excepted the city of Philadelphia, the district of Southwark, and one mile of the Northern Liberties, north of Vine Street, from the river Schuylkill to the southern side of the main branch of Cohocksink Creek, and thence down the creek to the Dela-

ware River. Meanwhile, and until Congress should make their election of a district, the use of the public buildings at Philadelphia was offered to the Federal authorities.

The progress in the adoption of the Federal Constitution by the other States was watched in Pennsylvania, especially in Philadelphia, with absorbing interest. As State after State signified its acquiescence, the exultation of the Federalists, as the advocates of the instrument were called, and the disappointment of the Anti-Federalists were exhibited with increasing bitterness. At a meeting of Federalists at Eppley's tavern, in June, it was decided that as soon as the ninth State signified its acceptance of the Constitution a public rejoicing should be held in Philadelphia. On the 21st of June, New Hampshire, the ninth State, ratified the instrument, and it was thereupon determined by the citizens of Philadelphia to celebrate the formation of the new Union on the Fourth of July. Before that date Virginia had also ratified the Constitution. The following official report of the ceremonies, made by the chairman of the committee of arrangements, gives a detailed description of the pageant:

GRAND FEDERAL PROCESSION, PHILADELPHIA, JULY 4, 1788.

On Friday, the 4th instant, the citizens of Philadelphia celebrated the Declaration of Independence made by the thirteen United States of America on the Fourth of July, 1776, and the establishment of the Constitution or frame of government proposed by the late General Convention, and now solemnly adopted and ratified by ten of those States.

The rising sun was saluted with a full peal from Christ Church steeple and a discharge of cannon from the ship "Rising Sun," commanded by Capt. Philip Brown, anchored off Market Street, and superbly decorated with the flags of various nations. Ten vessels, in honor of the ten States of the Union, were dressed and arranged through the whole length of the harbor, each bearing a broad white flag at the mast-head, inscribed with the names of the States, respectively, in broad gold letters, in the following order: New Hampshire, opposite to the Northern Liberties; Massachusetts, to Vine Street; Connecticut, to Race Street; New Jersey, to Arch Street; Pennsylvania, to Market Street; Delaware, to Chestnut Street; Maryland, to Walnut Street; Virginia, to Spruce Street; South Carolina, to Pine Street; and Georgia, to South Street. The ships at the wharves were also dressed on the occasion, and as a brisk south wind prevailed through the whole day, the flags and pendants were kept in full display, and exhibited a most pleasing and animating prospect.

According to orders issued the day before, the several parties which were to compose the grand procession began to assemble at eight o'clock in the morning at the intersection of South and Third Streets.

Nine gentlemen, distinguished by white plumes in their hats, and furnished with speaking trumpets, were superintendents of the procession, viz.: Gen. Mifflin, Gen. Stewart, Col. Proctor, Col. Gurney, Col. Will, Col. Marsh, Maj. Moore, Maj. Lenox, and Mr. Peter Brown.

The different companies of military, trades, and professions had previously met at different places in the city of their own appointment, where they were separately formed by their officers and conductors, and marched in order, with their respective flags, devices, and machines, to the place of general rendezvous. As these companies arrived in succession, the superintendents disposed of them in the neighboring streets in such manner as that they might easily fall into the stations they were to occupy in forming the general procession as they should be successively called upon. By this means the most perfect order and regularity was effectually preserved.

After a strict review of the streets of the city, it had been determined that the line of march should be as follows: To commence at the intersection of South and Third Streets; thence along Third Street to Callowhill Street; thence up Callowhill Street to Fourth Street; thence along Fourth Street to Market Street; and thence to Union Green, in

¹ On the night of the 6th a mob attacked the house of Maj. Boyd, in which John Baird, Abraham Smith, and John Smilie, members of the Executive Council, and James McLane, James McCalmont, William Findley, and John Piper, members of the Assembly and of the Anti-Constitution party, were sleeping. Stones were thrown, and the occupants of the house otherwise disturbed. A reward was offered for the discovery of the offenders, but without any result.

front of Bush Hill, William Hamilton, Esq., having kindly offered the spacious lawn before his house at Bush Hill for the purposes of the day.

The street commissioners had the evening before gone through the line of march, directed the pavements to be swept, the trees to be lopped, and all obstacles to be removed.

About half after nine o'clock the grand procession began to move, of which the following is as correct a detail as could be procured:

I. Twelve axemen, dressed in white frocks, with black girdles round their waists, and ornamented caps, headed by Maj. Philip Panckake.

II. The First City Troop of Light Dragoons, commanded by Capt. Miles.

III. *Independence*.—John Nixon, Esq., on horseback, bearing the staff and cap of Liberty. Under the cap a silk flag with the words, "Fourth of July, 1776," in large gold letters.

IV. Four pieces of artillery, with a detachment from the train, commanded by Capts. Morrell and Fisher.

V. *French Alliance*.—Thomas Fitzsimons, Esq., on horseback, carrying a flag of white silk, having three *fleur-de-lis* and thirteen stars in union over the words, "Sixth of February, 1778," in gold letters. The horse he rode belonged formerly to Count Rochambeau.

VI. Corps of light infantry, commanded by Capt. A. G. Claypoole, with the standard of the First Regiment.

VII. *Definitive Treaty of Peace*.—George Clymer, Esq., on horseback, carrying a staff adorned with olive and laurel. The words "Third of September, 1783," in gold letters, pendant from the staff.

VIII. Col. John Shee, on horseback, carrying a flag, blue field, with a laurel and an olive wreath over the words "Washington, the friend of his country," in silver letters, the staff adorned with olive and laurel.

IX. The City Troop of Light Dragoons, Capt. William Bingham, commanded by Maj. W. Jackson.

X. Richard Bache, Esq., on horseback, as a herald, attended by a trumpet, proclaiming a new era. The words "New Era," in gold letters, pendant from the herald's staff, and the following lines:

"Peace o'er our land her olive wand extends,
And white-robed Innocence from heaven descends;
The crimes and frauds of Anarchy shall fail;
Returning Justice lifts again her scale."

XI. *Convention of the States*.—The Hon. Peter Muhlenberg, Esq., on horseback, with a blue flag; the words "Seventeenth of September, 1787," in silver letters.

XII. A band of music performing a grand march, composed by Mr. Alexander Reinagle for the occasion.

XIII. *The Constitution*.—The Hon. Chief Justice McKean, the Hon. Judge Atlee, the Hon. Judge Rush (in their robes of office), in a lofty, ornamented car, in the form of a large eagle, drawn by six horses, bearing the Constitution, framed and fixed on a staff, crowned with the cap of Liberty, the words "The People," in gold letters, on the staff, immediately under the Constitution.

XIV. Corps of Light Infantry, commanded by Capt. Heysham, with the standard of the Third Regiment.

XV. Ten gentlemen, representing the States that have ratified the Federal Constitution, each bearing a flag with the name of the State he represents, in gold letters, and walking arm in arm, emblematical of the Union, viz.:

1. Duncan Ingraham, Esq., New Hampshire.
2. Jonathan Williams, Jr., Esq., Massachusetts.
3. Jared Ingersoll, Esq., Connecticut.
4. Samuel Stockton, Esq., New Jersey.
5. James Wilson, Esq., Pennsylvania.
6. Col. Thomas Robinson, Delaware.
7. Hon. J. E. Howard, Esq., Maryland.
8. Col. Febiger, Virginia.
9. W. Ward Barrows, Esq., South Carolina.
10. George Meade, Esq., Georgia.

XVI. Col. William Williams, on horseback, in armor, bearing on his left arm a shield emblazoned with the arms of the United States.

XVII. The Montgomery Troop of Light Horse, commanded by Capt. James Morris, Esq.

XVIII. The consuls and representatives of foreign States in alliance with America, in an ornamented car drawn by four horses.

Capt. Thomas Bell, with the flag of the United States of America.

Barbe de Marbois, Esq., vice-consul of France.

J. H. O. Heineken, Esq., consul of the United Netherlands.

Charles Hellstedt, Esq., consul-general of Sweden.

Charles W. Lecke, Esq., carrying the flag of Prussia.

Thomas Barclay, Esq., carrying the flag of Morocco.

XIX. The Hon. Francis Hopkinson, Esq., Judge of Admiralty, wearing in his hat a gold anchor, pendant on a green ribbon, preceded by the register's clerk carrying a green bag filled with rolls of parchment, and having the word "Admiralty" in large letters on the front of the bag.

James Read, Esq., register, wearing a silver pen in his hat.

Clement Biddle, Esq., marshal, carrying a silver oar adorned with green ribands.

XX. The wardens of the port and tonnage officer.

XXI. Collector of the customs and naval officer.

XXII. Peter Baynton, Esq., as a citizen, and Col. Isaac Melchor as an Indian chief, in a carriage, smoking the calumet of peace together,—the sachem magnificently dressed according to the Indian custom.

XXIII. The Berks County troop, consisting of thirty dragoons, commanded by Capt. Philip Strubing.

XXIV. The New Roof, or grand Federal Edifice, on a carriage drawn by ten white horses; the dome supported by thirteen Corinthian columns, supported on pedestals proper to that order; the frieze decorated with thirteen stars; ten of the columns complete and three left unfinished. On the pedestals of the columns were inscribed, in ornamented ciphers, the initials of the thirteen American States. On the top of the dome a handsome cupola, surmounted by a figure of Plenty, bearing cornucopias and other emblems of her character. Round the pedestal of the edifice were these words: "In union the fabric stands firm."

This elegant building was begun and finished in the short space of four days by Mr. William Williams & Co.

The grand edifice was followed by architects and house-carpenters; in number, four hundred and fifty, carrying insignia of the trade, and preceded by Messrs. Benjamin Loxley, Gunning, Bedford, Thomas Nevel, Levi Budd, Joseph Ogilby, and William Roberts, displaying designs in architecture, etc. Mr. George Ingalls bore the house-carpenters' standard,—the company's arms properly emblazoned on a white field. Motto, "Justice and benevolence."

To this corps the saw-makers and file-cutters attached themselves, headed by Messrs. John Harper and William Cook, and carrying a flag with a hand- and saw-mill-saw, gilt, on a pink field.

On the floor of the Grand Edifice were placed ten chairs for the accommodation of ten gentlemen, viz.: Messrs. Hilary Baker, George Latimer, John Wharton, John Nesbitt, Samuel Morris, John Brown, Tench Francis, Joseph Anthony, John Chalouner, and Benjamin Fuller. These gentlemen sat as representatives of the citizens at large, to whom the Federal Constitution was committed previous to the ratification. When the Grand Edifice arrived safe at Union Green, these gentlemen gave up their seats to the representatives of the States enumerated above in Article XV., who entered the temple and hung their flags on the Corinthian columns to which they respectively belonged. In the evening the Grand Edifice, with the ten States, *now in union*, was brought back in great triumph and with loud huzzas to the State-House, in Chestnut Street, where it now stands.

XXV. The Pennsylvania Society of Cincinnati and militia officers.

XXVI. Corps of light infantry, commanded by Capt. Rose, with the standard of the Fifth Regiment.

XXVII. The Agricultural Society, headed by their president, Samuel Powell, Esq. A flag, borne by Maj. Samuel Hodgdon, on a buff-colored ground in an oval compartment. Industry represented by a plowman, driving a plow drawn by oxen, followed at a small distance by the Goddess of Plenty bearing a cornucopia in her left and a sickle in her right hand. In the background a view of an American farm. Motto, "Venerate the plow."

XXVIII. Farmers, headed by Richard Peters, Richard Willing, Samuel Meredith, Isaac Warner, George Gray, William Peltz, — Burkhardt, and Charles Willing. Two plows, the one drawn by four oxen, and directed by Richard Willing, Esq., in a farmer's dress, Mr. Charles Willing in the character of a plow-boy driving the oxen; the other, drawn by two horses, and directed by Mr. — Burkhardt, followed by a sower sowing seed, farmers, millers, etc.

XXIX. The Manufacturing Society, with the spinning- and carding-machines, looms, etc.

Mr. Gallaudet bearing a flag, the device of which was a bee-hive, with bees issuing from it, standing in the beams of a rising sun; the field of the flag blue, and the motto, "In its rays we shall feel new vigor," written in golden characters.

Robert Hare, Esq.

Managers of the society.

Subscribers to the society.

Committee for managing the manufacturing fund.

Subscribers to the manufacturing fund.

The carriage of the manufacturers is in length thirty feet, in breadth thirteen feet, and the same height, neatly covered with white cotton of their manufacture, and drawn by ten large bay horses. On this carriage was placed the carding-machine, worked by two persons, and carding cotton at the rate of fifty pounds weight per day; next a spinning-machine of eighty spindles, worked by a woman (a native of and instructed in this city), drawing cotton suitable for fine jeans or federal rib. On the right of the stage was next placed a lace loom, a workman weaving a rich scarlet and white livery lace; on the left a man weaving jean on a large loom with a fly-shuttle. Behind the looms was fixed the apparatus of Mr. Hewson, printing muslins of an elegant chintz pattern, and Mr. Lang designing and cutting prints for shawls. On the right was seated Mrs. Hewson and her four daughters pencilling a piece of very neat sprigged chintz of Mr. Hewson's printing, all dressed in cottons of their own manufacture. On the back part of the carriage, on a lofty staff, was displayed the calico painters' flag—in the centre thirteen stars in a blue field, and thirteen red stripes in a white field. Round the edges of the flag were printed thirty-seven different prints of various colors—one of them a very elegant bed-furniture chintz of six colors—as specimens of printing done at Philadelphia. Motto, "May the Union Government protect the manufactures of America."

Then followed the weavers' flag,—a rampant lion in a green field, holding a shuttle in his dexter paw. Motto, "May Government protect us." Behind the flag walked the weavers of the factory, accompanied by other citizens of the same trade, in number about one hundred.

The cotton-card makers annexed themselves to this society.

XXX. Corps of light infantry, commanded by Capt. Robinson, with the standard of the Sixth Regiment.

XXXI. The Marine Society, Capt. William Greenaway, carrying a globe, supported by Capt. Heysham and Alberson, with spyglasses in their hands.

Ten captains, five abreast, with quadrants, representing the ten States that have joined the Union, viz., John Woods, John Ashmead, William Miller, Samuel Howell, John Souder, Robert Bethel, William Allen, William Tanner, Leeson Simons, and George Atkinson.

Members of the society, six abreast, with trumpets, spyglasses, charts, and sundry other implements of their profession, wearing badges in their hats representing a ship,—eighty-nine in number.

XXXII. *The Federal Ship "Union,"* mounting twenty guns, commanded by John Green, Esq.; Capt. S. Smith, W. Belchar, and Mr. Mercer, lieutenants; four young boys in uniform, as midshipmen. The crew, including officers, consisted of twenty-five men. The ship "Union" is thirty-three feet in length; her width and depth in due proportion. Her bottom is the barge of the ship "Alliance," and the same barge which formerly belonged to the "Serapis," and was taken in the memorable engagement of Capt. Paul Jones of the "Bon Homme Richard" with the "Serapis."

The "Union" is a masterpiece of elegant workmanship, perfectly proportioned and complete throughout, decorated with emblematical carving, and finished even to a stroke of the painter's brush. And what is truly astonishing, she was begun and completed in less than four days, viz., begun at eleven o'clock on Monday morning, the 30th of June, and on the field of rendezvous on Thursday evening following, fully prepared to join in the grand procession. The workmanship and appearance of this beautiful object commanded universal admiration and applause, and did high honor to the artists of Philadelphia who were concerned in her construction.¹

The ship was followed by

The Pilots of the Port, with their boat, named "The Federal Pilots," under the command of Isaac Roach, who sheered alongside the ship "Union" at the place appointed, and put Mr. Michael Dawson on board as pilot; then took his station with his boat in the procession, and on her arrival attended and took the pilot off again.

Boat-Builders.—A frame, representing a boat-builder's shop, eighteen feet long, eight wide, and thirteen high, mounted on a carriage.

The whole machine was contrived with great skill, and drawn by four bright bay horses belonging to and under the conduct of Mr. Jacob Toy, of the Northern Liberties, followed by forty boat-builders, headed by Messrs. Bowyer Brooks and Warwick Hale.

Sail-Makers.—A flag, carried by Capt. Joseph Rice, representing the inside view of a sail-loft, with masters and men at work; on the top thirteen stars; in the fly five vessels. Motto, "May commerce flourish and industry be rewarded." Followed by a number of masters, journeymen, and apprentices.

Ship-Carpenters, headed by Messrs. Francis Grice and John Norris, with the draft of a ship on the stocks, and cases of instruments in their hands; a flag, bearing a ship on the stocks, carried by Manuel Eyres, Esq., supported by Messrs. Harrison, Rice, Brewster, and Humphreys. Followed by mast-makers, calkers, and workmen, to the amount of three hundred and thirty, all wearing a badge in their hats, representing a ship on the stocks, and a green sprig of white-oak.

Ship-Joiners.—Nicholas Young, conductor—his son carrying a cedar staff before him; Robert McMullen, master workman; William McMullen and Samuel Ormes, carrying the company's arms on a flag, viz., a binnacle and hencoop; crooked planes and other tools of that profession proper; thirteen stripes and thirteen stars—ten in full splendor. Motto, "By these we support our families." Followed by twenty-five of the trade wearing cedar branches in their hats.

Rope-Makers and Ship-Chandlers.—The flag, carried in front by Richard Tittermary, representing a rope-yard, with ten men spinning and three standing idle with their hemp around their waists—emblematical of the present situation of the thirteen States,—with a motto, "May commerce flourish." Next in front, as leaders, were John Tittermary, Sr., and George Goodwin, being the oldest belonging to the calling.

Merchants and Traders.—Their standard was the flag of a merchant ship of the United States; in the Union were ten illuminated stars, and three traced round in silver but not yet illuminated; on one side of the flag a ship—the "Pennsylvania"—with an inscription, "Fourth of July, 1788" on the reverse of the flag a globe, over which was inscribed, in a scroll, "Par tout le monde." The staff on which the flag was displayed terminated in a silver cone, on which was a ring suspending a mariner's compass. The standard was borne by Mr. Jonathan Nesbitt, preceding the merchants and traders.

Thomas Willing, Esq., attended by their committee, Messrs. Charles Pettit, John Wilcocks, John Ross, and Tench Coxe.

The body of the merchants and traders.

Next followed the clerks and apprentices of the merchants and traders, preceded by Mr. Saintonge, bearing a large ledger.

Corps of light infantry, commanded by Capt. Sproat, with the standard of the Fourth Regiment.

Trades and Professions.—The order of the several trades, except house-carpenters and those concerned in the construction and fitting out a ship, was determined by lot.

XXXIII. *Cordwainers.*—A carriage drawn by four horses, representing a cordwainer's shop, in which were six men actually at work; the shop hung round with shoes, boots, etc.

Mr. Alexander Rutherford, conductor.

Mr. Elisha Gordon and Mr. Martin Bish, assistants; followed by a committee of nine, three abreast.

Mr. James Rouey, Jr., standard bearer. The standard—the cordwainers' arms—on a crimson field; above the arms Crispin holding a laurel branch in his right hand and a scroll of parchment in his left.

Three hundred cordwainers following, six abreast, each wearing a white leather apron, embellished with the company's arms, richly painted.

XXXIV. *Coach-Painters.*—With a flag, ornamented with the insignia of the art, carried by Mr. —, followed by ten of the profession carrying palette and pencils in their hands.

XXXV. *Cabinet- and Chair-Makers.*—Mr. Jonathan Gottelow, carrying the scale and dividers; Mr. Jedediah Snowden, with the rules of architecture; four of the oldest masters; Mr. James Lee, attended by three masters bearing the standard, or cabinet-makers' arms, elegantly painted and gilt on a blue field, ornamented with thirteen stars, ten of which were gilt, the other three unfinished; below the arms two hands united. Motto, "By unity we support society."

The masters, six abreast, wearing linen aprons, and bucks' tails in their hats.

The workshop, seventeen feet long by nine feet eight inches wide, and fourteen feet high, on a carriage drawn by four horses; at each end of the shop ten stars; two signs, inscribed, "Federal cabinet and chair-shop," one on each side; Mr. John Brown, with journeymen and apprentices, at work in the shop.

XXXVI. *Brick-Makers.*—Carrying a large flag of green silk, on which was represented a brick-yard, hands at work, a kiln burning; at a little distance a Federal city building. Motto, "It was found hard in Egypt, but this project makes it easy."

Ten master brickmakers, headed by Mr. David Rose, Sr., and followed by one hundred workmen in frocks and trousers, with tools, etc.

XXXVII. *House-, Ship-, and Sign-Painters.*—Arms, three shields argent on a field azure; crest, a hand holding a brush proper. Motto, "Virtue alone is true nobility."

¹ After the procession this little ship was placed in the State-House yard, from whence it was subsequently removed to Gray's Ferry.

The stage, fourteen feet long by seven; on it a mill for manufacturing colors; a glazing-table, with a stone for grinding paint; stage furnished with pots, sushes, tools, etc.; the business on the stage conducted by Messrs. Stride, Wells, Cowen, Dewetter, and McElwee. Flag, borne by Mr. Fausburg, as oldest painter, supported by Messrs. Fling and Fullerton; the rest of the company marching six abreast, with gilded brushes, diamonds, gold hammers, glazing-knives, etc. Sixty-eight in procession.

XXVIII. Porters.—Led by John Lawrence and George Green; on each side a porter, dressed with a silk sush, leading a horse and dray, the horse richly decorated with blue, white, and red ribbons; on the dray five barrels of superfine flour, the words "Federal flour" painted on the heads of the barrels, followed by John Jacobs and forty porters; a light blue silk standard, borne by David Sparks, on which were exhibited ten stripes and thirteen stars, three of them clonded, the rest in full splendor. Also a horse and dray, with four barrels on the dray and a porter loading a fifth. Motto, "May industry ever be encouraged."

The standard, followed by a number of men, and the rear closed by Andrew Dryer and Joseph Greswold.

The five barrels of Federal flour were taken, after the procession, and delivered to the overseers for the use of the poor.

XXXIX. Clock- and Watch-Makers.—The company's arms neatly painted on a silk flag. Motto, "Time rules all things." Headed by Mr. John Wood, and followed by twenty-three members of the company.

XL. Fringe and Ribbon Weavers.—Mr. John Williams, bearing a blue staff, capped with a gilt ball; across the staff ten wires, to which were suspended implements and a great variety of specimens of the art.

XLI. Bricklayers.—Headed by Messrs. Nicholas Hicks, William Johnson, and Jacob Graff, with their aprons on and trowels in their hands; a flag, with the following device: The bricklayers' arms; the Federal city rising out of a forest; workmen building it, and the sun illuminating it. Motto, "Both buildings and rulers are the works of our hands."

The flag, carried by Messrs. Charles Souder, William Mash, and Joseph Wilds, with their aprons, and supported by Messrs. John Robbins, Peter Woglom, Thomas Mitchell, John Boyd, Burton Wallace, Michael Groves, John Souder, Edward McKaigen, Alexander McKinley; ten master bricklayers, with their aprons on and their trowels and plumb-rules in their hands, followed by fifty-five masters and journeymen in their aprons, and carrying trowels in their hands.

XLII. Tailors.—Preceded by Messrs. Barker, Stille, Martin, and Tatem, carrying a white flag with the company's arms in gold supported by two camels. Motto, "By union our strength increases." Followed by two hundred and fifty of the trade.

XLIII. Instrument-Makers, Turners, Windsor Chair and Spinning-wheel Makers.—Conducted by Captain John Cornish, Mr. John Stow bearing the standard,—the turner's arms, with the addition of a spinning-wheel on one side and a windsor chair on the other. Motto, "By faith we obtain."

Messrs. George Stow and Michael Fox, carrying columns representing the several branches of turning; Messrs. Anthony and Mason, with a group of musical instruments, followed by sixty persons dressed in green aprons.

XLIV. Carvers and Gilders.—The carvers and gilders exhibited an ornamental car on a Federal plan, being thirteen feet by ten on the floor, on which were erected thirteen pilasters richly ornamented with carved work,—the heads of ten gilt, and labeled with the names of the several States, arranged as they came into the Federal Union, the remaining three left partly finished; about three feet above the floor a level rail united to the pilasters, denoting the equality of the subjects.

Before the car walked the artists of the several branches, preceded by Mr. Cutbush, ship-carver, and Mr. Reynolds and Mr. Jugiez, house, furniture, and coach-carvers, with young artists going before, decorated with blue ribbons round their necks, to which were suspended medallions, blue ground, with ten burnished gold stars,—one bearing a figure of Ceres, representing agriculture; another Fame blowing her trumpet, announcing to the world the Federal Union; the middle one carrying a Corinthian column complete, expressive of the domestic branches of carving. In the car were a number of artists at work, superintended by Mr. Rush, ship-carver.

XLV. Coopers.—Led on by Mr. Daniel Dolby; an elegant flag, bearing the coopers' arms, embellished with thirteen stars. Motto, "May commerce flourish. Love as brethren."

Supported by Messrs. W. King, R. Babe, and John Louch; followed by one hundred and fifty coopers in white leather aprons, and wearing badges in their hats representing the tools of the trade.

XLVI. Plane-Makers.—Mr. William Martin in front, bearing the

standard—white field, a smoothing-plane on the top; device—a pair of spring dividers, three planes, a brace, a square, and gauge; followed by eight plane-makers. Motto, "Truth."

XLVII. Whip and Cane Manufacturers.—A machine on a carriage; a boy on it at work plaiting a whip; followed by Mr. John McAllister and his journeymen, carrying several articles of the trade; on the top of the machine a flag, with this motto: "Let us encourage our own manufactures."

XLVIII. Blacksmiths, Whitesmiths, and Nailers.—A machine drawn by nine horses, representing the Federal blacksmiths', whitesmiths', and nailers' manufactory—being a frame of ten by fifteen feet and nine feet and nine feet high, with a real chimney, extending three feet above the roof, and furnished for use; in front of the building three master blacksmiths—Messrs. Nathaniel Brown, Nicholas Hess, and William Perkins—supporting the standard, elegantly ornamented with the smiths' arms. Motto, "By hammer in hand all arts do stand."

The manufactory was in full employ during the procession. Mr. John Mingle and his assistant, Christian Keyser, blacksmith, completed a set of plow irons out of old swords, worked a sword into a sickle, turned several horse-shoes, and performed several jobs on demand.

Mr. John Goodman, Jr., whitesmith, finished a complete pair of plyers, a knife, and some machinery, with other work, on demand.

Messrs. Andrew Fessinger and Benjamin Brummel forged, finished, and sold a considerable number of spikes, nails, and broad tacks.

The whole was under the conduct of Messrs. Godfrey Gebbler, David Henderson, George Goddard, Jacob Esler, Lewis Prah, and Jacob Eckfelt, and followed by two hundred brother blacksmiths, whitesmiths, and nailers.

XLIX. Coach-Makers.—Preceded by Mr. John Bringhurst in a phaeton drawn by two horses, and bearing a draft of a coach on a white silk flag.

L. Potters.—A flag, on which was neatly painted a kiln burning, and several men at work in the different branches of the business. Motto, "The potter hath power over his clay." A four-wheeled carriage, drawn by two horses, on which was a potter's wheel and men at work; a number of cups, bowls, mugs, etc., were made during the procession. The carriage was followed by twenty potters, headed by Messrs. Christian Piercy and Michael Gilbert, wearing linen aprons of American manufacture.

LI. Hatters.—Led by Mr. Andrew Tybout.

The standard, borne by Mr. John Gordon, viz.: On a white field a hat in hand, on each side a tassel band; the crest, a beaver; motto, on a crimson garter, in gold letters, "With the industry of the beaver we support our rights"; followed by one hundred and twenty-four hatters.

LII. Wheelwrights.—A stage drawn by two horses, with five men working upon it, making a plow and a speed for a wagon wheel; the standard a blue flag; motto, "The united wheelwrights"; followed by twenty-two of the trade, headed by Messrs. Conrad Rohrman and Nicholas Reb.

LIII. Tinplate Workers.—Preceded by Joseph Fineaur and Martin Riser, carrying by turns a flag bearing the arms of the company properly emblazoned; followed by ten workmen in green aprons.

LIV. Skinners, Breeches-Makers, and Glovers.—Headed by Messrs. John Lisle and George Cooper,—one carrying in his hand a beaming-knife and the other a paring-knife; the standard, borne by Mr. Shreiner, viz.: on one side a deer, and below it a glove; on the other a golden fleece, and below a pair of breeches; motto, "May our manufacture be equal in its consumption to its usefulness"; followed by fifty-eight of the trade in buckskin breeches and gloves, and wearing bucks' tails in their hats.

To these Mr. Joseph Rogers, parchment and glue manufacturer, attached himself.

LV. Tallow Chandlers.—Mr. Richard Porter, master; two standards,—first, the company's arms on a blue field, trimmed with white; three doves with olive-branches; over the arms an angel bearing St. John the Baptist's head; on each side two blazing lamps; motto, "Let your light so shine." Second standard, a representation of a chandelier of thirteen branches, a lighted candle in each, and thirteen silver stars in a half circle; inscription, "The stars of America a light to the world"; motto at the bottom of the chandelier, "United in one."

The uniform blue, and white cockades; blue aprons, bound with white, and a dove painted in the middle of each; a white rod, surmounted by an olive-branch, in each person's hand,—twenty in number.

LVI. Victualers.—A flag, with this inscription: "The death of anarchy and confusion shall feed the poor and hungry"; two axemen preceding two stately oxen, weighing three thousand pounds; ten boys dressed in white—five on the right and five on the left of the oxen, carrying small flags with the names of the States that have ratified the Federal Constitution; two cleaver men; a band of music.

Conductors, Messrs. Philip Hall, George Woelper, Philip Odenheimer, and Conrad Hoff; followed by eighty-six master victualers, all dressed in white; the oxen to be killed, the hides and tallow to be sold for bread and given, with the meat, to the poor.

LVII. Printers, Bookbinders, and Stationers.—A stage nine feet square, drawn by four horses; upon the stage the Federal printing press complete; cases, and other implements necessary to the business, by ten printing offices united; on the stage men at work in the different branches of the profession; Mr. Durant, in the character of Mercury, in a white dress, ornamented with red ribbons, having real wings affixed to his head and feet and a garland of blue and red flowers round his temples. During the procession the pressmen were at work, and struck off many copies of the following ode, composed for the occasion by F. Hopkinson, Esq.:

THE ODE.

Oh! for a muse of fire to mount the skies,
And to a listening world proclaim:
Behold! behold an empire rise!
An era new, Time, as he flies,
Hath entered in the book of Fame.
On Alleghany's towering head
Echo shall stand—the tidings spread—
And o'er the lakes and misty floods around
An era new resound.

See where Columbia sits alone,
And from her star-bespangled throne
Beholds the gay procession move along,
And hears the trumpet and the choral song!
She hears her sons rejoice,
Looks into future times, and sees
The numerous blessings Heaven decrees,
And with her plaudits joins the general voice.

"Tis done! 'tis done! My sons," she cries,
"In war are valiant, and in council wise.
Wisdom and valor shall my rights defend,
And o'er my vast domain those rights extend.
Science shall flourish; Genius stretch her wing;
In native strains Columbia muses sing;
Wealth crown the arts, and Justice clean her scales;
Commerce her ponderous anchor weigh,
Wide spread her sails,
And in far distant seas her flag display.

"My sons for freedom fought, nor fought in vain,
But found a naked goddess was their gain;
Good government alone can show the maid
In robes of social happiness arrayed."

Hail to this festival!—all hail the day!
Columbia's standard on her roof display!
And let the people's motto ever be,
"United thus, and, thus united, free!"

This ode, together with one in the German language, fitted to the purpose, and printed by Mr. Stetner, were thrown amongst the people as the procession moved along.

Mr. William Sellers, Sr., bearing the standard of the united professions, viz.: Azure, on a chevron argent, an American bald eagle volant, between two beams of paper proper—between three Bibles closed proper—in chief, perched on the point of the chevron, a dove with an olive-branch, of the second. Supporters, two Fames, blowing their trumpets, clothed with sky-blue flowing robes, spangled with stars argent. Crest, a Bible displayed proper, on a wreath azure and argent. Under the escutcheon two pens placed saltière ways proper. Motto, "We protect and are supported by Liberty." After the standard, masters of the combined professions, followed by journeymen and apprentices, each carrying a scroll tied with blue silk binding, exhibiting the word "Typographer," illuminated by ten stars in union,—fifty in the train.

LVIII. Saddlers.—A saddler's shop, dressed with saddlery and a variety of ready-made work, elegant American plated furniture, etc., drawn by two fine horses. In the shop Mr. Stephen Burrows and a number of hands were at work, one of whom (having the different parts in readiness) completed a neat saddle during the procession.

The standard carried by Messrs. Jehosaphat Polk and John Young was of green silk, with the company's arms elegantly painted and gilt. Motto, "Our trust is in God." The company was headed by Messrs.

John Stephens and John Marr. Mr. William Haley, silver-plater, joined himself to this corps, carrying a Federal bit of his own workmanship.

LIX. Stone-Cutters.—Three apprentices before with tools, and two with the orders of the operative lodge, one with the standard, in masons' order, the rest followed with pieces of polished marble. Twenty in number.

LX. Bread and Biscuit Bakers.—A standard bearing the bread-bakers' arms, properly emblazoned. Motto, "May our country never want bread." Headed by Mr. George Mayer.

Biscuit-bakers' standard, a white flag with the representation of a bake-house and several hands working in the different branches of the business. Motto, "May the Federal Government revive our trade."

Messrs. Thomas Hopkins and Matthias Landenberger in front of twelve masters. Messrs. John Peters, Sr., and William Eckart closed the rear, each master carrying a small peel. The number of bakers in procession, one hundred and thirty.

LXI. Gunsmiths.—A stage erected upon a four-wheel carriage, drawn by four horses, being in length fourteen feet, and in breadth eight feet, with a motto in large letters on each side, "Federal Armory," with a number of hands thereon at work, employed in different branches of the trade, conducted by two senior masters, viz.: John Nicholson and Joseph Perkins, Abraham Morrow, bearing a standard at the head of the company, in rear of the carriage, the standard decorated with sundry devices, representing the arms belonging to the trade.

LXII. Coppersmiths.—A car, fourteen by seven feet, drawn by four horses, with three hands at work at stills and tea-kettles, under the direction of Mr. Benjamin Harbeson.

LXIII. Goldsmiths, Silversmiths, and Jewelers.—William Ball, Esq., senior member, with an urn.

Standard-bearers, Messrs. Joseph Gee and John Germaine, carrying a silk flag with the silversmiths' arms on one side of it. Motto, "Justitia Virtutum Regina." And on the reverse the Genius of America, holding in her hand a silver urn, with the following motto: "The purity, brightness, and solidity of this metal is emblematical of that liberty which we expect from the new Constitution," her head surrounded by thirteen stars, ten of them very brilliant, representing the States which have ratified, two of them, less bright, representing New York and North Carolina, whose ratifications are shortly expected.

LXIV. Distillers.—On a standard of light-blue silk a still, worm-tub, and other implements of the business, neatly painted. The standard borne by Mr. Michael Shubert, and followed by twelve distillers.

LXV. Tobacconists, headed by Mr. John Riley. The standard of white silk, a tobacco-plant with thirteen leaves (ten in perfection, three leaves not finished), a hoghead of tobacco on one side of the plant, a roll of plug tobacco, bottle and bladder of snuff. Over the plant, on the other side, are thirteen stars, ten silvered and shining bright, the other three not finished. Carried by Mr. Thomas Leiper. Motto, "Success to the tobacco-plant." Each member with a green apron and blue strings, a plume of the different kinds of tobacco-leaves in his hat, and different tools of his profession in his hands. Conductors, Messrs. Hamilton, Few, Stimble, and Murphy. Seventy in number.

LXVI. Brass Founders.—Mr. Daniel King, in a car drawn by four gray horses, with emblematical colors, and a furnace in blast during the whole procession. The motto of the colors, "In vain the earth her treasure hides." The whole was executed by Mr. King, at his own expense.

LXVII. Stocking Manufacturers.—Headed by Mr. George Freytag, thirty in number; their colors white, with a pair of blue stockings across, a cap above, finger-mitt below, encircled with a gilded heart, a gilded crown with ten horns or points; on each a blue star. Above all, motto, "The union of the American stocking manufacturers."

LXVIII. Tanners and Curriers.—Tanners twenty-five in number, led by Mr. George Leib, carry the flag with the company's arms. Motto, "God be with us." Curriers, led by Mr. George Oakley, carrying the flag with the company's arms. Motto, "Spes nostra Deus," followed by thirty-four of the trade, each carrying a currying-knife, and wearing a blue apron and jean coat of our new manufactory.

LXIX. Upholsterers.—Headed by Messrs. John Mason and John Davis. In front a cushion, with its drapery, on which fluttered a dove with an olive-branch in its mouth, and on its head a double scroll. Motto, "Be Liberty thine," followed by a cabriolet sofa decorated.

LXX. Sugar Refiners.—Conducted by the Hon. Christopher Kucher, Capt. Jacob Lawerswyler, Messrs. Benjamin Panington, John Morgan, David Miercken, Adam Cornman, and Henry Clause, wearing black cockades, blue sashes, and white aprons with a blue standard, arms on a gold field, the Cap of Liberty on a staff between two loaves of sugar. Motto, "Double refined," in a blue field, thirteen stars; crest, a lighted

candle in a candlestick, on the foot the word "Proof," beneath "American manufactures," ornamented with sugar-canes; followed by thirty-six with white aprons, on which were painted sugar loaves, marked ten, and bearing the various implements of the business.

LXXI. *Brewers*.—Ten in number, headed by Reuben Haines, with ten ears of barley in their hats, and sashes of hop-vines, carrying malt-shovels and mashing-oars; one dray loaded with malt and hops, and one loaded with two hogs-heads and a butt, marked "beer, ale, porter," with the following inscription: "Proper drink for Americans." A standard carried by Luke Morris, decorated with the brewers' arms. Motto, "Home brew'd is best."

LXXII. *Peruke-Makers and Barber Surgeons*.—Preceded by Messrs. Perrie and Trautwine, full dressed.

LXXIII. *Engravers*.—Their armorial insignias (occasionally devised) were: Or on a chevron, engrailed gules (between a parallel ruler sabre, barred and studded of the first, and two gravers salter-ways azure, handled at the third); three plates; the crest, a copper-plate on a sand-bag proper, inscribed underneath, in large capitals, "Engravers."

LXXIV. *Plasterers*.

LXXV. *Brush-Makers*.—A white flag, with a wild boar, and a bundle of bristles over him, the motto, "Federal brush manufactory." The flag carried by Mr. Roger Flahaven, Jr.

LXXVI. *Slay-Makers*.—Represented by Mr. Francis Serre, with his first journeyman carrying an elegant pair of ladies' stays.

LXXVII. Corps of light infantry, commanded by Captain Rees, with the standard of the Second Regiment.

LXXVIII. The civil and military officers of Congress in the city.

LXXIX. The Supreme Executive Council of Pennsylvania.

LXXX. The justices of the common pleas and the magistrates.

LXXXI. Sheriff and coroner, on horseback.

LXXXII. Board of city wardens.

City treasurer, and secretary to the board.

Clerks of the markets, with standard, weights, and measures.

Constable of the watch, with his two assistants, bearing their staves.

Music.

Twenty watchmen, with their flams decorated, and in their proper dress.

Twenty silent watchmen, with their staves.

Watchman, calling the hour,—"Ten o'clock, and a glorious starlight morning!"

The hour and stars alluded to the ten States who have adopted the Constitution.

LXXXIII. The street commissioners.

LXXXIV. The gentlemen of the bar, headed by the Hon. Edward Shippen, Esq., president of the Common Pleas, and William Bradford, Esq., Attorney-General, followed by the students of law.

LXXXV. The clergy of the different Christian denominations, with the rabbi of the Jews, walking arm in arm.

LXXXVI. The College of Physicians, headed by their president, Dr. John Redman, and followed by the students in physic.

LXXXVII. Students of the University, headed by the vice-provost, and of the Episcopal Academy, and most of the schools in the city, preceded by their respective principals, professors, masters, and tutors, a small flag borne before them inscribed with these words: "The rising generation."

LXXXVIII. The county troop of light-horse, commanded by Maj. W. MacPherson, brought up the rear of the whole.

Maj. Fullerton attended the right wing, and Col. Mentges the left wing of the line.

Messrs. Stoneburner, Hiltzheimer, and Jonathan Penrose furnished and superintended the horses for the carriages.

This grand procession began to move from the place of rendezvous about half-past nine (as was before mentioned), and the front arrived at Union Green, in front of Bush Hill, about half-past twelve. The length of the line was about one mile and a half, the distance marched through about three miles. As the procession came into Fourth Street, Capt. David Zeigler and Lieut. John Armstrong had drawn up their company of Continental troops, and saluted the procession as it passed, according to military rule.

A very large circular range of tables, covered with canvas awnings, and plentifully spread with a cold collation, had been prepared the day before by the committee of provisions. In the centre of this spacious circle the Grand Edifice was placed, and the ship "Union" moored. The flags of the consuls and other standards were planted round the Edifice.

As soon as the rear of the line had arrived, James Wilson, Esq., addressed the people from the Federal Edifice in an eloquent oration.

The several light companies were then drawn off by Capt. Heysham to an eminence nearly opposite, where they fired a *feu de joie* of three rounds, also three volleys, followed by three cheers, to testify their satisfaction on this joyful occasion.

After the oration the company went to dinner. No spirit nor wines of any kind were introduced. American porter, beer, and cider were the only liquors. With these were drunk the following toasts, announced by the trumpet, and answered by a discharge of artillery, a round of ten to each toast, and these were in like manner answered by a discharge from the ship "Rising Sun," at her moorings.

TOASTS.

1. The people of the United States.
2. Honor and immortality to the members of the late Federal Convention.
3. Gen. Washington.
4. The King of France.
5. The United Netherlands.
6. The foreign Powers in alliance with the United States.
7. The agriculture, manufactures, and commerce of the United States.
8. The heroes who have fallen in defense of our liberties.
9. May reason, and not the sword, hereafter decide all national disputes.
10. The whole family of mankind.

It is impossible to be precise in numbers on such an occasion, but averaging several opinions, there were about five thousand in line of procession, and about seventeen thousand on Union Green. The green was entirely cleared by six o'clock in the evening, and the Edifice, ship, and several machines being withdrawn, the citizens *soberly* retired to their respective homes. The weather was remarkably favorable for the season,—cloudy, without rain, and a brisk wind from the south during the whole day. At night the ship "Rising Sun" was handsomely illuminated in honor of this great festival.

As the system of government (now fully ratified) has been the occasion of much present joy, so may it prove a source of future blessing to our country, and the glory of our rising empire.

Published by order.

FRANCIS HOPKINSON,

Chairman of the Committee of Arrangement.

July 8, 1788.

The opposition to the Constitution did not cease with its adoption. A few of the leading men in the Anti-Federal party met in convention at Harrisburg in September, with Blair McClenachan as chairman and John A. Hanna secretary, and adopted resolutions declaring it expedient to acquiesce in the ratification of the instrument, but urging that revision was necessary. The convention then nominated a general ticket for Congress, headed by Blair McClenachan and Charles Pettit. The action of the Harrisburg convention was severely criticised by those friendly to the Constitution, and the nominees for Congress were opposed on the ground that they were Anti-Federalists, and that the power to enforce the new Federal system ought not to be committed to its avowed opponents. It was determined to call a new convention at Lancaster, and a town-meeting was held at the State-House on the 25th of October, with Col. Miles in the chair, at which the names of Thomas Fitzsimons, George Clymer, Henry Hill, Hilary Baker, William Bingham, and John M. Nesbitt were agreed upon as those of six gentlemen suitable to represent the city and county of Philadelphia, from whom the choice of two was made. Walter Stewart, Thomas Mifflin, Philip Wager, James Wilson, Samuel Howell, Sr., and Thomas McKean were suggested as suitable for electors of President and Vice-President. The Lancaster conference selected Fitz-

simons and Clymer for the Congressional ticket, and James Wilson as the representative of Philadelphia on the electoral ticket. At the election of members of Congress, in November, in the city and county, Fitzsimons had 2478 votes, Clymer 2468, McClenachan 575, and Pettit 687. In the State six of the nominees on the Federal ticket were elected, and two (David Muhlenberg, of Montgomery, and Daniel Heister, of Berks), who, although Federalists, had, with two others of the same politics, been placed as a matter of policy on the opposition ticket.

The feeling in opposition to slavery continued to grow in Philadelphia, and in 1788 the Pennsylvania Society for the Abolition of Slavery was under full headway and doing effective work. The condition of American citizens captured by the Algerine pirates appealed most forcibly to the society, which appointed a committee to collect information in relation to the captives and to suggest some means of relieving them. About the same time the Society of Friends complained to the Legislature that the law providing for the gradual abolition of slavery in Pennsylvania had been evaded by various persons, who had shipped their slaves to West India islands and sold them. An investigation was ordered by the Assembly, and the committee to whom the matter was referred reported that vessels had been fitted out at Philadelphia "provided with handcuffs and military implements, in order to stir up the princes of Africa to wage war against each other, and for the support and encouragement of an unrighteous traffic in human flesh." The act against slavery was declared to be defective, in that it did not prohibit the owners of slaves from selling them from their wives, husbands, parents, or children into distant parts or foreign countries, and there was no punishment for stealing slaves, and no security that those negroes who would become free at twenty-eight years of age might not be sent away from the State before that time and sold. A new bill, covering these defects, was accordingly prepared, and passed by the Assembly on the 29th of March. This act also contained the important provision that slaves brought into Pennsylvania by citizens of the State should at once become free, and that those brought by citizens of other States, with the intention of becoming permanent residents, should also be free.

Gen. Washington's birthday was *officially* celebrated in Philadelphia for the first time in 1788 by salutes of artillery, the powder used on this occasion being paid for by the Supreme Executive Council.

Owing to the escape in October of thirty-three prisoners from Walnut Street jail, most of whom evaded recapture, and nearly all of whom were daring criminals, there was an unusual number of highway robberies and burglaries during the remainder of the year. The marauders finally became so bold that it was found necessary to employ Col. Shee's light infantry battalion as a night patrol for several weeks. The criminal record for the year 1788 was also marked

by the execution on the 24th of September, on the commons near the city, of Levi and Abraham Doane, members of a noted family of Tories which lived in Bucks County, and was the terror of that section of the State. They were charged with a long catalogue of crimes,—murder, rape, arson, highway robbery, and other offenses. On the 8th of April, 1783, the Legislature passed an act setting a price upon their heads. Joseph Doane, the younger, was shot and killed in Bucks County in 1783. Moses was captured and executed in the same year, and the hanging of Levi and Abraham at Philadelphia left but two brothers, against whom the sentence of outlawry had been pronounced, Mahlon and Eleazar.

In order to provide more effectually for the regulation of the port of Philadelphia, the Assembly, on the 4th of October, passed an act directing the Supreme Executive Council to appoint seven wardens of the port. These officers, who were required to meet every month, had power to license three classes of pilots. The first class was to be composed of those who had served four years' apprenticeship. The second class were apprentices of three years, and the third class of two years of service. Power to make a code or regulations for the pilots was given to the board of wardens. It was provided that tonnage fees should be paid by ship-builders, one-fourth of which were to be applied to "The Society for the Relief of Widows of Decayed Pilots." The board also had authority to regulate the building and extension of wharves, to regulate fees for wharfage, to regulate the anchorage of vessels, to have jurisdiction in matters of collision, and to have general authority over all questions connected with the interests of the port. The original members of the board were Joseph Dean, Nathaniel Falconer, Samuel Caldwell, Joseph Irvine, Elias Boys, Robert Buisley, and Francis Gurney.

Southwark again received the attention of the Assembly this year, and an act was passed authorizing the election of regulators and supervisors. To the latter was given authority to dig wells and establish pumps for public use, and to regulate, pitch, pave, light, and provide for watching the streets. William Leonard, Silas Engle, and William Williams were elected regulators, and Samuel Church, William McMullen, and John Cornish supervisors.

The first election for President of the United States was held in Philadelphia in January, 1789. In Philadelphia the Federal ticket for electors, headed by James Wilson, was successful, as was the case throughout the State. The birthday of Washington, who was chosen the first President of the new republic, was celebrated with more than ordinary *éclat*. Bells were rung and a salute of thirteen guns was fired by Capt. Fisher's company of artillery, which also paraded. After the parade the company had a dinner, at which thirteen toasts were drank. On the 4th of March, Fisher's company paraded again in honor of the inauguration of the new government. President

Washington set out from Mount Vernon for New York, where Congress was in session, in April, after having been officially notified of his election. Elaborate preparations were made for his reception in Philadelphia. On the 20th of April, Hon. Thomas Mifflin, President of the State, Richard Peters, Speaker of the Assembly, and the city troops of horse, commanded by Capts. Miles and Bingham, received the President at the boundary line of the State of Delaware. After a military salute he was escorted to Chester, where breakfast was prepared. Washington would have avoided these testimonials if he could have done so, but finding it impossible to do so he yielded to the necessity, and ordering his traveling carriage to the rear of the line of procession, mounted a charger which was in readiness. Other detachments of troops joined the cavalcade, together with many citizens, so that when the company reached Gray's Ferry the number attending it was quite large. At this point every preparation had been made which it was thought would render the passage of the floating bridge at this place striking to the eye and gratifying to Washington. The bridge was spanned at the eastern and western ends with large arches formed of laurel. Upon each side of the bridge laurel shrubbery was thickly set in hedge-like order, so that the passage over the water seemed like a journey along a green lane. On the north side of the bridge were ranged eleven flags inscribed with the names of the eleven States which had at that time ratified the Constitution. At the southwest corner of the bridge was placed a large white flag bearing as a device a rising sun more than half above the horizon; motto, "The Rising Empire." On the northwest corner a blue flag, which had been hoisted in the East Indies by Capt. Bell as a Pennsylvania State ensign, bore the inscription, "The New Era." In the centre of the bridge, on the south side, the American flag fluttered in the breeze. At the northeast corner a high pole bore a striped liberty cap ornamented with stars, beneath which a blue flag bore as a device a rattlesnake, with the motto, "Don't tread on me!" At the northeast corner a white flag, displaying emblems of trade and commerce, bore the motto, "May commerce flourish." In the river were boats gayly adorned with ensigns, among which was what was then a novelty, an American jack which bore eleven stars. Upon the ferry-house a large signal flag served to warn the thousands of persons who were assembled upon the commons near the city of the approach of the distinguished guest. The procession came down the hill at Gray's Ferry in due order, and just as the carriage of the President was under the western arch a laurel wreath, which had been suspended in its centre, was lowered by a child clad in white and girdled and adorned with laurel. The emblem rested on Washington's brow, and as it did so the assemblage burst forth into a mighty shout. The procession then passed on to the city, and on the commons

was received by the infantry battalion, commanded by Capt. James Rees, and the artillery, Capt. Jeremiah Fisher, the whole being subject to the orders of Maj. Fullerton. After the line had passed the citizens fell in rank by rank, swelling the attendance, before the head of the procession reached the city, to a great number. Gen. Washington was conducted to the City Tavern, in Second Street, above Walnut, where a banquet had been prepared by the citizens. Fourteen regular toasts were drunk, among which were: "His Most Christian Majesty, our great and good ally," "His Catholic Majesty," "The United Netherlands," and "May those who have opposed the new Constitution be converts by the experience of its happy effects." Previous to the departure of Washington addresses were delivered to him by the President and the Supreme Executive Council of Pennsylvania, the mayor, recorder, aldermen, and Common Council of the city, the judges of the Supreme Court of Pennsylvania, the trustees and the faculty of the University of Pennsylvania, and the State Society of the Cincinnati. To these compliments appropriate replies were made. The next day Gen. Washington set out for Trenton in his traveling carriage, having, on account of inclement weather, declined the escort of the First City Troop. A week afterward the President's wife arrived in Philadelphia upon her way to New York, where she intended to join her husband. She was received near Darby by a number of ladies and gentlemen. A collation was served at Gray's Ferry, and the visitor was escorted to the residence of Robert Morris by Miles and Bingham's troops of light-horse, amid the ringing of bells and the discharge of salvos of artillery. On the following Monday she was similarly complimented upon her departure for New York, and was escorted upon her way for a considerable distance.

The Federal officers for Philadelphia appointed by the new administration were Sharpe Delaney, collector of the port; Frederick Phile, naval officer; William Macpherson, surveyor. The custom-house was at the corner of Walnut and Second Streets. Robert Patton was postmaster, and the post-office was at No. 36 South Front Street. The judge of the District Court was Francis Hopkinson; the district attorney, William Lewis; and the marshal, Clement Biddle.

The arguments which had been successfully urged against the adoption of a new State Constitution and the reincorporation of the city had now become obsolete, and both those important measures were successfully consummated during the year. On the 24th of March the Assembly adopted resolutions recommending that delegates be chosen at the usual time for the election of State officers to a convention which should be charged with forming a new Constitution for the State. The Supreme Executive Council was requested to promulgate the action of the Assembly, but refused to comply with the request. An organization known as the Republican Society, and composed of such

reputable citizens as Benjamin Rush, George Clymer, John Cadwalader, John Nixon, Thomas Fitzsimons, Thomas Mifflin, Francis Hopkinson, Robert Morris, George Ross, and about seventy others, strenuously urged the proposed revision of the Constitution of 1776. The Assembly proceeded cautiously; the Supreme Council, on the other hand, resisted the tendency towards reform. In September the Assembly adopted resolutions in favor of calling the convention, and at the general election in October delegates were chosen. James Wilson and Hilary Baker were elected from the city; Thomas Mifflin, George Gray, William Robinson, Jr., Robert Hare, and Enoch Edwards from the county of Philadelphia. The convention met on the fourth Tuesday of November, and elected Thomas Mifflin president, but it was not until Sept. 2, 1790, that the Constitution framed by it was adopted. In the new form of government a number of radical departures were made from the old system. The Supreme Executive Council was abolished and a Senate created. The chief executive was to be known as Governor instead of President. The Council of Censors was dispensed with, and in all important matters the new Constitution conformed to the system adopted for administering the general government.

There was now but little opposition to the reincorporation of Philadelphia, experience having fully demonstrated the necessity for a strong municipal government. On the 11th of March, 1789, "An Act to incorporate the city of Philadelphia" was finally passed. In the preamble it was declared that "the administration of government within the city of Philadelphia is, in its present form, inadequate to the suppression of vice and immorality, to the advancement of the public health and order, and to the promotion of trade, industry, and happiness;" and that "in order to provide against the evils occasioned thereby it is necessary to invest the inhabitants thereof with more speedy, vigorous, and effective powers of government than are at present established." Accordingly the inhabitants of the city within the boundaries between Vine and Cedar Streets, and from Delaware to Schuylkill, were constituted a corporation and body politic in fact and in law by the name and style of "The Mayor, Aldermen, and Citizens of Philadelphia." The freeholders were directed to elect, on the first Tuesday in April ensuing, and every seven years thereafter, fifteen persons to serve as aldermen for seven years. The common councilmen, thirty in number, were to be chosen for three years, and were all to be elected at the same time. The mayor was to be elected by the fifteen aldermen from among their own number, and to hold his office for one year. The recorder was chosen by the mayor and aldermen from among the freemen of the city, and held his office for seven years. The mayor, recorder, aldermen, and common councilmen constituted the law-making power when

assembled in Common Council. To the mayor, recorder, and aldermen were granted the powers of justices of the peace. The mayor, recorder, and aldermen, or any four of them, whereof the mayor or recorder was always to be one, had authority conferred upon them to inquire of, hear, try, and determine, according to the laws and constitutions of the commonwealth, all larcenies, forgeries, perjuries, assaults and batteries, riots, routs, and unlawful assemblies, and all other offenses committed in the city usually cognizable in any county Court of Quarter Sessions. To this tribunal was given the title of "The Mayor's Court for the City of Philadelphia," holding four terms yearly. Writ of error laid from the Mayor's Court to the Supreme Court, and the mayor and recorder might issue writs of *capias* for the arrest of offenders who had escaped or removed into any county of the commonwealth. There was also established a tribunal called "The Aldermen's Court," to be composed of three aldermen designated by the mayor and recorder during four terms in the year. This court had power to try and determine in a summary way all matters usually cognizable before justices of the peace, where the debt or demand amounted to forty shillings, and did not exceed ten pounds. The mayor and aldermen were also each given, individually, authority to determine summarily debts under forty shillings, in the same manner as justices of the peace, and the office of justice of the peace for the city was abolished. The Mayor's Court superseded "the City Court," and became the custodian of the records of the latter. The offices of wardens of the city and street commissioners were abolished. The new corporation had authority to license brokers, and to appoint one or more clerks of the market, to have assize of bread, wine, beer, wood, and other things within the city. All the property, real and personal, and the rights and franchises of the late corporation known as "The Mayor and Commonalty of the City of Philadelphia" were transferred to the new corporation.

The act was soon found to be defective in that it left the authority of taxation for municipal purposes in the position it occupied under former laws, and as the power was difficult of execution in that way, a supplement to the charter was passed on the 2d of April, 1790, by which the Common Council was given power to raise and levy taxes "upon the persons of single men, and upon the estates, real and personal, of the inhabitants, for the purposes of lighting, watching, watering, pitching, paving, and cleansing the streets, lanes, and alleys of the city;" also was granted full power to regulate the rates and prices to be demanded and received by wagoners, carters, draymen, porters, wood-sawyers, and chimney-sweepers.¹ In April fifteen aldermen and thirty common

¹ Some of the inhabitants of the Northern Liberties, residing below Pegg's Run and east of Sixth Street, were anxious to become residents

councilmen were elected by the citizens in accordance with the terms of the charter. The aldermen thus chosen were Samuel Miles, Hilary Baker, Samuel Powell, William Colliday, Joseph Swift, John Barclay, Francis Hopkinson, Matthew Clarkson, Gunning Bedford, John Baker, Reynold Keen, John Nixon, Joseph Ball, George Roberts, John M. Nesbitt. The common councilmen were Benjamin Chew, James Pemberton, George Latimer, Miers Fisher, John Wood, David Evans, John Craig, James Whiteall, John Morton, John Wharton, George Mead, John D. Coxe, Andrew Tybout, William Wells, Thomas Bartow, Henry Drinker, Nathaniel Falconer, Jacob Shriner, Edward Pennington, Frederick Kuhl, Isaac Morton, Thomas Morris, Jared Ingersoll, William Van Phul, John Kaighn, Israel Wheeler, John Stille, Robert Smith, John Dunlap, and William Hall.

The aldermen elected Samuel Powell mayor, and Alexander Wilcocks recorder. A new coat of arms was chosen for the city. The ship and balance were taken from the old seal of the city, and the plow from the arms of the Commonwealth. To support these, two female figures were adopted. The one emblematic of plenty is in possession of the cornucopia, from which the fruity treasures are lavishly strewn; the other, which perhaps personifies the city, holds in one hand a ground plan of a town, upon which is laid out streets and squares. The crest is a bare arm holding scales.

Comparatively little was done by the aldermen and Common Council during the first year of the new corporation. In May they resolved to carry out the provisions of the act of Assembly authorizing a lottery to raise money for building a city hall, and appointed managers to conduct it. Four-fifths of the proceeds was to go to the city and one-fifth to Dickinson College at Carlisle. A new ordinance was also passed extending the market in High (now Market) Street to Fourth Street, and providing rules for conducting it. Wednesdays and Saturdays were fixed as market days. Besides the principal streets, Front, Second, Third, and Fourth, from Mulberry to Chestnut Streets, and Strawberry Alley, Elbow Lane, Letitia Court, and Church Alley were appropriated for market purposes. Chains were ordered to be put across the streets during market hours to prevent the intrusion of horses and carriages. Besides the accommodations for venders of meats, vegetables, and farm produce, stands were provided in the market streets for porters, drays, venders of fresh fish, manufacturers of baskets and cedarware, venders of hosiery and "home-made articles," and of roots, vegetables, and garden seeds. The Second Street market was to be held on Tuesdays and Fridays, the regulations being similar to those of the large one on High Street.

of the new city, and petitioned the Assembly for that purpose. Remonstrances were received against the measure from other inhabitants of the Northern Liberties, and nothing was therefore done in the business.

After many years of comparatively fruitless agitation, the opponents of the test laws succeeded at last in 1789 in securing their repeal. The committee to whom the subject was referred in the Assembly reported that, however proper and salutary they may have been during the war, it appeared to them that in times of peace and well-established government they were "not only useless, but highly pernicious by disqualifying a large body of the people from exercising many necessary offices, and throwing the whole burden thereof on others, and also by alienating the affections of tender though perhaps mistaken minds from a government which, by its invidious distinctions, they are led to consider as hostile to their peace and happiness." In accordance with the recommendation of the committee a bill was passed repealing all laws requiring any oath or affirmation of allegiance from the inhabitants of the State. Disfranchised persons were restored to citizenship, and foreigners alone were required to take an oath of allegiance before exercising the privileges of a citizen. The action of the Assembly in depriving the old college of its charter on account of the Tory proclivities of some of the trustees and officers was also annulled. On the 6th of March an act was passed repealing that part of the act creating the University of Pennsylvania which deprived the college of its franchises and conferred them upon the university. The latter, which continued as a separate institution, was compelled to give up the college building, on Fourth Street below Arch, and other real estate belonging to the old institution. Philosophical Hall, on Fifth Street, was secured by the university, which, while its new quarters were being fitted up, occupied the lodge room in Lodge Alley. It soon became evident that the two institutions could not be sustained in a flourishing condition, and a proposition for union having been made by the university, which was accepted by the college, the two corporations applied to the Legislature for an act of consolidation, which was granted on the 30th of September, 1791, uniting the institutions under the name of the University of Pennsylvania.

The evil consequences of the provisions in the penal laws compelling the employment of convicts in the streets had now become so apparent that the citizens began to urge upon the Assembly the advisability of repealing them. The opposition was strengthened by incidents that occurred during the year 1789. On Sunday, January 11th, a number of "wheelbarrow men," confined in the jail, endeavored to escape by digging away the foundations. Discovered in the act, they were fired upon by the guard, and two or three of them fatally wounded. In March the jailer, Reynolds, and a turnkey were seized by twenty-two convicts, who robbed them of their watches, money, and hats, and the keys of the prison, and thrust them into a dungeon. They then attempted to escape, and six of them got out before the true

state of affairs was discovered by the other keepers. One of the convicts, William Cole, after his escape committed two burglaries and three highway robberies, and having been captured and convicted under the new penal law, which prescribed death as the penalty for a second felony, was hanged on the 29th of July on the common. On the 18th of September five wheelbarrow men, who had been at work in the vicinity of Centre Square, having discovered that two brothers named McFarland, who were drovers, living on the south side of Market Street above Thirteenth, had a considerable sum of money in their possession, formed a plot to rob them. That night they escaped from the jail, and, accompanied by the wife of one of their number, a man named Logan, proceeded to the house in which the McFarlands lived. Their demand for admission was refused by the two brothers, who made an ineffectual resistance. Having forced their way in, the convicts killed one of the McFarlands, but in the *mêlée* the light they had brought with them was extinguished, and the other brother escaped. They then plundered the house, obtaining about two thousand dollars, after which they left. All of them were subsequently arrested, and the five men—Cronan, Burns, Bennett, Logan, and Ferguson—were hanged at Centre Square. The woman, who had been condemned to death with the others, was either pardoned or had her sentence commuted. This fearful crime, together with the disturbances which had preceded it, led to the abandonment of the practice of employing convicts in the streets.

As early as February a petition had been presented to the Assembly in which the system was characterized as pernicious, and the request was made that the statute be repealed or that the practical operation of the law be rendered less dangerous to the lives and properties of citizens. In March a committee of the Assembly reported against "the present plan of employing felon convicts as being highly pernicious to society," and recommended that the necessary alterations should be made in the Walnut Street prison, in order that felons convicted of offenses not capital might be employed. It was also suggested that the workhouse on Prune Street, or so much of it as was necessary, with the benefit of the east yard, should be used as the jail for the confinement of debtors and persons charged with or convicted of misdemeanors, in order that their morals might not be corrupted by a communication with felons. In accordance with these recommendations an act to amend the act for the amendment of the penal laws was passed, as was one to prevent the importation of convicts into the State, which rendered any person convicted of the latter offense liable to an imprisonment for three months and a fine of fifty pounds. The penal laws were amended still further in the following year. On the 13th of March the Assembly passed an act providing that prisoners condemned to labor should be confined in Walnut Street prison in solitary cells or apartments

under the inspection of keepers by day and watchmen at night. The construction of additional cells was authorized, and it was provided that female convicts should be kept separate from the males. The workhouse building was set apart for debtors. One of the clauses provided that convicts who, after having escaped or been pardoned, committed offenses which would have rendered them liable to capital punishment before the passage of the law, should be liable to the same punishment as if the act had never been passed.

On the evening of Saturday, April 17, 1790, occurred the death of Benjamin Franklin, who, after serving as president of the Supreme Executive Council from Oct. 18, 1785, to Oct. 14, 1788, had been living in comparative retirement. During his long residence abroad as the diplomatic agent of the revolted colonies he had been kept too busy to give much attention to matters at home, but immediately after his return to Philadelphia, as we have seen, he was elected chief executive of the State. It was with a glad and grateful heart that he settled down to the enjoyment of that repose which he had coveted so long. In a letter to a friend he wrote, "I am now in the bosom of my family, and find four new little prattlers who cling about the knees of their grandpapa, and afford me great pleasure. I am surrounded by my friends and have an affectionate, good daughter and son-in-law to take care of me. I have got into my niche, a very good house which I built twenty-four years ago, and out of which I have been kept ever since by foreign employments." But his public career was not yet ended. As president of the Executive Council and member of the convention which framed the Federal Constitution, he was called upon to discharge many important and arduous duties, and it was not until 1788, when he was over eighty years of age, that he was able to enjoy to their full extent the comforts of his quiet home in Philadelphia. But never satisfied unless he was at work, Franklin utilized his leisure by employing his tongue and pen in behalf of various projects for the public good; and, reverting to the occupation of his younger days, had a small printing-press set up in his room, with which he amused himself. Here at last, at the age of more than eighty-four years, he quietly expired. "For my personal ease," he had written to Washington in the previous year, "I should have died two years ago, but though those two years have been spent in excruciating pain I am glad to have lived them, since I can look upon our present situation."

On Wednesday, April 21st, the remains of the philosopher and statesman were interred in Christ Church burying-ground, at the corner of Fifth and Arch Streets. The funeral procession attracted an immense concourse of spectators, estimated to have numbered more than twenty thousand, and during its progress through the streets bells were tolled and minute-guns fired. It was headed by the clergy of the city, in-

cluding the reader of the Hebrew congregation, and comprised the Supreme Executive Council, the General Assembly of the State, the judges of the Supreme Court, members of the bar, the corporation of the city, the printers of the city with their journeymen

Rittenhouse. Franklin's body was deposited beside that of his wife, near the northern wall of the burying-ground. A plain slab with the simple inscription, "Benjamin and Deborah Franklin, 1790," was placed to mark his grave. Distinguished honors were paid to

his memory by important bodies.

In Congress, Madison offered a resolution, which was adopted, declaring that "Benjamin Franklin was a citizen whose native genius was not more an ornament to human nature than his various exertions of it have been precious to science, to freedom, and to his country." The members also resolved to wear mourning for one month. Similar resolutions were adopted by the Supreme Executive Council and the American Philosophical Society; the latter organization deciding that one of its members should be appointed "to prepare and pronounce an oration commemorative of the character and virtues of our late worthy president, Dr. Benjamin Franklin." In France the news of Franklin's death elicited the most extraordinary demonstrations of respect. Mirabeau announced the fact to the National Assembly in a eulogium, in which he described Franklin as "the sage whom two worlds claim, the man whom the history of empires and the history of science alike contend for." At Mirabeau's suggestion, seconded by Rochefoucauld and Lafayette, the Assembly decided to go into mourning for three days. Funeral honors were paid at the Halle au Bled by order of the Commune of Paris. The building was hung with black, a sarcophagus was erected, and from a pulpit constructed for the occasion the Abbé Fauchet delivered an oration, of which twenty-six copies were sent to the United States. At the Café Principe many "friends of liberty" assembled, and after they had erected a mausoleum in honor of Franklin, one of their number pronounced a

tribute to his memory. A society of printers met in the Hall of the Cordeliers, and gathered around a bust of Franklin, elevated on a pedestal and wearing a civic crown. A printing-press was near, and while an apprentice was pronouncing a eulogy, the compositors and others were printing and distributing copies to the persons present.

Franklin bequeathed £1000, or \$4444.44, to the city

B. Franklin

and apprentices, the Philosophical Society, the College of Physicians, the faculty and students of the College of Philadelphia, and various other societies, besides a large number of citizens. The pall-bearers were Hon. Thomas Mifflin, Governor of Pennsylvania, Chief Justice McKean, Thomas Willing, president of the Bank of North America, Samuel Powell, mayor of Philadelphia, William Bingham, and David

of Philadelphia, for the purpose of extending aid in the shape of loans "to such young married artificers, under the age of twenty-five years, as have served an apprenticeship in the city, and faithfully fulfilled the duties required by their indentures." Bond was to be given with two sureties for the return of the money borrowed, and no sum greater than sixty pounds was to be loaned to any one person; the loan to be repaid in sums of one-tenth per annum with interest, the money when returned to be lent out to fresh borrowers. "I have considered," said Franklin, in his will, "that among artisans good apprentices are most likely to make good citizens, and having myself been bred to a manual art (printing) in my native town, and afterwards assisted to set up my business in Philadelphia by kind loans of money from two friends there, which was the foundation of my fortune and of all my utility in life that may be ascribed to me, I wish to be useful even after my death, if possible, in forming and advancing other young men that may be serviceable to their country."

He calculated that at the expiration of one hundred years this fund, if carefully managed, would amount to £131,000 sterling, or \$581,640, of which he recommended that £100,000 be applied to bringing the waters of Wissahickon Creek into Philadelphia and for the improvement of the navigation of the Schuylkill River. The balance, £31,000, was to be loaned out as before for another century, at the end of which he supposed it would amount to £4,061,000, or more than \$17,000,000, which, according to his directions, was to be divided between the city of Philadelphia and the State of Pennsylvania. Owing to failures to repay the amounts borrowed and the worthlessness of sureties, the fund has not realized the expectations of Franklin, and at the expiration of the first hundred years will fall far short of the sum he anticipated.¹

The republication of the "Encyclopædia Britannica," the greatest literary enterprise that had yet been undertaken in Philadelphia, was commenced in the year of Franklin's death,

by Thomas Dobson, "at the Stone-house," in Second Street above Chestnut. The work with the supplement, twenty-one volumes, was completed in 1803. When the first half-volume was printed, in 1790, there were but two hundred and forty-six subscribers, and only two or three engravers could be procured. Of the first volume one thousand copies were printed, and these having been exhausted when the eighth volume was published, a new edition of the first volume was rendered necessary.

In undertaking a work of such magnitude in a country impoverished by war, and whose educated class was comparatively small, Dobson exhibited a spirit and courage worthy of the highest praise. He was not alone, however, in this respect. During the same year John Churchman, who had invented "variation charts or maps of

GRAVE OF BENJAMIN AND DEBORAH FRANKLIN.

all the northern hemispheres to show the variations of the magnetic needle," petitioned the Assembly for as-

the pride of America. But a man who stood high in the literary world, and who had spent so many years in the courts of kings, particularly in the refined court of France, I conceived would not be of very easy access, and must certainly have much of the air of grandeur and majesty about him. Common folks must expect only to gaze at him at a distance, and answer such questions as he might please to ask. In short, when I entered his house I felt as if I was going to be introduced into the presence of an European monarch. But how were my ideas changed when I saw a short, fat, trunched old man, in a plain Quaker dress, bald

¹ Franklin's home and occupations just before his death are thus described by Rev. Manasseh Cutler, of Hamilton Church, Essex Co., Mass., who visited him about that time:

"Dr. Franklin lives in Market Street. His house stands up a courtyard, at some distance from the street. We (Mr. Gerry, of Massachusetts, and Dr. Cutler) found him sitting upon a grass-plat, under a very large mulberry-tree, with several other gentlemen and two or three ladies. There was no curiosity in Philadelphia which I felt so anxious to see as this great man, who has been the wonder of Europe, as well as

sistance, and a committee reported in favor of subscribing for a number of copies,—an incident showing that the enterprise of publishers was not lacking in substantial recognition. The State and municipal authori-

pate, and short white locks, sitting, without his hat, under the tree, and, as Mr. Gerry introduced me, rose from his chair, took me by the hand, expressed his joy at seeing me, welcomed me to the city, and begged me to seat myself close to him. His voice was low, but his countenance open, frank, and pleasing.

* * * * *

"After it was dark we went into the house, and the doctor invited me into his library, which is likewise his study. It is a very large chamber, and high. The walls are covered with book-shelves filled with books. Besides, there are four alcoves, extending two-thirds of the length of the chamber, filled in the same manner. I presume this is the largest, and by far the best, private library in America. He showed a glass machine for exhibiting the circulation of the blood in the arteries and veins of the human body. . . . Another great curiosity was a rolling-press, for taking copies of letters or any other writing. A sheet of paper is completely copied in two minutes. . . . He also showed me his long artificial arm and hand, for taking down and putting up books on high shelves; and his great arm-chair, with rockers, and a large fan placed over it, with which he fans himself and keeps off the flies, while he sits reading, with only a small motion of the foot. He showed me many other curiosities and inventions, all his own, but of lesser note. . . . The doctor seemed extremely fond of dwelling on philosophical subjects, particularly natural history, while the other gentlemen were swallowed up with politics. . . . Notwithstanding his age (eighty-four), his manners are perfectly easy, and everything about him seems to diffuse an unrestrained freedom and happiness. He has an incessant vein of humor, accompanied with an uncommon vivacity, which seems as natural and involuntary as his breathing."

The late Robert Carr, of Philadelphia, in a letter to J. A. McAllister, May 25, 1864, also relates some interesting reminiscences of the latter years of Franklin's life in Philadelphia. As a school-boy Mr. Carr had been the playmate of Franklin's two youngest grandsons. "The doctor's mansion-house," he writes, "was in the centre of a lot of ground, midway between Third and Fourth Streets, about one hundred feet wide, and extending from Market to Chestnut Street. A court or alley, ten feet wide, called Franklin Court, extended from Market Street to the rear of the house, which was built with the front towards Chestnut Street; but some time after it was erected it was discovered that the title to the front of the lot on Chestnut Street was defective, and the doctor, rather than engage in a litigation or pay an exorbitant price demanded by the claimant of the lot, abandoned it, and used the Market Street avenue. (This fact I heard Mr. B. F. Bache, his grandson, relate to Mr. Volney, the traveler, who inquired why the doctor had built his house fronting the south, to which he had no outlet.)

"The mansion-house was a plain brick building, three stories high, about forty feet front and thirty feet deep, with an entry through the centre. There was a large parlor on the east side of the entry and two rooms on the west side, with a door between them. The kitchen was in the basement, with an ice-house under it. The doctor's office or study was the northwest room on the first floor, and there was a coal-grate, in which he burned Virginia or English coal. Below this grate, on the hearth, there was a small iron plate, or trap-door, about five or six inches square, with a hinge and a small ring to raise it by. When this door or valve was raised, a current of air from the cellar rushed up through the grate to enkindle the fire.

"The doctor's bed-chamber was the southwest room on the second floor. There were two cords, like bell-pulls, at the head of his bed. One was a bell-pull, and the other, when pulled, raised an iron bolt about an inch square and nine or ten inches long, which dropped through staples at the top of the door when shut, and until this bolt was raised the door could not be opened. The house was built before the Revolution, but after the war he made an addition to the east end, about eighteen feet wide and thirty feet long. The lower room of this addition was a large reception-room, in which the Philosophical Society met for several years. The second floor was his library, and the third floor lodging-rooms. His son-in-law, Col. Richard Bache, and family resided in the same house with the doctor.

"The doors of the chambers, and nearly all the doors about the house, were lined or edged with green baize, to prevent noise when shutting, and several of them had springs behind them to close them.

ties, in fact, and the public at large, were now fully alive to the importance of extending all possible encouragement to efforts for the establishment of new industries and the development of old ones, nor was aught neglected that might contribute to the growth of commerce, manufactures, the arts and sciences, and the material prosperity of the city generally. Among the most important measures in this direction, of course, were those for improving the navigation of the Delaware, Schuylkill, and Susquehanna, for constructing and improving roads, and for the encouragement of manufactures. In March, 1789, the Assembly passed an act appropriating £10,000 annually for a fund for claims and improvements, opening roads, improving navigation, and encouraging domestic manufactures, and on the 28th of September of the same year an act for the improvement of roads

"On the south side of the house there was a grass lot about one hundred feet square, containing a few fine plum-trees, and surrounded on three sides by a brick wall. From the south wall to Chestnut Street there was afterwards a tan-yard and currier's shop. On the north side of the house there was a lot of the same size, extending to the printing-office, which was two stories high, built on each side, and over the court or carriage-way, opening on Market Street. This office he had built on his return from France for his grandson, Benjamin Franklin Bache, with whom I served my apprenticeship. The western room on the lower floor was a type-foundry, the opposite room on the east side of the court was a book-bindery. The printing-office was on the second floor, and was furnished with every variety of large fonts of type, from nonpareil to the largest sizes then used for posting bills. The doctor brought them from Paris when he returned in 1785.

"After the doctor's death, in April, 1790, there were a great many articles that had belonged to him stored in the loft over the office, among others a beautiful and valuable orrery (which, I believe, was sent to the Philosophical Society), a great variety of electrical apparatus, and a sedan-chair, in which I have often seen him carried by two men to and from the State-House, when he was president of the Supreme Executive Council of Pennsylvania. This sedan-chair was sent to the Pennsylvania Hospital, where it remained a great many years in the garret; but, on inquiring about it lately, I ascertained that it had been broken up and burned.

"During the latter years of the doctor's life he was afflicted with the gout and stone. For the latter his friends wished him to submit to an operation; but he said that at his age it was not worth while to undergo the pain. Although he suffered much from his affliction, he was remarkably patient and mild. When able to be out of bed, he passed nearly all of his time in his office, reading and writing, and in conversation with his friends; and when the boys were playing and very noisy in the lot front of the office, he would open the window and call to them, 'Boys, can't you play without making so much noise? I am reading, and it disturbs me very much.' I have heard the servants in his family say that he never used a hasty or angry word to any one.

"On one occasion, when his servant was absent, he called me into his office to carry a letter to the post-office. While waiting for it, there was a candle burning on the table with which he had been melting sealing-wax. He told me to put it out and set it away. I took up the candlestick and blew the candle out, when he said, 'Stop, my boy, I will show you the right way to put out a candle. Light it again.' Accordingly, I lighted the candle, and the doctor, taking it out of the candlestick, turned the blazing end down until the tallow had nearly extinguished it, when he quickly turned it up and blew it out. 'Now,' said he, 'it can be lighted again very readily, and the grease will not run down the candle.'

"The doctor was remarkable for always having some kind word of advice or encouragement for those around him. You may recollect the anecdote which has been published of his conversation with the man who was brushing his shoes. 'John,' said the doctor, 'I was once as poor a man as you; but I was industrious, and saved my earnings, and now I have enough to enable me to live in comfort in my old age.' 'Ah! but doctor,' replied John, 'if every one was as saving and as rich as you, who would black your shoes?'

and navigation. Under the latter act commissioners to view the navigable waters of the State were appointed—Timothy Matlack, Reading Howell, and William Dean—to examine the river Delaware; Benjamin Rittenhouse and John Adlum to inspect the condition of the Schuylkill, and Bartram Galbraith, Samuel Boyd, and Thomas Hulings to view the river Susquehanna. The Schuylkill was examined from "the great falls," five miles above the city, to the town of Hamburg, twenty-three miles above Reading, also the Tulpehocken and the ground between the head-waters of that stream and the Quittapahilla, which communicates with the Susquehanna. The commissioners to view the Susquehanna examined it from Wright's Ferry to its confluence with the Juniata, and the latter from the mouth to Piper's Run.

In his message of Feb. 9, 1790, the President of the State referred these matters to the special consideration of the Assembly, which appointed a committee on the subject. They reported that the surveys had apparently been conducted with great care, and that those rivers might be made navigable with as little difficulty and expense as any in the United States. The committee were of opinion, however, that it was expedient to ascertain the most practicable means of communication between the eastern and western limits of the State, and to determine how the waters of the rivers mentioned could be connected with those of the Allegheny, Lake Ontario, and Lake Erie, and in cases where portage by land would be necessary, to examine the face of the country and report the most suitable place for landings and roads. It was also proposed that commissioners be appointed to examine the land between Quittapahilla and Swatara Creeks; thence by the latter to the Susquehanna, examining from the mouth of the Juniata to Sunbury; thence up the West Branch to the Sinnamahoning Creek; and up the latter to Canoe place, or any other place that would connect with a practicable branch of the Allegheny River, the Consua, or Toby's Creek, or any other discharging in the Allegheny near French Creek. The latter was to be examined up to Leboëuf, and the portage to Presque Isle. The commissioners then, returning down the Allegheny, were to examine the latter from French Creek to the Kiskiminetas, up the latter to the Conemaugh, and up the last to its forks with Stony Creek; from the same to the nearest branches that may be improved by canal or lock navigation to the shortest portage that can be found to the Frankstown branch of the Juniata, near the mouth of Poplar Run, and down the Frankstown branch to the head of Water Street, where the commissioners last year concluded their work.

It was also recommended that commissioners be appointed to ascertain the best road and the distance from the Delaware, near the forks of the Mohawk and Pogaughton branch, to the great bend in the Susquehanna; thence down the latter to the mouth of

the Tioga; and thence to the junction of the east and west branches of the Susquehanna. On their return, the same commissioners were to be directed to examine the Lehigh from its head to the turn-hole, and to examine and explore the Tobyhanna and the Schuylkill from Hamburg to the Tamagway, or Little Schuylkill.

The Assembly adopted the committee's recommendations, and the Council appointed Timothy Matlack, John Adlum, and Samuel Maclay to examine the waters of the Quittapahilla, Swatara, Susquehanna, Juniata, Sinnamahoning, Allegheny, etc.; and Frederick Antes, Reading Howell, and William Dean for the Lehigh and Schuylkill Rivers. It was many years, of course, before the policy of internal improvements was fully developed. The efforts in behalf of manufactures had more immediate results. The "Pennsylvania Society for the Encouragement of Manufactures and the Useful Arts," established in 1787, with Gen. Thomas Mifflin as president, proved a most useful agent in stimulating local industries. It offered prizes for useful inventions, improvements in machinery, manufactured products, etc., and addressed itself with energy to the task of securing legislation from the Assembly for the protection of manufactures. Machines for carding and spinning cotton were imported from England by the society in March, 1788, and the manufacture of jeans, satinets, and other goods established. On the 26th of March, 1789, the Legislature, at the request of the society, passed an act to assist the cotton manufactures of Pennsylvania, appropriating one thousand pounds as a subscription to one hundred shares of the stock of the society. Another act, designed to encourage industrial enterprise, was passed by the Assembly prohibiting the exportation of manufacturing machines for two years; and a variety of special legislation was enacted in aid of inventors and experimenters. In 1789 the "Manufacturing Society" awarded a prize for painters' colors, and the Philadelphia Society for Promoting Agriculture offered premiums for improvements in farming operations. The Philadelphia County Society for the Encouragement of Agriculture and Domestic Manufactures, established Aug. 4, 1789, in opposition to the Philadelphia Society for Promoting Agriculture, admitted none but farmers to membership, whereas the old society had many members who were residents of the city. Both societies, however, rendered valuable aid in promoting scientific agriculture, and in fostering the invention and manufacture of agricultural machines. In March, 1789, the manufacturers and mechanics of the city, Northern Liberties, and Southwark met to consider the propriety of petitioning Congress to lay such duties on foreign manufactures imported into Pennsylvania, as would give a decided preference to American mechanics. The various trades were requested to send delegates to a convention to be held during the following month, but nothing further was done in reference to the matter.

Among the Philadelphia inventors struggling about this time for recognition and aid to carry out their schemes, the most prominent, and perhaps the most unfortunate, was John Fitch, who anticipated Robert Fulton more than twenty years in the application of steam as a motive-power for boats.¹

On the 9th of July, 1790, Congress, then in session at New York, passed a bill selecting the District of Columbia as the permanent capital of the nation; but declaring that for ten years from the end of that session the seat of government should be located at Philadelphia. Under this act Congress assembled in Philadelphia in the following December, and by the close of the year the executive officers of the government had located themselves. According to Biddle's Directory, published early in 1791, President Washington resided at No. 190 High Street, below Sixth, in the mansion built by Richard Penn, and occupied during the Revolution by Gen. Howe, Benedict Arnold, and Robert Morris. Vice-President Adams lived in the Hamilton mansion at Bush Hill. The house No. 307 High Street, northwest corner of Eighth, was occupied as the office of the Secretary of State, Thomas Jefferson. Jefferson's residence was No. 274 High Street, on the south side, the fourth house west of Eighth Street.²

The Treasury Department had its office in the old Pemberton mansion, No. 100 Chestnut Street, southwest corner of Third Street. The Secretary, Alexander Hamilton, lived at 79 South Third Street,

¹ His inventions are more fully treated elsewhere in this work.

² "The building in which Jefferson lived," says Thompson Westcott, "was the very large four-story house on the south side, No. 806, which was once occupied as the Washington Museum, and afterwards as Barrett's Gymnasium.

"Jefferson occupied the whole of this house, and there he gave audience to the many citizens who had business with him. Jefferson, having been ambassador to France, had imbibed some French notions of refinement, which, it may be supposed, did not altogether agree with the simple manners of the age. Among other matters he introduced a fashion of sleeping-apartments altogether unknown to our forefathers. This was by having a recess, for a bedstead, connected with the rooms occupied for every-day business, and which recess might be so closed in daytime that its use would not be suspected. The apartment which was constructed for Jefferson's use was between the breakfast-room and the library, and offered a double convenience, according to the time the philosopher awoke. If he did not unclothe his eyes until the tinkling of the bell warned him that the morning meal was ready, he could turn out at once into the breakfast-room. If, however, he awoke before the viands were upon the table he might amuse himself in the library by looking over philosophical works, and by other mental amusements. The house was built by Thomas Leiper. There were stables at the lower end of the lot, which was extremely long, running back to a small street. On the south side of the house Jefferson erected a veranda, which was very pleasant in summer-time. Being of an investigating mind, the philosopher, it is said, while living in the house, tried a philosophical experiment, which did not come up to his theories. It is said that, reasoning on the fact that plants may be preserved in hot-houses in winter merely by the warmth of the sun striking through the glass, the sage of Monticello, arguing on the supposition that men require no more caloric than plants, tried the experiment as to whether he could do without other heat in winter than that yielded by the sun's rays, which were to be admitted by properly fitting up the south veranda. Unfortunately for philosophy, practical knowledge satisfied him that men who walk about are not precisely similar to plants in pots, and the experiment was declared unsuccessful."

southeast corner of Walnut, and the Auditor, Oliver Wolcott, at 121 South Third, on the east side, the third house north of Spruce. Wolcott's office was at 44 South Third Street, on the west side, below Chestnut. The Secretary of War, Gen. Henry Knox, resided at No. 120 South Second Street, below Dock. The United States Treasurer's office was at No. 71 Chestnut Street, north side, between Second and Third, and the office for settling accounts between the United States and individual States was at No. 52 North Fourth Street, above Arch. The general post-office was at No. 9 South Water Street, below Market, and the Philadelphia custom-house, Sharpe Delaney, collector, at the southeast corner of Walnut and Second Streets. For the accommodation of Congress the Supreme Executive Council surrendered to the House of Representatives the entire west wing of the State-House. This rendered necessary the removal of several State officers, for whom quarters were procured elsewhere. The rooms at the corner of Sixth and Chestnut Streets were remodeled, and a gallery capable of accommodating three hundred persons was placed in the chamber of the House of Representatives. Work was now commenced on the city hall, at the corner of Fifth and Chestnut Streets, and the building was completed during the summer of 1791, and occupied for the first time by the Supreme Court of the United States. A movement was set on foot shortly after the establishment of the seat of government at Philadelphia for providing a permanent residence for the President of the United States. In August the Common Council appointed a committee to ascertain whether the Episcopal school—a fine building on the south side of Chestnut Street above Sixth—could be purchased. In case it was not for sale, the committee was instructed to endeavor to obtain some suitable building elsewhere. On the 31st of December, 1790, the municipal corporation presented a petition to the Legislature stating that suitable accommodations for the President of the United States and the two branches of Congress had been provided, and suggesting that the State of Pennsylvania furnish a suitable mansion for the President and repay the moneys expended by the corporation. The Legislature accordingly appropriated twenty thousand pounds for the purchase of a lot and erection of a house for the President, and £2903 14s. 6d. to the city of Philadelphia for expenses incurred in receiving Congress and providing for its accommodation. The Governor was authorized to borrow twenty thousand pounds, pledging the vendue dues of the commonwealth for the payment of principal and interest; and the act provided that the lot for the building should be situated west of Ninth Street. A lot situated on the west side of Ninth Street below Market, costing five thousand four hundred and ninety-one pounds, was purchased, leaving £11,607 10s. 8d. for the building. The foundations were laid shortly afterwards for a building designed

to be one hundred feet square, the construction of which was under the supervision of Richard Wells, Francis Gurney, and John Hiltzheimer, appointed for the purpose. The corner-stone bore the inscription, "This corner-stone of the house for the accommodation of the President of the United States was laid on the 10th of May, 1792, when the State of Pennsylvania was out of debt. Thomas Mifflin then Governor of the State." The "President's House," afterwards the property of the University of Pennsylvania, was torn down in 1829.

The convention to frame a Constitution for the government of the State completed its labors on the 2d of September, 1790. On that day the members signed the instrument, after which they went in procession from the State-House to the court-house, where the new Constitution was proclaimed. Provision had been made for the continuance in office, until the new government went into operation, of the Supreme Executive Council and other State officers, but not of the Legislature; and the latter body believing its authority had ceased, did not proceed to the transaction of business on the following day. On the 4th of September forty-six of them signed an address to the people setting forth the status of affairs. On the 7th of December the new Legislature met at the State-House. At the election for State officers under the new Constitution, Thomas Mifflin received in Philadelphia 1434 votes for Governor, and Arthur St. Clair 96 votes. In the county the vote was Mifflin, 1434; St. Clair, 18; and in the State, Mifflin, 27,118, and St. Clair, 2819. On the 21st of December the change of government was formally effected. A procession was formed at the chamber of the Supreme Executive Council, which moved to the old court-house at Second and Market Streets, where the old government yielded up its powers, and the new government was proclaimed. On the 1st of January, 1791, the City Councils, mayor, recorder, and a number of citizens waited on Governor Mifflin and tendered their congratulations.

Among the matters which had demanded the attention of the old government during the last year of its existence was one which related to the extension of the limits of Philadelphia County. A petition from inhabitants of Moreland, Abingdon, Cheltenham, and Springfield townships, in Montgomery County, asked the Assembly to annex those sections to Philadelphia County, but the measure was declared by a committee of the Legislature to be inexpedient. During this year (1790), also, two hundred and six inhabitants of the Northern Liberties, living between the northern boundary of the city and Pegg's Run and east of Fourth Street, failing to secure the annexation of that part of the county to Philadelphia, petitioned for authority to set up a sufficient number of lamps to light the district and for the appointment of watchmen to patrol it, the cost to be defrayed by equal taxation. Applications for grants of public lands for

the support of free schools were rejected by the Assembly of this year, on the ground that the body of land belonging to the State was too small to permit of such concessions. On the 27th of March an act was passed, supplemental to that for the incorporation of the city, extending power to the municipality to assess and levy taxes for lighting, watching, pitching, paving, watering, and cleansing the streets, and authorizing the mayor and City Councils to regulate the prices to be charged by wagoners, draymen, porters, wood-sawyers, and chimney-sweepers for their services, and to do all that the old boards of wardens and commissioners might have done. The Assembly was also called upon this year to provide a site for the powder-magazine. The Supreme Executive Council had decided that the magazine should be removed to some point outside of Philadelphia. But report was made to the Assembly that a suitable location could not be secured in the county, and it was decided to purchase a lot on the northwest corner of Walnut and Ashton Streets. The dimensions of the magazine were forty feet north and south, and sixty feet east and west. The walls were of stone, from two feet to two feet six inches in thickness, with a four and a half inch wall outside of these, which supported the roof of the house. The house was properly arched, in order to keep all secure and dry. A house for the keeper was provided at the southeast corner of Walnut and Schuylkill Front Streets. The Legislature granted the old powder-magazine to the city of Philadelphia as a house for storing oil.¹

The city was the scene of some stirring events during 1790. The removal of Congress from New York and the proclamation of the new State government have already been noted, and in addition there were the celebration of Washington's birthday, observed on the 11th of February (old style), with an artillery salute fired at noon in High Street by Captain John Connolly's company, and a parade of military, including the companies of Captains Jeremiah Fisher, William Sproat, and William Haley, and the reception of President Washington and family on their arrival from New York. The Fourth of July this year fell on Sunday, and was observed with religious ceremonies. The Society of the Cincinnati met at the State-House, and the members having formed themselves in procession, headed by Thomas Mifflin, President of the Supreme Executive Council, and Chief Justice Thomas McKean, marched to Christ Church, where Rev. Dr. William Smith preached an appropriate sermon. They were accompanied by the city corporation, officers of the militia, Captain Fisher's company of Volunteer Artillery, Captains Reese,

¹ On the 24th of October, Leshner's powder-mill, between Germantown and the Falls of Schuylkill, was blown up, a man and a boy being injured. Two days afterward a workman employed at the powder-mill of Joseph J. Miller, near Frankford, threw a snuff from a candle near some cans containing gunpowder, which caused the explosion of a ton of the material. The author of the accident was horribly mangled, and died in a few minutes. No one else was harmed.

Sproat, and Hodgdon's companies of light infantry, and a number of citizens. On Monday the citizens indulged in various recreations, among which a visit to Gray's Gardens at the ferry on the Schuylkill was especially popular. The grounds, laid out with pleasant walks and ornamented with shrubbery, offered great attractions: among which were artificial islands, waterfalls, bowers and grottoes, with illuminations and fire-works at night. The floating bridge was draped with flags, and the ship "Union," which had been a prominent feature of the Federal procession, was gayly decorated. A "Federal Temple," erected in the gardens, had for one of its ornaments a vault of twelve stones, representing the Federal Union,—the keystone now completed by the accession of Rhode Island. From a grove in the garden there came, at an appointed time, thirteen young ladies dressed as shepherdesses, and thirteen young men attired as shepherds. They proceeded to the Federal temple, where they sang an ode to Liberty, which was diversified with solos, choruses, and responses. At night an illuminated island floated on the Schuylkill. The reception of Washington and his family on the 2d of September was not marked by any incidents of special interest or by elaborate display. They were received at some distance from the city by an escort of troops, which accompanied them to the City Tavern, where an entertainment was served at the expense of the municipality. During his stay in the city, however, Washington was the recipient of many compliments, including a *fête champêtre* at Gray's Ferry, given by the citizens in honor of himself and wife. After a collation there was a concert, followed at night by an illumination of the grounds. On the following morning Washington set out for Mount Vernon.

At the beginning of the year 1791 the Bank of North America abandoned the old system of keeping its accounts in pounds, shillings, and pence, and adopted that of dollars and cents. It was suggested in the newspapers that citizens generally should follow its example, and thus was begun a gradual change which finally resulted in the universal adoption of the decimal system. About the same time was established the famous Bank of the United States. Hamilton, then Secretary of the Treasury, had suggested the establishment of a national bank as an institution which could not fail to be of great benefit in facilitating the administration of the finances and sustaining the public credit. Congress adopted the plan proposed by him, and on the 25th of February, 1791, granted a charter incorporating the stockholders of the proposed institution, under the title of "The President, Directors, and Company of the Bank of the United States." The charter was to remain in force until the 4th of March, 1811, during which time no other bank was to be established by authority of the general government. The capital stock was limited to ten millions of dollars, in shares of four hundred dollars each, payable

one-fourth in specie and three-fourths in stocks of the United States, the government having the privilege of subscribing for stock in the bank to the amount of two millions of dollars. Philadelphia was selected as the headquarters of the bank, but the directors were authorized to establish offices or branches of discount and deposit for the transaction of banking business. Offices were accordingly established at Boston, New York, Baltimore, Washington, Norfolk, and Savannah. Books for subscriptions to the stock of the institution were opened on the 4th of July, 1791, and before night more stock had been subscribed than could be legally issued. On the following day thirty-five dollars was given for scrip upon which but twenty-five dollars had been paid, and in four days the value of the stock had doubled. By the 4th of May the increase in price was three times the sum paid. Speculation was the inevitable result, and large sums of money were realized by those who bought and sold while prices were rising. Towards the end of August the stock sold at two hundred dollars for fifty dollars paid in, but in a few days fell to one hundred and forty-five dollars, and thenceforward continued to decline until it reached its normal value. The bank commenced business in the latter part of December in Carpenters' Hall, and proved, as was anticipated, a most important auxiliary of the United States Treasury.

In the year 1791 was also commenced that system of internal improvements which was destined to bring upon the commonwealth a heavy burden of indebtedness, and to form an important factor in political affairs. The committee appointed by the Legislature, in 1790, to consider the subject of inland navigation submitted a report on the 19th of February, 1791, in which they expressed the opinion that the Delaware River could be made an important channel for the introduction of the trade and produce of New York to Philadelphia by the construction of a portage of nineteen miles and the extension of two other short portages to Lake Ontario. The cost of a safe boat and raft navigation to the northern boundary of the State was estimated at twenty-five thousand pounds. Various interesting facts were stated by the committee in regard to the connection of the Delaware and Allegheny Rivers. In 1790, it was said, one hundred and fifty thousand bushels of wheat had been brought down the Susquehanna, and passed through Middletown for Philadelphia, a large proportion of which came from the Juniata. In 1788 a considerable quantity of flour went up the Susquehanna for the settlers of Northumberland. It was estimated that if the increase should be but one-eighth annually, the total amount of wheat brought down in eight years, ending in 1800, would be two million one hundred and seventy-five thousand bushels, worth at 2s. 6d. per bushel—the price at that time, which was also the price of carriage by land—two hundred and seventy-one thousand eight hundred and seventy-

five pounds for transportation. On the 3d of April a supplementary report was made, recommending appropriations for opening rivers, and that the Governor should be instructed to invite proposals for the construction of canals and locks in and near the waters of the Tulpehocken and Quittapahilla; that a canal should be made from Frankstown to Poplar Run; that proposals should be invited for clearing the Susquehanna from Wright's Ferry to the Maryland line; and that the construction of a turnpike road from Philadelphia through Lancaster to the Susquehanna and other roads in different parts of the State should be contracted for. The committee's recommendations were adopted, and on the 6th of April a bill covering them was passed.¹

In August, Governor Mifflin informed the Legislature that he had made contracts for the improvement of the navigation of the Delaware, Schuylkill, Lehigh, and Lechawaxen, and for opening and improving roads from Wilkesbarre to the Wind Gap, and in other portions of the State. In order to facilitate these and other schemes of internal improvement, an association composed principally of citizens of Philadelphia was formed, with the title of "the Society for Promoting the Improvement of Roads and Inland Navigation." On the 6th of September the society memorialized the Legislature in favor of the establishment of common roads throughout the State wherever they should be deemed necessary. It also suggested the construction of a canal between the Delaware and Allegheny Rivers, and pointed out the benefits that would result if the Schuylkill were connected with the Susquehanna. In regard to the proposed canal between the Tulpehocken and Quittapahilla, for the building of which no offers had yet been made, it recommended that a company be incorporated with a large capital for the construction of the work. Accordingly, in September an act was passed "to enable the Governor to incorporate a company for opening a canal and lock navigation be-

tween the rivers Schuylkill and Susquehanna, or by the waters of the Tulpehocken and Quittapahilla and the Quittapahilla and Swatara, in the counties of Berks and Dauphin." Henry Drinker, Robert Hare, Joseph Heister, George Latimer, George Fry, and William Montgomery were appointed commissioners to receive subscriptions for one thousand shares of stock at four hundred dollars each, and the subscribers were created a corporation with full power to build the canal, under the title of "The Schuylkill and Susquehanna Navigation Company."

Such was the popular interest in this enterprise that although the number of shares was only one thousand, forty thousand were subscribed for, and it was found necessary to distribute them by lot. A project for another canal, brought forward by Thomas Leiper and John Wall, of Delaware County, was supported by a petition from the Philadelphia stonecutters and masons. Leiper asked permission to cut a canal from the flowing of the tide in Crum Creek, at or near McIlvaine's mill-dam, or W. Leiper's mill-dam, in order to cheapen transportation from his stone quarries to tide-water. The petition was supported by Philadelphia mechanics on the ground that Leiper's stone was the best procurable in the vicinity of the city, and that the canal would be of advantage to the public. In consequence of a remonstrance from John and Isaac McIlvaine, no further action was taken at this session. In March, the Society for Promoting the Improvement of Roads and Inland Navigation suggested the incorporation of a company for the permanent improvement of the Delaware and its branches from Trenton Falls to the northern boundaries of the State, and of another company to complete the improvement of the Schuylkill from the lower falls to the heads of its branches. Favorable reports were made on both propositions in the Legislature, but no definite action was taken. At the session of the Assembly, Dec. 18, 1791, Mr. Wells offered a resolution favoring the construction of a canal to unite the Delaware and Schuylkill near the city, and a committee was appointed to examine the proposed route. This committee reported "that there was a gut a little above Vine Street on the Delaware (Pegg's Run), and a gut a little above Vine Street on the Schuylkill, which might be deepened and united without much probability of meeting obstructions from any body of stone. The highest ground between the situations named, they said, was not more than twenty-seven feet above high water. The committee was unable to determine whether the canal should be supplied with water by a dam on the Schuylkill just below the mouth of the canal, or whether the water of the Schuylkill could be brought from a distance above the mouth of the canal along the banks of the river, to supply it, or whether the small streams in the neighborhood could be relied upon as feeders. They suggested that a bill should be brought in to incorporate a company to build the canal, leaving the mode

¹ Among the appropriations were the following: For the improvement of the Delaware, Lechawaxen, and Lehigh, and a road from the Delaware to the Susquehanna, near Great Bend, three thousand six hundred and fifty pounds. For the Schuylkill and a road from Reading to Harrisburg, two thousand pounds. For the Susquehanna, from the mouth of the Swatara to the Juniata, from the Juniata to the West Branch, from the West Branch to the Starruca and Great Bend, one thousand and forty pounds. For the West Branch, from the mouth of the Sinnemahoning to its north branch, thence to Driftwood; for a road from Driftwood to the Allegheny, twenty-three miles; from the Allegheny to the Conewango, French Creek, and a road from the latter to Presque Isle, on Lake Erie, two thousand one hundred and seventy pounds. For clearing the Conewango Falls and down to Wright's Ferry, five thousand two hundred and twenty pounds. For the Juniata and its connecting roads and waters—from the mouth of the Juniata to Water Street; from the latter to Frankstown; thence by road to Poplar Run; thence by road to the Conemaugh, and a road from the forks of the Little Conemaugh to the mouth of Stony Creek; and for improving the Little Conemaugh, Conemaugh, and Kiskiminetus to the Allegheny, ten thousand three hundred and ten pounds. The Governor was also authorized to receive proposals for making sixteen roads in Berks, Dauphin, and other counties up to the Allegheny Mountains.

of supplying it optional with the company. The ground was measured afterward by some citizens, who made out that the highest portion of it was thirty-seven feet above high-water mark. This depth was thought to be too great to dig away with advantage. The feasibility of erecting a dam to back the water of the Schuylkill sufficiently to feed the canal was discussed. It was urged against the plan that the water would cover a large extent of ground, thus injuring many mill-seats and overflowing valuable fields and meadows, and that the dam could not be made strong enough to resist ice and freshets. It was suggested that it would be preferable to take the water of the Schuylkill from a point near Norristown, where the stream was forty feet higher than at Philadelphia. The water could be carried from thence to Philadelphia by a canal, passing the hollows by means of aqueducts. By this method it was thought that the city could be supplied with pure water for drinking and domestic purposes, and dry-docks might also be established. The Legislature passed an act to incorporate a company to construct the canal April 10, 1792, under the title of "The Delaware and Schuylkill Canal Navigation." Power was given to this company to take water from the Schuylkill anywhere between the mouth of Stony Creek at Norristown and the northern bounds of the city, and to conduct the same by a canal along the east bank of the river. The width of the locks at the river was to be thirty feet, and no more water was to be taken than would pass through a thirty-foot water-way. The company was also given power to construct a canal between the Delaware and Schuylkill, to be supplied with water from the streams lying between the Delaware and Schuylkill, and within eight miles from the northern bounds of the city, with authority to conduct the said streams into the canal, and to make dry- and wet-docks, for the accommodation of vessels, near Philadelphia, to communicate with the rivers. There was also added a more important authority, which was given for the purpose of supplying the city with water for drinking and culinary purposes from the canal. Privilege was given to conduct the water, by means of pipes and other conductors, under the public roads, streets, and alleys, and to dispose of it to the citizens at fixed rates.

"About the same time the Schuylkill and Susquehanna Canal Company commenced work at the crown level, or middle ground, between the Tulpehocken and Quittapahilla. The stock—two thousand shares at two hundred dollars each—was soon taken, and the company organized by the election of Robert Morris, president; Timothy Matlack, secretary; and Tench Francis, treasurer. It was resolved to bring the water from the mouth of Stony Creek, near Norristown, on the east side of the Schuylkill. The work was commenced in November, 1792, near Norristown mills."¹

¹ Thompson Westcott.

The construction of the proposed turnpike road from Philadelphia to Lancaster was an undertaking which enlisted the popular interest to a marked degree. Owing to its necessarily heavy cost the Legislature decided it was inadvisable for the State to attempt the work, and accordingly passed an act to enable the Governor to incorporate "a company for making an artificial road from the city of Philadelphia to the borough of Lancaster." The title of the corporation was "The Philadelphia and Lancaster Turnpike Company." The route extended from the west side of the Schuylkill opposite Philadelphia, so as to pass over the bridge over the Brandywine near Downingtown, thence to Witmer's bridge on the Conestoga, thence to the east end of King Street, Lancaster. There were to be one thousand shares at three hundred dollars each. Full authority was given to the company to enter upon lands, examine the ground and locate the road, compensate owners of property, regulate tolls, fix the width of wagon-wheels to be used in traveling over the road, etc. Books for subscriptions to the stock of the company were opened in May, and two thousand two hundred and seventy-six shares were subscribed, or one thousand six hundred and seventy-six more than were provided for. A lottery was resorted to in order to reduce the number of shares to one thousand, and six hundred of the subscribers were thrown out. The sum of sixty-two thousand two hundred and eighty dollars had been paid in on the subscriptions, but the lottery reduced the amount to thirty thousand dollars. Shares on which but thirty dollars had been paid on installment increased in value within a few days to one hundred dollars each. William Bingham was elected president of the company, William Moore Smith, secretary, and Tench Francis, treasurer. Work was commenced soon afterwards, and the road thus built was the first turnpike constructed in the United States.²

The attention of the Assembly was also directed by the "Society for Promoting the Improvement of Roads," etc., to the necessity for constructing roads from Philadelphia to Reading; from Philadelphia to the Wind Gap in Northampton County; from Philadelphia through Chester to the Delaware State line, and from Philadelphia through Bristol to the falls of the Delaware. Committee reports in favor of granting charters to companies willing to undertake these improvements were made, but no further action was taken by the Legislature at this time.

The legislative measures affecting the local interests of Philadelphia, enacted during 1791, were not specially important. The increase of the Northern Liberties having become so great that the residents in that section of the county had begun to experience the necessity of some form of municipal or borough government, the Legislature was appealed to, and a law was passed March 30, 1791, granting the inhabi-

² Thompson Westcott.

tants of that part of the Northern Liberties between Fourth Street and the Delaware and Vine Street and Pegg's Run, authority to elect three commissioners and a treasurer, with power to establish a public watch, and to set up and keep in repair a number of pumps, to procure lamps, to employ watchmen, and to assess taxes for the same. The question of imposing an excise tax upon distilled liquors was quite prominent in local political discussions about this time. In the Legislature, resolutions opposing the excise passed the House of Representatives, but were lost in the Senate. The system was considered to be of English origin, and this fact added to its unpopularity. At a meeting of the Society for Promoting Domestic Manufactures, held at Germantown, on the 4th of July, at which Dr. George Logan presided, resolutions were adopted opposing the excise, as being "a dangerous violation of our natural and inalienable rights," and declaring that the Legislature had no right to interfere with the use of distilled liquor. An application to the Legislature for power to tear down wooden buildings was refused this year. In their petition the Councils asked for authority to demolish such structures in case of fires, which made it dangerous to leave them standing, and also for power to tear down buildings that were ruinous and in danger of falling. The application was probably suggested by the experience gained in two destructive fires which visited the city this year. On the evening of May 11th fire broke out in a livery-stable, on Dock Street near Third, belonging to Israel Israel, which rapidly spread to other buildings, the majority of which were of wood. About twelve o'clock the part of the square bounded by Dock and Third Streets and Carter's Alley, and a small alley which ran parallel to Second Street, was in flames. From eighteen to twenty houses were burned, and much suffering resulted. Committees were appointed to collect subscriptions for those in distress, and Hallam & Henry gave a benefit at the old theatre on South Street.

In October another fire occurred in Dock Street under circumstances which justified the belief that it was of incendiary origin. Governor Mifflin offered a reward of five hundred dollars for the arrest of the perpetrator; and John Barclay, the mayor, Nicholas Waln, Thomas Fisher, John Morton, Mordecai Lewis, Robert Waln, D. Lenox, and David Lewis agreed to give five hundred dollars more. Four persons were arrested on suspicion, but nothing was proven against them. At a meeting of City Councils, "to consult in relation to the alarming attempts to fire the city," the mayor, John Barclay, and Aldermen Joseph Swift, Matthew Clarkson, and Reynold Keen, were authorized to appoint patrols to guard the city by night and day. A meeting of citizens was subsequently held at Peter Evan's tavern, and the following citizens volunteered to act as patrols: North Mulberry Ward, Thomas Coats, Nathaniel Falconer, Philip Wager; South Mulberry, John Hallowell, Leonard

Dorsey, Jonathan B. Smith; North, Samuel Emlen, Jr., Lawrence Seckel, Israel Wheeler; Upper Delaware, Andrew Hodge, John Montgomery, Bowyer Brooke; Chestnut, John Dunlap, William Lane, William Poyntell; South, Charles Marshall, Joseph P. Norris, Raper Hoskins; Dock, Joshua Gilpin, David Lewis, Joseph Few; Lower Delaware, Elliston Perot, Nathan Field, Chamless Allen; Middle, Charles Jervis, Andrew Tybout, George Bickham; Walnut, Casper Morris, Samuel Coates, John Shields; New Market, Francis Gurney, James Moore, John Clement Stocker; High Street, William Hall, Zachary Collins, Jacob Baker. These patrols kept watch for some days, when, no further attempts to commit arson having been made, they discontinued their services. Subsequently, William Dillon, a boy of twelve years of age, arrested and tried for setting fire to the stables of several citizens, was acquitted of arson, but pleaded guilty of setting fire to the store of John M. Jones and the stable of David Lenox. He was fined five shillings and condemned to two years' imprisonment, and to give security for good behavior for seven years.

The abuses in the management of the debtors' department of the jail was the only other subject of local interest that is worthy of mention in the legislative records of 1791. In a special message to the Legislature in December, Governor Mifflin called particular attention to these abuses. Among the evils cited was the "want of a provision for maintaining the prisoners," and the lack of a competent allowance for the service of the keeper, who was permitted to increase the emoluments of his office by vending liquors to the prisoners. Debtors, he added, were permitted to languish in jail without clothes, food, or fire, while those confined for crimes "enjoyed every supply that was requisite to maintain life." He recommended that provision be made for the maintenance of prisoners, and that the jailer be given an adequate salary in order that every pretence for his keeping supplies for the prisoners might be taken away.

President Washington's birthday this year was observed by the firing of salutes and by the official attentions of the heads of the national departments, foreign ministers, officers of the army and navy, State authorities, etc., who called upon him to tender their congratulations. The President held a levee, at which "one hundred ladies, elegantly if not superbly dressed, graced the ball-room, and twice that number of gentlemen made their appearance during the evening." On the 2d of March an eulogium on Franklin was pronounced at the German Lutheran Church on Fourth Street by the Rev. Dr. Smith, at the request of the American Philosophical Society. Among those present were President Washington and wife, Vice-President Adams and wife, members of Congress and the State Legislature, Governor Mifflin, and others. The Fourth of July was celebrated this

year by a fête, given by the Messrs. G. and R. Gray at their gardens. During the entertainment a disturbance occurred, during which several persons were thrown into the river but escaped drowning, and many were badly hurt. Two days later the return of Gen. Washington from the South, after a short absence, was signalized by the ringing of bells and firing of cannon. Governor Mifflin's birthday, August 1st, was observed in a similar manner.

The most important event of the year 1792, so far as Philadelphia was concerned, was the passage of the act for the establishment of the United States Mint. Ten years before, on the 21st of February, 1782, Congress had resolved to establish a mint, but the design was not at once carried into execution owing to the difficulty experienced in procuring artists and workmen. On the 16th of October, 1786, a resolution was adopted directing that the law of February, 1782, should be carried into effect, but it was found impossible to do so at that time. On the 2d of April, 1792, an act was passed providing that the mint should be established at Philadelphia, and during the summer and fall a building was erected on the east side of Seventh Street above Sugar Alley, afterward known as Farmer Street, and now Filbert Street. In October coining was commenced.

The acrimonious discussions and abusive newspaper controversies which had characterized the local politics of Philadelphia had now given place to milder methods of dealing with public affairs, and such had been the subsidence of popular feeling, and so general the concurrence in the results of the Revolution, that parties had almost ceased to exist, and there seemed to be a practical unanimity of political sentiment. During 1792, however, a difference of opinion arose on the question as to how candidates for office should be nominated. The Legislature had passed a law providing for the election of members of Congress and Presidential electors on a general ticket to be voted for throughout the State. Washington was the only candidate for President, and although some opposition to John Adams, the candidate for Vice-President, had been developed, it was not of a formidable character. No question of personal preference therefore, so far as the two principal candidates were concerned, was involved, and the difficulty arose from a difference of opinion as to the proper mode of nominating the candidates for electors and Congressmen. A meeting of citizens was held at the State-House on the 27th of July, Hon. Samuel Powell presiding, and William M. Smith secretary, to consider the action of a preliminary meeting at which Matthew Clarkson had presided, and Benjamin R. Morgan had acted as secretary. Both Clarkson and Morgan absented themselves from the second meeting. At the preliminary meeting it had been proposed that conferees should be appointed by the citizens of each county, who were to select a ticket. This suggestion had not been adopted; but an effort was now made to revive it.

At the second meeting (July 27th) it was decided that conferees ought to be appointed. Another meeting was called for the 30th at the State-House yard. At this meeting Judge Wilson was chosen temporary chairman, and Robert Henry Dunkin acted as secretary. Samuel Powell claimed the right to act as chairman, but was resisted by Judge McKean. Robert Morris and John Barclay were then proposed for chairmen by the contending factions, one side favoring the conferee method, the other side urging the appointment of a committee of correspondence to transmit letters to all parts of the State, in order to ascertain the views of citizens and settle upon a ticket. Judge McKean, who supported the committee of correspondence plan, was finally placed in the chair, whereupon the advocates of the conferee system withdrew. The meeting then reversed the action of the former meeting in favor of conferees, and appointed a committee of correspondence, consisting of Chief Justice McKean, James Hutchinson, A. J. Dallas, John Barclay, Hilary Baker, and Jared Ingersoll, who were directed to correspond with persons in all parts of the State, and procure the names of individuals suitable for Presidential electors and members of Congress. These names, when procured, were to be submitted, without the influence of selection or comment, "to the deliberate consideration and unbiased suffrage of the people." A meeting of the opposition was held at Eppelsheimer's tavern on the 4th of August, and resolutions calling for a conference at Lancaster of representatives from all the counties were adopted. A committee, composed of George Latimer, Robert Waln, William Lewis, Israel Whelen, William Rawle, Richard Wells, Hilary Baker, John Wilcocks, and Benjamin R. Morgan, was appointed to correspond with the leading citizens of the various counties on the subject of a conference and to invite their opinions as to the best way "to produce a wise and virtuous representation for the Congress of the United States, and a proper choice of electors for the President of the United States." Delegates were chosen in the different counties, and when the conference assembled at Lancaster on the 20th of September, it was found that Philadelphia, Bucks, Chester, Lancaster, York, Berks, Northampton, Montgomery, Dauphin, and Delaware Counties were represented. The conference nominated a Congressional ticket, upon which Thomas Fitzsimons and Thomas Scott were candidates for Congress from the city and county of Philadelphia. The electoral ticket was headed with the name of James Ross, of Washington. A few days afterwards the committee of correspondence issued a circular, stating that they had addressed letters to five hundred and twenty citizens of the State, residing in the different counties, and to the foreman of each grand jury, for himself and his associates. From the replies which they had received they undertook to say that it was the sense of the people of Pennsylvania that the electoral ticket headed

by Thomas McKean would be most agreeable to them. This ticket was eventually presented as that of "the friends of the rights of man," while the other, headed by Joseph Ross, was not honored with any distinctive title. The tickets were different throughout; but in the sequel it was proved that the people, not recognizing the subject as one of a party nature, elected some of the nominees on each ticket. There was no difficulty as to the choice of Washington; and, although Adams was denounced as an aristocrat, he received every vote in the electoral college of Pennsylvania but one.

At the election in October the ticket for Congress headed by the name of William Findley received 2179 votes in the city and 1140 in the county, while the ticket headed by Thomas Fitzsimons received 1372 votes in the city and 506 in the county. The electoral ticket headed by William Henry received 812 votes in the city and 210 in the county, while the ticket headed by William Todd received but 222 votes in the city and 47 in the county.

Public attention was somewhat distracted from home affairs about this time by the exciting events of the French revolution. Louis XVI., who seemed to have yielded to the demands of his people, was exceedingly popular on that account as well as because of his active interposition on behalf of the United States during the Revolutionary struggle, and at the Fourth of July celebration was toasted by the Society of the Cincinnati, and the Seventh Battalion of militia, Lieut.-Col. Coats commanding. On the 14th of July, the first anniversary of the destruction of the Bastille was celebrated in Philadelphia with a public demonstration. The shipping along the river front was gayly decorated with flags, and salutes were fired from the French vessels, of which there were several in the harbor. A public entertainment was served at Oeller's Hotel, at which a number of toasts complimentary to the French king and people were drunk, and the officers of Col. John Shee's Fourth Philadelphia Regiment celebrated the occasion with a dinner at Ogden's Hotel, on the Schuylkill, at Market Street.¹

¹ "The militia at this time," says Thompson Westcott, "was kept up with vigor, and those who composed it were proud of its discipline and influence. The officers participated in all public ceremonies, and were anxious to omit no proper occasion when they could appear."

"In November, a meeting of the officers of the militia of the city and liberties was held at the inn of Michael Kitts, to hear the report of a committee previously appointed, to determine on what occasions it was proper for them to assist in public testimonials. Col. Williams was in the chair; and Col. Shee, on behalf of the committee, made report as follows:

"1. That the characters to whom it is incumbent to manifest such attention are the President of the United States and the Governor of the State.

"2. That the time to present our respects is upon the anniversaries of those days on which happened events auspicious to our rising empire.

"3. As long as this city contains the seat of the general government we will annually wait on the President on the Fourth of July, in commemoration of an era at once propitious to our country and glorious to

Among the other local events of the year were the entertainments of the dancing assemblies and a visit of Indian chiefs, who came to pay their respects to the Federal government. The old City Dancing Assembly, which gave a ball on the 21st of February in honor of the birthday of President Washington, was composed chiefly of members of old and aristocratic families, who were disposed to be exclusive; while the new City Dancing Assembly, which gave a similar entertainment on the 22d, was principally made up of active tradesmen, who had been unable to obtain admission to the older organization. There was considerable rivalry and ill-feeling between the two assemblies, and Washington prudently attended both entertainments, proposing at each the toast "The State of Pennsylvania." The Indian deputation consisted of forty-seven members, including Oghayewas, or Farmer's Brother, first sachem of the Senecas, Long Plover tribe; Kanodington, first sachem of the Buffaloes, Snipe tribe; and Sagoyewetha, or Red Jacket, first sachem of the Wolf tribe; together with representatives of the Beaver tribe, Cayoges, Onondagoes, Oneidas, Tuscaroras, and Stockbridges. They were received at the State-House by Governor Mifflin, in the presence of a number of ladies and other spectators. A few days afterwards they gave an exhibition of war-dances, and about a week after the formal reception Red Jacket made a speech expressing their gratification at the civilities shown them.²

The year 1793 derives a ghastly pre-eminence in the annals of Philadelphia from the yellow fever epidemic of that year. During the early part of the summer the disease had been raging in the West Indies, and in July vessels were allowed to come to the Philadelphia wharves without sanitary inspection or quarantine. The fever first made its appearance during the same month in a lodging-house on Water Street, but it was not until the middle of August that its progress began to attract attention. The first official measures in relation to the disease were taken by the mayor, Matthew Clarkson, on the 22d of August, and four days later the physicians united in an address to the public defining the nature of the disease, and recommending measures of precaution and the

him who so eminently contributed to its establishment. We will assemble at eleven o'clock in the forenoon, with side-arms and the uniforms of our respective corps. The Governor on such occasions will be requested to precede us.

"4. At the same time and hour, on the 2d of September, the anniversary of the adoption of the Constitution of Pennsylvania, we will assemble to congratulate the Governor on the event.

"5. We will attend the funerals of commissioned officers of the militia, and will provide ourselves with uniforms."

² During their stay in Philadelphia, Ogiheta, or Peter Jaquette, one of the chiefs of the Oneidas, died. He had accompanied M. de Lafayette to France on the latter's return from the United States, and had been educated in that country. The funeral procession from Oeller's Hotel to the Presbyterian burying-ground in Mulberry Street, where the remains were interred, was escorted by a detachment of the City Light Infantry, and among those present were the Secretary of War and a number of army officers.

proper remedies for the treatment of the disease. When the people began at length to realize the alarming character of the disease, a panic ensued, and about the 25th of August a general exodus of the population commenced. Among those who remained the consternation was extreme; and, as the disease progressed, terror and dismay were visible on every hand. Mayor Clarkson remained at his post, and through his efforts a committee of citizens was organized to assist the overseers of the poor in their ministrations to the sick and dying. Subsequently another committee was formed, to which were intrusted all the arrangements relative to succoring the sick, providing physicians, nurses, etc. Other measures were taken from time to time to check the spread of the pestilence and provide for the destitute; and among those who remained in Philadelphia were many noble-hearted men and women, who devoted all their energies, their time, and their money to the work of relieving the general distress. Many succumbed to the disease; among these self-sacrificing spirits were ten clergymen and ten physicians. The epidemic lasted from the 1st of August to the 9th of November, during which period the number of interments in the city, according to the returns from the graveyards, was 4044. According to Mathew Carey, however, the real number of interments was about 5000. During the prevalence of the fever about 17,000 persons, it has been computed, left the city, and during the period of greatest mortality there were fewer than 23,000 persons in the city: Assuming that the deaths numbered 5000, the rate of mortality was in a fraction of twenty-two per cent. The pecuniary loss to Philadelphia has been estimated at from \$1,750,000 to \$2,000,000.¹

While the epidemic was at its height the embarrassments of the local authorities were increased by the necessity of providing for a large number of French refugees from St. Domingo, who arrived in Philadelphia early in August. These unfortunate persons had been driven from their homes by the insurrection of the negroes, and on their arrival in the United States found themselves in a destitute condition. About six hundred of them came to Philadelphia and were hospitably treated. The French Patriotic Society contributed eight hundred dollars to their relief, and subscriptions were obtained in various quarters which swelled the fund to eleven thousand dollars. It was estimated that fourteen thousand six hundred dollars more would be required, of which four thousand dollars would be needed to pay the passage of those who wished to go to France, and three thousand dollars of those who desired to return to St. Domingo. Additional subscriptions were obtained, but the increasing severity of the yellow fever doubtless interfered with the full accomplishment of the design.²

¹ For a detailed account of the yellow fever epidemic of 1793, see the chapter in this work on the Medical Profession.

² In February, 1795, the Legislature appointed Godfrey Haga, Edward Penington, Robert Ralston, S. P. Griffiths, Joseph Lowmes, Samuel Meck-

The proceedings of the Legislature during this year related to a number of matters of more than ordinary interest to Philadelphians. In April a bill was passed directing that a road be laid out from Philadelphia to York through West Chester and Strasburg, crossing the Susquehanna at Blue Rock; and a petition was presented for the establishment of a turnpike road from Chestnut Hill, through Germantown, to the city of Philadelphia. The committee of the Legislature reported in favor of its being laid out from the city to the ten-mile stone, adding that "if carried through to Bethlehem" it would "be beneficial," and recommended that it should be built to Chestnut Hill first, and extended to Bethlehem in ten years afterwards. Remonstrances, born of a growing hostility to special legislation, were presented to the Assembly, not only against the proposed Chestnut Hill turnpike, but also against the different canal and turnpike companies already in existence, as being vested with privileges in derogation of the rights of the people. The principal grievance seemed to be that the corporations were authorized to enter upon the lands of citizens and take possession of them for their own purposes. In consequence of the opposition thus developed the Chestnut Hill turnpike project was temporarily abandoned. The Legislature this year (March 30th) chartered another bank,—the Bank of Pennsylvania,—which was expected to "promote the regular, permanent, and successful operation of the finances of the State, and be productive of great benefit to trade and industry in general;" and passed a new militia act, which provided that the volunteers of the city and county of Philadelphia were to form one division and two brigades. Under this law Governor Mifflin appointed James Irvine major-general of the first division, composed of the city and county of Philadelphia; Thomas Proctor, brigadier-general of the city brigade; B. I. Nicholas, brigade inspector; Jacob Morgan, brigadier-general of the county brigade; and Joseph Key, brigade inspector. The Legislature also passed a law authorizing the enlargement of the court-house building at the corner of Sixth and Chestnut Streets, in order to provide additional accommodations for Congress. An appropriation of \$6666.67 was made, part towards completing the President's house, and the remainder for taking out the south wall of the court-house, extending it forty feet on Sixth Street, and erecting a gallery in the Senate for the accommodation of spectators, if the United States Senate should resolve to sit with open doors. On the 3d of April the Assembly

lin, and Joseph Sansom trustees to distribute two thousand five hundred dollars among the French refugees, "excepting so far as can benevolently be done such persons as, having slaves, do by any act or device contravene or evade the law of this State made and provided for the abolition of slavery, so as, contrary to the true intent and meaning thereof, to deprive the persons by them so held or claimed as slaves of their just rights to freedom." In January, 1796, one thousand dollars were appropriated to the same trustees for a like purpose, and in January, 1797, the sum of one thousand dollars.

passed a resolution directing the Governor to have additional buildings erected, adjoining the south side of the wings of the State-House, for the accommodation of the land office, rolls office, and treasury, and for the safe-keeping of records and public papers of the commonwealth; also to erect an additional building at the west end of the State-House for the accommodation of the Supreme Court of Pennsylvania. The resolution, however, does not appear to have met with the approval of the Senate.

The popular interest in ballooning experiments, which had been somewhat checked by the disaster which had overtaken the Carnes aerostat in 1784, was revived in Philadelphia in 1793 by the arrival of Blanchard, the famous French aeronaut. Blanchard's popularity was enhanced by the fact that his devotion to the principles of freedom had caused his imprisonment in the fortress of Kufstein, and he was thus enabled to appear in the dual rôle of a daring experimenter and ardent patriot. He secured the yard of Walnut Street prison as the place from which to make the ascent in his balloon, early in January, and a subscription at five dollars per ticket was set on foot to secure him from loss; but the desired amount not having been obtained as soon as expected, second-class tickets at two dollars each were issued. On the 9th of January, the day appointed for the ascension, an immense concourse assembled at the jail-yard and vicinity. Within the inclosure there were several hundred spectators. Capt. Fisher's company of artillery was stationed in the prison-court, and on the arrival of President Washington, at nine o'clock, a salute of fifteen guns was fired. Two guns were subsequently fired every fifteen minutes until the time of the ascension. At five minutes after ten o'clock, Blanchard, having received a paper from Gen. Washington, took leave of the spectators and sprang into his boat, which was spangled and painted blue. The balloon, which was of yellowish silk highly varnished, was covered with a strong network. Blanchard was dressed in a plain blue suit, with a cocked hat and white feathers. On entering the boat he threw out a portion of the ballast and the balloon began to ascend, the aeronaut waving the United States flag and the tri-color of France. As the balloon rose the spectators cheered, cannon were fired, and an inspiring air was played by the band. Blanchard's voyage lasted forty-six minutes, during which he traveled fifteen miles, descending a little to the eastward of Cooper's Ferry, N. J. At half-past six o'clock on the evening of the same day he reached Philadelphia and paid his respects to President Washington. The success of the experiment elicited many flattering notices of Blanchard in the newspapers; but these did not compensate him for the pecuniary loss which he sustained. He had calculated on gaining nearly three thousand dollars by the exhibition, the expenses of which were represented to be twenty-five hundred dollars. Instead of realizing the amount needed, he

represented that the whole sum received for tickets and subscriptions was but four hundred and five dollars. His expenses were five hundred guineas, so that he fell short several hundred guineas.

Joseph Ravara, consul-general of Genoa, started a subscription to reimburse Blanchard, but succeeded in raising only two hundred and sixty-three dollars. Blanchard, however, determined to make another ascension, and fixed the 30th of May for the trip. He selected Rickett's Circus, southwest corner of Twelfth and Market Streets, as the place from which to make the ascension, and fixed the price of admission at one dollar. In the mean time Governor Mifflin had, "for the encouragement of science," given Blanchard permission to erect a temporary rotunda or exhibition-room on the Governor's lot, on the south side of Chestnut Street, between Seventh and Eighth. Blanchard advertised that he would exhibit at this place the balloon with which he intended to make his forty-sixth ascension, accompanied by Joseph Ravara. While it was displayed there it became injured and broken by stones thrown against it from the outside, and the ascension did not take place. On the 5th of June, Blanchard sent up from his rotunda a balloon and parachute. The latter had in its car a dog, a cat, and a squirrel. A slow match was fixed so as to burn off the rope which suspended the car when the balloon was at a certain distance in the air. This was done, and the balloon fell into the Delaware at Five-Mile Point, and the parachute descended near Bush Hill. Blanchard again complained that, although one hundred and fifty dollars were received for admission to the rotunda, he was not compensated for his outlay. The number of outsiders was, as usual, immense. Nevertheless, another exhibition was given June 17th. The rate of admission was fifty cents. The balloon fell in Arch Street, near Fifth, and the parachute, with the animals, in the Friends' burying-ground, at Arch and Fourth Streets. The result was similar.

On the 20th Blanchard gave another exhibition, and on this occasion had the satisfaction of seeing his rotunda filled with spectators. He also exhibited models of balloons and philosophical apparatus, and a "wonderful carriage" propelled by an "automaton in the shape of an eagle chained to the tongue of the carriage and guided by the traveler." This vehicle, which ran without the assistance of horses, traveled "as fast as the best post-chaise," and could "not only travel on all roads, but likewise ascends any mountain which is accessible to any common carriage."¹

¹ In an advertisement headed "A curious carriage," Blanchard made the following announcement: "Monday, the 26th August, at half-past five o'clock, at his rotunda, on Governor Mifflin's lot, Philadelphia, Mr. Blanchard will make two experiments—the one of natural philosophy, and the other of mechanism. An air balloon of eleven thousand four hundred and ninety-eight cubic feet will be filled with atmospheric air in the space of six minutes (instead of ten hours, which were required formerly) by the help of a machine which he has invented and but

In 1794, Blanchard advertised that he would make his forty-sixth ascension if it were possible to obtain twelve pipes or cylinder tubes six feet in length. By such means he declared it would be practicable for him to fill his balloon with gas in two days. Subsequently he announced that he would be unable to make the ascension in consequence of the defectiveness of the tubes, and declared that he would henceforth cease to attempt aerostation in the United States "until the arts are brought to such perfection as to furnish him with the means necessary to success."

During 1793 and 1794 the people of Philadelphia were excited to a high pitch of enthusiasm by the events of the French revolution, which in the winter of the former year had reached its culminating point with the execution of Louis XVI. We have seen that only a few months before that unfortunate monarch had been the object of the warmest encomiums on the part of Philadelphians; but now the sympathies of the great majority of the citizens were wholly with the French republicans. Such, indeed, were the excesses indulged in for the purpose of testifying the general devotion to the principles of the revolution, that it is difficult to realize at this day that they could have been committed or tolerated in staid Philadelphia. As the French republic was then at war with England, the sympathy exhibited by the United States toward France naturally aroused the deep resentment of the British government, and led to offensive measures on the part of the latter, which finally necessitated the passage of the embargo laws. The first of the series of popular demonstrations in Philadelphia following the declaration of the French republic was an entertainment given at Oeller's Hotel, on the 1st of January, 1793, by a number of Frenchmen and Americans in honor of the recent successes of the French armies. Hodgkinson, the comedian, sang a patriotic song, and a number of toasts were drank. The persons present organized the "*Société Française des Amis de L'Egalité*," of which P. Barrier was elected president, and A. C. Duplaine, secretary. A number of Frenchmen had previously held a meeting, at which they had resolved to open subscriptions for the relief of their distressed fellow-citizens of France then in Philadelphia, and to organize a society to be known as the "*Société Française de bien Faisance*." John de Ternant, the French minister, was soon after elected president.

Other celebrations in honor of the new republic were held on the 6th of February. At an entertainment at Hyde's inn on that day, thirteen toasts expressive of sympathy with the Revolutionary party were drunk; and at the City Tavern a dinner was given for the purpose of celebrating the victories of the French armies over the Austrians and Prussians. At the latter entertainment Governor Mifflin, the French

minister, De Ternant, and the French consul-general, De La Forest, the officers of the city militia, and others were present. At the head of the table stood a pike bearing the cap of liberty and the French and American flags entwined, surmounted by a dove bearing the olive-branch. After the drinking of toasts, singing of songs, etc., the officers with the band proceeded to the house of the French minister, where the band played "*Ça Ira*"¹ and Yankee Doodle. The French Society held a celebration on the same day.

The effect of these demonstrations, and of the importation of radical notions from the French democracy, was to arouse a feeling of hostility to ceremonious form and display on the part of public officers. Thomas Jefferson had returned from France strongly impregnated with the advanced views of "fraternity and equality" which were being so savagely exploited there, and his great influence was thrown in the scale in favor of the French extremists. Such was the feeling excited on the subject that an effort was made in Congress to substitute for the head of Washington on the national coins "an emblematic figure of Liberty," which after a stubborn contest between the Senate and House was successful.² Objection was

¹ The *Aurora*, Sept. 29, 1801, contained the following strange account of the origin of this song, which probably was furnished by Mrs. Duane from a statement made by her father:

"When Dr. Franklin was at Paris, and heard of the success of the American armies under Gates, Greene, and Washington, his usual explanation to those around him was *pa ira*, which is, in literal English, 'go on,' or 'let them go on,' meaning thereby that success must attend such perseverance and valor. The venerable doctor was then the subject of general admiration and esteem at Paris, and these words, when the enthusiasm in favor of America was so high, became words of popular exclamation, or cant words. When the Bastille was demolished, those who recollected the enthusiasm connected with the words *pa ira* during the American revolution adopted and applied them to popular purposes in the French, and Dr. Franklin's exclamation of *pa ira* became the theme of the first popular song composed in the French revolution."

² This requires explanation. There never was a coin bearing a likeness of Washington issued as money under the authority of the United States of America. The first coin struck out by authority of the United States Mint was a copper cent, in October, 1793. It was commonly called the "chain cent," and bore as a device a head of the Goddess of Liberty, hair streaming backward freely and unbound. On the reverse was a circle of fifteen links formed into a chain. Another variety of the same general design, with a wreath substituted for the chain, was issued in the same year. The first half-cent of 1793 was of the same style, with a wreath instead of a chain. The first silver dollar and half-dollar, struck in 1794, had a head of Liberty, tresses loose and falling below the neck. On the reverse an eagle with outstretched wings standing on a rock. The first half-dime, in the same year, had the same device. The first dime, in the same year, was in general design like the dollar of 1793. The first gold eagle and half-eagle (1795) had a head of Liberty wearing the liberty cap. Three types of the cent were issued in 1791, having busts of Washington; they were got up as pattern-pieces under the mint authority but by private contracts. John Harper, sawmaker, at Sixth and Cherry Streets, coined them. But they met with Washington's disapprobation; and at his suggestion the device was rejected and the dies subsequently broken. Another pattern-piece, design, or bust of Washington (legend, "G. Washington I.") was issued in 1792 from a design of Peter Getz, of Lancaster, Pa. This was struck in an old coach-shop, on Sixth above Chestnut, by John Harper, in presence of Adam Eckfeldt, afterward coiner at the mint. Some specimens in silver were struck, but Washington disapproved. Another type with bust of Washington was struck in 1792, and a half-dollar of yet

lately brought to perfection. The eagle fixed to the carriage beginning its flight, the carriage will come out from it, stand and run round the place, carrying two persons."

also made to the President's levees, his ceremonious intercourse with the public, and his employment of a coach as a means of conveyance. It was charged that he held himself aloof from the people, and that he would not visit the Coffee-House and mingle with the people. The old Assembly having postponed their ball until President Washington's birthday, the action of the managers was criticised on the ground that it savored of undue deference. It was also urged that the officers of the militia ought not to wait upon him on his birthday, and any celebration of that event was denounced as idolatrous. Notwithstanding these objections, guns were fired and bells rung on the 22d of February, and the usual parade of the militia took place. In the evening a ball and supper were given at Oeller's Hotel.

On the 4th of March, Washington again took the oath of office as President of the United States, and no details of the ceremony of reading his inaugural address before Congress were omitted. He proceeded to the State-House "in an elegant white coach, drawn by six superb white horses, having on its four sides beautiful designs of the four seasons painted by Cipriani."¹ As the coach-door opened two gentlemen, with long white wands, emerged, and with some difficulty opened a passage-way through the concourse of spectators for the President. Washington was dressed on this occasion in a full suit of black velvet, with black silk stockings and diamond knee-buckles. His shoes, "brightly japanned, were surmounted with large, square silver buckles." His hair was powdered and gathered behind in a black silk bag, on which was a bow of black ribbon. He carried in his hand a cocked hat, decorated with the American cockade, and wore a light dress-sword in a green shagreen scabbard, with a richly-ornamented hilt.

Ternant, the French minister, was recalled during the winter of 1793, and Citizen Genet, a violent Republican, was sent out in the frigate "L'Ambuscade" to take his place. Genet arrived at Charleston in April, where he had undertaken to authorize the fitting out of privateers and the enlistment of sailors in the United States. Genet brought with him official notification of the fact that France had declared war against England, but the news had reached New York by British packet five days before his arrival at Charleston. The situation was the subject of deep concern to Washington and his cabinet. By the treaty of commerce the right of shelter was guaranteed to French privateers and prizes,—a right not

conceded to nations at war with France,—and the United States were pledged to protect the French possessions in America. The question arose, however, whether this agreement held good under the change of government in France, and it was finally decided to issue a proclamation of neutrality and to receive the new minister of France.

The frigate "L'Ambuscade," after landing Genet at Charleston, had set sail for Philadelphia. On her way up the coast she captured seven prizes, with which she arrived at Philadelphia on the 2d of May. She was greeted with a salute from two field-pieces which had been placed on Market Street wharf. Genet made the journey from Charleston to Philadelphia by land. On the 16th of May he was met at Gray's Ferry by a great concourse of citizens, who escorted him into the town. In the evening a meeting was held at the State-House, Charles Biddle presiding, and Robert Henry Dunkin acting as secretary, at which a committee, consisting of David Rittenhouse, Alexander J. Dallas, Dr. James Hutchinson, Peter Stephen Duponceau, Jonathan Dickinson Sergeant, George Fox, and William Barton, was appointed to prepare an address to the new ambassador. On the following day, after the address had been adopted, the persons composing the meeting formed themselves in line, and, with Charles Biddle at their head, proceeded to the City Tavern, where they were introduced to Genet. The latter declared that he was overcome by this manifestation of good-will, but he recovered sufficiently to make a suitable reply, which was afterwards reduced to writing. He was also waited upon by the French Benevolent Society, on whose behalf P. S. Duponceau made an address, to which the minister replied, and by the German Republican Society. These demonstrations, and the attentions he received at the hands of individuals, encouraged Genet in his efforts to obtain substantial aid and recognition from the American government. His effrontery soon became insufferable. On his official presentation to Washington, May 18th, perceiving in the vestibule of the President's residence a bust of Louis XVI., who had been guillotined a few months before, he complained that its retention in such a conspicuous position was an insult to his government, by whom the execution of Louis had been ordered. His pretensions, however absurd they may appear at this day, were in a measure justified by the extravagant attentions which he continued to receive at the hands of the people of Philadelphia.

A few days after his arrival a civic entertainment was given at Oeller's Hotel, at which the guests were Genet, the officers of "L'Ambuscade," and officials of the Federal and State governments. Charles Biddle presided, and Dr. James Hutchinson acted as vice-president. Each toast was greeted with a salute from Capt. Fisher's battery of artillery, and after the eleventh toast Citizen Genet sang the "Marseillaise" "with great judgment and animation." When all

another type (bust of Washington in uniform) in the same year, as also two varieties of a Washington cent. Who struck them or where they were issued is not known. They are all regarded as pattern-pieces. Other pieces, coppers, medalets, and tokens, with busts of Washington in copper, were issued in 1791, 1795, 1800, etc. They were never legalized as currency, and their coining were private speculations. (See further "American Numismatists' Manual," by Montroville W. Dickeson.)

¹ "Recollections and Anecdotes of the Presidents of the United States," by Arthur J. Stansburg.

the regular toasts had been drunk, the red cap of liberty was placed on Genet's head, and then, successively, on the heads of all present. As an antidote to the intoxicating draughts of "liberty and equality" which the people were eagerly quaffing, three hundred of the merchants and traders of the city presented an address to President Washington urging him to issue a proclamation of neutrality, and pledging themselves to assist in its enforcement, and the birthday of George III. was celebrated by a public dinner at Richardet's tavern. The tenth toast at this dinner was "The Cap of Liberty: but may those who wear it know that there is another for licentiousness." An incident which occurred soon after the arrival of the frigate "L'Ambuscade" compelled the municipal authorities to take decisive action. There were many English sailors in port at the time, and collisions between them and the French sailors were of frequent occurrence. Finally, on the 27th of May, a party of Englishmen, who had attacked a similar party of Frenchmen, were overpowered by the latter, assisted by citizens, severely beaten, and carried as prisoners on board "L'Ambuscade." After being held for a time they were released, "just at the moment," said Bache's *Advertiser*, "when they (the French) received information of a horrid plot among the English to assassinate all the French who were found alone in the streets." The mayor deemed it advisable to apologize to Genet for the failure of the authorities to prevent or suppress the riot, but the City Council, taking a more sensible view of the affair, expressed the opinion that the presence in port of armed vessels of nations at war would be a fruitful source of trouble, and resolved that a committee be appointed with the proper authority "in order to procure a standing order that all ships of war or privateers be directed to moor in the lower part of the port of Philadelphia, and not higher up the river than the borough of Chester." On the day on which this riot occurred Citizen Bompard, commanding "L'Ambuscade," gave an entertainment on board that vessel to the French minister, the Governor of the State, and other citizens. As the Americans were about to leave Dupont, the boatswain, addressed them on behalf of the crew in a "patriotic" speech.

The Fourth of July this year was celebrated more as a French than an American holiday. On that day the first Democratic society established in the United States was organized, with David Rittenhouse as president, William Coates and Charles Biddle vice-presidents, J. Porter and Peter S. Duponceau secretaries, Israel Israel treasurer, Dr. James Hutchinson, Alexander J. Dallas, Michael Leib, Jonathan Dickinson Sergeant, and David Jackson committee of correspondence.

The members of the society, together with those of the French Patriotic Society, celebrated the anniversary by a dinner at George Leshner's tavern, No. 94 South Second Street. The officers of the Fourth

Regiment dined at Ogden's, Middle Ferry, and in the evening proceeded to the house of the French minister, where an address was delivered, which was properly responded to by Genet. A "select company" in Passyunk township also participated in an entertainment, at which toasts to the French republic and Citizen Genet were drunk. The anniversary of the destruction of the Bastille, July 14th, was celebrated by the officers of the Second Regiment of militia by a dinner at Weed's Ferry. Genet and Governor Mifflin were among the guests, and "it was probably at this dinner that the head of a pig was severed from its body, and being recognized as an emblem of the head of the murdered king of France, was carried round to the guests. Each one, placing the cap of liberty upon his head, pronounced the word 'tyrant' and proceeded to mangle with his knife the head of the luckless creature doomed to be served for so unworthy a company."¹

The Federal government was not infected by the popular enthusiasm on behalf of the French revolutionists, but wisely sought to avoid embarrassing entanglement and to preserve the neutrality which it had proclaimed between France and her enemies. An English vessel, the "Grange," was captured by the French frigate "L'Ambuscade" in the Delaware, and an earnest protest to the French minister on the part of the American government resulted in the release of the vessel and cargo. Another English vessel, the "Sally," also captured by "L'Ambuscade," could not make out so good a case, and having been condemned, was fitted out by the French as a privateer in the port of Philadelphia, under the name of "Le Petit Democrat." As this was a clear violation of the neutrality proclamation, the State authorities undertook to prevent the departure of the vessel, and notified M. Genet that if necessary force would be resorted to. Genet replied in indignant terms, and asserted that President Washington had acted without authority in proclaiming neutrality without the formal consent of Congress. If the latter body, when it met, supported Washington's cause, he would withdraw, leaving the dispute to be adjusted by the two nations themselves. He peremptorily refused to enter into any negotiations for suspending the departure of the "Petit Democrat," and threatened if an attempt were made to seize her to repel force by force. Finally, however, Genet promised that the vessel should not sail without the consent of the authorities; but the vessel sailed, notwithstanding, a few days afterwards. Meanwhile a committee of merchants had been appointed at a meeting held for the purpose, which had waited on Governor Mifflin and urged that every effort be made to preserve neutrality. A subscription was also set on foot to raise six thousand dollars for the defense of the port.

¹ Thompson Westcott.

The Federal government supplemented the efforts of the State authorities in a vigorous manner. A British ship, the "William," arrived at Philadelphia in May as a prize of the French privateer "Citizen Genet," under the charge of two American citizens, Gideon Henfield, of Salem, Mass., and John Singletary, of South Carolina. Henfield and Singletary were arrested for violating the neutrality law, a proceeding which called forth a furious protest from Genet and a demand for their release. The Federal authorities remained firm, however, and Henfield was brought to trial in July, but acquitted. Genet at once gave a dinner, the guests being invited to meet Citizen Henfield, who had been "formally taken under the protection of the French republic." Henfield again took service with a French privateer, but was captured soon afterwards by a British cruiser and imprisoned. The ship "William" was placed in charge of a guard of militia, which was subsequently withdrawn in pursuance of an arrangement with the French minister. An attempt of the "Jane," an English armed vessel, to increase her armament at Philadelphia was resisted by the State authorities, and the British minister, Mr. Hammond, consented to her departure without increasing her force. In order more effectively to enforce the neutrality regulations, Governor Mifflin ordered a battery to be erected at Mud Island, which was garrisoned by companies of the city militia. The latter, however, sympathized with the French to such an extent that their services were almost perfunctory. On one occasion the "Sans Culottes," a French privateer sailing up the Delaware with a prize, was brought to and subjected to a formal examination at the fort, after which she took her departure with her prize, amid the cheers of the garrison. In August the Legislature appropriated five thousand dollars for the erection of a battery on Mud Island. On the anniversary of the abolition of royalty in France, Sept. 20, 1793, two French frigates in port, "La Precieuse" and "La Ville D'Orient," were decorated with flags and fired salutes, the patriotic societies uniting in a celebration at Richardet's, at which one of the toasts was, "The guillotine to all aristocrats."

Meanwhile, the French privateers were inflicting serious damage on American commerce by overhauling and capturing American as well as British vessels whenever it suited them. British cruisers were committing similar depredations, and on the 13th of August a meeting of Philadelphia merchants was held, at which a committee was appointed to collect information respecting the capture or detention of vessels belonging to citizens of the United States by cruisers of nations at war, and to lay the same before the President. The committee consisted of John Nixon, Thomas Fitzsimons, John Wilcocks, John Swanwick, John M. Nesbitt, Joseph Crawford, Joseph Bull, Francis Gurney, James Vanuxem, Magnus Miller, Robert Waln, Walter Stewart, and Robert Ralston.

Meanwhile, the struggle between the executive authority of the general government and the French faction, headed by Genet, was being carried on with rapidly accelerating bitterness. Genet's pretensions were supported not only by a strong popular element, but by an influential political faction headed by Jefferson, who, although a member of Washington's cabinet, was also head of the opposition. Freneau's *Gazette* and the *General Advertiser*, both published at Philadelphia,—the latter becoming afterwards the famous *Aurora*, published by Bache, a grandson of Franklin, who, educated in France, was an enthusiastic advocate of the new order of things in that country,—assailed the government with great vindictiveness, and assured Genet that the people were his friends, and that he had only to stand firm in order to obtain what he wished.¹

It was about this time that the name Democrat, derived from the Democratic Society which had been formed in Philadelphia in imitation of the political clubs of Paris, was first introduced as a party appellation into American politics. A long time elapsed, however, before it was accepted by any but the more ultra portion of the opposition. "It was never recognized by Jefferson; and even of these societies, several preferred to call themselves Republican. It was only in combination with that earlier name that the epithet Democratic came into general use, the combined opposition taking to themselves the title of Democratic Republicans."²

The embarrassing position in which the general government found itself was aggravated not only by the equivocal course of Jefferson and his followers generally, but by the conduct of many leading Pennsylvanians, who openly espoused the cause of France, and declared themselves in favor of war with Great Britain. Among these were Governor Mifflin, Chief Justice McKean, Frederick A. Muhlenberg, David Rittenhouse, Jonathan Dickinson Sergeant, and Alexander J. Dallas. Under their leadership and that of prominent men in other States, the organization of Democratic societies and the stimulation of public sentiment in favor of France were vigorously prosecuted. The newspaper attacks on Washington and his advisers grew more and more violent, and the embarrassments of the administration continued to multiply. Finally, in view of Genet's increasing insolence, it was determined to demand his recall. Public opinion now began to change, and ere long the government found itself supported by the great mass of the people, who readily perceived that the intemperate conduct of the French partisans, if unchecked and permitted to influence the policy of the government,

¹ Washington was greatly annoyed by these attacks. In a letter to Henry Lee, he wrote: "The publications in Freneau's and Bache's papers are outrages on common decency." And Jefferson quotes him with charging "that rascal Freneau" with "an impudent design to insult him."

² Hildreth's History of the United States, revised edition, vol. i. p. 425.

could not fail to involve the country in a war with Great Britain. In August Genet repaired to New York,¹ where he was received with ringing of bells and firing of cannon; but on the day of his arrival there, a public meeting was held, at which the policy of neutrality was strongly indorsed. Similar action was taken shortly afterward in many cities and towns, and the hands of the government thus immeasurably strengthened. On the other hand, Genet continued to be the recipient of flattering attentions in Philadelphia.

On the 1st of January a meeting of the Second Regiment of Philadelphia militia, Col. John Barker commanding, adopted an address congratulating Genet on the prospect of the establishment of a permanent republic in France; and on the 6th of February the anniversary of the alliance between France and the United States was celebrated by the officers of the regiment at Richardet's Tavern, Ninth above Arch Street. On the latter occasion the crew of the French vessel "*Ville D'Orient*" marched to the tavern headed by a band of music, and bearing the French and American colors, which were afterwards presented to the commonwealth of Pennsylvania, and delegates of the French Patriotic Society were present. On the same day the latter society gave a dinner at Oeller's Hotel, and a few days later the commander of the "*Ville D'Orient*" entertained a number of Americans and Frenchmen on board that vessel. In the mean time Genet's recall had been conceded, and on the 22d of February M. Fauchet, the new French minister, arrived at Philadelphia. The President's birthday was celebrated as usual by the firing of cannon, the ringing of bells, and the beating of drums. His *levée* was largely attended, and in the evening the President and his wife were present at the ball of the City Dancing Assembly, which terminated with a grand supper.

CHAPTER XX.

PHILADELPHIA FROM 1794 TO THE CLOSE OF THE CENTURY.

MEANWHILE the relations between the United States and Great Britain were becoming more and more unsatisfactory. It was not to be expected that the British government would view with equanimity the violent demonstrations in Philadelphia and elsewhere in favor of a nation with which it was at war; and it was only natural that it should fail to encourage a very

nice or rigorous discrimination between French and American property in its seizures of vessels on the high seas. So flagrant, indeed, became the aggressions of the British cruisers, that on the 13th of March, 1794, a meeting of merchants and traders was held at McShane's Harp and Crown Tavern, Third Street below Arch, with Stephen Girard as chairman, and Robert McKean as secretary. It was resolved that owners of American vessels had a right to reimbursement of losses from vexation or spoliation by cruisers of Great Britain or other nationalities, and that additional imposts should be placed on goods from States so offending. On the 18th a more general meeting was held in the State-House yard, at which the acts of hostility complained of as having been perpetrated by Great Britain, were thus described: "It appears that Great Britain," said one of the clauses of the preamble,—

"... uniformly actuated by an ambitious and vindictive policy, and equally regardless of positive compact and of general law, has denied the rights, attacked the interests, interrupted the pursuits, and insulted the dignity of the United States; inasmuch as she has arbitrarily refused to surrender the Western posts, conformably to the express stipulations of treaty; she has clandestinely fomented and maintained a savage war upon the frontiers of the United States, contrary to the dictates of justice and humanity; she has insidiously let loose the barbarians of Africa to plunder and enslave the citizens of the United States; she has arrogantly attempted to prescribe boundaries to the American commerce; she has basely authorized piratical depredations to be committed by her own subjects on the ships and citizens of the United States; she has violently seized and sequestered the vessels and property of the citizens of the United States to the value of several millions of dollars; she has insultingly imprisoned and meanly reduced or forcibly impressed into her service the seamen of the United States to the number of several thousand citizens; and she has contemptuously disregarded the reiterated complaints which such complicated injuries have produced."

In view of these grievances it was resolved that the citizens of the city and county of Philadelphia, being duly impressed with the injuries and insults which Great Britain has offered to the rights, commerce, and character of the United States, ask and expect, from the wisdom and patriotism of the general government, and they hereby pledge themselves cheerfully to support with their lives and fortunes the most expeditious and the most effectual measures (which appear to have been too long postponed) to procure reparation for the past, to enforce safety for the future, to foster and protect the commercial interests, and to render respectable and respected among the nations of the world the justice, dignity, and power of the American republic. It was also resolved that the general government be urged to extend to France and citizens every favor which "friendship can dictate and justice can allow," and that measures should be adopted "to prevent more of our property from falling into the hands of Algiers or of Britain;" that "duties and prohibitions ought immediately to take place on British ships and manufactures until reparation for the losses of our citizens can be obtained, and the just claims of America to the surrender of the Western posts be complied with. The chairman having called the attention of

¹ During the French minister's absence, a number of sailors—a portion of the crew of the French frigate "*Jupiter*," which had mutinied—came to Philadelphia, and at Genet's request were arrested by the State authorities. They were met at Kensington by companies of the city militia, taken into custody, and escorted to Walnut Street prison, where they were confined.

the meeting to the condition of American citizens enslaved at Algiers, it was resolved that "a committee of five citizens be appointed to prepare a plan for soliciting donations from all benevolent and patriotic freemen for the purposes of establishing a fund to relieve and redeem our unfortunate fellow-citizens who, sailing on board of vessels belonging to the port of Philadelphia, have been captured and enslaved by the Algerine or any other piratical State."¹

The committee reported at an adjourned meeting held on the 24th of March, suggesting the appointment of a committee of five citizens in each ward to solicit subscriptions, and a board of trustees to superintend the distribution of the Algerine fund. The persons chosen as trustees were George Latimer, John Barclay, John Swanwick, Jacob Morgan, Thomas Mifflin, George Meade, Thomas McKean, Israel Israel, Alexander Boyd, Caleb Lowmes, John Dunlap, Robert McKean, and Stephen Girard. A benefit in aid of the fund was given at the new theatre by Wignell and Reinagle, which realized nine hundred dollars, and a ball given by Monsieur Sicard, for the same charitable object, netted sixty dollars and fifty-six cents.

Measures of retaliation had already been proposed in Congress, and the excitement against Great Britain was intensified by the reception of news that a British Order in Council, dated Nov. 6, 1793, but only just made public, had directed British cruisers to stop, detain, and bring into port all ships laden with goods the produce of any French colony, or carrying provisions or other supplies for the use of such colony. Simultaneously with the adoption of this order an expedition was dispatched for the conquest of the French West Indies. Great excitement was caused in Philadelphia by the news of this action on the part of the British government, and on the 26th of March Congress passed a resolution laying an embargo for thirty days on American vessels bound to any foreign port or place, which term was afterwards extended for another period of thirty days ending on the 25th of May. On the 4th of June the President was authorized, at his discretion, to lay an embargo which might expire fifteen days after the beginning of the next session of Congress. The embargo caused considerable dissatisfaction among the sailors, many of whom were thrown out of employment. On the 13th of April a large body of them paraded the streets, and apprehensions of a riot were felt, but Governor Mifflin induced them to disperse. The militia, however, were called out, and measures taken for the defense of the city. In addition to the embargo, Congress adopted measures for strengthening the military forces

of the country, and the Legislature of Pennsylvania passed an act on the 28th of February for raising troops for the defense of the Delaware and the western frontiers. A company of artillery was ordered to be raised, of which John Rice was captain, John Hazlewood, Jr., lieutenant, and John Salsberry ensign. The company held possession of the fort at Mud Island during the summer and fall, and in December the act raising the company was revived, and the time of service extended. In pursuance of the act of Sept. 4, 1793, appropriating five thousand dollars for the purpose, a battery was erected on Mud Island by Peter Charles L'Enfant, engineer, and on the 16th of April, 1795, the property of Mud Fort was ceded by the State of Pennsylvania to the United States. This work was afterwards known as Fort Mifflin.

The state of popular feeling towards Great Britain is indicated in the character of the celebrations of public anniversaries during this year. On the 1st of May, St. Tammany's day, there was a demonstration, which was conducted "with great ceremony" by the Democratic and German Republican societies and citizens at the country place of Israel Israel, three miles from the city, in "honor of the late successes of their French brethren." Bache's *Advertiser*, published that day, suggested that it was time for Americans "to put away the old cockade borrowed from a nation that formerly tyrannized over them. Let them form a new one from the colors of their national flag. There will be a similarity between it and the French, as between the flags of sister republics. Let there be a difference of colors. The French run circular; let the American be striped from the centre to the circumference, alternately red and white, with a blue star in the middle. It is proposed that the Democrats who meet to-day shall provide themselves each with one." The suggestion was probably carried out, and is worthy of note as marking the beginning in the United States of the custom of wearing badges as designations of political preferences. After the dinner at Israel's mansion the citizens, of whom some eight hundred were present, formed themselves in double line before the house, and Blair McClenachan, as president of the Democratic Society, in which office he had succeeded David Rittenhouse, "gave the fraternal embrace" to the French minister, Fauchet, "amid the animated joy and acclamations of the whole company." From Israel's they marched in procession back to the city, escorted by a volunteer company. At the house of the French minister they partook of refreshments, and proceeding thence to the State-House were dismissed. Two days later another banquet in honor of French victories took place at Dalley's tavern, in Shippen Street, between Third and Fourth, at which Governor Mifflin and M. Fauchet were present.

In the hope of averting war with England, President Washington dispatched Chief Justice Jay as a special

¹ The Philadelphia vessels captured by the corsairs up to this time were these: Ship "Dauphin," Capt. Richard O'Brien, captured July, 1785; eight of the crew redeemed, seven died. Ship "Minerva," Capt. John McShane, captured Oct. 18, 1793; of the crew, fifteen living, two died. Ship "President," captured October, 1793, Capt. William Penrose; the crew eleven in number.

commissioner to that country. The appointment was very obnoxious to the Democratic element, which charged him with having bartered away the rights of the United States to a free navigation of the Mississippi River in the treaty with Spain, and predicted that the negotiations he was about to make with England would prove equally disadvantageous to his own country. After his departure from New York on the 12th of May, his effigy was exhibited in Philadelphia, having been "ushered forth from a barber's shop amid the shouts of the people," and, after having been guillotined, was blown up with gunpowder.¹

On the Fourth of July the Ciceronian Society held a celebration a short distance from the city, and among the toasts were: "May tyrants never be withheld from the guillotine's closest embraces," and "May the link which unites Americans and Frenchmen never be cast asunder by the *aqua fortis* of British intrigue." The officers of the Second Regiment dined at the "Swan Tavern," on the banks of the Schuylkill, Passyunk, and the toasts proposed were of a strong Gallic tendency. The Society of the Cincinnati, which dined at Richardet's, avoided the expression of partisan sentiments, and the Delaware pilots, who had an entertainment at Isaac Fish's, on the Jersey shore, were very moderate in their toasts. Ten days later the anniversary of the French alliance was celebrated with a military parade, artillery salutes, and an entertainment given by the shipwrights and carpenters. So strong was the anti-British sentiment that a medallion inclosing a profile bas-relief of George II., surmounted by a crown, which had been permitted to remain on the eastern front of Christ Church throughout the Revolution, was removed by the vestry in obedience to intimations published in Bache's *Advertiser* to the effect that if it was not taken down it might be done for them.²

The demonstrations this year in honor of the French republic culminated in "a grand festival" on the 11th of June, "to celebrate the abolition of despotism in France." At daybreak a salute of ten guns was fired from two field-pieces worked by French and American gunners, and at an early hour a large number of persons had assembled in Centre Square, the officers and volunteers in uniform, but without arms. An obelisk adorned with insignia of liberty, with the colors of America and France draped beside it, was

raised in the middle of the square; and young girls and boys dressed in white, with tri-colored ribbons, and holding baskets of flowers, were grouped about the pedestal. Fauchet, the French minister, and his suite were greeted on their arrival with cries of "Long live the French republic and the United States!" French and Americans "mingled together in the most fraternal manner," and the "Carmagnole" was danced. At a signal of ten guns a procession was formed, the line being headed by two pieces of artillery drawn by French and American gunners. The obelisk was carried by four Frenchmen and four Americans in uniform wearing red liberty caps, and surrounded by the young girls and boys. A French National Guard followed carrying a pike crowned with the liberty cap, and supported by bearers of the ensigns of the two nations. The French minister and officers of the State and city government came next, and after them an immense number of persons, Americans and Frenchmen, arm in arm, holding branches of oak in their hands. In this order they proceeded to the house of M. Fauchet, at the southeast corner of Twelfth and Market Streets. In the centre of a large grass-plot a statue of Liberty surmounting an altar had been erected upon a platform. Stationed upon this eminence, Citizen Choldard delivered an oration in French, which was responded to by Citizen Fauchet, who at the end took the oath "to support the republic, one and indivisible." The Frenchmen present also swore to support the republic, and live freemen or die. The young girls strewed flowers upon the altar. The persons present sang the "Marseillaise" hymn in grand chorus. The ceremonies at this place ended by dancing the "Carmagnole." At Richardet's a feast was prepared, at which there were five hundred guests. The usual ceremonies on such occasions took place, and the proceedings closed by dancing around the tree of liberty. In the evening fire-works were exhibited at the house of the French minister. As an accompaniment to the excitement of the day, the British flag was publicly burned in Market Street.

The year 1794 was also signalized by the Whiskey Insurrection in Pennsylvania, which for a time diverted the attention of the people of Philadelphia from foreign politics. A reign of terror was established throughout Western Pennsylvania, and the authority of the general government set at defiance. Washington applied to Mifflin, Governor of Pennsylvania, to suppress the insurrection and re-establish the reign of law, but Mifflin returned an evasive answer, alleging his inability to comply. His refusal determined Washington to assume the whole responsibility and to act with promptness and decision. Accordingly, on the 7th of August, he issued a proclamation requiring the insurgents to desist from their opposition to the laws, and made a requisition on the Governors of Pennsylvania, New Jersey, Maryland, and Virginia for thirteen thousand troops, afterwards in-

¹ Referring to the excitement which prevailed in Philadelphia during 1793-94, John Adams, in a letter to Thomas Jefferson many years afterwards, said,—

"You certainly never felt the terrorism excited by Genet in 1793, when ten thousand people in the streets of Philadelphia day after day threatened to drag Washington out of his house and effect a revolution in the government, or compel it to declare war in favor of the French Revolution and against England. The coolest, the firmest minds, even among the Quakers in Philadelphia, have given their opinions to me that nothing but the yellow fever, which removed Dr. Hutchinson and Jonathan Dickinson Sergeant from this world, could have saved the United States from a fatal revolution of government."

² The image and crown were for many years in possession of the Philadelphia Library Company, but are now in the vestry-room of the church.

creased to fifteen thousand, and on the 8th of August "general orders" were issued by Governor Mifflin calling out five thousand two hundred militia of the force of Pennsylvania, in accordance with the requisition of the President of the United States. Maj.-Gen. William Irvine was appointed to the command of the State troops, and Brig.-Gen. Thomas Proctor to the command of the brigade composed of the troops of the city and county of Philadelphia and the counties of Montgomery, Chester, and Delaware, in all eighteen hundred and forty-nine men. The quota of the city, or First Brigade, was five hundred and fifty-nine men; of the county, five hundred and forty-four men.

On the 1st of September the Legislature was convened in special session by proclamation of the Governor. He stated the facts in his message, and called upon the members for speedy action against the insurgents. The matter was referred to a committee, which recommended an appropriation of one hundred and twenty thousand dollars to defray the expenses of the Western expedition. The bill was passed September 19th, and the Governor was authorized to engage the services of troops for four months. On the 9th of September, Governor Mifflin requested the officers of the city and county brigades to meet him at the council chamber, City Hall. Here he made a speech, setting forth the views of President Washington and the necessity of immediate action. Through a defect in the military laws the militia could not be drafted; but through the personal exertions of Governor Mifflin volunteers stepped forward amounting altogether to one thousand men, being twice as many as it was then considered would be necessary from Pennsylvania. The Governor's tent was pitched near the Lancaster road, on the west side of the Schuylkill, Col. Clement Biddle being deputed to lay out the encampment. Capt. Jeremiah Fisher's company of artillery was first to offer its services. Capt. Chandler Price's light infantry was early among the volunteers. Maj. Macpherson raised a company in four or five days, about one hundred and fifty in number. This organization was called "Macpherson's Blues," and was the beginning of a military organization afterwards extended to a regiment, having in it companies of cavalry, artillery, and infantry, the members of which were Federalists in politics. The uniform of the Blues was blue cloth pantaloons, round jacket faced with scarlet, and white buttons. Capt. Taylor's rifle company adopted the same costume. On the 19th the First City Troop, Capt. Dunlap, and the cavalry corps of Capts. Singer and McConnell, about one hundred and sixty strong, marched from Market Street, near Twelfth, to Carlisle, by the way of Norristown, Reading, and Harrisburg. Scott's light infantry, with the artillery companies and ten six-pounders and five three-pounders, crossed the Schuylkill at the Middle Ferry two days afterward and marched up the Ridge road to Norristown, and so on to the place

of rendezvous. The next morning Col. Gurney's regiment, embracing grenadiers and light infantry, with baggage, marched by the same route. The light infantry encampment on the Lancaster road, containing about four hundred men, was broken up on the 22d, and the troops marched by way of Lancaster. Macpherson's Blues followed, one hundred and forty strong. Afterwards, at camp, the Blues, Taylor's rifles, Graham's and Clunn's artillery, and McConnell's, Singer's, and Dunlap's horse were formed into a regiment, of which Macpherson was elected colonel. Before these soldiers left the city a meeting was held at the court-house to devise means to support the families of citizens who were upon the expedition, whose maintenance depended upon the labors of those thus suddenly called away. John Wilcocks was chairman and Robert Ralston secretary. Godfrey Haga, William Montgomery, Israel Whelen, Andrew Bayard, James Cox, Levi Hollingsworth, John Phillips, and John Barclay were appointed a committee to solicit subscriptions. They collected \$3249. Of this sum families in North Mulberry Ward received the greater part, \$1162.14 being distributed there. Lower Delaware Ward received but \$6; South Ward, \$505.99; and New Market Ward, \$650.

Gen. Stewart remained in military command of the city during the absence of the Governor, with power to assist the civil authorities in the preservation of order. After a brief campaign, attended by slight loss of life, the troops dispatched to Western Pennsylvania succeeded in completely subduing the rebellion and re-establishing the rule of the lawful authorities. Macpherson's Blues returned to Philadelphia on the 10th of December, being received with salutes of artillery, and the cavalry companies of Dunlap, Singer, and McConnell reached the city on the 28th.

The movement for the abolition of slavery had been making quiet progress during all these years, and on the 1st of January, 1794, a convention was held at Philadelphia, by invitation of the Pennsylvania Abolition Society, of delegates from all the societies for the abolition of slavery throughout the United States. At this convention two memorials were adopted, one to the Legislature of Pennsylvania and the other to Congress, asking the adoption of suitable laws to protect the African race and to suppress the slave-trade. The petition to Congress, which related principally to the slave-trade, was referred to a committee, which made a report recommending the passage of a law against the fitting out of any ship or vessel in any port of the United States, or by foreigners, for the purpose of procuring from any part of the coasts of Africa the inhabitants of the said country, to be transshipped into any foreign ports or places of the world to be sold or disposed of as slaves. The law, as finally passed on the 22d of March, rendered the vessels prepared for such service liable to forfeiture, made all persons concerned in fitting them out liable to a fine of two thousand dollars each, and compelled

owners, masters, or factors of foreign vessels who were suspected of intending to turn them into slavers to give bond that the vessels should not be employed for such service. Another convention of abolition societies was held on the 1st of January, 1796, Theodore Foster, of Rhode Island, presiding and Thomas P. Cope secretary, at which an address was adopted to the free negroes of the United States, recommending attention to religious duties, the cultivation of habits of industry, abstinence from the use of spirituous liquors, and the acquirement of a knowledge of reading, writing, and arithmetic.

Yellow fever prevailed in Philadelphia again during 1794, and also in 1795, 1796, and 1802, but during the three years from 1794 to 1796, inclusive, Philadelphia newspapers carefully avoided any reference to its existence, and a rigid quarantine against infected ports was maintained. Besides enacting a quarantine law the Assembly of 1794, on the 22d of April, passed a supplement to the act for the appointment of wardens of the port, by which the new office of harbor-master was created. He was authorized to superintend the execution of all laws of the commonwealth, of the city corporation, and of the wardens of the port, in relation to the regulations of the port, for cleansing docks and wharves, and preventing nuisances thereat by burning or breaming vessels, or otherwise; to regulate the stationing and anchorage of vessels in the stream or at the wharves; and to regulate the time during which vessels might lie at the wharves to discharge cargoes or take them in; with power to remove vessels, when necessary, and to permit others to take their places. His fees were specified in the law at one dollar for each voyage made by vessels, except coasters under one hundred tons.

In August of this year was formed the "Philadelphia Society for the Information and Assistance of Persons emigrating from Foreign Countries," of which John Swanwick was elected president, Thomas Newnam treasurer, Naphthali Phillips secretary, Henry H. Heins register, Dr. A. Blaney physician, T. W. Tallman and W. Franklin counselors. The contributions were one dollar per year, and charitable donations were received.

The City Council was mainly occupied this year with legislation in regard to yellow fever and modes to prevent its recurrence. In January it was ordered that "five water-carts be provided to cause the streets to be watered and cleaned," and sheds to accommodate three of them were built on the northeast corner of Potter's Field (now Washington Square). In November it was determined that the most eastwardly of the city lots on Lombard Street, between Tenth and Eleventh, south side, should be fenced in and interments made there instead of in Potter's Field; but the action of the Councils was for a time a dead letter, and burials continued to be made in the old ground. The Councils also passed a resolution in June of this year,

directing that "a stone or column," having a base with four sides and forming an exact square, should be placed in the centre of the public square at Broad and Market Streets, as a standard from which the measurement and regulation of the streets and courses might be made. In December it was determined to extend the market-house on High Street from Fourth to Fifth Street. The district of Southwark, by an act of the Legislature passed on the 18th of April, had been erected into a corporation, with fifteen commissioners, who were empowered to employ a watch and to have the streets lighted, paved, and cleaned, to erect market-houses, school-houses, and public buildings, and to levy taxes. The first election was ordered to be held at the house of Catharine Fritz. In accordance with this act and prior laws a road had been laid out from Moyamensing road, opposite Brockden's gate, by the Buck Tavern to the ferry over the Schuylkill to States Island; also a street from the river Delaware at or near Prime Street, and parallel or nearly parallel with Cedar Street, to the Gray's Ferry road, which the commissioners named Federal Street. Authority was given, in 1796, to the county to lay taxes to pay for the cost of opening these highways.

The recall of Genet and the failure of the Whiskey Insurrection, which had been secretly countenanced by some of the leaders of the radical faction of the Democratic Republican party, were severe blows to the French sympathizers in Philadelphia. Both of these incidents demonstrated that Washington's government was firmly seated, and able to maintain itself in the face of popular clamor, and that while the administration lasted, it would be futile to endeavor to embroil the country with the enemies of France. When, on the 1st of July, the terms of Jay's treaty with England were made known by a publication in Bache's *Advertiser*, a violent opposition to its ratification was at once developed. On the Fourth of July, the militia paraded by order of Brig.-Gen. Thomas Proctor, marching from Centre Square down Market to Front Street, and thence by way of Front and Chestnut Streets to the State-House. "Everybody," said the *Independent Gazetteer*, "was solemn on account of Jay's treaty. It appeared like a day of mourning." The militia officers of the Philadelphia brigade dined at Smallwood's, near Frankford, and were ardent in their expressions of sympathy with France. Citizens dining on the banks of the Schuylkill were equally enthusiastic. In the evening a transparency with the figure of John Jay was brought from Kensington into the city escorted by a procession. In the right hand was held a balance. One scale, inscribed "American liberty and independence," was represented as kicking the beam, while the other, inscribed "British gold," was down in extreme preponderance. In the left hand the figure bore a scroll representing the "treaty of amity, commerce, and navigation," which was extended toward a group of senators, who seemed pleased, and were reaching

forward to grasp it. From the mouth of the figure issued the words, "Come up to my price, and I will sell you my country." The procession moved from Kensington down Front Street to Callowhill Street, and thence, by the latter, to Second and Market Streets; then to Front Street, and back to Kensington. "A great concourse attended. All was silent," said Bache's paper, "until its return. The figure was burned at Kensington amid the acclamations of hundreds. There was no noise nor riot."

The French Republicans had arranged a celebration of the anniversary of the Revolutionary alliance at Richardet's on the 11th; but the French minister Adet would not attend on account of Jay's treaty, and the affair was conducted coldly.

On the 22d a town-meeting was called at the State-House to deliberate upon the treaty, Dr. William Shippen, Jr., in the chair. A resolution was adopted that "the citizens of Philadelphia do not approve of the treaty between Lord Grenville and Mr. Jay." A committee was appointed to draft an address to the President of the United States upon the subject. It consisted of Thomas McKean, Charles Pettit, Thomas Lee Shippen, Stephen Girard, Jared Ingersoll, William Shippen, Blair McClenachan, Abraham Coats, Alexander James Dallas, John Swanwick, Moses Levy, F. A. Muhlenberg, John Hunn, John Barker, and William Coats. This committee reported the draft of a memorial at an adjourned meeting on the 24th. The address was adopted, and the chairman throwing the copy of the treaty contemptuously from the stage, it was caught by persons present, who placed it on a pole. Three cheers were given for Stevens Thomson Mason, and three cheers for Archibald Hamilton Rowan, the Irish patriot, who had arrived in the city a few days before. The crowd then proceeded, bearing the copy of the treaty on the pole, to the house of the French minister, whence, after some ceremony, they took it to Second Street, and burned it before the house of Hammond, the British minister. Similar scenes were enacted before the house of Phineas Bond, British consul, No. 171 Chestnut Street, and at the mansion of William Bingham, senator from Pennsylvania, at No. 114 South Third Street, where the windows were broken. The Democratic papers represented that the meeting was attended by six thousand citizens; but the *Gazette of the United States* declared that it was composed of "two shiploads of Irish people, interspersed with fifty French emigrants." The Frenchmen in the city showed their indignation by declining to meet on the 10th of August, as had been usual in former years, "out of deference," it was said sarcastically, "to the patriotism of the American people." These demonstrations were all intended to have an influence upon Washington, who had not yet signed the treaty; but they were without effect. Despite the vituperation launched against himself and Mr. Jay, he ratified the instrument on the 11th of August.

This act was the signal for fresh invectives from the Democratic press; but, on the other hand, Thomas Willing and others, a committee representing four hundred merchants of the city who had signed an address approving of the treaty, waited on the President on the 21st, and submitted their sentiments in favor of the measure. At the election the parties were ranged as "Treaty" and "Anti-Treaty," and in a few instances they were styled "Federalists" and "Democrats." For the State Senate, Robert Hare, the Treaty candidate, received 3055 votes in the city and county of Philadelphia and in Delaware County, and Jacob Morgan, Anti-Treaty, had 2314. In the city, Latimer, Federalist, had 1648 votes for the Assembly, and Pettit, Anti-Treaty, 1093. Blair McClenachan, Anti-Treaty, had in the county 871, and Thomas Forrest, Federalist, 608. There were five candidates for commissioner. Peter Helm was elected.¹

Besides the demonstrations that followed the publication of Jay's treaty with Great Britain, there were a number of other occasions during the year on which the popular feeling in favor of France was strikingly exhibited.

At a meeting of one hundred and fifty officers, held in January at Guise's tavern, Frankford road, to

¹ Among the remarkable political productions of the year was the following, published by Bache on the 23d of November:

"THE POLITICAL CREED OF 1795."

- "1. I believe in God Almighty as the only being infallible.
- "2. I believe that a system of excise must of itself, if continued, infallibly destroy the liberty of any country under heaven.
- "3. I believe that national banks are equally dangerous in a free country.
- "4. I believe that a man who holds his fellow-man at an awful distance in private life must hold them in contempt if, by accident, he finds himself for a time placed above them.
- "5. I believe that man wants to be a king who chooses the advocates for kingly government as his first counselors and advisers.
- "6. I believe that a little smiling, flattering adventurer was once placed at the head of a national treasury because he had contended for a monarchy over a free people.
- "7. I believe the man who was sent as ambassador to a great nation, and at a very critical moment, was sent because he contended for the same thing.
- "8. I believe that man wishes to be a despot who makes alliances with despots in preference to freemen and republicans.
- "9. I believe proclamations no better than popes' bulls; that, as far as they respect religious ceremonies, they are contrary to the freedom of conscience; that, as they respect government, they either counteract the force of law, or, in the vanity of government, pretend a superior skill as to its meaning.
- "10. I believe that there is something more designed than fair government when the people are too frequently ordered to fast or give thanks to God.
- "11. I believe that honest government requires no secrets, and that secret proceedings are secret attempts to cheat the governed.
- "12. I believe that all honest men in a government wish their conduct and principles to be made known to the governed, and that dishonesty only shuns the light.
- "13. I believe it is the duty of every freeman to watch over the conduct of every man who is intrusted with his freedom.
- "14. I believe that a blind confidence in any men who have done services to their country has enslaved, and ever will enslave, all the nations of the earth.
- "15. I believe that a good joiner may be a clumsy watchmaker, that an able carpenter may be a blundering tailor, and that a good general may be a most miserable politician."

consider what measures were necessary to amend the militia laws, the proceedings were closed by a dinner and toasts, in which pro-Gallic sentiments were promulgated, and the anniversary of the French alliance was commemorated by a dinner given by Lieut.-Col. Barker's Second Regiment at Jacob Meyer's tavern, Filbert Street, between Eighth and Ninth. On the other hand, the officers of Col. Gurney's regiment, together with Gen. Proctor and others, who dined at Dalley's, in Shippen Street, toasted Alexander Hamilton, the bugbear of the French party.¹

A dinner to Hamilton, who had just resigned the Secretaryship of the Treasury, was given by the merchants of Philadelphia on the 18th of February, "as a testimonial of respect for his virtues and their gratitude for his eminent services." Among those present were Gen. Knox, the late Secretary of War, the judges of the Supreme Court, the Governor of the State, and many others. The 22d of February being Sunday, Washington's birthday was celebrated on the 23d. He was waited upon and congratulated by Congress, the Society of the Cincinnati, and citizens. In the evening the City Dancing Assembly gave a ball and supper. On the reception of the news of the capture of Amsterdam by the French on the 1st of April, the bells of the churches were rung, and on the 17th the victory was celebrated by French, Dutch, and American citizens and Capt. Flintham's artillery. A salute of seven guns was fired at daybreak, and one of fifteen guns at Centre Square at ten o'clock. Citizen Dubois, Sr., presided, and Citizens Dubois, Jr., and Gautier acted as secretaries. The committee of arrangements consisted of Citizens Chotard, Sr., A. C. Duplaine, Dore, Sr., Benjamin F. Bache, J. C. Heneken, Jacob Gerard Koch, M. H. Meschert, Israel Israel, and Michael Leib. From Centre Square the company proceeded to the garden of Minister Fauchet, at Twelfth and Market Streets. Here before the statue of Liberty a French citizen made an address, after which the citizens present took an oath "to live free or die." The French minister then delivered an address, after which Dubois united the three flags under a civic crown. The assemblage repaired to Oeller's Hotel, and after dinner the artillery and citizens escorted the American flag to the house of Governor Mifflin, Market Street above Seventh; the Dutch flag to the residence of Francis Van Berckel, minister of the Netherlands, at No. 258 Market Street; and the French flag to Citizen Fauchet's house, at the southeast corner of Twelfth and Market Streets. On the 1st of May a civic feast was given by the Democratic and German Republican Society at Oeller's Hotel. The Dutch and French ministers were present, and Fauchet made his appearance for the last time. He was succeeded on the 13th of June by

Citizen Adet, who with the French consul-general, De La Tombe, now represented the French republic.²

The local measures before the Legislature and City Councils were not specially important this year. By an act of March 13th the Northern Liberties was divided into two districts for election purposes, the dividing line being Second Street from Vine Street to Germantown road, and the latter from the intersection to the boundary of the township. The divisions were known as the Eastern and Western Districts of the township of the Northern Liberties, and the citizens were authorized to elect one assessor and two inspectors for each. A few days later an act was passed to authorize the building of a town-house and market-place in the Northern Liberties. Twenty feet of ground on each side of Second Street, between Coates and Poplar Streets, had been dedicated by the owners of lots to encourage the improvement of that part of the county, and the petitioners to the Legislature offered to build the markets by subscription, without any charge to the public, and proposed that, after the buildings had been paid for, all the income of the market should be appropriated to the benefit of the charity school of the Northern Liberties. William Coats, Jacob Weaver, Dr. John Weaver, Dr. Peter Peres, Jacob Whitman, William Peter Sprague, Daniel Miller, John Brown, Michael Groves, and John Nicholas Wagner were appointed superintendents of the building, with power to take subscriptions and loans, and were authorized to commence in the middle of Second Street, forty feet north of Coates Street, a town-house twenty-four feet front by thirty feet in depth along Second Street,³ and a market eighteen feet wide, extending to Brown Street; also a market at the same distance from the principal streets, and of the same dimensions, between Brown and Poplar Streets. Henry Faunce was nominated first clerk of the market, and three surveyors were appointed to regulate the grades, descents, and water-courses of the streets, lanes, and alleys of certain portions of the township bounded by the Shackamaxon Creek, or Gunner's Run, portions of the Frankford road, the Germantown road, and the Old York road, and Hickory Lane and the Wissahickon road; and also to survey a portion of the township north of Cohocksink Creek.

Owing to the additional danger to the city from fire resulting from the erection of wooden buildings, the Legislature, on the 18th of April, 1794, passed an act empowering the city corporation to pass ordinances forbidding the erection of any wooden man-

¹ William Cobbett, whose political writings afterward attained great circulation, came to Philadelphia about this time, and in January issued his first pamphlet, entitled "A Bone to Gnaw for the Democrats."

² A riot took place on the 1st of June between a party of sailors belonging to the privateer "Brutus" and some rope-makers, during which one rope-maker was killed and several persons were wounded. To quell the disturbance, Neilson's grenadiers and Scott's light infantry were ordered out and patrolled the streets for two nights.

³ The town-house stood in Second Street, north of Coates. It was in size and general appearance similar to the building still standing in the middle of Second Street at Pine Street, at the north end of the "Second Street Market," once called the "Society Hill Market."

sion-house, shop, warehouse, store, carriage-house, or stable within such part of the city eastward of Tenth Street as may be judged proper. Remonstrances against the exercise of this power were presented to the City Councils, and the matter was postponed for more than a year, but on the 6th of June, 1795, an ordinance was passed prohibiting the erection in future of wooden buildings between the Delaware and the east side of Sixth Street, between Vine and Sassafras, and between Walnut and Cedar Streets, and between the Schuylkill River and Tenth Street, between Sassafras and Walnut Streets. The penalty was five hundred dollars, besides a liability to pull down the building so erected, under a fine of three hundred dollars for every three months during which the house remained up after conviction. Every person engaged in the building of such wooden house was also declared to be subject to a fine of one hundred dollars. This ordinance was resisted, and successfully. On the trial a citizen of Philadelphia was admitted as a witness, although it was objected that he was a member of the corporation, and therefore incompetent to give testimony. This opinion was sustained by the Supreme Court. The Councils denounced this decision as unreasonable. By it "the police of the city was prostrated, the execution of the laws rendered impossible, and the very existence of the corporation became absurd and useless."¹

In April, 1795, the Legislature passed an act authorizing the city corporation to pass an ordinance compelling the owners and occupants of houses in the city to provide and keep in repair any number of leathern buckets not exceeding six for each building, to be used in extinguishing fires. At the same time an act was passed providing for the inspection of powder, and naming David Rittenhouse, Francis Gurney, and Thomas Proctor as commissioners, with instructions to procure two of the machines invented by Joseph Leacock, of Philadelphia, for ascertaining the force of powder, and to "make experiments, settle the standard of gunpowder, and mark the gradations in the arch." It was further provided that the strength of all manufactured gunpowder should be fixed by an inspector appointed for the purpose. The Legislature also passed an act authorizing the extension of the market in High Street, between Third and Fourth Streets, for the benefit of the farmers only.

Among the local incidents of the year was the death of John Penn, formerly Proprietary Governor

of Pennsylvania, which occurred on the 9th of February. He was buried in the aisle of Christ Church, in front of the chancel, nineteen feet from the north wall.²

On the 10th of November a small schooner of eighteen feet keel, twenty-three feet from stem to stern, and six feet beam, arrived at Market Street wharf at noon, and the occupants, two persons, fired a Federal salute from a blunderbuss. This small vessel was called the "White Fish," and it had reached Philadelphia by water, and occasional portage by land, from Presque Isle, on Lake Erie, now near the present town of Erie, Pa., under the charge of two persons, John Thomson and David Lummis.³

Thomson and Lummis were surveyors who had been engaged in laying out lands in the Northwestern Territory, and who, having finished their labors, had determined to test the truth of a theory that there was an easy means of establishing transportation between Lake Erie and the Hudson River. They built their boat at Presque Isle during the summer of 1795, without adequate tools for the work, and taking all their timber from the woods. The "White Fish," as she was called, was an open boat, without a deck. After making her way to New York City across the State and down the Hudson, she started for Philadelphia, and, sailing the Jersey coast, doubled Cape May on the 4th of November.

On her arrival at Philadelphia the "White Fish" had completed a voyage of nearly one thousand miles, twenty-nine of which was over the land, embraced in five portages. It had demonstrated the feasibility of connecting the waters of the lakes with the Hudson River, an idea afterward acted upon when the New York and Erie Canal was constructed. The "White Fish" was considered a great curiosity. It was taken from the water and placed in the State-House yard, where it remained for many years.⁴

The most important event of the year 1796 was the announcement of Washington's intention to retire from public life at the close of his Presidential term. On the 19th of September his Farewell Address to the people of the United States was published in Dunlap & Claypoole's *Daily Advertiser*.⁵

² The inscription on the tombstone reads as follows:

"Here lieth the body of
HONORABLE JOHN PENN, Esquire,
One of the late proprietaries of
Pennsylvania,
Who died February 9th, A.D. 1795,
Aged 67 years."

John Jay Smith says, in "The Penn Family," that John Penn "died in Bucks County."

³ John Thomson was at that time a native of Delaware County. He was the father of J. Edgar Thomson, afterwards president of the Pennsylvania Railroad Company. David Lummis was subsequently lost in a storm in a passage from Philadelphia to Charleston, S. C., in 1804.

⁴ An entertainment was given at Weed's tavern in January, 1796, to commemorate the arrival of the "White Fish."

⁵ D. C. Claypoole, printer of the *Daily Advertiser*, furnished in 1826 a committee of the Pennsylvania Historical Society with an account of the manner in which he obtained the manuscript of the Farewell Address

¹ These difficulties were remedied by an act passed in 1799, which declared that the interest of members of a municipal corporation in the fines and penalties incurred for breaches of the ordinances of such corporation was too remote to affect the credibility of their testimony. Therefore it was declared that the inhabitants of Philadelphia, and of any other town or borough, should be good witnesses in prosecutions for breaches of ordinances or laws where the penalties inured to the corporation; that the mayor, recorder, and aldermen might act as judges, notwithstanding their nominal interest, and the freemen of the corporation might act as jurors in such cases.

Washington's residence in Philadelphia had been made very uncomfortable during the latter years of his presidential service by the assaults of political opponents, especially during the period of excitement growing out of the French revolution. Although his course was uniformly temperate and prudent, he was denounced as favoring men and measures inimical to the American form of government, and language seemed scarce strong enough to express the suspicion and dislike with which he was regarded by Democratic extremists. In a letter to Jefferson, written in the summer of 1796, Washington complained that every act of his administration had been tortured, and the grossest and most insidious misrepresentations made "in such exaggerated and indecent terms as could scarcely be applied to a Nero, a notorious defaulter, or even a common pickpocket."

Another noteworthy event of the year was the death on the 26th of June of the famous astronomer, David

(1 Hist. Soc. Memoirs, edition of 1864, page 265.) The statement was called for in order to settle the truth of an allegation made that the Farewell Address was written by Alexander Hamilton and was entirely in his handwriting. Mr. Claypoole says,—

"A few days before the appearance of this memorable document in print I received a message from the President, by his private secretary, signifying his desire to see me. I waited on him at the appointed time, and found him sitting alone in his drawing-room. He received me kindly, and, after I had paid my respects to him, desired me to take a seat near him. Then, addressing himself to me, he said that he had for some time past contemplated retiring from public life, and had at length concluded to do so at the end of the then present term; that he had some thoughts and reflections upon the occasion which he deemed proper to communicate to the people of the United States in the form of an address, and which he wished to appear in the *Daily Advertiser*, of which I was editor. He paused, and I took the opportunity of thanking him for having preferred that paper as the channel of his communication with the people—especially as I viewed this selection as indicating his approbation of the principles and manner in which the work was conducted. He silently assented, and asked when the publication could be made. I answered that the time should be made perfectly convenient to himself, and the following Monday was fixed on. He then told me that his secretary would call on me with a copy of the address on the next Friday morning, and I withdrew.

"After the *proof-sheet* had been compared with the copy, and corrected by myself, I carried another *proof*, and then a *revise*, to be examined by the President, who made but a few alterations from the original, except in the punctuation, in which he was very minute.

"The publication of the address—dated 'United States, Sept. 17, 1796'—being completed on the 19th, I waited on the President with the original, and in presenting it to him expressed my regret at parting with it, and how much I should be gratified by being permitted to retain it. Upon which, in an obliging manner, he handed it back to me, saying that, if I wished for it I might keep it; and I then took my leave of him.

"Any person acquainted with the handwriting of President Washington would, on seeing this specimen, at once recognize it; and, as I had formerly been honored by written communications from him on public business, I may say that his handwriting was familiar to me; and I think I could at any time, and without hesitation, identify it. The manuscript copy consists of thirty-two pages of quarto letter-paper, sewed together as a book, and with many alterations, as in some places whole paragraphs are erased and others substituted; in others many lines struck out; in others sentences and words erased, and others interlined in their stead. The tenth, eleventh, and sixteenth pages are almost entirely expunged, saving only a few lines; and one-half of the thirty-first page is also effaced. A critical examination will show that the whole, from first to last, with all its numerous corrections, was the work of the same hand; and I can confidently affirm that no other pen ever touched the manuscript now in my possession than that of the great and good man whose signature it bears."

Rittenhouse, at his house, corner of Arch and Seventh Streets. His funeral was attended by the American Philosophical Society and the Democratic Society, of both of which organizations he was president at the time of his death; and, at the request of the Philosophical Society, an eulogium upon his character was delivered on the 17th of December in the First Presbyterian Church, in the presence of President Washington, members of Congress, the State Legislature and the City Councils, the mayor, etc.

The excitement growing out of Jay's treaty with England, and the efforts made both in France and America to commit the United States to an active interference on behalf of the French republic, continued during 1796, and was intensified in June by the announcement that the American ship "Mount Vernon," which had sailed from Philadelphia a few days before, had been captured a few miles outside the capes of the Delaware by the "Flying Fish," a French privateer, which had been lying at Philadelphia during the previous month, and which was supposed to be owned by a resident of the city. It was pretended that the "Mount Vernon," which was bound for London, had goods that were contraband of war on board, but an examination of the manifest showed that such was not the case. The commander of the "Flying Fish," however, took possession of the "Mount Vernon," declaring that, since Jay's treaty, he had determined to seize every vessel bound to a British port, and adding that he had a list containing the names of other vessels about to sail from Philadelphia which he intended to capture. Sending back the "Mount Vernon's" crew in a pilot-boat, the "Flying Fish" bore away with her prize. On their way up the Delaware, the captured crew met the ship "Philadelphia" bound for Bristol, which, on hearing what had befallen the "Mount Vernon," put back to Philadelphia. Vessels about to sail were delayed, and a panic ensued among the merchants which was not allayed until the departure of the "Flying Fish" from the coast.

Jay's treaty had its friends as well as its opponents in Philadelphia, and in April a meeting of merchants was held to urge Congress to pass the necessary laws to carry the treaty into execution. In the memorial adopted by the meeting it was represented that property belonging to merchants of the United States, amounting at a moderate computation to more than five millions of dollars in value, had been taken from them by subjects of Great Britain, the restitution of which they believed depended in a great measure upon the completion of the treaty. Besides this sum, the merchants had invested large amounts in vessels and ventures which they apprehended would be jeopardized if the United States failed to carry out the stipulations of the treaty. In order to give full effect to the action of the meeting a committee of correspondence was appointed, consisting of Thomas Fitzsimons, Joseph Ball, Walter Stewart, George

Latimer, Samuel Sterritt, Israel Whelen, Robert Waln, Joseph Anthony, Samuel Breck, and Francis Gurney. This movement was antagonized by a meeting of the Gallic element held several days later, with Stephen Girard in the chair, in which the treaty was denounced as being "unequal in its stipulations, derogatory to our national character, injurious to our general interests, and as offering insult instead of redress." Congress finally passed the laws necessary to carry the treaty into effect on the 30th of April.

Party lines had now come to be very strictly drawn between the Federalists and Republicans or Democrats. At the election held in October, John Swanwick, the Republican candidate for Congress, had 1502 votes in the city, and Edward Tilghman 1432. The other candidates of the Federal party, however, had a majority of 642 in the city. In the county, Blair McClenachan, the Republican candidate for Congress, received 1182, and Robert Waln, Federalist, 910. At the Presidential election in November, the Jefferson electoral ticket, headed by Thomas McKean, received 1723 votes in the city and 1832 in the county. The Adams ticket, headed by Israel Whelen, received 1100 in the city and 399 in the county. In the State, McKean had 12,306, and Whelen 12,181. Two Federalists, Samuel Miles and Robert Coleman, were declared elected, however, in consequence of personal popularity. At the meeting of the electoral college, Jefferson had 14 votes, Burr 13, Pinckney 2, Adams 1. Two electors were excluded in consequence of alleged irregularities in the election. About this time the wearing of the tri-colored French cockade, which had been previously suggested, became general. Citizen Adet, the French minister, in November, issued a proclamation calling upon all Frenchmen resident in America to mount and wear the tri-colored cockade, "the symbol of a liberty the fruit of eight years' toil and five years' victories." This request was not only complied with by Frenchmen, but by large numbers of citizens who sympathized with French principles. Adet, who seems to have been almost as presumptuous and overbearing as Genet had been, was much incensed by the fact that in some periodical works, almanacs, etc., published in the United States, and particularly the "Philadelphia City Directory" for 1796, the name of the minister of the French republic had been printed after that of the minister of Great Britain. Adet applied to Timothy Pickering, Secretary of State, for redress, and coolly demanded that the error should be rectified "by suppressing the publication and distribution of the directory and other almanacs in which it has been committed." Pickering of course refused to interfere, and informed Adet that he presumed that the government of the United States would not "attempt by official arrangement voluntarily to settle questions of rank among foreign powers."

Another incident curiously illustrative of the state of feeling in Philadelphia at the time is the announce-

ment, under date of October 25th, in the *New World* (published by Samuel Harrison Smith at No. 118 Chestnut Street) of the fact that among the passengers in the ship "America" was "L. P. B. Orleans, eldest son of the *ci-devant* Égalité, and distinguished in French history as lieutenant-general at the battle of Jemmapes." The partisans of the French no longer had it all their own way, however, for William Cobbett, the celebrated English political writer, who had come to the United States in 1792, began to publish a series of bitter and vindictive pamphlets under the *nom de plume* of "Peter Porcupine," in which he fiercely assailed the French and their American sympathizers. His publisher was Thomas Bradford, who realized large profits from the sale of the pamphlets. Cobbett, however, was very poorly paid, receiving only four hundred and three dollars for them during the two years that Bradford was his publisher, and in order to reap the benefit of his writings he resolved to establish himself in business as a bookseller, and hired a blue frame house No. 25 North Second Street, opposite Christ Church. "The moment, however, that I had taken a lease of a large house," wrote Cobbett, "the transaction became the topic of public conversation, and the eyes of the Democrats and the French, who still lorded it over the city and who owed me a mutual grudge, were fixed upon me. I thought my situation somewhat perilous. Such truths as I had published no man had dared to utter in the United States since the rebellion. I knew that these truths had mortally offended the leading men among the Democrats, who could at any time muster a mob quite sufficient to destroy my house and to murder me." Cobbett's apprehensions, however, were not realized; and though warned "not to put up any aristocratical portraits, which it was said would certainly cause his windows to be demolished," he exhibited, without injurious consequences, all the portraits of kings, queens, princes, and nobles,—"in short every picture that I thought likely to excite rage in the enemies of Great Britain." "Such a sight," he adds, with evident satisfaction, "had not been seen in Philadelphia for twenty years. Never since the beginning of the rebellion had any one dared to hoist at his window the portrait of George III."

Although Cobbett escaped mobbing, the Anti-Federalist feeling in Philadelphia was still very violent. A curious illustration of its depth and bitterness is found in the conduct of Democratic citizens, who celebrated the Fourth of July with a public dinner at Oeller's Hotel, at which Pierce Butler and John Swanwick presided. Lieut. Shaw's second company of volunteers, after firing a salute at daybreak, took post at twelve o'clock upon some waste ground near Oeller's Hotel. The Society of the Cincinnati happened to be dining at Governor Mifflin's garden on Chestnut Street, between Seventh and Eighth, and the salutes which Shaw's company were engaged in

firing interfered with the toasts and speeches. Governor Mifflin and the officers of the society sent a message to Lieut. Shaw, requesting him to reserve his fire until their last toast had been delivered; but "the company to a man," said Bache's *Aurora*, "refused to acquiesce, conceiving that as they were called upon to honor the day, they, as freemen and soldiers, were not bound to wait on any description of men, in which they persisted, although a second and more strenuous effort was made."

The first gaslights ever seen in America were exhibited in August of this year by Ambrose & Co., manufacturers of fire-works, at their amphitheatre in Arch Street, above Eighth, who advertised that in addition to the ordinary fire-works of combustible material they would "show a grand fire-work by means of light composed of inflammable air." They disposed the lights so as to form an Italian parterre, Masonic figures and emblems, a superb country-seat, etc. The jets of light were made from orifices in pipes bent into the requisite shapes.

After a successful campaign against the Indians in the Northwest, Gen. Anthony Wayne returned to Pennsylvania, and on the 6th of February was received, at some distance from Philadelphia, by three troops of light-horse, and escorted into the city amid artillery salutes from cannon stationed in Centre Square and the ringing of bells. He was afterwards entertained by the Democratic Society at a dinner at Richardet's. Ambrose & Co., manufacturers of fire-works, procured subscriptions for the erection of a trophy in Arch Street, between Seventh and Eighth. The structure, a triumphal arch, twenty-six feet in height, representing the Temple of Peace, was intended to show the public gratification at the fact that there was peace between the United States and Algiers, between the republic of France and the king of Prussia, the republic of Holland, the king of Spain, the Elector of Hanover, etc., and between the United States and the Indians, "a result of the late western expedition." The edifice was supported by four grand pilasters, and the cornice bore appropriate inscriptions. The front was surmounted by the figure of a terrestrial globe, on which rested a dove bearing an olive-branch in its beak. Beneath this was a statue of a woman, intended to symbolize Union. Five statues, of Peace, Liberty, Plenty, Justice, and Reason, with their attributes, decorated other portions of the structure, with which were intermingled vases, baskets, and other ornaments. The temple was brilliantly illuminated in the evening, and there was also a handsome display of fire-works.

Capt. Morrell's Volunteer Greens, a cavalry corps, composed of Federalists, gave a dinner to Gen. Wayne, on the 25th of February, at Weed's tavern, Gray's Ferry. Gen. Morgan, Col. Macpherson, and the officers of the First and Second Troops of city cavalry were present.

Material amendments to the city charter were

made during this year. By the act of incorporation of 1789 the City Council was one body, composed of the mayor, aldermen, and city councilmen, but on the 4th of April, 1796, the Legislature passed an act creating a Select Council, consisting of twelve citizens, to serve for three years.

Those first elected were directed to divide themselves into classes for one, two, and three years, after which one-third of the number of members was to be chosen yearly. The Common Council, composed of twenty persons, was to be elected annually. The whole legislative power of the city was vested in these two bodies. The Governor was authorized to appoint the recorder and fifteen aldermen, to hold their offices during good behavior. The mayor was to be elected by the Select and Common Councils from among the aldermen, to serve for one year. He was to preside in the mayor's court. This act went into operation in October, when the new Councils were elected. The corporation was not favorable to this change. A protest against the measure was presented to the Legislature, and the mayor sent in a communication asking that the corporation might be heard by counsel against the bill at the bar of the House. On the other side the petitioners, who were many, sent in a memorial asking to be heard on their side, if the privilege asked by the city was granted. The House paid no attention to either request, but proceeded to pass the bill, which was soon ratified by the Senate.

Various other matters of local importance came up before the Legislature during 1796. From the Northern Liberties came remonstrances in reference to the condition of the hay-scales and public landings in that district, which caused the passage of a law by the Legislature in April vesting the property mentioned in the commissioners of the county, who were to govern them with the approbation and consent of three justices of the peace. They were empowered to make rules and orders for the regulation of the tenants of the wharves and landings, and of carters, drivers, skippers, and others, to fix the prices of weighing at the hay-scales, to lease and repair the landings and hay-scales, and with the profits to buy other landings and wharves in the Northern Liberties for public use. A lottery to raise £5250 for that purpose had been recommended by the committee, but the House would not sanction the proposition. A petition was also presented in favor of raising £6000 for paying off the debt incurred by the erection of market-houses in the district.

In March the Senate passed a bill authorizing a lottery for the benefit of Dickinson College. The House amended the bill by inserting sections in favor of a lottery to raise, among other sums, \$15,000 for the erection of piers in the Delaware River at Chester, \$16,000 for finishing the town-house and Callowhill Street market in the Northern Liberties, and \$8000 for a town-house and repairing public landings

in Southwark. These were all struck out of the bill by the Senate. The House adhered to the amendments, and so the whole bill fell. Petitions for making the Cohocksink Creek a public highway were sent to the Legislature in the latter part of the year, and the committee to which the subject was referred reported in favor of making it a highway from the Delaware to the bridge crossing the Frankford road, for the passage of all kinds of vessels and rafts that could float thereon. The law, passed in accordance Feb. 27, 1796, made it lawful for any citizen to remove obstructions to the navigation, so that the width of the creek for navigation should be forty feet. Drawbridges were authorized wherever necessary. The Legislature also ordered that the roads laid out from Brockden's gate by the Buck tavern to the ferry on State Island, and from Prime Street on a line parallel with Cedar Street to Gray's Ferry, and called "Federal Street," should be opened, as the same were surveyed under the act of 1787; and in December the Governor announced in his message that the Philadelphia and Lancaster turnpike had been completed, but it was not immediately in good traveling order. The regular stage commenced its trips in May, to go through in one day. The first stage left Lancaster at five o'clock in the evening, and reached Philadelphia at five o'clock in the morning, bringing ten passengers. The successful completion of this work was justly regarded as a subject for congratulation.

About the only matter of interest before the City Council in 1796 was the effort to discover the origin of attempts that were made in December to fire the city. A committee appointed by the Council to investigate the matter, reported that endeavors had been made to set fire to the house of Peter Cress, harness-maker, No. 237 Market Street, and a reward of five hundred dollars was offered for the arrest of the incendiary. The nightly watch was ordered to be doubled, and meetings of citizens were held at the State-House, at Southwark Hall, and at Kitt's tavern, No. 58 Market Street, of the inhabitants of the Middle Ward, who appointed a guard to patrol the streets. The Councils took up for consideration a bill to oblige owners of houses to provide and repair their fire-buckets, and they again urged the necessity of stringent laws against the construction of wooden buildings. It was resolved to appoint twelve assistant superintendents to oversee the watchmen, and observe that they do their duty. The alarm was increased by a fire which broke out on the night of the 30th of December at the old academy, in Fourth Street, below Arch, which destroyed the roof of that building and the roofs of three houses adjoining. This was supposed to be the work of design. The precautions were redoubled, and the incendiaries becoming intimidated, did not again attempt to apply the torch.

During December of this year representatives of a number of Indian tribes visited Philadelphia, and

accidentally met at Peale's Museum, in Philosophical Hall, on Fifth Street below Chestnut. As they were hostile to one another, some embarrassment resulted, but by degrees the interpreters entered into conversation, and the chiefs were induced to take part. Their differences having been alluded to, it was finally decided to meet again for conference. At this interview there were present chiefs of the Creeks, Cherokees, Choctaws, Chickasaws, the Southern Shawnese, Wyandotts, Delawares, Miamis, Chippewas, Kickapoos, and other Northwestern Indians. The conference opened by a message from President Washington congratulating them that their hearts were softened to each other, and encouraging them to make up their differences. The Indians were so struck with the circumstances connected with the unexpected and singular manner of their meeting that they expressed their belief that the Great Spirit must have brought them thus together for the purpose of reconciliation. In this opinion they debated their grievances, and resolved to enter into a treaty of amity.

Among the speculative schemes projected about this time was a lottery proposed by Joseph Cooke, who had built stately stores and dwellings at the southeast corner of Third and Market Streets. The drawing was to be controlled by the numbers drawn in the Federal lottery. The house at the corner of Market Street¹ was valued at \$50,000; the house adjoining, on Third Street, at \$40,000; and the next at \$30,000. The depth of the whole lot was but one hundred and seven feet. To this real estate Cooke proposed to add jewelry to the value of \$280,000,—making the total \$400,000. There were to be 16,739 "fortunate chances" and 33,261 "nothings." The price of tickets was placed at eight dollars each. This scheme was urged in January; but the value put upon the property was extravagant, and few were found who were willing to invest in it.

The event of the year 1797 in Philadelphia was the

¹ This house, which got the nickname of "Cooke's Folly," was originally built about 1792. Cooke, who was a fashionable and flourishing goldsmith and jeweler, erected the building with the intention that it should rival the most splendid establishments of London and Paris. It was a lofty brick structure, with a gable on Third Street, and wings upon either side of the gable. The Market and Third Streets fronts were literally crowded with carvings, and grotesque faces and figures were placed wherever there was room for them. The upper part of the building was designed for dwellings, while the lower stories were occupied, at the outset, by jewelers, who made a grand display of mirrors, etc. The completion and opening of "Cooke's building," or of "Cooke's Folly," made quite an excitement, and the showy shops used to be surrounded by crowds of curious gazers. The novelty, of course, wore off, and the building being too fine for the age, it gradually fell into decay. It went from one degree of dilapidation to another, until its fine apartments up-stairs were all used as workshops; its statuary and carvings were broken and covered with dust, its wood-work became bare of paint, there was scarcely a whole pane of glass in the upper windows, old hats and rags occupied the place of glass, and when it was finally demolished, about 1838, it was as gloomy a looking wreck of finery and frippery as could be imagined. Mr. Cooke occupied the corner store for his shop, and the downfall of his enterprise carried him with it. He failed for a very large amount, and finally died poor, leaving his family, who had been brought up in luxury, destitute.

change in the Federal administration, John Adams having been elected President to succeed Washington, and Thomas Jefferson Vice-President in place of Adams.

As the anniversary of Washington's birthday was the last that would occur during his occupancy of the Presidential chair, efforts were made to celebrate it with special *éclat*. In the morning Capt. Skerritt's artillery paraded, and at noon fired a salute. At ten o'clock the companies of grenadiers and light infantry, commanded by Capts. Neilson, Robbins, and Johnston, with Hozey's Southwark Light Infantry, assembled in front of the State-House. The militia officers met there at the same time, and were escorted to Washington's residence.¹ At a later hour members of the Society of the Cincinnati, escorted by grenadiers and light infantry, called to pay their respects, and in the evening there was a ball.

On the 3d of March, Thomas Jefferson, the Vice-President elect, arrived in Philadelphia, where he was received by Capt. Shaw's company of artillery, which displayed a flag bearing the inscription, "Jefferson, the friend of the people." On the following day the inauguration of the second President of the United States took place in the Senate chamber. Upon the entry of Adams and of Jefferson there was applause from their respective partisans. Adams took a seat in the Speaker's chair. Jefferson, Washington, and the secretary of the Senate were at his left hand. The chief justice and associate justices of the Supreme Court of the United States were in the centre at a table. Gen. Wilkinson, commander of the army, all the officers of state, and foreign ministers were present.

At the proper time John Adams arose and made an appropriate speech. After he ceased speaking he descended to the table at which the judges were sitting and took the oath of office, which was administered by Chief Justice Oliver Ellsworth. He then returned to his seat. After a few moments he arose, bowed to the audience, and retired. He was followed by the Vice-President, between whom and Washington a ceremonious contest arose as to who should go first. Washington insisted that Jefferson should take precedence, and the latter reluctantly agreed to proceed in that manner. The foreign ministers and others followed, and the inaugural act was concluded.

¹ The building in Ninth Street below High or Market, which had been commenced by the State of Pennsylvania with the intention of making it an official residence for the President of the United States, was now almost completed, and on the 3d of March Governor Mifflin wrote to President elect Adams tendering it to him for his accommodation, with the stipulation that rent should be paid for it equal to that which Mr. Adams would have had to pay for any other suitable house in Philadelphia. Mr. Adams, however, declined to accept the house, being in doubt as to whether he was at liberty to do so without an authorization from Congress, and leased the residence No. 190 High Street, which had been occupied by President Washington. On the 17th of March, 1800, the Legislature passed a law authorizing the Governor to appoint commissioners to sell the President's house. The property was afterwards sold to the University of Pennsylvania for forty thousand dollars, and the building was torn down in July, 1829.

Mr. Jefferson was afterwards sworn into office in the Senate chamber, up-stairs.²

² William McKoy, who wrote his recollections many years ago in Poulson's *Daily Advertiser*, under the signature of "Lang Syne," gives the following description of this memorable scene:

"The first novelty that presented itself was the entrance of the Spanish minister (the Marquis Yrujo) in full diplomatic costume. He was of middle size, of round person, florid complexion, and hair powdered like a snow-ball, dark, striped silk coat, lined with satin, white waistcoat, black silk breeches, white silk stockings, shoes and buckles. He had by his side an elegant-hilted small-sword, and his 'chapeau,' tipped with white feathers, under his arm. Thus decorated he crossed the floor of the hall, with the most easy nonchalance possible, and an occasional side toss of the head (to him habitual), to his appointed place. He was viewed by the audience for a short time in curious silence. He had scarcely adjusted himself in his chair when the attention of the audience was roused by the word 'Washington!' near the door of the entrance. The word flew like lightning through the assembly, and the subsequent varied shouts of enthusiasm produced immediately such a sound as

'When loud surges lash the sounding shore.'

It was an unexpected and instantaneous expression of 'simultaneous' feeling which made the hall tremble. Occasionally the word 'Washington!' 'Washington!' might be heard like guns in a storm. He entered in the midst, and crossed the floor at 'quick step,' as if eager to escape notice, and seated himself quickly on his chair, near the Marquis Yrujo, who rose up at his entrance as if startled by the uncommon scene. He was dressed similar to all the full-length portraits of him,—hair full powdered, with black silk rose and bag pendant behind, as then was usual for elderly gentlemen of the 'old school.' But on those portraits one who had never seen Washington might look in vain for that benign expression of countenance possessed by him, and only sufficiently perceptible in the lithographic bust of Rembrandt Peale to cause 'a feeling,' as Judge Peters, in his certificate to the painter, expresses it. The burst at the entrance had now subsided, when the word 'Jefferson!' at the entrance-door again electrified the audience into another explosion of feeling similar to the first, but abated in force and energy. He entered, dressed in a long, blue frock-coat, single-breasted, and buttoned down to the waist; light sandy hair, very slightly powdered, and cued with black ribbon a long way down his back; tall, of benign aspect, and straight as an arrow, he bent not, but with an erect gait moved leisurely to his seat near Washington and sat down. Silence again ensued. Presently an increased bustle near the door of the entrance and the words, 'President!' 'President Adams!' again produced an explosion of feeling similar to those that had preceded, but again diminished, by *repetition*, in its force and energy. He was dressed in a suit of light drab cloth, his hair well powdered, with rose and bag, like that of Washington. He passed slowly on, bowing on each side, till he reached the 'Speaker's chair,' on which he sat down. Again a deep silence prevailed, in the midst of which he rose, and bowing round to the audience three times, varying his position each time, he then read his inaugural address, in the course of which he alluded to, and at the same time bowed to, his predecessor, which was returned from Washington, who, with the members of Congress, were all standing. When he had finished he sat down. After a short pause he rose up, and bowing round as before, he descended from the chair, and passed out with acclamation. Washington and Jefferson remained standing together, and the bulk of the audience watching their movements in cautious silence. Presently, with a graceful motion of the hand, Washington invited the Vice-President, Jefferson, to pass on before him, which was declined by Mr. Jefferson. After a pause, an invitation to proceed was repeated by Washington, when the Vice-President passed on towards the door, and Washington after him. A rush for the street now commenced, and the next view of Washington, the 'beheld of all beholders,' was on the north side of Chestnut Street, going down, with the crowd after him, and Timothy Pickens on his right, to 'Francis Hotel,' on a visit of congratulation to the President elect. On his arrival at the hotel, in Fourth above Chestnut (now Indian Queen), they passed in, and the door was closely 'wedged in' with people desirous of beholding to the last the person of Washington, now passing away from them, and to be seen by them no more forever. When the door closed another explosion of feeling from the assembled throng produced a sound like thunder. The effect was such that the door of the hotel again opened, and again Washington (to them), 'first in war, first in peace, and first in the hearts

On the afternoon of the same day the merchants of Philadelphia gave Washington a farewell dinner at Rickett's Circus. The guests assembled at Oeller's Hotel, and proceeded thence to the amphitheatre. As they entered the building the band played "Washington's March," and a curtain being drawn up, a finely-painted transparency was revealed, representing the Genius of America in the act of crowning Washington with laurel, her hand pointing to an altar, upon which was inscribed "Public Gratitude." Two hundred and forty persons were present, and Thomas Willing and Thomas Fitzsimons presided. After Gen. Washington had withdrawn a toast was drunk, expressing the hope that the evening of his life would be as happy as its morning and meridian had been gloriously useful, and that the gratitude of his country would be "coeval with her existence." Washington's retirement was not by any means the subject of universal regret, but was hailed by some of the Democratic journals in savage terms of satisfaction. In the *Aurora* he was denounced as the "man who is the source of all the misfortunes of our country," and was charged with having "cankered the principles of republicanism in an enlightened people just emerged from the gulf of despotism," and with having carried "his designs against the public liberty so far as to have put in jeopardy its very existence."¹

On the other hand, various addresses of respect were made to Washington on behalf of societies, churches, and other public bodies. The City Councils not being able to agree as to the phraseology of an address, the Common Council determined to present an address of its own, irrespective of the other branch; and the clergymen of the city presented an address signed by the ministers of all the denominations, in which they quoted with favor the sentiments of his Farewell Address in relation to religion, and wished him long life and happiness. The signers were William White, Ashbel Green, William Smith, John Ewing, Samuel Jones, William Hendel, Samuel Magaw, Henry Helmut, Samuel Blair, Nicholas Collin, Robert Annan, William Marshall, John Meder, John Andrews, J. F. Schmidt, Robert Blackwell, William Rogers, Thomas Ustick, Andrew Hunter, John Dickins, I. Jones, Joseph Turner, Ezekiel Cooper, Morgan J. Rhee, James Abercrombie.

Congress met this year in quarters which had been greatly enlarged and improved, having at last been

completed in accordance with the original plan. The County Court had been extended forty feet on Sixth Street, and a gallery erected for spectators on the north side of the Senate chamber, which remained there until about 1835 or 1836. The Senate occupied the second-story back room, which afterward became the court-room of the District Court; and the House of Representatives an apartment down-stairs immediately under the Senate. The rooms fronting on Chestnut Street were divided into committee-rooms. From the front door on Chestnut Street a hall or entry led to the door of the hall of the House of Representatives, or to the stairway leading to the second story, in the same position as the present stairway leading to the District Court rooms. The arched entrance on Sixth Street had not then been opened.² New quarters had also been provided for the Bank of the United States, which in July removed from Carpenters' Hall to the

² The following interesting reminiscences of the appearance of Congress are from one who frequently saw that body in session from 1790 to 1800: "The House of Representatives, in session, occupied the whole of the ground-floor, upon a platform elevated three steps in ascent, plainly carpeted, and covering nearly the whole of the area, with a limited *loggia* or promenade for the members and privileged persons, and four narrow desks, between the Sixth Street windows, for the stenographers, Lloyd, Gales, Callender, and Duane. The Speaker's chair, without canopy, was of plain leather and brass nails, facing the east, at or near the centre of the western wall. The first Speaker of the House in this city was Frederick Augustus Muhlenberg, who, by his portly person and handsome rotundity, literally *filled* the chair. His rubicund complexion and oval face, hair full powdered, tamboored satin vest of ample dimensions, dark-blue coat with gilt buttons, and a sonorous voice, exercised by him without effort in putting the question, all corresponding, in appearance and sound, with his magnificent name, and accompanied, as it was, by that of George Washington, President, as signatures to the laws of the Union,—all these had an imposing effect upon the inexperienced auditory in the gallery, to whom all was new and very strange. He was succeeded here by Jonathan Dayton, of New Jersey, a very tall, raw-boned figure of a gentleman, with terrific aspect, and, when excited, a voice of thunder. His slender, bony figure filled only the centre of the chair, resting on the arms of it with his hands and not the elbows. From the silence which prevailed of course on coming to order, after prayers by Bishop White, an occasional whisper, increasing to a buzz, after the manner of boys in school, in the seats, in the lobby, and around the fires, swelling, at last, to loud conversation, wholly inimical to debate.

* * * * *

"The United States Senate convened in the room up-stairs, looking into the State-House garden. In a very plain chair, without canopy, and a small mahogany table before him, festooned at the sides and front with green silk, Mr. Adams, the Vice-President, presided as president of the Senate, facing the north. The portrait which was in Peale's Museum is, in the opinion of the writer, a perfect *fac-simile* of the elder Adams in face, person, and apparel, as they appeared to him, above the little table placed before that venerable gentleman. Among the *thirty* senators of that day there was observed constantly during the debate the most delightful silence, the most beautiful order, gravity, and personal dignity of manner. They all appeared every morning full powdered, and dressed, as age or fancy might suggest, in the richest material. The very atmosphere of the place seemed to inspire wisdom, mildness, and condescension. Should any one of them so far forget, for a moment, as to be the cause of a protracted whisper while another was addressing the Vice-President, three gentle taps with his silver pencil-case upon the table by Mr. Adams immediately restored everything to repose and the most respectful attention, presenting in their courtesy a most striking contrast to the independent loquacity of the representatives below-stairs, some few of whom persisted in wearing, while in their seats, and during the debate, their ample *cocked* hats, placed 'fore-and-aft' upon their heads, with here and there a leg thrown across the little desks before them, and facing Mr. Jupiter Dayton, as he was sometimes called by writers in the *Aurora* of Benjamin Franklin Bache."

of his countrymen,' stood *uncovered* before them. A deep silence ensued. He then bowed three times to the spectators, varying his position each time, which was returned by a shout from the crowd and a clapping of hands. Having so done, he slowly retired, seemingly in much agitation, within the door, and the grateful assembly gradually disappeared."

¹ According to the late Col. Robert Carr, the article in the *Aurora* was written by Dr. William Reynolds, a physician, at that time residing at No. 95 South Eighth Street, who took it to the newspaper office in company with Dr. Michael Leib. The latter looked over it and suggested some modifications. It was published during the absence from the city of the editor, Mr. Bache, who, on his return, expressed great anger and annoyance at its appearance in the columns of the *Aurora*.

new building specially erected for it in Third Street below Chestnut, the law-office occupying the bank's old quarters.

The change in the Federal administration produced no softening of political asperities in Philadelphia, but, if anything, rather seemed to intensify the bitterness between the contending factions. Fuel was added to the flames by publications in *Peter Porcupine's Gazette*, a daily evening paper published by William Cobbett, the first number of which appeared in March. It was strongly anti-Democratic and anti-French, and its course was marked by great violence and vindictiveness of tone. A fierce attack on Don Carlos de Yrujo, the Spanish minister, caused the latter to make a demand upon the American government that Cobbett should be prosecuted. The request was granted, and the printer was bound over to appear in the Federal Court; but De Yrujo, dissatisfied with this disposition of the case, expressed a desire that Cobbett should be tried before the Supreme Court of Pennsylvania, the presiding justice of which tribunal, Thomas McKean, was his particular friend. Accordingly Judge McKean, in November, delivered a charge to the grand jury, in which he sought to obtain the indictment of Cobbett, and even went so far as to appear before that body as a witness against the journalist. But the grand juries of both the Supreme and Federal Courts ignored the indictment. Cobbett naturally construed this action as a triumphant vindication of his course, and in his paper severely criticised the conduct of Judge McKean.

The bitterness of party feeling was even more forcibly demonstrated by an attack which was made on Benjamin F. Bache, editor of the *Aurora*, by Clement Humphreys, son of Joshua Humphreys,¹ during a visit to the frigate "United States," while upon the stocks at Southwark. The ship-carpenters employed on the vessel were Federalists, and owing to some strictures in the *Aurora* as to their political course were deeply incensed against Bache. An attack was

made upon him by Clement Humphreys, who, while beating him, exclaimed that he had "accused the ship-carpenters of being bribed," had "abused the President on the day of his resignation," and had "printed several Tory pieces." Bache succeeded in escaping, but not until after having been considerably injured. Humphreys was arrested, tried, and found guilty, and sentenced to pay a fine of fifty dollars and to give security in the sum of two thousand dollars to keep the peace. About the time of the assault on Bache, Cobbett was threatened with violence in consequence of articles in relation to Governor Mifflin; but with characteristic boldness he published a defiance, in which, in vigorous terms, he upheld the liberty of the press and denounced his would-be assailants. The frigate "United States," whose construction has been referred to, was launched at Southwark, under the direction of the builder, Joshua Humphreys, at high water, on the morning of the 10th of May. The launch was witnessed by thousands of spectators, among whom the President of the United States and the heads of departments, who were stationed on the United States brig "Sophia," Capt. O'Brien. Commodore Barry was in command of the "United States." The latter was constructed on better principles than those observed in building the vessels of the Revolutionary navy, and was a formidable addition to the naval armament of the country. The model was fine, and the decoration exceeded anything which had then been attempted. The figure-head, carved by William Rush, represented the Genius of America, wearing a crest adorned with a constellation. Her hair escaped in loose, wavy tresses, and rested upon her breast. A portrait of Washington was suspended from a chain which encircled her neck, and her waist was bound with a civic band. In her right hand she held a spear and belts of wampum,—the emblems of peace and war. In her left hand was suspended the Constitution of the Union. Above was a tablet, on which rested three books, to represent the three branches of government, and the scales of Justice. On the base of the tablet were carved the eagle and national escutcheon, and the attributes of commerce, agriculture, the arts and sciences.

Political discussion was interrupted for a time by the prevalence of yellow fever, which again ravaged the city. The disease made its appearance on the 17th of August, and almost immediately caused a general exodus from the town. President Adams took refuge at Braintree, Mass., and the United States offices were removed. The war office was opened at the Falls of Schuylkill; the treasury office at Gray's Ferry, and the general post-office at Dunlap's stable, Twelfth Street, below Market. The office of Secretary of State was opened at Trenton, N. J., and the heads of the State and Post-Office Departments went to the same town. The Secretary of War took lodgings near Downingtown, Pa., and the Attorney-General went to Virginia. Many merchants transferred

¹ Joshua Humphreys was a native of Delaware County, Pa., and died in 1838, aged eighty-seven. He may be called the father of the American navy, as the vessels constructed under the act of Congress of March 27, 1794, "to provide a naval armament for the United States," were modeled after his designs. On the 12th of April, 1794, Gen. Knox requested Mr. Humphreys to prepare drafts and models for such frigates as he had proposed to the War Department in his letter of that date, and also models for the frames; and in July following he was instructed to have the moulds for those to be built at Norfolk (the "Chesapeake"), Baltimore (the "Constellation"), New York (the "President"), Boston (the "Constitution"), and Portsmouth (the "Congress"), prepared with all possible dispatch and sent to those places. Mr. Humphreys superintending in person the construction of the frigate "United States" at Philadelphia. The central idea of Mr. Humphreys' plans was that ships of a heavier build and greater weight of metal than those of the European navies should be constructed, in order that the United States might at once take rank as a naval power. Mr. Humphreys' views met with some opposition, and one of the frigates, the "Chesapeake," was constructed on a smaller scale than had been intended, and on a different model, although the timbers had been prepared for the larger dimensions. The ships constructed after Humphreys' plans proved to be fast sailers, capable of enduring heavy battering and of inflicting severe injury in a short time.

their business to Wilmington, Del., at which place sixteen Philadelphia firms announced, in the month of August, that they were prepared to sell their goods and merchandise.

The epidemic continued until about the 1st of November. During its prevalence the number of deaths from the disease was twelve hundred and ninety-two. In consequence of the frequent visitations of the scourge the Governor urged upon the Assembly the importance of obtaining a sufficient supply of water for the city by means of canals, and providing proper sanitary regulation; and a petition to the City Councils asking that action be taken in the same direction, received many signatures. President Adams' return on the abatement of the epidemic was marked by a new display of political rancor. The adjutant-general of the city volunteers had issued orders for a parade of the military to receive the President. "An Old Soldier," on the 4th of November, published a communication in the *Aurora*, objecting to binding the militia "to the chariot-wheels" of the President. He said that "the attempt was made to convert the honorable badge of the citizen soldier into the slavish livery of a mercenary;" to "concentrate the regiments into servants in livery;" and that the President had been "reveling and feasting at Boston and New York while our unhappy city was the prey of disease and death." Other articles of the same kind, subsequently published, were signed "No Idolater," "An Old Whig," etc. The *Aurora* of the 11th described the reception as "the triumphal entry of his Serene Highness of Braintree into the city."¹ It said that at eleven o'clock Capt. Dunlap's troop, consisting of twenty-four men, Morrell's of eighteen, and Singer's of twelve, "went to meet his Serene Highness." Between two and three o'clock the cavalcade appeared. Capt. Forest, with twenty-four men, "had the honor to precede his Highness' horses." Capt. Dunlap's "and the other two troops had the honor to follow his carriage. Great order was maintained," said the *Aurora*. "There was no gaping multitude; no huzzas." The companies, according to the same authority, turned out miserably. Nelson's grenadiers had eight men, Robinson's artillery seven. The whole number of soldiers on parade was about ninety, although the real force of the eleven regiments ordered out was about one thousand. The *Aurora* says that constables stationed at the doors of his Excellency ordered some small boys to hurrah, and thus ended the reception of the President at the seat of government.

The popular celebrations of the year were marked by similar ebullitions of partisan feeling. On the 14th of January Commodore Joshua Barney was entertained at dinner at Oeller's Hotel, "in consideration of his services to the cause of republican liberty," and the anniversary of the alliance with France was

celebrated at the same hotel "by as respectable an association of citizens," said the *Aurora*, "as ever convened on a similar occasion." Chief Justice McKean and Mr. Langdon, of New Hampshire, presided, and among the guests was Joseph Priestley, the famous philosopher. Washington's birthday, as we have seen, was celebrated with much *éclat*, and on the 12th of April the successes of the French in Italy were celebrated at Kensington on the site of an old redoubt, commenced by Gen. Putnam while in command of the city, and afterwards completed by the British. The usual salutes were fired at daybreak, noon, and sunset, and the French, American, and British flags were displayed. At the entertainment the toasts were of strong Gallic flavor. On the 1st of July an entertainment was given to James Monroe, late minister to France, who was recalled on account of his rashly enthusiastic course in "fraternizing" with the officials of the French republic. Chief Justice McKean and Mr. Tazewell, of Virginia, presided, and among the guests were President Adams and Vice-President Jefferson. On the 4th of July the second company of artillery (militia), Capt. Guy, dined at the Buck Tavern in the "Neck," fifty citizens dined at Geisse's Point-no-Point (now Bridesburg), and the Columbian Fishing Company spent a pleasant day at their fishing hut on the Schuylkill. On the 18th of August, Gen. Thaddeus Kosciuszko, the Polish patriot, arrived at Philadelphia as a passenger on the ship "Adriana" from Bristol, England. He was received by a large gathering of citizens, who took the horses out of his carriage and dragged it in triumph to Mrs. Lawson's, in Fourth Street, where the general was to lodge. The sufferings of the American captives in Algiers called forth strong expressions of sympathy in Philadelphia, and when the prisoners were at last released they were received with great kindness in Philadelphia, where they arrived on the 8th of February. They were met outside the city and escorted to the Indian Queen Tavern. In the evening they were taken to Rickett's Circus, and a subscription taken up for their relief realized a handsome amount. Shortly after their arrival the United States schooner "Hamdalla" sailed from Philadelphia for Algiers laden with gunpowder, cannon, and other munitions of war. The construction of three vessels intended for similar service was commenced at Philadelphia about the same time. One, a ship of twenty guns, was built at Kensington by Bowers. Joshua Humphreys laid down the keel, in Southwark, of the "Hassan Bashaw," a brig, mounting twenty guns, and Nathaniel Hutton constructed a schooner, the "Skjoldbrand," to carry eighteen guns. All these vessels were transferred in payment of tributes to the Dey of Algiers. During this year two vessels were libeled for being engaged in the slave-trade. The ship "Lady Waltersdorff," of New York, was one of them. When she entered the Delaware two negroes were found on board, and irons, handcuffs, chains,

¹ John Adams' residence was at Braintree, Mass., since called Quincy.

and other implements of the trade. It was ascertained that she had left the coast of Africa with one hundred and fifty men, who had been sold into slavery at St. Croix. The vessel was seized and confiscated at Philadelphia, and the owner made amenable to the penalty of the act of Congress.

The next exciting incident of the year in Philadelphia was a fire which occurred between five and six o'clock on the morning of the 27th of January in the house of Andrew Brown, printer of the *Philadelphia Gazette*. The escape of the family, which slept in an upper story, was cut off by the flames. Two apprentices leaped from a window, and though injured, escaped with their lives. Two servant-girls, who were badly hurt, were got out alive; and Brown was rescued by a negro servant, who bore him down a ladder. Mrs. Brown and three children (two girls and a boy) were suffocated. The victims were buried in three coffins, the funeral starting from the house of Maj. Robert Patton, on South Third Street, and proceeding to St. Paul's Church, where the service was read by Rev. Dr. Magaw. Mr. Brown lingered until the 4th of February, when he died, and Ann Taggart, one of the servants, died a week afterwards. The publication of the *Philadelphia Gazette* was continued by Andrew Brown, a son of the deceased.

Among the measures before the Legislature and City Councils this year was a project for erecting a permanent bridge over the Schuylkill at Middle Ferry on Market Street. The City Councils proposed to undertake the work, but private individuals, on the other hand, desired the formation of a company for its construction; and, owing to the conflict of interests, no definite action was taken in the matter this year, but in 1798 a bill was passed incorporating a company. In April an ordinance was passed by the Councils assigning the use of Dock Street, on Wednesdays and Saturdays, to the cattle market. The location of the market was shortly afterwards changed to Seventh Street, between Walnut and Prune (Locust). An act of Assembly passed on the 27th of February declared the Cohocksink Creek, from the mouth to the bridge on the road to Frankford, a public highway for the passage of all kinds of vessels and rafts that could float therein. The inhabitants were granted permission to remove obstructions, and it was provided that the creek should be of the width of forty feet for purposes of navigation. Authority was also given for the erection of drawbridges over it.

In consequence of the insolent attitude of the French Directory and the continued seizures of American vessels by French cruisers, the popularity of France had now begun to decline; and it soon became evident that the country was slowly but surely drifting into war. On the 5th of March, 1798, President Adams informed Congress of the receipt of dispatches from the American envoys to Paris announcing the failure of their mission. Accompanying the dispatches was a message from the French Directory

to the Council of Five Hundred urging the passage of a law declaring that all ships having English commodities on board were good prizes, and that the ports of France would be closed to all ships that in the course of their voyages had touched at any English port. A few days later, Congress was informed that the representatives of Talleyrand, one of the French ministers, had demanded a bribe of fifty thousand pounds for the members of the Directory and a loan to the republic, in consideration of the adoption of a satisfactory treaty. Great excitement was caused by the publication of these facts, and a decided revulsion of feeling in the popular sentiment toward France soon followed. In every part of the country was re-echoed the vigorous language of Charles Cotesworth Pinckney: "Millions for defense, but not one cent for tribute."

In the Pennsylvania Senate, however, the feeling in favor of France was still very strong. On the 20th of March that body adopted resolutions declaring that the representatives of Pennsylvania bear their public testimony against war in any shape or with any nation unless the territories of the United States shall be invaded, but more especially against a people with whom our hearts and hands have been lately united in friendship. In the House, however, the resolutions were received and laid on the table, but never taken up for consideration. On the 12th of April the Common Council appointed Joseph Magoffin and Thomas P. Cope a committee to consider with the mayor, recorder, and aldermen the propriety of holding a general meeting "on the subject of uniting the whole corporation in an address to the President of the United States on the present critical situation of affairs." The Select Council also adopted resolutions in favor of presenting an address "expressing to the President of the United States the highest approbation of his conduct relative to the existing differences with the French republic." This address was presented to President Adams on the 23d of April. It expressed, in the name of the city of Philadelphia, approbation of the Federal administration, and of "the prudence and moderation with which our government has received the unprovoked aggressions of France." In his reply President Adams expressed his gratification at these expressions of confidence and good will. At a meeting of the merchants, traders, and underwriters, held at the City Coffee-House on the previous day (April 11th), an address to the President had been adopted expressing regret at the failure of the negotiations with France, and their determination to support the government. On the following day a number of the residents of the city, Southwark, and the Northern Liberties met at Dunwoody's tavern, Market Street above Eighth, with Col. Gurney in the chair and Samuel W. Fisher secretary, at which it was resolved that the government had done all that could be done to restore harmony between the United States and France, and Joseph

Thomas, Andrew Bayard, Samuel Wheeler, Joshua Humphreys, Henry Pratt, Levi Hollingsworth, and Joseph North were appointed a committee to prepare an address to the President. Popular indignation at the conduct of France was rapidly intensifying, and the publication of a new patriotic song, "Hail Columbia," greatly stimulated the agitation. At the request of Gilbert Fox, a young actor, Joseph Hopkinson, then twenty-eight years of age, wrote "Hail Columbia" to accompany the air of "The President's March," composed by a German music-teacher named Roth, which had become very popular in Philadelphia. This song was sung by Fox at his benefit in the theatre on the 25th of April, and excited the wildest applause. It was necessary to repeat it several times, the audience joining in the chorus. The words were immediately caught up and repeated in all parts of the city, and thence throughout the country. It was also sung at night in the streets by large assemblies of citizens, including some members of Congress. As the song was thought to be inimical in tone to the French, it was not very popular among the Democratic party, which, under the leadership of Jefferson, Madison, and Monroe, was still strongly favorable to France. Bache's *Aurora* of the 27th denounced the song as "the most ridiculous bombast and the vilest adulation to the Anglo-monarchical party and the two Presidents," and on the 5th of May announced that "Joseph Hopkinson, the author of the late Federal song to the tune of 'The President's March,' had been nominated by the President a commissioner to transact some business with the Indians," and added, "He has written his song to some tune, that's clear!"

Among the demonstrations for the support of the government was a meeting of youths between eighteen and twenty-three years of age, at James Cameron's tavern, Shippen Street, on the 28th of April. Samuel Relf presided, and Edward Bridges acted as secretary. Resolutions were passed approving the action of the Federal government, and Samuel Relf, Edward Bridges, Charles Hare, John Woodward, Charles W. Goldsborough, and Richard Rush were appointed a committee to prepare an address to the President. At an adjourned meeting held on the 30th, at which it was computed eight hundred young men were present, committees were appointed to procure signatures to the address. On the 7th of May twelve hundred of them assembled at a place of rendezvous and marched in procession to the President's house. At the suggestion of Francis Shallus it was decided to wear a black cockade, and with this badge upon their hats they marched into the President's house in double file and were received by the President in his saloon, after which they dined together. In the evening, excited by liquor, some of them made an attack upon the house of Benjamin F. Bache, printer of the *Aurora*, and battered at the doors and windows, but committed no further trespass. On the following

night parties of men wearing the French cockades appeared upon the streets and created some disorder, in consequence of which the Citizen Volunteers were placed on guard at the mint and arsenal, and troops of cavalry paraded the streets at night. The 8th of May had been designated as a day of fasting and prayer; but political agitation rendered it a day of excitement and disorder. The newspaper writers contributed not a little to the excitation of feeling. Cobbett was particularly violent, and Bache, in the *Aurora*, was almost as vehement. In James Carey's *United States Gazette* of May 10th, Cobbett was denounced as a foreigner who had no interest in the country, and severely criticised for having recommended the wearing of a cockade by the Federalists. "A citizen," it was urged, "has no business with a cockade. It is a military emblem, which ought only to be worn by a soldier. . . . It ought to be discountenanced by citizens at large." Republicans—"the real friends of order"—were advised "not to think of assuming any badge liable to misconstruction," and which "could answer no possible good and might be attended with mischief."

Cobbett having charged the American Society of United Irishmen with being "engaged in a conspiracy against the country," was denounced in a series of strong resolutions, and the Tammany Society, or Columbian Order, in celebrating their saint's day at the Columbia Wigwam on the Schuylkill, on the 12th of May, adopted a number of toasts expressing strong sympathy with the French and an enthusiastic preference for Democratic principles. The Democratic Republicans of the Northern Liberties, at a meeting held on the 1st of May, Col. Coats presiding and William Robinson, of Southwark, assisting, adopted sentiments of a similar character. On the same day the grenadiers and infantry assembled at the State-House and marched to Centre Square, where they performed various evolutions. After their dismissal, the First Light Infantry, which had gained the designation of *sans-culottes*, partook of a dinner prepared for the occasion. The True Republican Society, successor of the Democratic Society, had an entertainment at John Snyder's Robin Hood Tavern, in the course of which an election for officers was held. Early in June, Governor Mifflin, in anticipation of war with France, addressed a circular letter to the militia officers, requesting their co-operation in the preparation of measures for defense, in accordance with the act of Congress, passed near the end of May, providing for the raising of a provisional army. A meeting of the division officers, including Gen. Thomas Proctor, major-general of the division of the city and county of Philadelphia, was held at the State-House, and resolutions adopted assuring the Governor of their cordial and hearty support. The militia of the county brigade, however, sympathizing with France, and desiring to avoid a conflict, if possible, were not so prompt or enthusiastic in their action.

On the 16th of June seventy of the brigade officers assembled at the town-house, Northern Liberties, Gen. Jacob Morgan in the chair, and by a vote of sixty-five to five adopted resolutions offered by Capt. Hozey, of the Southwark Light Infantry, declaring their intention to co-operate with the Governor. On the other hand, an address deprecating hasty action and expressing gratitude to France for her generous assistance during the Revolution, which was offered by Maj. Frederick Wolbert, was adopted by a vote of

A MACPHERSON BLUE.

sixty-one to nine, and Gen. Jacob Morgan, Col. Coats, Dr. Michael Leib, Col. Worrell, and Col. Franks were appointed to present it. New companies were organized, and Macpherson's Blues, who promptly offered their services, were strengthened by the addition of new companies in the various arms of the service; their number being increased to six hundred men. The different commands embraced in the organization were the First Troop City Cavalry, Capt. John Dunlap, afterwards Robert Wharton; Second Troop City Cavalry, Capt. Singer, afterwards Joseph B. McKean; one company artillery, Capt. Hale, afterwards Taylor; one company grenadiers, Capt. Higbee, afterwards Moore, of which Fennell, the tragedian,

was a member; one company riflemen, Capt. Howell; one company infantry, from Germantown, Capt. —; four companies infantry (Blues), Capts. McEwen, Heysham, Frobisher, and Willing.¹

Several companies of infantry, artillery, and cavalry were also raised in various parts of the city and county, among which were a troop of light-horse raised by Capt. Thomas Lieper; the Philadelphia Blues, Capt. Lewis Rush; First Green Infantry, Capt. Doyle Sweeny; the Light Infantry, blue and buff, Capt. John Johnson; the Light Infantry, blue sash, Capt. David Irving; the Germantown Infantry Blues, Capt. Daniel Rubicam, attached to Macpherson's Blues; the Northern Liberty Blues, and others. Governor Mifflin accepted from the city eight hundred and seventeen men, and from the county seven hundred and ninety-five. The Philadelphia troops were attached to the Third Division, commanded by Maj.-Gen. Thomas Craig, of Montgomery County; Brigs. Jacob Morgan, of Philadelphia, and Thomas Boude, of Lancaster.

¹ The general uniform of the Blues was of navy-blue cloth; pantaloons edged with white; a tight round jacket, edged in the same manner, with red lappels, cuffs, and collar, the collar standing, two inches high, having two bright buttons and worked button-holes thereon. The hat was turned up on the left with a fan-tail by a white button and looped, decorated with a black cockade, out of which arose a white plume; the crown was covered with bear-skin.

As Macpherson's Blues were mostly Federalists, a military association of persons of opposite political principles was formed as a set-off. It was known as the "Militia Legion of Philadelphia," and consisted of all the "Republican uniformed flank companies, troops of horse, rifle corps, grenadier, artillery, and light infantry companies, established conformably to the laws of this Commonwealth." It was to be commanded by one general commandant and four majors,—one of cavalry, one of artillery, and two of infantry. Easter Monday, the 1st of May, and the Fourth of July were selected as the regular parade days. All the members of the association were required to subscribe to a "test," declaring their attachment from conviction or principle to Democratic Republican government, and pledging themselves at all times to support the laws and republican institutions of the general and State governments. The association was popularly known as the Republican Legion, and exercised an important influence in public affairs. Col. John Shee was chosen commandant.

On the 11th of June a number of merchants assembled at the City Tavern, George Latimer being in the chair and John Donaldson secretary, and resolved to take up subscriptions for building and equipping two ships, not exceeding five hundred tons each and mounting twenty guns, for the use of the United States government. Joseph Anthony, David H. Conyngham, Daniel Smith, James Crawford, and Joseph Simmons were appointed to receive subscriptions, and it was determined that, as soon as forty thousand dollars had been subscribed, the construction of the vessels should be commenced; but, on the recommendation of the government, the plan was modified by the substitution of a frigate of forty-four guns for the smaller vessels. The frigate, which was constructed by the younger Humphreys, N. Hutton, and Delavue, was named the "City of Philadelphia." She was one hundred and thirty feet keel, and built to carry thirty eighteen-pounders and fourteen twelves.

The arrival of Gen. John Marshall, one of the envoys to France, on the 19th of June, was the occasion of a popular demonstration. He was received at Frankford by the three troops of horse, commanded by Capts. Dunlap, Singer, and Morrell, and welcomed by the ringing of bells and the plaudits of a large concourse of citizens.

Considerable excitement was created about this time by the arrival in the Delaware of several vessels having on board a number of Frenchmen and negroes, who had come to the United States in consequence of the occupation of Port-au-Prince by the British troops. Governor Mifflin, alarmed at the prospect of the introduction into Philadelphia of so many persons supposed to be inimical to the country, issued orders to the Board of Health to detain them at quarantine, and prevent them from coming to the city, and applied to President Adams for assistance. The French were disposed to be turbulent, and threat-

ened to take possession of the vessels in which they were passengers and proceed to the city. Gen. Tous-sard, who commanded at Fort Mifflin, had two guns placed so that they commanded the vessels, and Capt. Stephen Decatur, who commanded the frigate "Delaware," which lay below the fort, took a position with his guns bearing on the French ships. Early in July the "Delaware" went to sea, and on the following day captured, off Egg Harbor, a French privateer schooner, "L'Croyable," of twelve guns, with a crew of seventy men, which had cruised about the capes of the Delaware and made prizes of several vessels bound to and from Philadelphia. The news of her capture was the subject of general rejoicing among merchants, a number of whom met at the Coffee-House and exchanged congratulations. "L'Croyable" was sent to Philadelphia and condemned as a prize, the crew being sent to Lancaster jail under charge of a detachment of Macpherson's Blues and the First City Troop. The vessel was afterwards fitted out as the American privateer "Retaliation," and under the command of Capt. Bainbridge rendered valuable service.

The political controversies of the period resulted in two personal affrays,—one between Matthew Lyon, of Vermont, and Roger Griswold, of Connecticut, members of Congress, and the other between B. F. Bache, editor of the *Aurora*, and John Ward Fenno, son of the editor of the *Gazette of the United States*. While balloting, on the 22d of January, for members of the committee on the impeachment of Senator Blount, Griswold insulted Lyon by alluding to a story in which Lyon was charged with having been compelled, while an officer of the Revolutionary army, to wear a wooden sword on account of cowardice in the field. Lyon retorted by spitting into Griswold's face. A committee of investigation reported in favor of the expulsion of Lyon, but a resolution to that effect was lost. Irritated by this failure, Griswold, on the 15th of February, approached Lyon, while the latter was writing at his desk, and struck him over the head and shoulders with a club. Lyon returned the blows with a pair of tongs, and after they had belabored each other for a short time, the combatants were separated. Subsequently they met in one of the anterooms, where Lyon assaulted Griswold with a stick. One of Griswold's friends ran out and procured a hickory club, which he gave to Griswold; but other parties interfered and prevented a renewal of the fight. A resolution for the expulsion of both Lyon and Griswold was defeated, neither the Democratic nor Federalist party, to which they were respectively attached, being willing to spare their services.

The affair between Bache and Fenno grew out of charges which the elder Fenno had made in his paper to the effect that Bache was in the pay of France. Bache retorted by asserting that Fenno was sold to the British. Fenno thereupon denounced

Bache as a "villain," and the latter characterized Fenno as a mercenary scoundrel. Finally young Fenno called on Bache at his office, and inquired who was the author of the last article. Bache told him to send his father to ask that question, and Fenno then left the office. On the following day the parties met on Fourth Street, and Fenno struck at Bache, who plied his cane over Fenno's head. After they had been separated, Bache, according to his own account, stooped "to pick up his comb" and Fenno gave him "a wide berth." Military preparations for the anticipated war with France were vigorously prosecuted. On the 11th of November, Gen. Washington, who was now lieutenant-general of the army, arrived in Philadelphia to take charge of matters, and was received by the troops of horse and a large number of the uniformed companies of foot. On the 24th President Adams, who had left the city on account of the recurrence of yellow fever,¹ returned, and was received

¹ The fever was again very virulent during the summer and early fall of 1798. Among its victims were Hilary Baker, mayor of the city, Benjamin Franklin Bache, editor of the *Aurora*, and John Fenno, editor of the *National Gazette*. The newspaper offices suffered severely, there being in all sixty-two persons who died from the disease. The publication of the *Aurora* was suspended from September 10th to November 1st. Carey's *Recorder*, the *Gazette of the United States*, ceased publication in the early part of September, and the *American Daily Advertiser* removed its office to Germantown. The scenes attending the pestilence were often horrible. Putrefying bodies were discovered in deserted houses in such a state of decomposition that they were no longer recognizable, and persons delirious from fever ran through the streets almost naked. Many were found lying in the streets stricken down by the disease. About forty thousand people fled from the town. At night the streets were deserted, and the thief and robber plied their trade with impunity. On the night of the 2d of September the Bank of Pennsylvania was robbed of one hundred and sixty-two thousand eight hundred and twenty-one dollars and sixty-one cents in specie and notes, and the circumstance added to the dismay. The robbery admonished other moneyed institutions to beware of a similar danger. The Banks of North America and Pennsylvania were immediately transferred to Germantown, and the Bank of the United States soon followed. The fever made its appearance in the Walnut Street prison on the 13th or 14th of September, and its mortality was severe. There were then three hundred persons in confinement, including debtors. This disaster rendered it necessary to remove as many as could be safely taken away. The unfinished buildings of Robert Morris, Chestnut Street above Seventh, afterwards called "Morris' folly," were placed in requisition, and the women, with vagrant and untried prisoners, were removed there. Some of those who remained became desperate, and on the 18th made a bold attempt to escape. This was not a general movement on the part of the prisoners. Some of the convicts confined in the east wing took advantage of the visit of Dr. Duffield to seize the key and make an effort to escape. They knocked down Mr. Evans, a constable, who was acting as a deputy keeper, and then called to the other convicts in the yard to aid them. Robert Wharton, then an alderman of the city, who was in another part of the jail, ran to the assistance of the keeper. When he arrived, Miller, the ring-leader, had an axe raised to kill Evans. Wharton and G. Gass, an assistant keeper, seeing this, both fired their muskets at the same time. One of the balls (supposed to be from the musket of Gass) broke the right arm of Miller and entered his body. Vaughan, another convict, struck Evans with a bar of iron, and retreated into his apartment. Evans pursued him and fired at him, sending a ball into his lungs. Another convict was wounded by a bayonet in the hands of a prisoner, a negro, who sided with the keepers. The majority of the convicts had nothing to do with this attempt. It commenced and ended with the projectors. Seven prisoners broke out afterwards by undermining the prison walls and escaped. The total number of deaths from the fever was three thousand six hundred and forty-five, or over twenty-four per cent. of the population remaining in the city.

with salutes from the sloop-of-war "Delaware," Capt. Stephen Decatur, and Capt. Matthew Hale's ninth company of Philadelphia Artillery, which was stationed near Centre Square.

Among the minor incidents of the year were the organization of the Welsh Society for the assistance of distressed immigrants from Wales, which was incorporated in 1802, many of its members having been associates of the old Society of Fort St. David's, which had been in existence before the Revolution; the death of Nathan Bryan, a member of Congress from North Carolina, who was buried in the graveyard of the First Baptist Church; and the falling, on Sunday morning, July 8th, of the roof and dome of Lailson's Circus, in South Fifth Street. The apex was ninety feet high, and the noise made by the falling timbers, etc., startled the whole city like a report of cannon. The building had been used until twelve o'clock the night before by Macpherson's Blues, and a constant cracking was heard in some parts of the building, but created no alarm, as no one suspected the cause. The catastrophe ruined M. Lailson, who soon after returned to France.

Among the laws passed this year was one, enacted on the 4th of April, which permitted the obstruction of the passage of certain streets of the city on Sunday. This act recited in the preamble that various religious societies had been enabled to purchase and hold lands by virtue of the act of Feb. 6, 1731, and to erect churches and other houses of religion thereon. The provision of the Constitution, "that all men have a natural and indefeasible right to worship Almighty God according to the dictates of their own consciences," was quoted, and it was declared that those rights would be "nugatory" without securing the peaceable and quiet enjoyment of them. As a means of securing such rights, religious congregations in the city of Philadelphia were permitted to fasten chains across the streets, lanes, or alleys in front of their churches or meeting-houses, so as to prevent the passage of horses, vehicles, or persons on horseback, during the hours of divine service on the Sabbath. Churches which were in High Street, opposite the market, were permitted to fasten chains on both sides of the market. This provision was for the benefit of the First Presbyterian Church and the Friends' meeting-house, at the corner of Second and Market Streets. The fine for removing a chain so set up was thirty dollars. The law specially applied to the city of Philadelphia, and to no other part of the State. In March an act was passed to incorporate a company to make a turnpike road from Philadelphia to Germantown, and by the route of Chestnut Hill to the twelve-mile stone on the Reading road, and thence to Reading, in Berks County. This road to Germantown was a great improvement, the travel between the city and that borough being so great that heavy ruts were cut in the highway, which became a slough of mire in wet weather. In the spring of the

year, especially, the way was only passable with the greatest difficulty. Wagons were bemired, stalled, and broken. Horses were sprained and weakened by the extraordinary efforts necessary to drag their loads; and such was the bad character of the roads that practically, at certain periods of the year, there was non-intercourse between Philadelphia and Germantown. A turnpike road had been prayed for immediately after the chartering of the Lancaster Turnpike Road Company; but the opposition by property-owners, who did not wish to pay the tolls, and the dilatory manner in which the Legislature acted upon all subjects of importance, postponed and delayed the improvement until this time. The new corporation was entitled "The President, Managers, and Company of the Germantown and Reading Turnpike Road." The new avenue was ordered to be commenced at the intersection of Front Street with the Germantown road, thence through Germantown to the top of Chestnut Hill, and thence through Hickorytown, the Trappe, and Pottstown to Reading,—the road to be sixty feet wide, thirty feet of which was to be an artificial road, bedded with wood, stone, or gravel. The income from tolls above nine per cent. was directed to be invested as a fund, with which to buy off the shares of the company; and, when all were paid off, it was directed that the road should be free. Another measure of great importance to the city was the incorporation of a company to build a permanent bridge over the river Schuylkill, at or near the city of Philadelphia. Petitions were presented from Philadelphia for the organization of a company, in connection with citizens of New Jersey, for the erection of a bridge over the Delaware at Trenton, to facilitate communication between Philadelphia and New York. The Legislature acceded to the request by the passage of an act incorporating the bridge company, and New Jersey concurred.

Although the yellow fever was again severe in 1799, and the city almost deserted by its inhabitants,¹ the political controversies were fiercer than ever. A violent opposition to President Adams and his administration had sprung up. The celebration of his birthday, January 17th, with a ball and supper at the new theatre, gave great offense to the Democrats; and the passage of the "alien law" led to some scandalous scenes.

On Sunday, February 9th, William Duane (then editor of the *Aurora*), Samuel Cumming (a printer employed upon that paper), Dr. James Reynolds, and Robert Moore, who had lately emigrated from Ireland, entered the yard of the Catholic Church of St. Mary's, prepared with blank petitions for the repeal of the law. During divine service they posted upon the walls of the church copies of a placard requesting the natives of Ireland who worshiped there "to re-

¹ The deaths from the fever this year were estimated to number twelve hundred and seventy-six.

main in the yard after divine service until they have affixed their names to a memorial for the repeal of the alien bill."

Some of the trustees of the church and members of the congregation tore these bills down, but they were again put up. When the congregation was dismissed, Duane and the others had the petitions spread out upon the tomb of the Rev. James Burns, and ready for signing. Some of the persons who came out of the church signed; but others looked upon the proceeding as an insult to the congregation, and strenuously remonstrated against it. An attempt was made to compel the intruders to leave the churchyard. Dr. Reynolds was pushed by the crowd, and drawing a loaded pistol, presented it at the body of James Gallagher, Jr., declaring that he would shoot any man who laid hands upon him. Gallagher struck at him, and, as Reynolds wheeled, the pistol fell or was knocked from his hand. Another person (Lewis Ryan) then caught Reynolds, threw him to the ground, and seized the pistol. Complaint was immediately made to the mayor, and shortly afterward Duane, Cumming, Moore, and Reynolds were arrested. During the proceedings before the mayor, Judge McKean appeared, and, according to Cobbett, exhibited a spirit of partisanship in favor of the prisoners, which must have been very offensive to the mayor.¹

Duane, Moore, Cumming, and Reynolds were afterwards tried for seditious rioting, in the Oyer and Terminer, before Judge J. D. Coxe and Associate Justices Reynold Keen, Jonathan B. Smith, and A. Robinson. Reynolds was also indicted for an assault and battery upon Gallagher. The jury acquitted the defendants of riot, but convicted Reynolds of the assault. John Melbeck, Owen Foulke, Abraham Singer, Edward Shoemaker, Jacob Cox, John Morrell, and William Levis were indicted for this assault in the Mayor's Court, but the trial was delayed until 1801, when they were found guilty and fined, with costs. Civil actions for damages were brought against Peter Miercken, John Dunlap, Joseph B. McKean, Joshua Bosly Bond, James Simmons, and George Willing.

An article having appeared in the *Philadelphia Gazette* offensive to the United Irishmen, John Richard McMahon, one of the number, went to the office, ordered his paper to be stopped, and challenged Brown, the printer, to fight him with pistols. He was tried, convicted, and fined twenty dollars and costs for assaulting Brown, and to twelve months' imprisonment or a fine of two hundred and eighty dollars for giving the challenge. Another Irishman, John McGurk, was found guilty of entering the office of Fenno's *Gazette* with a drawn sword and committing an assault upon a man named Hilliard, whom he found there. Brown, of the *Philadelphia Gazette*, was also

beaten and injured. In May, William Duane, having asserted in the *Aurora* that some of the troops which went from the city to suppress the Northampton insurrection² had lived at free quarters while engaged in that duty, the officers of the cavalry regarded this statement as an insult, and a party of them waited on Duane and demanded to know which troop was thus stigmatized. Duane having refused to answer, was forced down-stairs into the yard of his house. The demand was repeated, but he again refused to tell, whereupon he was set upon and beaten. On the following day a number of Democrats assembled at the *Aurora* office to protect it from further violence, but no disturbance occurred. Several days later Fenno, editor of the *Gazette*, was assaulted in his office by Capt. J. B. McKean, on account of a publication concerning the latter's father. McKean struck at Fenno, and the latter returned the blow. A scuffle ensued, but the parties were separated. The most exciting political controversy of the year, however, was that growing out of the election for Governor. The Democrats had nominated Thomas McKean and the Federalists James Ross, of Pittsburg. McKean had many enemies, among whom the bitterest and most relentless was William Cobbett. At the public meetings of both parties the proceedings were bold and uncompromising. At one of these assemblages held at Dunwoody's tavern, of which Robert Wharton was chairman, resolutions were adopted instructing a committee to prepare an address on behalf of the friends of James Ross, in which it was declared to be necessary to expose the "judicial tyranny and intolerance of McKean."

Another meeting of Federalists was held at which their reasons for supporting Ross and opposing McKean were given. A few days before the election, a writer, signing himself a "Pennsylvanian," declared that McKean had been inconstant to all parties, and ever ready to attach himself to the strongest. Thus he had been opposed to the Stamp Act, the Declaratory Act of 1766, and all other arbitrary crown measures until 1772, when the post of collector of his

¹ The mayor at this time was Robert Wharton, who had been elected in the previous year to succeed Hilary Baker, who had died of yellow fever.

² This insurrection grew out of the opposition to the levying of a direct tax by the Federal government. One of the provisions of the law directed the measurement of the windows in each house as a means of approximating the value of the house as a subject of taxation. This measure was resisted at first by the women, and the methods of defense resorted to by some of them led to the adoption of the title "The Hot-Water War," as applied to the disturbances. In Northampton County some thirty persons who had been most active in fomenting trouble were arrested and imprisoned in the house of the United States marshal, but were rescued by a force of men under the command of John Fries. President Adams issued a proclamation commanding obedience to the laws, and Governor Mifflin called out a quota of troops. From Philadelphia, Dunlap's, Singer's, Morrell's, and Leiper's troops, and from the county, Leshier's troop marched on the 4th of April. One troop of cavalry also went from Bucks, Chester, Montgomery, and Lancaster. Brig.-Gen. Macpherson, who had been commissioned as an officer of the United States army, was given command of the expedition, his position in the State service being given to Col. Gurrey. Fries was soon apprehended and sent to Philadelphia, and others were also taken into custody. Fries was tried and found guilty of high treason, but both he and his companions were afterwards pardoned by the President.

Majesty's customs for New Castle, Del., being vacant, he applied for it, was appointed, and took the oath of allegiance to the king. The latter canceled the appointment when McKean became a warm Whig. "He was," said the writer, "a timid member of Congress in 1776; a Constitutionalist until 1787; a Federalist of the highest tone until 1793; and an Anti-Federalist, a foreigner, a Jacobin, and a Frenchman since, beside being the advocate of the Penn claim for half a million of pounds for quit-rent." James Ross' character was not so vulnerable, and the Democrats confined themselves chiefly to general criticisms of the Federalist policy. At a meeting of the citizens of South Mulberry Ward, held on the 16th of September, of which John Barker was chairman, it was resolved that the British faction and their emissaries were "trying to destroy our government by efforts to introduce British laws, British customs, and British cruelties in lieu thereof," and that Judge McKean should be supported "for his uniform opposition to the British tyrant, for his patriotism, integrity, firmness, and ability, and his long and faithful services for thirty-three years, so early as 1765, when he manfully opposed the British Stamp Act." The political excitement was so great that there was danger of large numbers of persons flocking to the city on election-day from their country retreats, and exposing themselves to the infection of the yellow fever. To prevent injury Governor Mifflin changed the place of holding the election for the city and the townships of Blockley and Kingsessing from the State-House to the Centre-House Tavern, kept by John Mearns, in Market Street west of Broad. The place of election for the District of Southwark was removed from the Commissioners' Hall, formerly Little's school-house, to Isaac Wharton's house, in Love Lane, between Moyamensing and Passyunk roads. The vote in the city was, for McKean, 1137, for Ross, 1612; and in the county, McKean, 2513, and Ross 1188. McKean was elected by a majority of 5395.

On the 24th of October a grand jubilee was held "upon account of the triumph of the principles of republicanism over a foreign faction." A number of Republicans or Democrats met at Zeigler's Plains, Spring Garden, "where a fine fat steer was in ancient order immolated on the altar of liberty, beneath the flag of America, surmounted by the classic emblem of liberty and peace, the cap and wreath of laurel and palm." Libations of red and white wine, said the *Aurora*, "were poured upon the altar, and the classical mind was regaled with inhaling the mixed odors of the libation and the sweet savors of the victim." At noon "two British twelve-pounders, whose muzzles had erst muttered destruction in the ears of the free sons of America, were heard to bellow forth the triumphs or triumph of him who had, in the hour of peril, met and dared their thunders." Guns were fired in honor of each of the counties where there was a Republican majority, and nine guns collectively for

the Republicans of the counties where the opposition had prevailed. At two o'clock two guns were fired specially "in honor of the union of German and Irish interests in the support of Republicanism and the virtuous exertions of the Germans in the counties of Lancaster and York." The evening ended with a general jubilee, "wherein music was used in rendering the parade agreeable," and patriotic songs were sung, after which the company returned to the city, and with lights and music marched to the houses of leading Republicans, whom they serenaded. On the 6th of November a meeting was held at the Universalist Church, Lombard Street, Israel Israel in the chair, at which Dr. Michael Leib reported an address congratulating Chief Justice McKean upon his election as Governor. In his reply, McKean did not hesitate to inveigh against the character and motives of those who had voted against him. Among these was William Cobbett, who had repeatedly declared that if McKean was elected he would leave Pennsylvania. When the result of the election in McKean's favor was made known, Cobbett hastened to prepare for his removal to New York. He was not able to perfect his arrangements before an execution was levied upon his personal effects, which swept away nearly all the property which he had accumulated in America. The plaintiff in the suit was Dr. Benjamin Rush, and the judgment had been obtained upon a verdict against Cobbett for libel. The quarrel between the parties, although perhaps aggravated by a difference of political opinion, was not about politics. In 1793 Dr. Rush had adopted a method of treatment of the yellow fever, upon the success of which he prided himself, and which he labored hard to convince the community was judicious. The principal features of his practice were the administration of copious mercurial purges and bleeding the patient as often, said Cobbett, as "five or six times a day." During the fever of 1797 *Peter Porcupine's Gazette* was published. Dr. Rush again, by letters printed in other newspapers, urged the adoption of his system of bloodletting and the use of calomel. Cobbett took up the subject, and ridiculed Dr. Rush's system of practice unmercifully. He opposed it by squibs, puns, epigrams, and quotations from "Gil Blas," by which Dr. Rush's practice was likened to that of Dr. Sangrado. "It began," said Cobbett, "about the beginning of September, and before October bleeding almost to death, and calomel, or Rush's powders, were the jests of the town." Suits for libel were brought against Cobbett and Fenno, who joined him in the assaults upon the Democratic doctor. The proceeding against Fenno was abandoned, "because," said Cobbett, "he was an American." That against the Englishman lingered on for two years. It had been brought in the Supreme Court, and Cobbett, "well knowing, from a former example," what he might expect from Chief Justice McKean, who presided in that tribunal, made application for a removal of the

 Ugg'd by old Nick, to drive his dirty trade, | And triumphs much to stab you to the heart.

FAC-SIMILE OF ONE OF THE COBBETT CARICATURES.

suit to a United States Court upon the allegation that he was a British subject. This favor was denied. The suit remained untried until after the election of McKean as Governor, and was called on in December, while Cobbett was absent in New York. In his charge to the jury Judge Shippen summed up the nature of the libels complained of thus:

"He (Cobbett) repeatedly calls the plaintiff a quack, an empiric; charges him with intemperate bleeding, injudiciously administering mercury in large doses in the yellow fever, puffing himself off, writing letters and answering them himself, styling himself the Samson in medicine, and charging him with slaying his thousands and tens of thousands."

The only defense to the suit was that the articles were not libelous nor malicious, but fair comments on a public subject. The jury thought otherwise, and brought in a verdict of five thousand dollars damages,—a sum unprecedented in the record of actions for tort in Pennsylvania. Execution was promptly taken out, and Cobbett's property was seized.

In his account of the affair, Cobbett asserts that property was sold for four hundred dollars, among the exulting yells of the sovereign people, that ought to have brought nine hundred or a thousand. He denounced the "sovereign people of Philadelphia" in bitter terms, characterizing them as "the most malicious and the most cowardly race in existence," and revenged himself by publishing a periodical in New York called *The Rushlight*, in which, after abusing Rush, McKean, Shippen, Hopkinson, and Harper, he ended by consigning all Philadelphians to perdition and sailed for Europe. Before his departure he issued "Porcupine's Farewell Address to the People of the United States," dated May 29, 1800. He stated that he had made John Ward Fenno his agent, and that he intended to print his writings in England and send them to this country, as well as *The Rushlight*, which was to be continued.¹

Among the measures of municipal improvement set on foot during this year (1799) was one for providing the city with an adequate supply of water. A petition signed by several hundred citizens was pre-

sented to the City Councils, requesting the municipal authorities to take the lead in the work, which was described as being one of peculiar importance in view of its probable efficacy in moderating, if not preventing, the ravages of yellow fever. The immense loss often experienced from fire through the insufficiency of the water supply was given as an additional reason, and the City Councils were urged to take the matter into their "immediate, wise, and effectual consideration." In August, 1798, the Common Council proposed that the Spring Mill fountain in Montgomery County should be examined, and a report made upon its capacity and the best method of bringing the water to the city. No action was taken by the Select Council until November, when a committee was appointed to investigate the subject, and to examine other sources of supply between Spring Mill and the city. It was also determined to petition the Legislature for assistance, and to request that the auction duties be appropriated for that service, and that full authority be given the city corporation for the introduction of water. Mr. Huntley, of Connecticut, having been represented as a person who possessed some valuable improvements for raising water from rivers to heights above their levels, the committee of Councils was authorized to consult with him and others.

In December, 1798, the citizens, together with the managers of the Marine and City Hospitals and the Delaware and Schuylkill Canal Company, petitioned the Legislature for aid in procuring a water supply, and the Senate appointed a committee in relation to the subject, which reported favorably on the 12th of January, 1799, adding that the most feasible method of accomplishing that object would be the completion of the Delaware and Schuylkill Canal. It was proposed that the State should aid this work, and that sufficient funds might be raised by mortgaging the house built for the accommodation of the President of the United States, and by the duty on auctions, to enable the commonwealth to purchase one thousand shares of the stock of the canal company at two hundred dollars each. Benjamin H. Latrobe was selected as the engineer in place of Mr. Huntley. He reported that the water of Spring Mill Creek might be brought to the city in a closed, elliptical culvert of three feet six inches section, at least three feet under ground, except at the valleys, over which it might be carried by means of aqueduct or segment arches. The distance necessary to be traversed was estimated at twelve miles, and the cost at two hundred and seventy-five thousand dollars. This plan, however, was not approved by Mr. Latrobe, who proposed instead that works be erected on the Schuylkill, near the city, to pump water by steam-power into a reservoir high enough to distribute the water by pressure throughout the city. The canal company, whose interests would thus have been sacrificed, opposed Mr. Latrobe's proposition, claiming that by the completion of the canal, half its water, without any engine or reservoir on the Schuyl-

¹ A writer in the *Aurora*, Feb. 28, 1800, says,—

"Mr. Cobbett has asserted, both in his farewell *Gazette* and in a late advertisement, that all his property in this city has been taken in execution and sacrificed at public vendue at the suit of Dr. Rush. This is not so. Not an article belonging to him has been sold at this suit; but it is a fact, notwithstanding his many boasts of punctuality in the discharge of his debts, that all his goods found in this city were seized by the executors of his landlord for house-rent disgracefully left unpaid by him, and it is also a fact that the whole amount of sales arising therefrom has not been sufficient to satisfy that claim.

"Any one questioning the truth of this statement is referred to the sheriff's office, where it will be seen that all the moneys raised by execution does not exceed the sum of three hundred and thirty dollars."

In the *Aurora* of June 11, 1801, it is said that the fine of five thousand dollars was paid by six gentlemen, three Englishmen having contributed one thousand dollars each, one Englishman five hundred dollars, one American one thousand dollars, and one American five hundred dollars.

kill or anywhere else, might be delivered into a reservoir on Centre Square, on a level of at least forty feet above the high-water marks of the Delaware or Schuylkill, "so as to send floods of water down all the streets and raise fountains in most of them without those aerial castles and elevated reservoirs of different stories which have been proposed."

It was also stated that the canal company had received a proposition from a Mr. Sambourn for throwing into the canal reservoir, by means of an engine on the banks of the Schuylkill, thirty gallons of water for each house in the city, or three hundred thousand gallons per day, estimating the number of houses at ten thousand, for twenty-five thousand dollars, or one-third of the cost as calculated by Mr. Latrobe; and it was declared to have been "well ascertained before the act passed by the Legislature, after repeated examination and levels and accurate calculations of the quantity of water any way contiguous to or connected with Philadelphia, that no other source and supply of water for the city and neighborhood, dry- and wet-docks, and extensive inland navigation could be obtained so expeditiously, or at so small an expense, as from the waters of the Schuylkill, taken off in their purest state, as high as the mouth of Stony Creek or Norristown, as hath been already suggested in our memorial." Latrobe's plan, however, finally prevailed, although the contest was kept up throughout the following year, principally by the canal company and its adherents. The employment of steam to pump the water was especially criticised, and a writer in the *Philadelphia Gazette* of July 31, 1800, spoke of it as "a ridiculous project," expressing the hope that "the good people of my native city will be no longer duped by such chimeras, but that they will turn out of Councils those men who have actively or, by suffering themselves to be duped by others, passively contributed to saddle the city with an unheard-of expense to accomplish that which, when finished, will be a public nuisance, and the probable cause of general calamity to our city, to wit: *a reliance upon steam-engines in the proper supply of water.* They are machines of all machinery the least to be relied on, subject to casualties and accidents of every kind."

Councils not only took prompt and energetic action on their own account, but on the 9th of February, 1799, authorized an address to be prepared, praying the assistance of citizens in this important work. Two days before the same bodies had passed an ordinance pledging the estates of the corporation, except the High Street bridge and ferry, for the payment of the interest and final redemption of the principal of a loan of one hundred and fifty thousand dollars, in shares of one hundred dollars each. Edward Tilghman, Jared Ingersoll, Stephen Girard, Jesse Waln, Levi Hollingsworth, Leonard Jacoby, John Innskeep, Jacob Shoemaker, Joseph Cruikshank, William Jones, Jonathan Robinson, and Thomas Haskins were appointed commissioners to receive subscriptions. The

water was directed to be furnished freely in the streets; and it was promised that it should be introduced into one dwelling-house, for each share subscribed, for the term of three years, without charge. This was not sufficient, and at a later period an ordinance was passed to raise fifty thousand dollars by taxation.

The plan adopted for the works was as follows: A basin or inlet was formed at the Schuylkill, on the upper side of Chestnut Street, eighty-four feet wide and two hundred feet long, the bottom of which was three feet below low-water mark. From this an open canal extended one hundred and sixty feet to the rise of the hill, and thence a tunnel, six feet in diameter, was cut through the rock three hundred and sixty feet farther to the shaft or well in which stood the pumps for elevating the water. This shaft was ten feet in diameter and fifty-four feet deep, twenty-two feet of which was cut through solid rock. Here a powerful steam-engine was erected, which raised the water from the shaft and forced it into a brick tunnel six feet in diameter and one thousand and forty-eight yards long, by which the water was conducted up Chestnut to Broad Street, and along the latter to another engine-house in the middle of Centre Square. At this place the water was again raised into a reservoir containing sixteen thousand gallons, placed at an elevation of thirty-six feet from the ground, from which it descended into an iron chest four feet by eight outside of the building. With this chest were connected the main pipes for distributing water throughout the city. On the 12th of March, 1799, the first ground for the water-works was broke in Chestnut Street, by John Houston, under his contract for digging the trench of the upper tunnel, a work intended to convey to the Centre Square the water pumped into it by the lower engine. The extremely unfavorable weather retarded this work so much that very little was done at it before the 10th of April, when the weather became more favorable, and Robert Maltseed began the canal from the Schuylkill to the lower tunnel. On the 27th of April the lower tunnel was begun by John Lewis, and in a few days it was discovered that its whole extent would be in the solid rock, from the Schuylkill Canal, from whence it received the water, to the engine well, from which it was raised into the upper tunnel. The well was about the same time dug by Timothy Caldwell, and sunk to the level of low-water mark. On the 2d of May the first brick was laid by Thomas Vickers in the aqueduct of three arches which carried the tunnel across the gully in Chestnut Street, a large embankment having been previously made both above and below the trench. In the mean time contracts for the supply of logs for pipes of distribution were made, and a number of rafts were purchased, as occasion offered, and about the end of May the first pipes were bored. On the 18th of June the first pipe was laid, and at the same time the foundations of the lower engine-house were begun to be dug. A circu-

lar road was made in Centre Square, and the foundations of the upper engine-house and reservoir were begun. Pipes of distribution were soon laid in Chestnut Street from Front to Seventh, and in Mulberry between Second and Third Streets. Nicholas I. Roosevelt was employed to build the steam-engines, and he prosecuted his work very vigorously. A contract was also entered into with that gentleman to maintain the engine and keep it in repair. By the contract Roosevelt undertook to supply one million gallons of water to the city per day, at the rate of three thousand dollars per annum for each engine, and to supply any larger quantity, as far as three million gallons per day, at a rate of half the price of the first million per day. The whole supply was to be at the rate of about one dollar for every one hundred thousand gallons supplied per day. From this expense was to be deducted the annual amount of the rent of the extra power of the lower engine, and of a lot of ground leased to Roosevelt for forty-two years on an increasing rent, being for the first seven years \$500; for the second, \$800; for the third, \$1000; for the last twenty-one years, \$1800,—an average rent of \$1450 per annum. In consequence of this lease a very large additional power was given to the lower engine, which at a future period might meet the increasing demands of the population of the city by arrangements with the lessee.

The most important action taken by the Legislature during this year was the consummation of the project for the removal of the State capital from Philadelphia. In February, 1795, the Pennsylvania House of Representatives adopted a resolution in favor of removal, and Carlisle was selected as the seat of government. It was provided that the whole of the State property in Philadelphia should be sold, and that the removal of the Legislature should be effected by the 1st of December, 1798. The bill having passed the House failed in the Senate, but at the session of 1796 the matter was again taken up. Lancaster was selected as the capital by the House by a majority of two in preference to Carlisle and Reading, whose claims were strongly urged, but the Senate again refused to assent to the action of the House. Two years afterwards (in 1798) Representative Bonnet moved in the House that the seat of government should be removed to a convenient place at or near Wright's Ferry, on the Susquehanna River. Subsequently a motion was made to strike out "Wright's Ferry" and insert "Harrisburg," but it was lost by twenty-nine yeas to forty-three nays. The proposition to have the seat of government at Wright's Ferry was passed and sent to the Senate, which amended the bill by the insertion of "Harrisburg" as the capital. Neither house would recede from its position, and no committee of conference was appointed, so the bill was lost. In 1799 this measure was finally accomplished. On motion of Mr. Martin, of the House, seconded by Strickler, a resolution was adopted declaring that the

increase of the population of the commonwealth rendered it necessary that the seat of government should be removed from Philadelphia and fixed somewhere near the centre of the population of the State, "and more especially as of late a disease called the yellow fever had raged at particular periods, so as to render it dangerous for the members of the Legislature to meet." A committee was appointed to bring in a bill to remove the seat of government to some central place. Efforts were made to have Wright's Ferry, on the Susquehanna, chosen. Meanwhile the Senate took up the subject, and fixed Lancaster as the place of residence of the Legislature. When the bill came to the House attempts were unsuccessfully made to substitute "Harrisburg." The bill was finally passed by a vote of forty-four yeas to twenty-four nays, with Lancaster as the place to which the removal was to be made. The Governor signed the bill April 3, 1799. The time from which Lancaster was to be considered the State capital was after the first Monday of November. The Legislature met there on the 3d of December, 1799, and thus, after one hundred and seventeen years, Philadelphia ceased to be the capital of the State, about the same time when, by removal of the Federal government, it ceased to be the capital of the Union. This removal had an effect upon the people of the State that was probably not contemplated when it was adopted. It introduced taxation as a necessity for the support of government. In his message to the Legislature, in December, 1799, Governor Mifflin said that, for the first time in the history of the State, taxation would be necessary for the support of government. The removal from Philadelphia diminished the amount of fees for the attestation of public seals. The auction duties were specifically pledged for the payment of a certain debt, and a small contribution would be necessary from citizens. He also suggested the sale of the mansion-house, built for the use of the President of the United States, and other State property in Philadelphia, including the city lots yet undisposed of.

During the night of the 17th of December, 1799,¹ news was received of the death of Gen. Washington at Mount Vernon three days before. Congress assembled next morning, but at once adjourned, and on the following day John Marshall delivered an address in the House of Representatives and introduced the resolutions written by Richard Henry Lee, in which Washington is characterized as being "first in war, first in peace, and first in the hearts of his countrymen." In the Senate orders were given to drape the chamber in black. The Episcopal churches were shrouded in black, and at Christ Church the pulpit and organ and the pew occupied by Gen. Washington were covered with the emblems of mourning. Mrs. Adams, wife of the President, postponed her recep-

¹ On the evening of the same day Rickett's circus, at the southwest corner of Sixth and Chestnut Streets, was destroyed by fire.

tion until the 27th, and the ladies belonging to families of the officers of the government were requested to wear black, while other ladies attending the *levée* were requested to dress in white, trimmed with black ribbons, wearing black gloves, and carrying black fans. Congress decreed that a commemorative procession should take place, and that a funeral oration should be pronounced by Gen. Henry Lee. This celebration was held on the 26th of December, 1799, and was long known in common parlance as Washington's sham funeral. The parade was formed in the middle of Chestnut Street, right on Sixth. The route was down Fifth to Walnut Street, down Walnut to Fourth, and up Fourth to the church. The bier was deposited beneath the pulpit. An anthem was sung by a choir, and a funeral service adapted to the occasion was read by Bishop White, after which Gen. Lee delivered the address, in accordance with the resolution of Congress.¹

¹ In describing the procession the *Aurora* specified the volunteer companies according to the political principles of the members of the various corps:

Capt. McKean's troop Federal horse.
 Capt. Price's light infantry,—Republican.
 Capt. Johnson's light infantry,—Republican.
 Capt. Rush's light infantry,—Republican.
 Capt. Kessler's light infantry,—Republican.
 Capt. Duane's light infantry,—Republican Greens.
 Capt. Sweeney's light infantry,—Republican.
 Capt. Summers' light infantry,—Republican Blues.
 Capt. Hozey's light infantry,—Republican.
 Capt. Nelson's grenadiers,—Republican.
 Capt. Ferguson's artillery,—Republican.
 Capt. Crispin's artillery,—Republican.
 Capt. Hale's artillery,—Republican.
 Capt. Hoff's riflemen,—Republican.
 Capt. Leiper's dragoons, dismounted,—Republican.
 Col. Shae, commandant of the Republican Legion.
 The fife of the whole military corps.
 The drums,—muffled.
 A band of wind instruments.
 The light infantry of the Blues (Macpherson's),—Federal.
 Infantry of the Blues,—Federal.
 Grenadiers of the Blues,—Federal,—Capt. Higbee.
 Artillery of the Blues,—Federal,—Capt. Taylor.
 Dunlap's dragoons,—Federal.
 Singer's dragoons,—Federal.
 Morrell's dragoons,—Federal.
 Capt. Hoyle's riflemen,—Federal.
 Brig.-Gen. Macpherson, mounted, and his aides, with the staff of the militia.
 Thirty-four of the clergy, of different sects, two and two.

THE BIER,

carried by six sergeants.
 Pall, supported by six sergeants.
 Gen. Lee, the orator of the day.
 A white steed, caparisoned, led, with a crest of plumage and the boots reversed.
 The doorkeepers of the Senate, carrying white staves bound with crape.
 The sergeant-at-arms.
 The clerk of the Senate and assistant.
 The Senate, two and two.
 Doorkeepers of the House of Representatives.
 The sergeant-at-arms, with the mace in mourning.
 The heads of departments under the Federal government.
 Heads of departments under the State government.
 Officers of militia not under arms.

At the theatre a monody was spoken by Mr. Wignell on the 28th. The house was crowded. The pillars supporting the boxes, the chandeliers, and the fronts of the boxes were covered with crape. The audience wore badges of mourning. "Washington's March" was played, and was succeeded by a solemn dirge, during the performance of which the curtain rose, displaying a Grecian catafalque in the middle of the stage bearing a portait of Washington in the centre, encircled by a wreath of oak leaves; beneath, swords, shields, helmets, and military insignia. The top of the tomb rose in the form of a pyramid, and was surmounted by an eagle weeping tears of blood. In the beak of the bird was a scroll with the inscription, "A nation's tears." The sides of the stage were decorated with black banners, on which were blazoned the name of each State. The monody was accompanied by solemn dirges.

The local militia was again reorganized this year by an act passed April 9, 1799, which constituted the city and county one military division,—the city being one brigade and the county one brigade,—the officers then in commission under the former law to remain until their terms expired. In the arrangements made under this act, Lieut.-Col. Gurney's regiment was numbered the Twenty-fourth; Geyer's, Twenty-fifth; Nichols', Twenty-eighth; McLane's, Fiftieth; Scott's, Eighty-fourth. In the county, Lieut.-Col. Shrupp's regiment was the Forty-second; Patterson's, Sixty-seventh; Frank's, Seventy-fifth; Worrel's, Eightieth; Coats', Eighty-eighth. The militia uniform was directed to be blue coats, faced with red; lining, white or red; buttons to correspond with the color of the same. The uniforms of general officers and staff to be blue, faced with buff. The State flag was directed to be of dark blue, "the American eagle supporting the arms of the State, or some striking part of the same." In the upper corner, next the staff, the number of the regiment and the word "Pennsylvania," encircled by thirteen stars; the other color to be of thirteen stripes; in the corner the same decorations as above.

The Legislature passed several other laws of local interest, among them an act authorizing the Governor to appoint an auctioneer for the special purpose of selling horses, cattle, carriages, etc., and an act passed January 16th, declaring Frankford Creek a public highway "from the mouth up to Joseph I. Miller's land, opposite the race-bridge across the Bristol road, or Main Street, in Frankford." Asylums for lost children were established this year at the taverns of Frederick Kelheffers, sign of the Fleece and the Dove, No. 240 North Second, near Callowhill Street, Michael Kitts, Indian King, No. 80 Market Street,

 A corps of Republican cavalry from the country.

and at Martin Rizer's, sign of General Lafayette, No. 222 South Second Street, opposite the new market.

The frigate "City of Philadelphia," which, as heretofore stated, had been built for presentation to the United States government, was launched from the ship-yard in Southwark on the 28th of November. The figure-head was a bust of Hercules. The armament consisted of forty-four 18-pounders. As the vessel touched the water salutes were fired from the ship "Ganges" and the armed brigs "Augusta" and "Richmond." Stephen Decatur was appointed commander, and the vessel speedily fitted up. Her career was brief, as she was soon after destroyed in the harbor of Tripoli.

The century which closed with 1799 had been, as we have shown, an eventful one for Philadelphia; which, in fact, had witnessed more stirring scenes and had been the centre of more important actions than any other city in America. At the opening of the nineteenth century she still found herself among the leading cities of the new republic, advancing with steady strides in population, industries, trade, and commerce. The loss of prestige as the seat at once of the Federal and State governments did not affect her material interests, but on the contrary tended to give them freer play and increased vitality. Municipal improvements kept pace with the growth of the city. Among these the most important was the construction of a permanent bridge across the Schuylkill, the corner-stone of which was laid on the 18th of October, 1800, in the presence of the mayor, members of the City Councils, directors of the bridge company, and others. By an act of March 1, 1800, a new division of the city into wards was made. Fourth Street was established as the dividing line. The wards east of that boundary and the Delaware River were: Upper Delaware, from Vine to Race Street; Lower Delaware, from Race to Arch; High, from Arch to Market; Chestnut, from Market to Chestnut; Walnut, from Chestnut to Walnut; Dock, from Walnut to Spruce; New Market, from Spruce to Cedar, or South. West of Fourth Street the wards, which extended to the Schuylkill, were the following: North Mulberry, between Race and Vine; South Mulberry, between Race and Arch; North, between Arch and Market; Middle, between High and Chestnut; South, between Chestnut and Walnut; Locust, between Walnut and Spruce; Cedar, between Spruce and South, or Cedar. An act, passed two days after the former law, directed that the ordinances of the corporations of Philadelphia and Southwark should be enrolled in the office of recorder of deeds instead of that of the master of the rolls, which, by removal of the latter to the seat of government, had now become inconvenient of access.

By act of the 7th of March the town of Frankford was incorporated into a borough. The boundaries began at a corner by the side of Frankford Creek, "between the land of Rudolph Neff, and now or late

of Henry Rover, extending down Frankford Creek one hundred and ninety-five perches, or thereabouts, to the mouth of Tacony Creek; up Tacony Creek, by its several courses, six hundred and ten perches, to a corner of Jacob Smith's land; thence by said Jacob Smith's land and the land of Robert Smith and others; south, thirty-eight degrees fifteen minutes; west, four hundred and nine perches; and south, six hundred and ten perches to the place of beginning." The government of the borough was intrusted to two burgesses, the highest in vote being chief burgess, five assistant burgesses, and a high constable. The title of the corporation was to be "The burgesses and inhabitants of the borough of Frankford, in the county of Philadelphia." The board thus constituted was empowered to improve the streets, regulate the depth of wells, vaults, sinks, etc.; to regulate party walls; with power to assess taxes for local improvements at a rate not exceeding one cent on a dollar.

Congress was now about to establish itself at the new Federal capital, Washington, but before leaving Philadelphia finally, the Senate passed resolutions thanking the commissioners of the county of Philadelphia for the accommodations that had been so long provided for them. The Supreme Court held its last session in Philadelphia in August, and adjourned to meet at Washington. The quarters vacated by the Federal government were occupied by the State authorities, among the first consequences of the change being the removal of the board of health to the State-House.¹

Among the last acts of Congress while in Philadelphia was a resolution recommending that the 22d of February, 1800, should be observed throughout the United States as a day set apart for exercises to express the popular esteem for the virtues of Washington. In accordance with this suggestion the Freemasons of Philadelphia assembled at their hall at the State-House on that day, and from thence marched to Zion Church, at the corner of Fourth and Cherry Streets. In the centre of the procession was exhibited a trophy in honor of Washington, borne by four Past Masters. Its base was five white marble steps, in-

¹ Mention has already been made of the fact that the house intended for the accommodation of the President of the United States was sold to the University of Pennsylvania. By an act of March 17, 1801, the Governor was authorized to appoint three commissioners to sell the building with the ground appertaining, divided into six lots on Market Street, and six lots on Chestnut Street. In July the house and lot adjoining were sold to the University of Pennsylvania for twenty-four thousand dollars. The whole property, including the lots on Chestnut and Market Streets, brought forty-one thousand six hundred and fifty dollars. This sum was paid by installments,—the trustees raising the money by the sale of stock, and by the disposal of a portion of the old college and adjoining premises to a society of Methodists for a place of worship. They were careful, however,—as bound by the title-deeds,—to retain enough of the Fourth Street property to serve for the maintenance of the charity schools and the accommodation of itinerant preachers. The house on Market Street, below Sixth, which had been occupied by Washington and Adams, being now vacant, was leased by John Francis, who opened it shortly afterwards as the "Union Hotel," which soon became a fashionable establishment.

scribed, on the four corners, "Washington Lodge, No. 59." On the platform was a golden urn, surmounted with an eagle with wings expanded, holding in its beak a scroll in the figure of a heart, with the following inscription:

WASHINGTON LODGE.
Honored by the name,
let us emulate
his virtues
whose loss we
deplere.

The three lights usually borne in Masonic processions were upon this occasion extinguished.¹

At Zion Church an appropriate oration was delivered to the order by the Rev. Brother Samuel Magaw. Solemn odes in the German language, composed by the Rev. Dr. Helmuth, and set to music by Messrs. Einrich and Weizaecker, were sung by a select choir. After the ceremonies the lodges moved in inverse order to their hall.

The day was solemnly observed by other citizens. The journals say "the houses were shut and work generally abolished." At eleven o'clock the Rev. Dr. Carr delivered an eloquent discourse to a large congregation at St. Mary's. At twelve o'clock the procession, under the direction of the Society of the Cincinnati, left the State-House. They proceeded up Chestnut to Third, up Third to Race, and along Race to the German Reformed Church near Fourth Street, where an eulogium upon the virtues of the deceased was pronounced by Maj. William Jackson.²

At the church the exercises were commenced by a prayer from the Rev. Dr. Rogers, after which Maj. William Jackson delivered his address. There were

¹ The following "blue lodges" participated:

The French lodge L'Aménité, No. 73; Brother Joseph E. G. M. De La Grange, Esq., Master.

Philadelphia Lodge, No. 72; Brother Christian Sheetz, Esq., Master.

Orange Lodge, No. 71; Brother William Nelson, Master.

Concordia Lodge, No. 67; Brother Henry Voight, Esq., Master *pro tem*.

Washington Lodge, No. 59; Brother John McElwee, Master.

Harmony Lodge, No. 52; Brother George Springer, Master.

Lodge No. 19; Brother Capt. John Coyle, Master.

Lodge No. 9; Brother Capt. Andrew Nelson, Master.

Lodge No. 3; Brother Col. John Barker, Master *pro tem*.

Lodge No. 2; Brother John Phillips, Master.

² The procession moved in the following order:

Capt. McKean and the First City Troop Volunteer Cavalry, dismounted.
Music, in mourning.

Gen. Taylor with the artillery.

Gen. Macpherson.

Capt. Higbee's company of Grenadiers.

The Blues.

Music in the centre, playing "Washington's March."

Germantown Light Infantry.

Second City Troop Volunteer Cavalry.

A led horse, caparisoned in full war-trappings, bearing a portmanteau, holsters, saddle, and having thrown across him a pair of military jack-boots, a uniform coat, a sword, and a cocked hat.

The Society of the Cincinnati, having their badges covered with black ribbon.

Officers of the army and navy.

Officers of the militia of the city and county.

present upon this occasion the President of the United States, John Adams, and the Vice-President, Thomas Jefferson, members of the Senate and House, and His Excellency Robert Lister, the British minister. In the evening Mr. Peale displayed an emblematic transparency at his museum.

Among the ceremonies on this occasion none were more impressive than those which were directed by the French lodge L'Aménité, No. 73. The brethren ordered that an oration should be delivered in open lodge, under the most solemn and impressive forms of the master's lodge. Brother S. Chaudron was chosen to deliver the address. The lodge-room was accordingly completely hung in black. In the centre, on a platform, to which the ascent was by five steps, a bier was raised, with the Mason's insignia and military decorations proper to the character of the deceased, surrounding which were several urns suitably decorated. Over and surrounding the bier, which stood ten feet above the lodge, black drapery was displayed from the ceiling, festooned and knotted, and interspersed with suitable emblems. The catafalque was surrounded by more than three hundred lights.

The intemperate language used by Governor McKean in responding on the 6th of November, 1799, to the congratulations tendered him upon his election to the governorship drew forth sharp expressions of feeling. In the House of Representatives a motion to substitute for the usual complimentary reply to the Governor's address a paper strongly censuring the Governor for partisanship failed by a vote of thirty-three to thirty-nine, but in the Senate, where the Federalists had a majority, an address to the Governor was adopted condemning him for having removed from office "a great number of respectable characters, against whom no other blame rests than the exercise of their rights as freemen in opposition to your wishes." The Governor replied, denying the right of the Senate to exercise a censorship over him. With regard to removals of persons from office, he relied upon his right to make such changes as he deemed proper, without accountability to any person or party. A few weeks later he acted upon this principle by removing Joseph Hopkinson from office, and appointing John Beckley in his place. This incident gave rise to an animated controversy, in which Joseph B. McKean appeared on behalf of his father. Governor McKean was also assailed on account of his participation as "Grand Sachem" at the anniversary celebration of the St. Tammany Society, which was held May 12, 1800, at the Buck Tavern, in Moyamensing. The "long talk" was made by Dr. John Porter, and among the other "Sachems" present besides McKean were Israel Israel and Col. John Barker. The ceremony was burlesqued by a writer in the *Philadelphia Gazette* of June 3d, who spoke of McKean as "him who rules poor Pennsylvania State." The course of William Duane in the *Aurora* had great influence in embittering the feeling between Federalists and Re-

publicans. His attacks against the administration of President Adams were virulent and unceasing, while the Federalist majority in the United States Senate was narrowly watched and its action frequently denounced.

Upon one occasion Duane stated in the *Aurora* that Mr. Ross had introduced into the Senate "a bill to influence and affect the approaching Presidential election, and to frustrate in a particular manner the wishes and interests of the people of Pennsylvania." The bill referred to provided a mode of deciding disputed elections of President and Vice-President of the United States by the election of six persons by the Senate and six by the House to form a grand committee, with the chief justice of the United States as an additional member, to try disputed questions. On the 19th of February he followed up the subject by printing a copy of the bill which was described as being so mischievous, and asserted that the measure had been perfected in a caucus of Federalist senators. This method of securing concerted action by parties in legislative bodies was denounced as capable of being made an instrument of oppression. The disputed elections bill, continued the *Aurora*, was "an offspring of this spirit of faction secretly working," and would be "found to be in perfect accord with the outrageous proceedings of the same party in our State Legislature, who are bent on depriving this State of its share in an election that may involve the fate of the country and posterity." The publication led to the adoption by the Senate of a resolution to the effect that it contained "assertions and pretended information respecting the Senate and the committee of the Senate and their proceedings which were false, defamatory, scandalous, and malicious," and that it was a "daring and high-handed breach of the privileges of this House." Another resolution was adopted declaring that Duane should be called to the bar of the Senate on a certain day, "at which time he will have an opportunity to make any proper defense for his conduct in publishing the aforesaid false, defamatory, scandalous, and malicious assertions and pretended information." Duane appeared and declared his willingness to answer any questions which the Senate might think proper to ask, but at the same time asked that he might be heard by counsel. Alexander James Dallas and Thomas Cooper were requested to act as his counsel, but declined on the ground that they would not be permitted sufficient liberty of action. In consequence of their answers Mr. Duane informed the Senate that under the restrictions which the Senate had thought fit to adopt he found himself deprived of all professional assistance, and therefore thought himself "bound by the most sacred duties to decline any further voluntary attendance upon that body, and leave them to pursue such measures in this case as in their wisdom they may deem meet." The Senate thereupon resolved that Duane was guilty of contempt, and issued a warrant to the sergeant-at-arms commanding his arrest.

Duane, who is reported to have kept out of the way for a time, was not arrested, possibly because some of the members of the Senate thought that they had gone further than their jurisdiction extended. Remonstrances were presented against their action in Duane's case. On the 12th of May the Senate resolved that, instead of bringing the printer before them, he should be prosecuted in a court of law. A resolution was passed requesting the President of the United States "to instruct the proper law officer" to commence and carry on a prosecution against Duane for the article of 19th February, "intending to defame the Senate and bring them into contempt and disrepute, and excite against them the hatred of the people of the United States."

Cooper's letter in relation to Duane's case gave great offense to the Federalists. He was detested heartily by the whole party, and his free-spoken thoughts and writings involved him in trouble. Shortly after his refusal to act as counsel for Duane he was himself arraigned at Philadelphia in the United States Circuit Court, before Judge Chase, under the provisions of the sedition law, for a libel on President Adams. The article complained of was published in the *Sunbury and Northumberland Gazette*, of which paper Cooper was editor. The expressions seem, at the present day, to be quite moderate in comparison to many that are now used in speaking of public officers. They would now meet with no other reproof than a counter-article in some opposition journal, or be passed over in silence. Cooper had been accused of having sought the appointment of agent of American claims from Mr. Adams in 1797, in which he failed. In referring to some comments upon his position as an opponent of the administration, after having in vain solicited its favors, he defended himself upon the ground that he had not at that time done anything to render his application improper or indelicate. He added a number of charges against President Adams, concluding finally that had Mr. Adams been guilty of all these things in 1797, he never would have been troubled with any application for office from him. Cooper found an unsympathizing bench. Chase was presiding judge, and the law was ruled against the defendant strictly upon all points. After a strong charge to the jury by the judge, Cooper was found guilty, and sentenced to pay a fine of four hundred dollars and undergo an imprisonment of six months, and to give two sureties for his future good behavior in five hundred dollars each. He suffered the full penalty of this sentence. The Republicans looked upon him as a martyr, and when he was discharged from prison he was met at the jail-door by a deputation of friends, who took him to a fashionable hotel, where a public dinner had been prepared for him. Two tables were set. At one presided the popular Democrat, Dr. George Logan; at the other, Thomas Leiper.

Cooper had been frequently attacked while in

prison by Wayne in the *United States Gazette*. After his term of confinement expired he sent a letter to the latter referring to those attacks when he could not reply to his insolence by a personal challenge. He had been bound over to keep the peace when he came out of prison, but he notified Wayne that he would right himself when he could do it without injury to his friends. This communication was carried to Wayne's office by Dr. Reynolds "and another United Irishman." Wayne ordered them out. A fracas seemed imminent, but the intruders prudently retired without the necessity of a fight.

The friends of Adams were not less strenuous in their opposition to Jefferson, who was denounced as an atheist and a demagogue. Even the pulpit enlisted in the warfare. In a sermon preached at St. Peter's Protestant Episcopal Church in August, Rev. Dr. James Abercrombie, referring to Jefferson, spoke of the danger to the community to be apprehended from the election of an irreligious chief magistrate, and having been criticised for this declaration, announced that, as a member of the community, he had a right to express his political opinions, and *would* express them, and that as a Christian minister he conceived it to be his duty, when the interests of religion and morality were involved in the prevailing discussions of public policy, publicly and professionally to declare his opinions. This announcement rendered Dr. Abercrombie a mark for newspaper pasquinades and criticism. Rev. Dr. Helmuth, of the Lutheran Church, who in a sermon had lamented the decline of religion, as evidenced by its being disregarded by a "great number of the people of this country in their choice of rulers,"—a palpable hit at Jefferson,—was also attacked by the *Aurora* for interfering in politics. The Philadelphia newspapers dealt in a good deal of fierce invective about this time. Timothy Pickering, Secretary of State under Adams, was denounced by the *Aurora* as a defaulter and purloiner, his total peculations at one time being set down at as large an amount as eight millions of dollars. The circumstances attending the delivery of Thomas Nash, *alias* John (or Jonathan) Robbins, to the British government upon a claim that he was a British subject and was guilty of murder, was a subject which provoked a violent controversy. The Democrats claimed that he was an American citizen who had been delivered up to a British naval officer and hung. On the other hand, the government asserted that he was a British subject who had committed murder and had been justly punished. Duane, who led the Democratic assaults upon the administration in this matter, was himself the object of frequent attacks. Among other accusations brought against him was that of being the author of a pamphlet advocating the murder of Gen. Washington, a charge which he felt called upon in December, 1800, to deny. Tench Coxe, to whom many of the articles in the *Aurora* were attributed, was also vigorously assailed as having been a Tory

during the Revolution, and with having guided the British troops from the head of the Elk River to Philadelphia, entering the city at the side of Gen. Howe, etc. In his vindication Coxe relied chiefly on the fact that he had been appointed to office by Washington, who would not have done so unless he had believed him to be a friend to his country. Duane's vigorous advocacy of their cause obtained for him and for his paper great popularity and influence among the Republicans. At New York a dinner was given in his honor, and he was frequently toasted on public occasions.¹

Among other subjects to which Duane devoted special attention was the rivalry between the politico-military organizations, Macpherson's Blues and Shee's Legion. The Blues had been accepted by the President of the United States in 1798 for two years, upon the apprehended danger of French invasion, and it was resolved that the battalion should be dissolved upon the expiration of that time. The friends of the Republican Legion, commanded by Gen. Shee, took occasion to exult at this circumstance. Duane, in an article upon the subject, stated that the Blues had been originated by Samuel Relf for young men between sixteen and twenty-three years of age. It was said to be a partisan organization, the existence of which rendered the creation of the Republican Legion absolutely necessary. The Blues were accused of wearing the

¹ One of the principal topics of discussion among the politicians of the day was the question as to how electors for President of the United States should be appointed. The Senate and House could not agree upon the method in which the choice should be made. One of the bodies was in favor of a general ticket for electors, to be voted for by the people of the State in aggregate. The other chamber favored the choice of electors in districts. All attempts to reconcile these differences by a compromise failed, and when the Legislature adjourned in March no authority had been given to hold an election for electors of President or Vice-President in the fall. The hopelessness of any arrangement between the stubborn parties probably had its influence upon Governor McKean, and admonished him of the uselessness of endeavoring to procure any settlement of the question by the representatives and senators then in power. He waited until the election in October, after which writs were issued calling a special session of the Legislature in November. In his message the Governor adverted to the difficulty whereby the citizens of the State had been deprived of all opportunity of choosing electors. There was no time for holding a general election, and the only manner in which Pennsylvania could exercise any part in the choice of President and Vice-President would be by electors chosen by the Legislature. The dispute between the two branches was now renewed in another shape. Fifteen electors were to be chosen. The House desired to elect the whole of them by joint vote. The Senate refused to sanction such a plan, inasmuch as the greater number of the members of the House would give the latter the settlement of the question. The Senate proposed that each chamber should choose eight electors, but to this the House would not agree. Committees of conference were appointed, and various propositions were made. The House insisted that nine persons should be nominated by each chamber, from among whom the choice should be made. The Senate would not agree that more than eight persons should thus be nominated. On the latter basis the matter was at length compromised. The electors were chosen in joint meeting, the bill having been signed by the Governor December 1st.

The determination shown by the Senate prevented the accomplishment of the object of the House, which was to secure the entire vote of the State to Jefferson and Burr. At the meeting of the electors appointed by the Legislature they voted,—for Adams, seven; for Jefferson, eight.

black cockade in 1798, and of being generally inimical to the country. In reply, Relf's *Gazette* retorted that the Blues had always shown spirit, and had full ranks when the necessities of the country required it. The Legion, it was claimed, on the contrary, in times of danger paraded ten or twelve men to a company, and only filled up after peace. On the 18th of June the Blues, two hundred and two men, paraded and yielded up their arms and equipments at the Manège on Chestnut Street. After an address by Gen. Macpherson, the members met at Dunwoody's tavern and adopted an address of thanks to their former commander. After the dissolution of the Blues, Shee's Legion had no longer an excuse for remaining in existence as a political organization. It would probably have soon lost that feature had it not been for the efforts of the State government. In November the feeling in reference to the wearing of cockades was renewed by official orders from Lancaster. The adjutant-general stated that the Governor having observed that the military dress of the militia was prescribed by the Legislature,—consisting of a blue coat faced with red, and the lining white or red,—but that no regulation had been made by law respecting the cockade, “and being desirous of distinguishing the militia of this State from other corps, recommends that in future the colors of the cockade be blue and red, corresponding with the colors of the uniforms.”

On the first parade of the Legion after this intimation Gen. Shee issued orders that the State cockade should be assumed. An endeavor was made to render the wearing of this badge universal among citizens, which was strenuously opposed by the Federalists, who signified their disapprobation by assuming the black cockade. Shee's Legion kept up its organization some time longer, until all pretexts for maintaining volunteer companies of a purely political character had died away, and on the 4th of July eighteen companies paraded, and after exercising dined at various places.

The subject of the abolition of slavery was revived this year by petitions to the Legislature for the unconditional extinction of the system in Pennsylvania. Absalom Jones and seventy-three other blacks of Philadelphia presented a petition against the fugitive slave bill, the Guinea slave trade, and the practice, of which some citizens of the State it was said had been guilty, of shipping off negroes to be sold in Georgia. A number of free blacks also presented petitions for the emancipation of the slaves in the commonwealth, and requested that they (the petitioners) should be taxed to pay for the expense of freeing them.¹

¹ On the 6th of August the schooner “Prudent” arrived at the fort in charge of a prize-master, having been sent in by the United States ship “Ganges.” Sixteen slaves were on board of the schooner. A few days afterward another slave-vessel, upon which were one hundred and eighteen negroes, was sent in by the “Ganges.” An affecting incident which occurred in relation to the human cargoes of these two vessels attracted much attention. The negroes were at first encamped on shore at the fort. When the second lot of slaves were taken out of the ves-

sel Among the local incidents of the year was a deer-chase in the spring. The hunters met at Bush Hill. There were forty horsemen, and so little obstruction did the face of the country present at that time that when the buck was let loose they were enabled to participate in an exciting chase. This was probably the last affair of the kind that occurred near the centre of business. In January a fox-chase was started from the sign of the Liberty Cap, on Coates Street, between Third and Fourth.

From Nov. 1, 1800, dates the practical end among the merchants of Philadelphia of the British or colonial method of computation by pounds, shillings, and pence. The brokers of Philadelphia also gave notice that, as there were no pounds, shillings, and pence coined in the United States, they intended thereafter to buy and sell public bonds for dollars and cents, and they published books for the use of those accustomed to the old way of computation.

CHAPTER XXI.

FIRST YEARS OF THE NINETEENTH CENTURY TO THE TRIAL OF THE EMBARGO ACT IN 1807.

POLITICS occupied the greater part of public attention during the autumn and winter of 1800 and the spring of 1801, and the contest was carried on with a vigor hardly surpassed in any political campaign since. The names of Jefferson and Burr were returned to the House, each with seventy-three electoral votes, but many Republicans (afterwards called Democrats) predicted the triumph of the great Virginian. On the 8th of January a meeting was held at the State-House in Philadelphia, at which, in this spirit of prophecy, it was resolved “to commemorate the 4th of March, 1801, as a day of public festivity to celebrate the success of Democratic principles.” The committee of arrangements consisted of Hugh Ferguson, Daniel Boehm, John Smith, Michael Bright, Thomas Leiper, Andrew Kennedy, Peter S. Duponceau, Joseph Worrell, James Gamble, James Ker, William Rush, Robert Porter, Gen. Jacob Morgan, William Coats, Dr. John Porter, Frederick Wolbert,

sel, a woman who was among those first brought recognized her husband among the new-comers. They had been torn apart and separated in Africa, and by this strange accident were restored to each other. The shock of the meeting was so great that the woman gave birth to a child, but fortunately recovered her health subsequently. The attention of the Pennsylvania Society for the Abolition of Slavery was at once called to this circumstance. A large number of the Africans were housed at the Wigwam, on the banks of the Schuylkill, and donations of clothes, blankets, and provisions were solicited. The United States marshal, John Hall, was without means of supporting them, when the first vessel was libeled, condemned, and sold; but no action was authorized in relation to the negroes. In this condition of affairs the marshal took the responsibility of binding them out to service. With the aid of the Abolition Society places were found for them in due time, and, no inquiry having ever been made for them, they obtained comfortable homes, and there was no further trouble in relation to their support.

Caspar Sneider, John Dover, Manuel Eyre, Jr., Ebenezer Ferguson, Isaac Hozey, Robert McMullen, Michael Freytag, James Ingle, George Goodwin, Philip Peltz, Heath Norbury, and Nathan Jones. A permanent committee of correspondence, A. J. Dallas chairman, was appointed to correspond on the subject of the pending electoral session. While the question was still undecided, the most lively interest was manifested throughout the city. There were processions, with music, public meetings, immense sleds drawn through the streets, banners, and mottoes. Almost every one took sides, and the pamphleteers waged energetic war against each other. February 11th balloting was begun at Washington, and six days later the struggle came to a close, Jefferson, fortunately for the country, being chosen President. The delay had caused great excitement, as news traveled but slowly, and "rumors had been circulated charging the Federalists with revolutionary intentions." Jefferson was greatly agitated, and the Republicans threatened that the Middle States would take arms to prevent any change in the method of elections. Excited crowds surged up and down the streets of Philadelphia hungry for news from Washington. Though elected February 17th, the news of Jefferson's victory did not arrive till some time on the 19th. Shaw's artillery fired a salute at the arsenal, the bells of Christ Church were rung, banners were displayed, and that night some Republicans illuminated their houses. The mayor had ordered that the bells be rung, and the sarcastic *Aurora* remarked that "they were tolled for the death of the Federal faction." The next night the "young Republicans met and made arrangements to take part in the celebration set for March 4th, resolving, however, to carefully avoid "any marks of insult or defiance" to the vanquished. The general "committee of arrangements" indorsed this, and also decided against bonfires and illuminations. Mayor Inskeep, hearing that there was talk of disregarding this recommendation, issued a proclamation enforcing these points, but adding that he would grant permission for the firing of cannon and the ringing of bells at suitable places. The militia were ordered out by Maj.-Gen. Proctor to aid the procession. Col. John Barker, of the Eighty-fourth Regiment, showed his political sentiments with old-fashioned plainness, for in his "orders" requiring their parade he declared,—

"No event has taken place since the glorious Fourth of July, 1776, of such importance or so congenial to the spirit of that day as the present. The capture of Cornwallis is but as a drop in the bucket. That was a victory over a host of foreign mercenaries, acting under the orders of a royal tyrant openly. This is a triumph of Reason and Justice over Folly and Intrigue and a phalanx of domestic tyrants and sycophants acting under the cloak of Republicanism."

March 4th was thus a great day in Philadelphia, and was long remembered by those who either witnessed or took part in the celebration. The city was crowded with strangers. At sunrise sixteen guns were fired, bells were rung, flags floated over house-tops and shipping in the river. The procession

formed at the State-House, marched down Walnut to Second, up Second to Race, up Race to the German Reformed Church, and back to the State-House, after exercises at the church, Robert Porter reading the Declaration, John Bickley delivering an oration, and a song, "The People's Friend," written for the occasion, being sung.

Shee's Legion was the first in the line. It was composed of Leiper's and Snyder's troops of horse, Huff's riflemen, Shaw's and Guy's artillery with brass pieces, the light infantry companies of Denham, Hozey, Potts, Sweeney, and Kessler, and Goodman's and Ashton's artillery with brass pieces. Jones' troop closed the legion. Maj.-Gen. Proctor and Brig.-Gen. Morgan followed, with officers of militia. The civil officers succeeded, A. J. Dallas, secretary of the commonwealth, at their head. The Tammany Society presented the pageant of warriors in costume, some bearing calumets and other emblems. The tribes representing the States were preceded by the Wiskinskey with the key. The True Republican Society followed, and the Youth with their new band of music. The schooner "Thomas Jefferson," drawn by sixteen horses ridden by boys dressed in white, closed the procession.

A subscription dinner was given that afternoon at Francis' Union Hotel. At Ziegler's Plains, Spring Garden, an ox and a sheep were roasted. Similar barbecues, public games, and exhibits of skill were attractions at various points in the city. At Germantown, Matthew Huston delivered an oration in the German Reformed Church, the "Declaration" was read, and a dinner was given at the Union school-house. The Federalist newspapers made severe comments upon "the mob honors thus lavished on Jefferson," and the victors were not slow in replying.

Perhaps the severest invectives were poured out upon the retiring President. Matthew Lyon, of Philadelphia, sent him a letter, on the day of his resignation, of which the following extract will show its partisan character:

"Should you stop at Philadelphia, how melancholy must it seem to you. McPherson's band of cockaded boys are dispersed or grown up into Democrats. No Federal mobs there now to sing 'Hail Columbia!' and huzza for John Adams, and to terrify your opposers. Hopkinson's lyre is out of tune; Cobbett and Liston are gone; the Quakers are for the living President; and your old friend Joe Thomas, I am told, can scarcely find duds to cover his nakedness. I am surprised you did not make him a judge!"

Some anonymous Philadelphian printed a song on "The Duke's Return to Braintree," the "duke" being Adams.

One of the strongest Federalist journals was "Oliver Oldschool's" *Portfolio*, a weekly, which first appeared Jan. 3, 1801, and, though its contents were chiefly of a literary nature, yet it often devoted space

to forcible and often acrimonious political articles. Joseph Dennie was the editor, and he took every opportunity to condemn Jefferson and his famous writings. In April some writer, over the signature of "Common Sense," praised the *Aurora's* recent criticism of the "Declaration of Independence," and declared that "the reading of the Declaration of Independence on every anniversary of the American republic is an improper act, as it tends to prolong in the minds of an ignorant and brutal mob animosity and hatred against a nation with which we are united by a similarity of language, laws, religion, customs, and habits, and with which we reciprocate a large and lucrative commerce."

July 4th the *Portfolio* said,—

"To-day Mr. Jefferson's July paper is read by a few, willing to gull the miserable populace. The farce of republicanism is acted with much Bartholomew-fair drollery. Independence is very noisy in the morning, nonsensical orations are pronounced at noon, and patriotism is exceedingly drunk at night."

Duane's pet name for this journal was "The Portable Foolery." Samuel Harrison Smith, former editor of the *Universal Gazette*, Philadelphia, took charge of Jefferson's new organ, the *National Intelligencer*, in point of talent far short of the passionate *Aurora*, which presently called him "the silky milky Smith."

The President's appointments of Federal officers for Philadelphia were soon announced. Gen. John Shee, nominated "marshal of the Eastern District of Pennsylvania," declined, and John Smith took the place. J. Wilkes Kittera was removed from the district attorneyship, and Alexander James Dallas appointed. This gave serious dissatisfaction, because Dallas was already "secretary of the commonwealth," and, resigning that position, was at once appointed by Governor McKean recorder of Philadelphia, an office of a judicial character, its incumbent being presiding officer of the "Mayor's Court." It was argued that the State Constitution forbade any United States officer from holding such an office. Both the Common and the Select Councils were opposed to his taking the recordership. Proceedings being had, the case was argued by Hopkinson, Lewis, and Tilghman for the Councils, and by McKean and Ingersoll for Dallas, but the defendant won the case.¹

Dallas appeared in a libel suit against the *Philadelphia Gazette*, that journal having said, "Everybody laughs at his law opinions." The two proprietors pleaded guilty, and were fined three hundred dollars each, and ordered to give security of one thousand dollars to "keep the peace for one year." Dallas also sued C. P. Wayne, of the *United States Gazette*, and recovered three hundred dollars and costs. Suits for libel were abundant in those days. The *United States Gazette* charged Duane, of the *Aurora*, with having murdered a girl in Connell, Ireland. Duane brought suit, laying damages at six thousand dollars, but offered to withdraw it if Wayne would give the name of the author of the article. About this time Levi Hollingsworth brought suit against Duane charging that he was an "alien and a British subject." The jury found in favor of Hollingsworth, thus denying the jurisdiction of the American courts in the libel case mentioned. The *Aurora* then attacked Hollingsworth in severe terms, and even assaulted Chief Justice McKean. Duane was sent to prison for thirty days, and damages of six hundred dollars laid against him. Edward Burd, then the prothonotary of the Supreme Court, also brought suit against the impetuous Duane for charging him "with packing a jury," but in 1803 an apology was tendered and accepted. The Duane episode is highly interesting, exemplifying to an unusual degree the license of the press on the one hand, not less than the severity of the libel law on the other.²

February 12th the Germantown and Perkiomen Turnpike Company was incorporated. The road was to begin at the corner of Third and Vine Streets. Benjamin Chew was chosen president, and John Johnson treasurer. This improvement had become necessary. The old road to Germantown "was called the worst road in the United States," and travelers often went around by the way of Frankford or across the open fields to escape its deep ruts.

Another important incorporation created in this year was that of the Delaware and Chesapeake Canal Company. In January the Pennsylvania Legislature had passed favorable resolutions, and the Governor had

² Of Duane's two attacks on Hollingsworth, the first, "The Age of Revolutions," accused him with being a traitor, a Tory, and a slave-trader; in the second he declared that Hollingsworth was a member of the City Troop during the Revolution, that he had deserted and joined the British, and was saved by McKean, with one hundred and fifty others, from the fate of Carlisle and Roberts. In the succeeding year Hollingsworth published a refutation of these charges. He declared that McKean had denied that Duane had authority to make these charges. Hollingsworth said that he was imprisoned by a lawless mob, in 1779, for refusing to sell a quantity of flour in his store, deposited there by the commissary of the Eastern District of Maryland for the United States army. The people seized upon him at the place where the flour was stored, and took him to jail. He was kept there until the City Court was held, in June, when Plunket Fleeson, who was upon the bench, dismissed him, with thanks for his past services to the country and for his humane conduct to the distressed. He annexed certificates that he was taken prisoner by the British, with certificates by Abram Markoe, Samuel Morris, and others, that he was tried, discharged, and thanked by the court.

¹ The Legislature took up this subject at the next session, and passed a law Jan. 27, 1802, declaring that the holding of an office under the State by a Federal office-holder was an offense. Governor McKean interposed the executive veto. He declared that inasmuch as no complaint had been hitherto made of the practice of uniting Federal and State trusts in the same person, there was no necessity for the law. He alluded to the fact of his appointment of Dallas a few months previous. The Governor said that he could not, by signing the bill, declare that he had done wrong. He also alluded to another case where he had appointed a member of Congress (Dr. Michael Liebh) physician at the Lazaretto. The Governor had himself been a pluralist, holding the office of member of Congress from Delaware and chief justice of Pennsylvania at the same time. The House and Senate passed the bill over the veto January 27th. Dallas then resigned the office of recorder, and Moses Levy was appointed.

appointed Dr. George Logan, John Hunn, and Presley C. Lane to consult with the Delaware Legislature, but the latter body made conditions (1) desiring certain papers relating to lands in Delaware; (2) that certain parts of the health and quarantine laws should be repealed. Pennsylvania agreed to these terms, and February 19th the act of incorporation was passed, though attacked by the *Aurora* and other papers as "a source of vast mischief." One of these writers, after speaking of "the canal mania in Great Britain ten years ago," proceeded to make one of the earliest suggestions in America concerning "wooden railways" for vehicles on common roads. A few weeks later another writer recommended "iron rails" instead of wood. The canal company was not fully organized till May, 1803; Joseph Tatnall, of Delaware, president, and William Tilghman, James C. Fisher, George Fox, Joshua Gilpin, and others directors, with Messrs. Latrobe and Howard as surveyors.

In 1802 the report to Congress showed that the "Arsenal" buildings built on the banks of the Schuylkill had cost \$152,608.02, and were still unfinished. The Navy-Yard property had been purchased for \$37,000 in 1800, chiefly the site of the old "Association Battery," in Southwark, and the citizens of that district met in the Commissioners' Hall in February, Robert McMullin, chairman, Joseph Huddell, Jr., secretary, and passed resolutions urging the Legislature to declare vacant all cross streets which intersected the proposed site.

The water-works, delivering water from the Schuylkill through pipes and at hydrants along the streets, began operation January 27th, and this was made an occasion for great public rejoicing. By February about \$73,000 had been subscribed to the water loans, and an ordinance was passed furnishing water free for three years to these subscribers. The rate for dwellings was five dollars per annum. In April a sad accident happened at the Schuylkill works, two men being suffocated in a large wooden boiler. The committee's report in October showed that \$220,310 had been spent upon the works, and that the first estimate of \$127,000 had been much exceeded, and large sums were still necessary. Of the money spent the loans had brought in \$90,007, the special tax \$49,579.99, the sale of bridge property \$20,238.02, and various minor resources the remainder. The enterprise was at a standstill, the wooden pipes cost more than was anticipated, and affairs looked gloomy. Michael Freytag and John Curtis proposed to make earthenware pipes, but no one believed in them. Iron was proposed by some, and the committee instituted experiments. In 1801 sixty-three houses were supplied with Schuylkill water, also four breweries and one sugar refinery. Thirty-seven hydrants were in various parts of the city.

The year 1801 was marked by beginning the practice of making local nominations by ward committees in conference or convention. The Democrats, as

the Republicans were now called, adopted it in June, and the Federalists followed their example before the October elections. The townships of Blockley and Kingsessing had been made a separate election district called Schuylkill. The city and county of Philadelphia and the county of Delaware were made one district, to choose four State senators. Philadelphia sent five representatives to the Legislature and the county sent six.

The Philadelphia Chamber of Commerce was organized this year, admission fees eight dollars, and annual dues five dollars. Thomas Fitzsimons was president, John Craig and Philip Nicklin vice-presidents, Robert Smith treasurer. The committee for the first month (February) was Thomas W. Francis, Joseph S. Lewis, John Stille, Jr., R. E. Griffith, and Archibald McCall. The meetings were held at the City Tavern.

A permanent foundation for a free school among the poor was laid, growing from a little social club started in 1779 by a few young men, who in that winter or early in 1800 organized "The Philadelphia Society for the Free Instruction of Indigent Boys." Beginning with not more than nine members, this society opened a night-school, and taught twenty or thirty pupils; their revenue the first season was but \$16.37, their expenditure was only \$9.27. Others offered help, when, in June, 1801, Christopher Ludwick, of Philadelphia, died, leaving about eight thousand dollars to "the association first incorporated to teach gratis poor children." The trustees of the University of Pennsylvania endeavored to incorporate first, but the above-mentioned society won the victory, and organized under their charter in 1801, choosing as managers Thomas L. Bristoll, Thomas Bradford, Jr., Caleb Cresson, Jr., William Paxson, Robert Coe, Jr., Edmund Darch, William Neckervise, Thomas M. Hall, Benjamin Williams, William Fry, Joseph Bennett Eves, Joseph D. Brown, Samuel Lippincott, Philip Garrett, Frederick Stelwagon, Thomas Smith, Robert McMinn, and Joseph Briggs. Their school-house was back of the Second Presbyterian Church. John Dickenson afterwards gave them a lot in Kensington. In 1803, Chambers Wharton left them four thousand dollars. In April, 1801, there were eight day or evening day-schools and two Sunday-schools open, free, for colored children.

The city had brought a suit against the German congregation which was using a part of the Northeast Square as a cemetery. In February the Councils agreed to stop the suit on the following conditions, which were accepted:

"1st. That the congregation yield possession of all of the square in which interments had not been made.

"2d. If they will accept a lease from the corporation of that part of the lot in which interments are made, but for which they hold no patent.

"3d. That they do not erect buildings on the lot for which they have a patent, and length of possession shall be no bar to the city's rights."

At that time John M. Irwin, the auctioneer, used to sell cattle and horses on stated days on the west

side of this square, also on the Southeast Square. February 19th the German Reformed Church was granted by the Legislature a lot on Mulberry Street, between Schuylkill Sixth and Fifth, "for a burial-place, and for charity schools."

In April the United States frigate "Constellation," then lying at anchor in front of the city, capsized at the change of the tide, being thrown suddenly on a rocky shoal, heeling over so far that the lee guns were under water. The vessel was, however, righted in a few days without much loss. Late in June the Pennsylvania Bank took formal possession of its beautiful new building, erected on Second Street above Walnut, Benjamin H. Latrobe, architect.

The various improvements of 1800 and 1801 in the way of buildings were matters of much congratulation. The first row of houses on a uniform plan was erected by or for Mr. Sansom, and were on Walnut Street, north side, between Seventh and Eighth, and in the street between Walnut and Chestnut, from Seventh to Eighth, afterwards called Sansom Street.

CHESTNUT STREET, SOUTH SIDE, FROM THIRD STREET TO WHALEBONE ALLEY (NOW HUDSON STREET).
[From 1803 to 1808.]

Some of them rented at only two hundred dollars per year. A few years later it was announced that the rent would be raised, because from being remote and lonely the houses had become eligible residences. Business men in 1800 said they were "too far from their business." Walnut Street not being paved west of Sixth, Mr. Sansom applied to the Councils for permission to have two more blocks paved, and offered to advance the money.

Dr. Michael Leib early in this year was dined and toasted at John Snyder's, in Poplar Lane, "for his patriotic services." One toast was, "The Northern Liberties, the rallying-point of Democracy," a sentiment that, at a later period, was changed to "The Cradle of Democracy." Late in February a dinner was given to Oliver Wolcott, former Secretary of the Treasury. It was in the rotunda of the new bank building, lit by nine chandeliers. John Nixon presided. The sixteen toasts were marked by unusual mildness and freedom from political passion. July 4th, in Harmony Hall, Irish Tract Lane, Thomas Condie and others gave a dinner, at which a toast of unique and somewhat famous expression was first

given,—*"American Manufactures,—blast all their furnaces, dam all their canals, sink all their coal-pits, and consume all American manufactures."*

The first public announcement of Cape May attractions for visitors was extravagantly made on July 1st, by an advertisement in the *United States Gazette*.

Some time in 1801 a society was started called "The Philadelphia Premium Society," instituted "for the purpose of fostering American industry, by giving premiums for improvements in arts and manufactures," but it was soon proved that there was little need of any such effort. American artisans and tradesmen were sufficiently energetic and ambitious without any such artificial stimulus.

On the 1st of January, 1802, a meeting was held at the District Court room, to form a company, "The Pennsylvania Improvement Company," devoted to inland communication and to banking. Thomas Leiper was chairman, and the subscription committee consisted of Thomas Leiper, A. J. Dallas, Matthew Lawler, John Hunn, Samuel Carswell, Guy

Bryan, William McFadden, Robert Patterson, Samuel Clark, James Vanuxem, William Devitt, and Andrew Pettit. The Legislature was petitioned to grant a charter to the company, and also to subscribe for shares to the value of ten thousand dollars, but did neither.

Early in this year the "Company for the Improvement of the Vine," long talked of by enthusiastic horticulturists, was fully organized. They laid out a vineyard near Legaux's farm, at Spring Mill, and employed Peter Legaux to tend it. Dr. Benjamin Say was president; Isaac W. Morris, treasurer; Jared Ingersoll, John Vaughan,

Dr. James Mease, Frederick Heiss, and Elisha Fisher, managers. At that time the following vineyards were in the city: Montmollin's vineyard, on the Ridge road, four miles from Philadelphia, having one thousand plants; Peter Kuhn's vineyard, about a mile from Montmollin's, with Lisbon, Malaga, and Madeira grapes; Dr. James Mease chose an excellent situation in the centre of the ground-plan of Philadelphia, on the line of Cherry Alley, and had three thousand plants; Paul Labrousse's vineyard was about a mile from Philadelphia, by way of South Second Street, between Second and Third Streets, near Mr. Crousillat's tavern; Crousillat's was four miles from Philadelphia, on the banks of the Schuylkill. He had fifteen hundred plants. North of it was Dance's vineyard; south of Crousillat's was Thunn's, with many young plants; Stephen Girard's, also near Thunn's, had only forty or fifty plants.

Late in 1801, Mathew Carey, of Philadelphia, proposed a series of "Literary Fairs," like the book fairs of Germany, and the project was carried into effect in 1802. Carey's circulars, issued in December, 1801, asked all the booksellers and printers of the United

States to meet in New York, June 1st, to "buy, sell, and exchange" their goods.

The "fair" was formally opened at Bardin's, New York, and Hugh Gaine, the oldest bookseller in the United States, chosen president. Among the New Yorkers present were Evert Duyckinck, William Falconer, and James Oran; Philadelphia sent S. F. Bradford, W. Bradford, Mathew Carey, William Duane, Patrick Byrne, William T. Birch, Abraham Small, John Bioren, and Jacob Johnson. Samuel Trumbull came from Stonington, Conn., and Charles Pierce from New Hampshire. It was decided to hold a fair in New York each April, and one in Philadelphia each October; but the presence of the yellow fever caused the postponement of the latter till December, when it took place at the Franklin Hotel, Mathew Carey presiding, and Samuel F. Bradford and Samuel Campbell being vice-presidents. It closed with a "booksellers' dinner, at which there were seventeen toasts." For a year or two the "fairs" were successful, but the market "was flooded with inferior editions," and the city booksellers withdrew. The fairs "dragged along for four or five years more, and then sank into oblivion."

Jan. 4, 1802, the "sufferers by the spoliations of France on American commerce" met at the City Tavern, and drafted memorials to Congress. Stephen Girard, Joseph Ball, Charles Pettit, James Coxe, Thomas Fitzsimons, Henry Pratt, and John Craig were appointed a committee. They corresponded with other sufferers, to secure united action, and they also prepared a "memorial" to the United States Senate and House of Representatives, worded as follows:

"The memorial and petition of the subscribers, citizens of the United States, dwelling in Philadelphia, respectfully sheweth: That your memorialists and divers others, in the regular course of their trade, in the years 1793, 1794, and 1795, invested very large sums of money in provisions and other merchandise suited to the West-India market, and sent them thither, where many cargoes were sold to the officers of the colonial administration of the republic of France, to be paid for in cash or colonial produce. Many others were taken by force by the said officers from the supercargoes and consignees, at prices arbitrarily fixed by themselves, to be paid for in produce at rates and terms of credit fixed at their pleasure, and that others have been arrested on the high seas, carried into their ports, and taken for the use of the republic without any stipulated price or contract; that your memorialists confidently believe that the amount of property belonging to the citizens of the United States, thus delivered to and taken by the administrative bodies of the French republic in the West Indies, exceeds two millions of dollars now in arrear, for which your memorialists and others concerned have no mode of obtaining payment, satisfaction, or redress; that the usual course is, after taking the cargo by force and duress, to detain the vessels under pretense of paying in produce, until the masters and crew are wearied with idleness, sickness, delay, and insult, so as to be willing to return either altogether without payment or with such small portions thereof as scarcely to pay the freight and charges occasioned by these long delays, whereby in most instances the whole capital has been left behind, and in those instances where a considerable part of the cargo has been paid for in colonial produce, the expenses of demurrage have consumed almost the whole, as by vouchers ready to be laid before the House or a committee thereof, will abundantly appear.

"Your memorialists further show, that some of the earliest sufferers among them applied personally and by memorials to citizens Genet, Fauchet, and Adet, the first and succeeding ministers of the French republic, for redress, without obtaining it; they also applied by memo-

rial to the President of the United States, who referred them to the Secretary for the Department of State, whose advice they pursued in committing their claims to James Monroe, Esq., Minister Plenipotentiary of the United States to the republic of France, at the time of his embarkation; that although your memorialists are perfectly satisfied that the executive authority of the Union hath done all within its power to procure redress to your memorialists, yet it has not had the desired effect.

"Your memorialists further represent that they had hoped that some arrangement would have been assented to, whereby the debts due from the republic of France to the citizens of the United States might have been discharged out of the debt due to her from the United States, and under this expectation they exercised patience; but finding that money funded and transferred to an agent of the republic, all hope from that resource is vanished, your memorialists feel the more concern that while provisions have been made by the Executive of the Union for obtaining from other nations a redress for spoliations committed on their commerce, no measures hitherto adopted have been successful for procuring satisfaction from that nation which the merchants of this have shown so decided an affection to, by supplying their islands with provisions and necessities at a greater risk than attended any other branch of their trade,—supplies that were absolutely necessary to their colonies, and which they could from no other place nor in any other manner be furnished with.

"Your memorialists therefore pray that the Legislature will take their suffering case into consideration, and afford them such relief and protection as to their wisdom shall seem consistent with right and justice.

A "Tammany celebration" on March 4th was marked by the presence of a number of Indian chiefs. Shee's Legion and the Tammany Society took part in the procession, and the latter had obtained the help of the Indians. A few days later one of them, a counselor of the Wolf tribe of the Shawanese, died, and was buried by the Tammany Society with Indian ceremonies. The "Great Wigwam" was at No. 85 Race Street. In April "Father William Coats," of the Northern Liberties, an old Revolutionary officer, died, and was buried by Tammany; the members "wearing buck-tails, tied with black ribbons, in their hats."

The return in this year of the yellow fever scourge was the most serious event to be recorded. As before, it came from the West Indies, this time by the ship "St. Domingo," from Cape François. Some of the crew died while the ship was yet at anchor in her West Indian port, and the steward died on the voyage. Being quarantined on her arrival below Philadelphia, one of the crew was taken to the hospital and died

there. Her quarantine was extended, but when it expired she was allowed to moor above Vine Street wharf. John Edwards, a carpenter, who had been temporarily employed on the ship, was taken sick July 4th, and died in three days. About the same time numbers of persons who lived near the wharf were taken with the epidemic; some had worked in the vessel, some were children who had played about the wharf, some were visitors who had ventured on board. July 17th the Board of Health reported "nine dead and twelve sick." The infected district was about Vine and Water Streets, and from thence to Callowhill along Front. An attempt was made to quarantine "the Northern Liberties," but failed, and the Lazaretto hospital was prepared for the poor who fled from the scene of contagion. August 2d the citizens of the district met, Frederick Wolbert, chairman, and Daniel Groves, secretary, and appointed a committee to aid the Board of Health. August 5th an alarming increase marked by most malignant characteristics was reported, and citizens were begged to withdraw from the infected district. The mayor, Matthew Lawler, requested that "those about to leave would send their fire-buckets to his office." One of the newspapers published a letter begging them "not to lock up dogs and cats in their houses" to starve, as had occurred at previous departures of the kind. August 4th the City Hospital, at Race Street, on the Schuylkill, was opened. Drs. Proudfit and Church presided, Heath Northbury was steward. Southwark citizens met on the 4th, William Linnard presiding, and James Rolph secretary; committees were appointed, but two days later they reported "no fever." Moyamensing citizens met August 9th, Michael Kuhn, chairman, and Michael Freytag, secretary, but found little to do. The post-office was removed to Dunlap's building, on Twelfth Street below Market, and the bank officers, on the 7th, decided to remain at their posts. On the 9th an additional patrol was authorized, and a loan of fifteen thousand dollars was negotiated by the city to meet extraordinary expenses. But the mortality was less than in previous years; admissions to the hospitals were but five or six a day; deaths during August were from seven to nineteen daily.

The Southwark people were "proud of the salubrity of their district," and assailed the Board of Health for an erroneous report. They resolved that "no contagious disease exists or had existed in Southwark," and "dissolved their Committee of Safety." October 6th the Board of Health suspended daily reports; October 14th, the City Hospital was closed; November 1st, the board began to grant clean bills as usual. The deaths from all causes in city and liberties were eight hundred and thirty-five. Governor McKean, in his message, estimated the yellow-fever deaths at three hundred. Remembering past epidemics, John Bleakley, April 19th, had willed one thousand pounds to the city to relieve the indigent in times of yellow

fever, but this aid was not utilized until the subsequent visitations of 1803 and 1805. Bleakley also left one thousand pounds as a fund to buy fuel for poor widows.

The commencement of the public-school system, that has since developed so marvelously, was in 1802, an "Act to Provide for the Education of the Poor gratis" being passed, and approved by Governor McKean. It provided that the guardians and overseers of the poor in the city of Philadelphia, and the districts of Southwark and the Northern Liberties, and of every township and borough in the commonwealth, should ascertain the names of all children whose parents they should "judge" were unable to give them educations. It was provided that they should give notice to such parents that provision had been made for educating their children; that the said parents should have a right to subscribe for their education at the usual rates, and send them to any school in the neighborhood, giving notice to the guardians and overseers that they had done so. The names were to be properly registered, and the cost of the schooling was to be levied for in the taxes, and collected in the usual way. This act was restrained to an existence of three years only. This experiment was the result of a long series of efforts by private persons, by church and college organizations, to educate the poorer classes. Ten years before the "Society for the Establishment of First-Day Schools" had memorialized the Legislature on the subject of "free schools." Men like Albert Gallatin and Governor Mifflin had become interested in this important subject.

Politics were somewhat exciting in the fall of 1802, but the Democrats had an easy victory. Governor Thomas McKean was warmly supported by the Administration, received a unanimous renomination, and in October beat James Ross, of Pittsburgh, by 30,000 majority. The vote in the city stood: McKean 1943, Ross 1517; in the country, McKean 2965, Ross 779. A banquet was held to celebrate this victory, at Hamburg Tavern, on the Schuylkill; Dr. Leib was president, and Dr. Betton vice-president. Governor McKean was the honored guest, as also at another banquet given in November at Francis' Union Hotel, A. J. Dallas and William Jones presiding.¹

¹ Dr. Michael Leib controlled the party at this time, and some malcontents had previously met at Dunwoody's tavern, in Market Street, to devise measures to dethrone him. Though Leib, Richards, and Clay, Democratic candidates for Congress, were elected, still the quarrel kept simmering, and afterwards led to the formation of a third party, thus dividing the Democracy.

One of the Democratic songs of rejoicing, "The Election Ground," that became very popular is full of personal allusions. We quote a few stanzas:

"There were oystermen bawling aloud;
There were fruit lasses sweetly inviting;
Oh! the music and din of the crowd,
'Twould have done your heart good, so delighting!

Some time in February a farmer, Peter Bachkerker, was murdered and robbed by three footpads on Market Street, between the ferry and the Centre House. His companion escaped. Large rewards were offered, but without avail. A petition was thereupon presented to the Councils stating:

"That since the late unprecedented and atrocious murder and robbery, committed on the highway in Market Street, numbers of country-people are terrified, and neglect attending the market. Those who live so distant as to render it necessary for them to arrive at the city or its vicinity in the evening or night are under peculiar apprehensions. At the bridges, on Schuylkill, it is remarked that no travelers, market-people, or others of character pass after dusk, though it has heretofore been customary to travel in all seasonable hours of the night. The increase of dissolute and desperate vagabonds is notorious. This state of things is attended with great detriment to the citizens, by keeping away supplies from our market, and is dishonorable to the police of the city. It is on all these accounts thought right that some lamps should be placed between the built parts of the city and Schuylkill, in High Street."

From this suggestion grew the proposal to light the streets with gas. Benjamin Henfrey came forward as an "inventor," and published an address saying that his system of extracting gas from coal was "applicable to light-houses for the sea-coast, and, in an octagon light-house, for the use of towns." To manufacturers, on principles of economy and safety, his plan would be useful, and for domestic purposes, for the same reason. "As to expense, it will cost nothing (first cost of apparatus and attendance excepted), as the coal will be of more value after the gas and tar are extracted than before." He proposed that towers should be erected in certain parts of the city, so that the light would not only illuminate the streets, but the back alleys. The principle was "easy, and the flame regulated by the turning of a cock." He appended certificates from the citizens of Richmond, Va., where the light was tested. But he had to encounter opposition and prejudices. Scientific men

and government officials objected, and the scheme of this unappreciated pioneer was ignored.

One of the important events of 1802 was the exhibition by Charles Wilson Peale of his splendid collection of curiosities and works of art. The State-House had been vacated by the Legislature, and Peale in February petitioned for the use of the building. The American Philosophical Society and Councils indorsed his petition, and an act was passed March 17th granting permission to use the upper story, and the eastern end of the lower story, under reasonable restrictions. The collections were soon after arranged and opened to the public. There were about two hundred stuffed animals, a thousand specimens of birds, four thousand specimens of insects, a collection of minerals, cabinets of serpents, fishes, etc. In one room were over a hundred portraits of famous statesmen and soldiers, painted by Mr. Peale and his son, Rembrandt. The greatest curiosities were the famous Ulster County, N. Y., mastodon skeletons, dug from a marl-pit in 1801 by Mr. Peale, and joined together with infinite labor. The first was finished before the museum was opened; when the gigantic frame-work of the second was united a unique banquet was given, Rembrandt Peale and twelve others dining within the skeleton, seated around a table; room was also found for a piano within the bony mammoth.¹ Shortly after this skeleton was taken to England and exhibited there by the Peale brothers.

One of the laws passed this year regulating the militia introduced changes in the Philadelphia troops. The city and county at this time had ten thousand two hundred and ninety-two militiamen, in one division (the First) and two brigades. The appointment of Gen. John Shree as major-general was severely attacked by the Federalists. The *Gazette* character-

There was Bobby, the *ci-devant* mayor,*
With tickets crammed full in each fist;
Old scape-gallows Levi was there,†
And one with the black Tory list.‡

"And there was old goosified Tom,§
With his noted scurrility scraper;
A scavenger, better there's none,
And a foul common sewer his paper.
Portfolio likewise was there,||
With three lads of the same resolution;
To be sure, they're not paid by the year
For abusing our blest Constitution.

"And there was that Federal hack
Long dubbed the Political Parson;¶
He once preached a sermon, good lack!
When the gospel he made but a farce on.
He'd talk about bishops and kings;
But the people him well understood,
Of what blessings to nations it brings
To be blest with a dignified priesthood."

* Robert Wharton, mayor in 1798-99.

† Levi Hollingsworth.

‡ A list of the Tories proclaimed in the Revolution was published before this election, and was called the "Black List."

§ Thomas Bradford, printer.

|| Joseph Dennie, editor of the *Portfolio*.

¶ Rev. James Abercrombie, of Christ Church and St. Peter's.

¹ The toasts given at this curious entertainment deserve remembrance for their oddity. They were as follows:

1. The biped animal, Man—May peace, virtue, and happiness be his distinguishing character.

2. The American people—May they be as pre-eminent among the nations of the earth as the canopy we sit beneath surpasses the fabric of the mouse. Music—"Yankee Doodle."

3. Agriculture—In constituting the pride and riches of our country, may its rewards be as abundant as this fruit was unexpected.

4. The Constitution of the United States—May "its ribs be as ribs of brass, and its backbone as molten iron." Job, chap. xl. "Hail Columbia."

5. The Arts and Sciences—Nursed in a genial soil, and fostered with tender care, may their honor prove as durable as the bower which surrounds us.

6. The Brains of Freemen—May they never be so barricaded by the jackass bones of Opposition as to crush their native energy.

7. The Friends of Peace—To all else such bones to gnaw as, dried by ten thousand moons, may starve their hungry maws.

8. All Honest Men—If they cannot feast in the breast of a mammoth, may their own breasts be large enough.

9. The Ladies of Philadelphia—Ere their naked beauties prove as horrible as bare bones, may Virtue behold them clothed in the garments of Modesty.

10. The Present Company—May their second birth, though from the womb of the beast, be followed with every blessing in life.

Volunteer—Success to these Boney-parts in Europe.

ized it as an instance of a pernicious system of favoritism, unguided by talents, services, or respectability. Gen. Shee challenged Relf, the editor, but the affair ended with publications from both sides.

The city authorities continued street improvements, opening Cherry Street to Eighth, partly by private subscription, citizens contributing six hundred and thirty dollars to help buy the right of way. Additional public walks were laid out in the Potter's Field, and rows of trees planted there. These and other improvements ultimately led to the opening of another public square.

In January, 1803, the two Councils sent a memorial to the Legislature urging the return of the capital to its ancient seat, but failed in their effort. The means of the city government for paving and improvements were limited, and times were dull. Edward Pennington advanced one thousand dollars to pave Crown Street. The Councils were notified that "the two paviors employed by the city" were "going to move to Baltimore in search of occupation." January 15th, Mayor Lawler sent a message to the Councils speaking of two attempts in one night to fire the city. Twenty-eight patrols were appointed, and a reward of four hundred dollars offered for the arrest of any incendiary.

The destructive fire at Portsmouth, N. H., in January, caused much sympathy, and committees were appointed at citizens' meetings, who collected seven thousand seven hundred and twenty dollars in the city, seven hundred and twenty dollars in Southwark, and enough from the Northern Liberties and suburbs to raise the total to over nine thousand dollars.

In January also there occurred on Third Street above Arch, at "Mrs. Cameron's, sign of the Golden Swan," a meeting, the first known to the public, of those interested in an important enterprise, the "Lehigh Coal Mining Company." Gentlemen of means and energy were the stockholders, and they had faith in the future, though previous experiments with coal as a fuel had not prospered.

In February the "Pennsylvania Society for the Encouragement of Useful Arts and Manufactures" began reorganization, having been inactive for years. In March they received an incorporation act from the Legislature, and elected Dr. Benjamin Rush president, and Tench Coxe, John Kaighn, Dr. Caspar Wistar, and Anthony Morris as vice-presidents. Samuel Wetherill was chairman of the "Manufacturing Committee."

Washington's birthday was celebrated by a public dinner at Kitchen's City Tavern. Thomas Willing and John Nixon presided, and Samuel Fox and Joseph Ball were vice-presidents. The officers of the City Brigade dined on the 4th of March at the Franklin Hotel.

February 28th, Thomas Passmore, of Philadelphia, went to the Legislature with charges against Supreme Justices Shippen, Yeats, and Smith of illegal and

oppressive conduct and illegal imprisonment of himself. Passmore, in 1802, had insured a vessel, and two of the underwriters, Pettit and Bayard, refused to pay their share of a loss incurred. Passmore then issued execution upon his judgment in the Supreme Court, but Pettit and Bayard entered exceptions. Passmore then prepared a paper denouncing their conduct, which he put up at the Coffee-House. The defendants then applied to the Supreme Court and secured an attachment against Passmore for contempt, and ultimately he was fined fifty dollars and imprisoned thirty days. March 9th the legislative committee reported that "summary proceedings by contempt were contrary to the genius of our laws," and "a step towards establishing an aristocracy." The necessity of the passage of some law to define the powers of courts in cases of contempt was declared to be urgent, and the draft of a bill for that purpose was reported; but the time for the adjournment of the session then being near, the whole subject was recommended to the attention of the next Legislature.

March 28th the Legislature passed "An Act creating a corporation to be styled 'the commissioners and inhabitants of that part of the Northern Liberties lying between the west side of Sixth Street and the river Delaware and between Vine Street and Cohocksink Creek.'" It directed that fifteen commissioners should be elected by the citizens at the town-house in the evening of the first Saturday in May, by ballot, five for three years, five for two years, and five for one year, and five annually thereafter upon the first Saturday in May. They had power in local enactments, street matters, wharves, etc. Their first act, July 14th, was to provide for an extension of the market on Second Street; Michael Baker, Daniel Miller, and Daniel Groves being appointed superintendents.

In March also the Legislature changed the poor laws and health laws. The "Guardians of the Poor" was to be a board of thirty members, sixteen chosen by the City Councils, six by the commissioners of Southwark, and eight by the justices of peace in the Northern Liberties. One-half retired each year, and their places were filled by elections. The act was lengthy and full of minute specifications. The new health law authorized the Governor to appoint a board of five, three from Philadelphia, one each from Southwark and the liberties, serving one year, at a salary of four hundred dollars apiece. He was also to appoint health, quarantine, and lazaretto officers.

Transportation improvements continued to develop. March 24th the incorporation act of the "Cheltenham and Willow Grove Turnpike Company" was passed. Their route was "from the Rising Sun Tavern through Shoemakertown to the Red Lion Inn, on the Old York road." Another company was on the same day incorporated to build a turnpike "from Front Street through Frankford and Bustleton to the Morrisville Ferry, Bucks Co." This company engaged to bridge

the Delaware between Morrisville and Trenton, and secured the services of Timothy Palmer, who was contractor for the bridge at High Street, Schuylkill. Petitions for a turnpike along the Ridge or Wissahickon road were refused, "because the Germantown turnpike was parallel, and only a mile and a half distant." The projectors of the Delaware and Chesapeake Canal had by this time secured two hundred and fifty thousand dollars in subscriptions, and May 9th they completed their organization at Wilmington.

April 1st the Legislature decided to sell certain vacant lots and build a new prison in Philadelphia, the Walnut Street prison being far too small. Since 1790 the State had been using the city prison, having previously appropriated five hundred pounds to erect cells, and hence was bound to contribute towards the new prison. The lots were sold and the building commenced "on Arch Street, south side, between Broad and Schuylkill Eighth." Funds were insufficient, and the prison was unfinished for years. In 1812 the Legislature appropriated twenty-five thousand dollars, and declared that the building "should be considered the exclusive property of the commonwealth," an announcement that caused great dissatisfaction, as the State was still using the Walnut Street prison. The building, however, proved so unsuitable that no State convicts were sent there.

Another enactment made in April secured "mechanic liens" in certain specified cases in Philadelphia and its suburbs. Bricklayers, lime merchants, stone-cutters, carpenters, painters, and glaziers were entitled to this benefit.

In May the admirers of Thomas Paine, the pamphleteer and free-thinker, gave a banquet in his honor at the Franklin Hotel, which had been opened in Franklin's old mansion, in the court south of Market, between Third and Fourth Streets.

May also witnessed the most extensive militia parade since the Revolution, under the command of Brig.-Gen. John Barker. The City Brigade turned out five regiments, three thousand men in all; there were twelve flank companies, an artillery regiment, and two corps of cavalry. July 4th the Legion paraded, in two divisions, under Maj. Jonas Simmons and Thomas Willis, and several new infantry companies also paraded. In October the Legion had a "sham battle" at the old race-ground, between Pine and South Streets.

July 25th the Health Board called public attention to the falsity of "reports that yellow fever existed in Philadelphia, though it was raging in New York." August 10th non-intercourse with that city was ordered, vessels were examined at the Lazaretto, and persons were subject to detention. September 12th the board was forced to acknowledge that "a disease of malignant character" had appeared in the part of the city between Market and Walnut, and from Front Street to the Delaware. They investigated the subject, and declared that neither had any suspicious

vessel landed a cargo, nor had any sick person from New York or elsewhere gained admission. A correspondent of the *Aurora* contradicted this, stating that yellow fever patients had entered from New York, by way of Baltimore and Lancaster, and that one had died in Spruce Street, and one in Water Street, near Market. But the disease was not thought violent, and the board, September 13th, after declaring that it had done its whole duty in the matter, prohibited visits to the infected districts. The quarrel of several years' standing between the contagionists and the non-contagionists was renewed, the latter controlling the Board of Health. Indeed, as early as June citizens had met at the court-house and censured the board for not enforcing a quarantine, Col. Thomas Willis being president and William Duane secretary. After the fever fairly broke out the *Aurora* became the organ of the "contagionists." It accused the board of incompetence and of making unfaithful reports. "New York," they said, "had the yellow fever July 17th; no protective measures were taken here till August 9th." The first cases were near the Arch Street wharf, where the New York packets lay, also at South Street wharf and along the Delaware. The hospital was opened September 13th and closed October 16th, receiving eighty-eight patients, of whom thirty-nine died. The city reported one hundred and forty-five cases, and the deaths were about one hundred and twenty, though the exact number is not stated.

The entire year seemed to be more or less occupied with endeavors to improve the arrangements for extinguishing fires. Public attention was called to this by the increasing number of fires, some of them incendiary. February 8th the old Quaker school-house in Fourth Street, below Chestnut, said to be the first school-house built in Pennsylvania, was destroyed by fire, and few of the books and apparatus were rescued. August 25th, at P. Daniels' shot and lead factory, on Water Street near Market, a disastrous fire occurred in which John Clark, Richard Naylor, and Thomas Riley were killed, and several persons were severely injured. At this time water was handed in buckets along lines of men and poured into the hand-engine. The suggestion was now made that "hose might be attached to the hydrants," and a standard of uniform size for the fire-plugs was also proposed. But nothing was done till after a costly fire, December 13th, in a row of unfinished houses on Sansom Street, near Eighth, eight of which were destroyed, and three partially burned. Subscriptions for the relief of the sufferers were taken up, and the "Fire Committee" and "Watering Committee" were spurred to renewed efforts. December 15th, Reuben Haines, Roberts Vaux, Joseph Parker, Samuel N. Lewis, Abraham L. Pennock, William Morrison, Joseph Warren, and William Morris met at the home of the first named, No. 4 Bank Street, and organized "The Philadelphia Hose Company."

Charles E. Smith joined at the second meeting, and age for new members was fixed at between seventeen and twenty-one. They estimated cost of hose and incidentals at three hundred and fifty dollars, and proposed to subscribe it themselves, but the citizens at once raised over seven hundred dollars, and they built a house on lot No. 17 North Fourth Street. The cost of the hose-carriage was seventy-eight dollars. March 3, 1804, Israel Israel's stables in Whalebone Alley (afterward Hudson's) caught fire, and the hose company did such service that they received a donation of seventy dollars, and two more companies were soon organized.

Politics were very quiet, except that Dr. Michael Leib was still accused of being "Dictator of Philadelphia County." July 27th the dissatisfied Democrats met at the "Rising Sun," but Leib's friends attended also, and a fight occurred, in which Manuel Eyre, the chairman, was thrown from his seat, and the meeting broken up. In August the County Committee required written pledges to stand by the nominations, but the anti-Leib party put up a separate ticket. Col. John Barker, the regular candidate, was elected by 171 majority over William T. Donaldson, and Leib remained in control of things. The address this year called Pennsylvania the "keystone of the Democratic arch," probably the first instance of this use of the comparison.

Manufactures were growing rapidly. Of calico-printing establishments near Philadelphia there were Hewson's at Kensington, Stewart's at Germantown, and Thorburn's at Darby, the three turning out two hundred thousand yards in 1803, and employing seventy persons. Oliver Evans had commenced the manufacture of steam-engines. Mr. Eltonhead had begun to make cotton machinery,—carding-engines at four hundred dollars, drawing and roving frames at two hundred dollars, mules with one hundred and forty-four spindles at three hundred dollars each. "The Association of Artists and Manufacturers" was organized this year to collect statistics of domestic industry, and to promote arts and manufactures. Everywhere in Philadelphia County the germs of the great industrial enterprises of the present day were taking firm root. These diminutive factories and engine-shops were vast creations, if we consider the difficulties under which they had been developed.

Political excitements formed the staple events of 1804 in Philadelphia. We have spoken of the Thomas Passmore affair in 1802-3,—his complaints against Chief Justice Shippen and Associate Justices Yeates and Smith. When the Legislature of 1804 again took the case up it caused a commotion that involved every one, from city ward politicians to the Governor himself. A committee report on March 13th recommended "that the judges should be impeached for high misdemeanors by arbitrarily and unconstitutionally fining and imprisoning Thomas Passmore." After due debate the House, March 20th,

resolved to impeach the justices by vote of 57 to 24, and three days later articles were sent to the Senate for action. Then occurred an extraordinary event. Justice Hugh Henry Brackenridge, hitherto not involved in the case, intruded himself upon the Legislature, and March 24th wrote requesting that he also be impeached in the interests of the Democratic administration. The genuineness of the letter was doubted, but it was proved authentic, and a special committee reported that it contained "evidence of a premeditated insult to the House, by insinuating in a manner neither to be mistaken nor palliated that the House was actuated in their proceedings against the other judges by party motives." They added, "Such unfounded and unwarrantable insinuations (and more especially by a citizen to whom a trust of administering the laws is confided) must naturally tend to general suspicion among our constituents that the laws are the offspring of corruption and caprice, and not framed by the unbiased will of their representatives;" and, in conclusion, they thought he "was not a proper person to discharge the important duties of a judge." Impeachment was not advised, and being afterwards moved in the House was lost by a vote of 8 to 68. A motion to address the Governor and ask that he remove Judge Brackenridge was adopted by a vote of 54 to 24, and also passed the Senate, but Governor McKean disregarded it altogether, which caused a storm among his adherents. Duane's energetic journal, the *Aurora*, had been criticising the Governor's veto of the "Adjustment Bill" (to extend magistrates' jurisdiction in civil cases), and it took up the new *casus belli*. May 10th and May 18th this lately official organ made seven assaults on McKean's course as "lending himself to traitors, Tories, and Apostate Whigs." But since there was at this time but one Federalist in the Senate and five in the House, the impeachment of three out of the four judges of the Supreme Court had all the aspects of a partisan proceeding. Several projects for changes in legal jurisdiction adopted by the Legislature were vetoed by the Governor as unconstitutional. The quarrel thus begun extended throughout the party.

It was a golden opportunity for the anti-Leib party, determined to prevent that gentleman's renomination. Their organs were the *Freeman's Journal* (established by McCorkle as the *Evening Post*) and Maj. William Jackson's *Political and Commercial Register*. Dr. Leib in August declined nomination, but the city and county convention forced him to take it, and a hot campaign followed. The *Aurora* termed the anti-Leib men "*Tertium Quids*," a phrase invented for them in 1802-3 by Tench Coxe, now one of their leaders, and a former writer for the *Aurora*. Coxe held a government office, "Purveyor of Supplies," worth two thousand dollars per year. The Federalists made no nominations this year, and the factions had the field to themselves. The anti-Leib men indorsed the names of Richards and Clay from

the regular ticket, but nominated Penrose for Congress instead of Leib. In the October election Clay received 7427 votes, Richards 7021, Leib 3992, and Penrose 3685. A celebration was held over this victory at Vogdes' Inn, Chestnut Street; Mayor Lawler presided, Thomas Leiper, Frederick Wolbert, Gen. Barker, and Ebenezer Ferguson were vice-presidents.¹ The Presidential election in November went almost by default, Jefferson receiving 3300 votes in the city out of 4000 votes polled.

Market space was contracted, and the Legislature gave the Councils power to erect and regulate market-houses as they saw fit, provided the stalls for country people were free. In August the South Second Street market was improved by a two-story brick building added at the north end, Joseph Wetherill loaning one thousand dollars, and subscriptions being also taken to aid the work. A market, so petitions said, was needed on Dock Street, and one on Southeast Square, and the High Street market needed an extension, but nothing further was done this year.

Early in January the Legislature had desired to give Abraham Baldwin, Thomas Gibbs, and Nathaniel Nichols special privileges for carding- and spinning-machine, but the Senate refused. William Copeley, of Shippensburg, an inventor, wanted one thousand dollars to complete a machine for carding and spinning, but the bill to that effect failed to pass. Moses Coats, having patented an apple-parer, desired to sell it to the State, but was not encouraged. The Philadelphia Society, mentioned as organized in 1803, favored John Biddis' processes,—his potato starch, sago powder, and "wool from old clothing" (or shoddy). January 7th "an act for the inspection of butter" was passed, and inspectors appointed at Philadelphia. April 3d a similar act relating to black-oak bark was passed, but petitions begging for inspection of gypsum and plaster were neglected.

Philadelphia, as at the Portsmouth fire, showed her benevolence in case of need on March 20th; a great meeting was held at the State-House, George Latimer presiding, and \$3000 was collected for the sufferers from a destructive fire in Norfolk, Va. The total collections in the city were \$4999.34.

Very important financial matters were brought

before the Legislature of 1804, but that of greatest moment was the struggle over the charter of the Philadelphia Bank, organized in August, 1803, with a capital stock fixed at \$1,000,000. When its representatives appeared before the Legislature, its charter was opposed by the Bank of Pennsylvania, and offers and counter-offers were made by both sides. The struggle was long and doubtful, but the new bank was incorporated March 5th.

The effort was made this season to secure the extension of the Lancaster turnpike to Pittsburgh, or to build a road from Pittsburgh to Harrisburg, then to connect with turnpikes already finished. The matter was laid over till another Legislature. Up to this time all travel to Pittsburgh was either on horseback or by private vehicles, usually rough farm-wagons. On rare occasions, and in time of political excitement, special stages and relays of horses were provided. In the month of August the first regular line of stages was established. It started weekly (Friday mornings) from John Tomlinson's hotel on Market Street. The agreement was that the journey should not exceed seven days, and the fare was twenty dollars per passenger, twenty pounds of baggage allowed; extra baggage twelve dollars per hundred.

The new line was praised in all the journals as a marvel of enterprise and celerity. Those who tried it wrote back from Pittsburgh that the cost of meals "was eight dollars and twenty-one cents per passenger, at good country inns. The time of passage from Pittsburgh to New Orleans was twenty or twenty-five days by boat." Thus painfully and slowly were the links with the broad region west of the Alleghenies knit together. A stage-line to Lancaster had for some time been in operation. Minor extensions of turnpike enterprises went on steadily. One company incorporated to build from near Bustleton to Southampton, Bucks Co.; and another "from Chestnut Hill through Flourtown to the Spring-House Tavern, in Montgomery County." This year the Trenton Delaware Bridge Company was incorporated.

When Louisiana was acquired, the friends of Jefferson gave a celebration (May 12th), and the well-known Legion took part. Capt. Powell's artillery fired seventeen guns at daylight, in Centre Square, and Christ Church bells were rung. The procession consisted of Leiper's, Holgate's, Hill's, Jones', and Connelly's troops of horse; of the artillery companies of Shaw, Goodman, Powell, Cash, and Forepaugh; of the rifle companies of Huff, Snyder, Fessmire, Seyfert, and Wagner; and of the light infantry companies of Irwin, Rush, Lyle, Lloyd, Hergesheimer, Waterman, Fotherall, Ebberly, Dalzell, Stern, Sweeny, Duane, Mintzer, Montgomery, Vogdes, Fox, Marshall, McKellar, Symington, and Altemus. There were six pieces of artillery and twenty-three standards in the parade. The Tammany Society paraded with "the tribe of Pennsylvania" and sixteen others. The True Republican Society, the Cincinnati, and the Demo-

¹ Among the toasts on this occasion were the following:

"The Commonwealth of Pennsylvania, Nature's keystone in the arch of the Union; may she continue the keystone in the arch of Principle."

"Genuine Democratic principles honestly enforced, that, like a Dutch fan, they may separate the wheat from the chaff."

"Tertium Quids, a new order of Jesuits, whose creed is

RELIGION,	{	which consists in worshipping an un-	THE
LIBERTY,		restrained monopoly of filching the	LOAVES
AND		good name of all who stand between	AND
LAW,		them and	FISHES."

The Tammany Society at Rowland Smith's new Wigwam adopted as toasts:

"The Tertium Quids: May those fond of this quid find it a quiddity."

"The advocates of a third party in Pennsylvania: May they learn experience from Burr's defeat, and by early repentance escape a similar fate."

cratic Republican Benevolent Society were present, and also St. Patrick's, Union, Cordwainers', United German Beneficial, incorporated St. Tammany, Provident, Friendly, Victuallers'. The route of the parade was down Second Street, through the new market, to Lombard, thence up to Third, passing the house of Governor McKean, up Third to Chestnut, along the latter to Sixth, thence to Market, and to Centre Square, where an oration was delivered by Dr. Michael Leib.

The *Philadelphia Gazette* of May 21st said, satirically, "This military procession, in celebration of a peace measure, in due time straggled out to that precise part of the common where in more wholesome days—when a gallows was a part of the regimen of our penal code—atrocious criminals were wont to be executed," and "the celebrated Dr. Leib mounted the platform."

In July news reached Philadelphia that "Hamilton was no more," and the particulars of the fatal duel created a profound sensation. The citizens met, Thomas Willing chairman, and William Meredith secretary, and passed appropriate resolutions. Arrangements were made for the tolling of bells on the next Sabbath. Shipmasters were asked to raise their flags to half-mast, and clergymen were requested to "preach upon the custom of dueling." Such citizens as "could consistently with their religious principles" were asked to wear crape for thirty days. One of the last resolutions was,—“In imitation of the pious example of the deceased in the closing scenes of his life exhibiting an illustrious proof of the benign influences of the religion of our forefathers, the citizens, in their respective places of worship, on Sunday next, will render their prayers of thanksgiving to God for His goodness in having blessed our nation with men of talent to discern, and of virtue to pursue, her safety, her honor, and her welfare, and especially for having thus long continued to us the eminently useful talents of the deceased.”

Members of the bar met,—Jared Ingersoll chairman; also the law students, John E. Hall chairman, both assemblies passing resolutions. A number of ministers met, resolved that they "were always opposed to dueling," and thought such prayers as suggested in the resolution above quoted "would be for various reasons inexpedient."

Philadelphia escaped the yellow fever this year. The Board of Health not liking the location of the City Hospital bought a lot "in Hickory Lane (Coates Street), one and three-quarter miles from the old court-house," and hidden from the view of travelers.

September witnessed a riot begun by several Spanish sailors, who stabbed and dangerously wounded William Barry, a young American sailor. His friends went to a Spanish house, and tore it nearly to pieces. Several persons were severely hurt during the riot.

Jan. 1, 1805, marked the practical completion and opening to the public of the Schuylkill Permanent Bridge after many difficulties and delays. Its corner-

stone had been laid Oct. 13, 1800, and many new problems had arisen in the course of its construction.

The winter of 1804-5 was one of great distress. It was stated that since 1780 there had not been as much suffering, want, and penury among the poor. In order to raise the means of relief, a meeting of citizens was held at the State-House, in January, at which committees were appointed to make collections. John Inskeep was chairman, James Milnor secretary, and Robert Ralston treasurer. They obtained contributions from the citizens amounting to ten thousand and eighty-three dollars and sixty-four cents, which were properly distributed. In this sum was embraced six hundred dollars obtained by a benefit given at the theatre. The female association opened a soup-house at the corner of Ninth and Cherry Streets, where soup was sold at two cents per quart. Unfortunate individuals incarcerated in the debtor's department underwent such privations that the grand jury indicted the keeper for neglect of his duty.

Nicholas Roosevelt had a contract to supply the city with water, but he sent a communication to the Councils in March, saying that he had lost forty-seven thousand dollars by his contract to build steam-engines. The watering committee complained that the engines did not furnish the quantity specified, and did not work evenly; disputes which followed lasted most of the year. The watering committee proposed in August to pay him ten thousand dollars for the extra power and for his right, title, and interest in the machinery. In the ensuing month negotiations were opened for the purchase of the unexpired lease of lots on the Schuylkill where the engine-house was erected. A writ was at last issued against Roosevelt, who locked the gates against the sheriff. That officer broke open the doors and delivered the engine to the watering committee, who put Frederick Graff in charge. The committee, in December, reported in favor of giving Roosevelt fifteen thousand dollars in compromise of all claims.

In March, Capt. Preble, of the United States navy, the gallant commander of the famous assaults upon the pirates at Tripoli, received a public dinner, tendered him by leading citizens of Philadelphia, at Mrs. Hardy's hotel. Thomas Fitzsimons and Gen. Francis Gurney presided, and much enthusiasm prevailed.

The famous "impeachment of the Supreme Court Judges" came to a final vote in the State Senate early in the year, and stood,—guilty, thirteen; not guilty, eleven; lacking the required two-thirds majority, the accused were therefore acquitted. But party feeling ran higher than before. The *Aurora's* head-lines were, "The common law everything, the Constitution nothing." It denounced the minority that had supported the judges, it accused lawyers as freedom-haters, and it called for a revision of the Constitution. Shortly after Duane, Dr. Leib, and others organized in secret

to prevent Governor McKean's renomination, and to agitate changes in the Constitution. In February they presented memorials for the latter purpose. Their platform was,—Senators elected annually; limitation of executive patronage; reforms in the judiciary; and the cheapening of justice. Early in March the "Constitutional Republicans" organized, with Dr. George Logan as president; Israel Israel, vice-president; Samuel Wetherill, Jr., secretary; and A. J. Dallas, J. B. Smith, Isaac Worrell, Samuel Wetherill, Jr., and Blair McClenachan as committee. The Anti-Constitutionalists then reorganized under the name of "Friends of the People;" Matthew Lawler, president, and James Carson and George Bartram, secretaries. Messrs. Carson, Clay, Lawler, Leib, Duane, Wolbert, and Bartram formed the committee; all had been warm supporters of McKean. Several of the Governor's vetoes, as also his interference in the case of Joseph D. Cabrera, a young Spaniard, charged with forgery, added strength to the discontented party. A caucus of members of the Legislature was held at Lancaster, and Simon Snyder had forty-two votes; McKean, seventeen; and Maclay, one. Messrs. Mitchell, Ferguson, and Boileau drew up a violent "Address to the People," setting forth McKean's "austerity and aristocratical habits," his "years of professional contention and domination in courts," his "ungracious distribution of offices among relatives," and his present intimacy "with those who had been his former libelers."

The entire document was highly characteristic of one of the most heated political campaigns that Pennsylvania had ever witnessed. The strongest charge it made was that the Governor had said, "There is a shameful and base prejudice now existing against lawyers, which proceeded from ignorance, for it was absurd to say lawyers were not the wisest and best men in the community." And then he said, "The memorial for calling a convention is a base libel, and the authors of it are rascals and villains, and the supporters of the measure are a set of stupid geese. The present Constitution was formed by a set of the wisest and best patriots that were ever collected; and shall a set of ignorant clodhoppers in this way overturn that Constitution formed by a set of gentlemen so extensively learned in the law? No! it never shall be. I will not suffer such a thing to take place." The charges made in this address were of too grave a nature to be allowed to rest without some attempt at explanation. Alexander J. Dallas addressed a letter to the Governor, asking him to explain the circumstances connected with the conversations which were referred to. The reply substantially admitted the truth of the charges.

The terms "clodhoppers" and "geese" immediately passed into the political controversies of the time, the Anti-Constitutionalists satirically adopting them, and losing no opportunity to keep alive the odium which such epithets must have excited.

The assaults of the Anti-Constitutionalists were largely directed against Dallas, who was stigmatized as the holder of three lucrative offices. Duane published a sarcastic pamphlet, "Samson against the Philistines." The officers of the militia, so high ran the tide of political feeling, even refused to pay the Governor the honor of a marching salute on the Fourth of July. The Federalists preserved entire neutrality for a time, though many were at last drawn into the controversy, chiefly on McKean's side, as he had been forced into the position of a conservative. When the votes were counted, Thomas McKean had a majority of nearly 5000 over Simon Snyder. In Philadelphia City and County McKean had 4100 votes, and Snyder 3893. The Senate and House were strongly for McKean. This result was caused by Federalist votes, they holding the balance of power. The Governor, thus vindicated, began separate libel suits against John Steele, William Dickson, Matthew Lawler, Thomas Leiper, Dr. Leib, Jacob Mitchell, and William Duane for various publications and utterances. Samuel Bryan was removed from the comptrollership, and Gen. John Shee was deprived of the flour inspectorship.

An important act relating to the opening of streets in Philadelphia passed the Legislature March 25th. It gave the Court of Quarter Sessions power to appoint twelve freeholders as "viewers," seven being a majority capable of laying out a proposed street. Another jury of twelve were to assess damages. The authority of the Councils over streets was enlarged, and the jurisdiction of the city was extended. In April the Board of Wardens of the port were granted a duty of four cents per ton on vessels clearing for foreign ports, to improve navigation on the Delaware River. Complaints were made of the pilotage charges and the stringency of the quarantine as impeding commerce. The wardens were granted authority respecting the building of wharves on the Schuylkill.

During the early part of the year there was great fear of fires, and the watchmen were ordered to examine the hydrants every hour during the night in cold weather, and to let the water run a moment from each to prevent freezing. If there was an alarm of fire a watchman in High Street was to notify the operators of the Centre Square engine, for which extra service he was "paid two dollars per year."

The anniversary of the evacuation of Philadelphia by Sir Henry Clinton, June 18, 1777, was celebrated by Col. Willis' Twenty-fifth Regiment, Capt. Marshall's "Volunteers," and Capt. Duane's new "Republican Greens." The militia Legion had commemorated the 4th of March by their usual parade and banquet of the officers.

The City Councils defeated the Dock Street Market project. Additional improvements were made at Southeast Square; a building there was removed and a water-course walled over. The University of Penn-

sylvania wished to erect a medical school building in this square, but permission was refused.

In Rembrandt Peale's studio in the State-House the plan of an Art Society was perfected some time during August. The building committee was George Clymer, William Poyntell, William Rush, John R. Coxe, and John Dorsey. This organization was incorporated March 17, 1806, as the "Pennsylvania Academy of the Fine Arts," and soon began exhibitions.

In August, Gen. John Victor Moreau, one of Napoleon's marshals, victor of Hohenlinden, banished from France for complicity in the Pichegru plot against Napoleon, came to Philadelphia, on his way to Morrisville, Bucks Co., where he resided for a number of years. Some time in December of this year a number of his friends and admirers tendered him a public dinner in Philadelphia.

The epidemic of 1803 returned again in this year, appearing in Southwark, between Shippen, Almond, and Swanson Streets, August 20th, when two persons were taken to the Lazaretto, and ten others reported sick. September 2d, the Board of Health, David Jackson president, William Binder secretary, began publishing names and residences of those taken sick. September 7th, persons were forbidden to remove from the infected district under a penalty of two hundred dollars. Any vessel which remained more than an hour at any Southwark wharf was not permitted to land elsewhere under the same penalty. September 9th the district as defined was between South Street and the navy-yard and west to Fourth Street, in which space seventy cases existed. The City Hospital was opened on the 8th, under the charge of Drs. Samuel Duffield, J. Church, and Joseph Parrish, with Samuel Goodman as steward. Two hundred tents were pitched at Rosemount, where many poor were kept out of the reach of contagion. Though the hospital was busier than in 1802, there being three hundred and fifty-nine persons sent there from September 27th to October 31st, of whom one hundred and seventy-two died, there was less alarm manifested in the city than in former years. At one time the board recommended the desertion of South Street from the Delaware to Fifth Street, in hopes of checking the spread of the disease, but the interval suggested

was too slight to be of much benefit. After October 1st the epidemic lessened in violence; bills of health were again issued after the 21st, and November 5th the board officially declared the fever at an end. From August 16th to October 26th nine hundred and forty-three deaths occurred in the city, but how many of these were from yellow fever is not ascertained. Southwark had reported six hundred and seventy-six cases, and the city and Northern Liberties reported one hundred and forty-seven cases. Later investigation showed that in July there were six vessels from the West Indies lying in quarantine down the river, and that Peter Young, Tobias Smith, and other persons living at Samuel Chrisman's, Southwark, had been boating, and had unlawfully visited these vessels.

The greatest mechanical improvement of the year

was that of Oliver Evans, whose efforts to manufacture steam-engines have been alluded to. In an article in *Poulson's Advertiser*, ten years later, he speaks of having suggested steam as a motor on land as early as 1773, and for boats in 1778. He adds,—

OLIVER EVANS.

"In the year 1804 I constructed at Philadelphia a machine (of my invention) for cleaning docks,—a heavy mud flat, with a steam-engine of the power of five horses in it to work the machinery. And, to show that both steam-carriages and steamboats were practicable (with my steam-engines), I first put wheels to it and propelled it by the engine a mile and a half, and then into the Schuylkill, although its weight was equal to that of two hundred barrels of flour. I then fixed a paddle-wheel at the stem, and propelled it by the engine down the Schuylkill and up the Delaware, sixteen miles, leaving all the vessels that were under sail full half-way behind me (the wind being ahead), although the application was so temporary as to produce great friction, and the flat was most illy formed for sailing, done in the presence of thousands."

tion, and the flat was most illy formed for sailing, done in the presence of thousands."

Before the boat was thus taken to the water, Evans exhibited it upon the circular road at Centre Square, as the following advertisement from the *Philadelphia Gazette* of July 13, 1805, shows:

"TO THE PUBLIC. In my first attempt to move the Orukter Amphiboles, or Amphibious Digger, to the water by the power of steam, the wheels and axletrees proved insufficient to bear so great a burden, and having previously obtained the permission of the Board of Health (for whom this machine is constructed), to gratify the citizens of Philadelphia by the sight of this mechanical curiosity, on the supposition that it may lead to useful improvements, the workmen who had constructed it voluntarily offered their labor to make, without wages, other wheels and axletrees of sufficient strength, and to receive as their reward one-half of the sum that may be received from a generous public for the sight thereof—half to be at the disposal of the inventor, who

pledges himself that it shall be applied to defray the expense of other new and useful inventions which he has already conceived and arranged in his mind, and which he will put in operation only when the money arising from the inventions already made will defray the expenses. The above machine is now to be seen moving round Centre Square at the expense of the workmen, who expect twenty-five cents from every generous person who may come to see its operation. But all are invited to come and view it, as well those who cannot, as those who can conveniently spare the money.

"OLIVER EVANS."

Even before this experiment was made, in September, 1804, Evans had proposed to construct a road-carriage for freight. He thought the engine would cost \$1500, the carriage \$500, and allowed \$500 for unforeseen expenses. He thought his carriage when built could carry one hundred barrels of flour at an average speed of two miles per hour, thus doing in two days (on the trip from Philadelphia to Columbia) the work that required the work of twenty-five horses and five wagons for three days at a cost of \$3304. The turnpike company refused to enter into a contract

OLIVER EVANS' STEAM-CARRIAGE.

with him. Evans then wagered \$3000 that he "could make a carriage go by steam on a level road faster than any horse," but found no takers; he also announced that he could build carriages to "run on a railway" at the rate of fifteen miles an hour. To show how well this shrewd genius, who fairly divides the honor of successful steam experiments with Fitch and Fulton, understood the entire subject we have only to quote from a letter of his some years later in the *New York Commercial Advertiser*. Parts of the passage have become almost classic because of their long-ago fulfilled prophecy. Said Mr. Evans,—

"The time will come when people will travel in stages moved by steam-engines at fifteen to twenty miles an hour. A carriage will leave Washington in the morning, breakfast at Baltimore, dine at Philadelphia, and sup at New York on the same day. Railways will be laid of wood or iron, or on smooth paths of broken stone or gravel, to travel as well by night as by day. A steam-engine will drive a carriage one hundred and eighty miles in twelve hours, or engines will drive boats ten or twelve miles an hour, and hundreds of boats will so run on the Mississippi and other waters, as was prophesied thirty years ago (by Fitch); but the velocity of boats can never be made equal to that of carriages upon rails, because the resistance in water is eight hundred times more than that in air. Posterity will not be able to discover why the Legislature or Congress did not grant the inventor such protection as might have enabled him to put in operation those great improvements sooner, he having neither asked money nor a monopoly of any existing thing."

Manufacturing enterprises continued to be established. The largest undertaking of the sort in this

year was the Seth Craige cotton-mill, or factory, at the old Globe Mills, Kensington. This favored location had formerly been the site of a flour-mill belonging to the Penns., and called "the Governor's grist-mill." It was easily reached by boats by the way of the Cohocksink Creek, also by roads from city and country. But there had long been an abundance of grist-mills, and the enterprising Mr. Craige, as has been stated, led the way in a new industry, his factory being the first extensive one of the kind in Pennsylvania. His first contracts were for "girth-web" for a saddlery hardware establishment at No. 110 Market Street. As time progressed the factory developed extensive business connections. It struggled through various trade depressions, and by 1816 was enlarged, then taking rank as the most extensive concern of the kind in the Union. Mr. Houston was then taken into partnership, but died soon after. The firm was then increased,—Thomas H. and Seth Craige, Jr., also John Holmes were admitted,—and the firm of Craige, Holmes & Co. invested over two hundred thousand dollars in new and improved machinery, manufacturing not only cotton goods, but also woolen fabrics and yarn.

Allusion has been made in the last chapter to the American difficulties with France, so threatening at one time that war was imminent, and peaceful traders armed for their own defense, particularly in the West India trade, found so lucrative by the hardy sailors of Maine and Massachusetts. Jefferson had, early in 1805, called the attention of Congress to the trade with the San Domingo revolutionists, urged to this by the protests of Gen. Turreau, the French envoy extraordinary. The carrying trade of the United States had increased to an extraordinary extent, never since equaled in degree, until Americans seemed about to take the commercial dominion of the seas from England herself. The cruisers of the warring nations, however, treated the "Yankee" vessels as fair prey, making unjust captures, and maltreating officers and crew, besides taking in their courts more stringent views of the "rights of neutrals." The difficulties with the French, though still existing, were overshadowed towards the close of the year by prospects of immediate hostilities with Spain. Leading ship-owners and merchants met in Boston, New York, Philadelphia, and other cities, and called upon the government for protection.¹ Spain had also allowed

¹ The merchant marine of Philadelphia in these times made a creditable showing, though the newspapers complained now and then of "commercial decadence." Ports along the Atlantic coast now seldom or never heard of were then rivals of Boston and New York. The following first-rate ships were in 1805 owned in the port of Philadelphia:

In the China trade—Ships "Woodrop Sims," Captain Hodgson, 500 tons; "China" (packet), Rosseter, 350 tons; "Bingham," Ansley, 340 tons; "Bengal," Cooper, 340 tons; "Oriental," —, 350 tons; "Pekin," Waters, 340 tons; "Dorothea," Hays, 450 tons; "Hebe," Otto, 350 tons. East India trade—"Rosseau," McLevan; "Montezuma," Ashmead, 270 tons; "William Penn," Daley, 350 tons; "Pennsylvania" (packet), 270 tons.

her officers to make military aggressions, and her refusal to ratify the convention of 1802, and fix the boundaries of Louisiana, excited public indignation. The President sent a message to Congress on the difficulties with Spain; it was read with closed doors, referred to a committee, and the report denounced Spain's conduct as ample cause for war. While these steps were being taken, public feeling grew greatly excited, and abundant offers of aid were sent to the government. In Philadelphia, a special meeting of

Antwerp trade—"Helvetius," Bower, 350 tons; "Commerce," Ray, 320 tons.

Marseilles trade—"Ocean," Gordon, 300 tons.

Leghorn trade—"Sally and Betty," Evans, 240 tons.

Liverpool trade—"South Carolina," Tubbs, 260 tons; "Liverpool," Quandall, 300 tons.

Lisbon trade—"Voltaire," Earl, 300 tons.

Amsterdam trade—"Little Cherub," Brewton, 240 tons; "Amsterdam" (packet), —, 370 tons.

London trade—"London" (packet), McDougal, 330 tons.

Bordeaux trade—"Union," Jacobs, 300 tons; "Zulema," Altan, 250 tons; "Bordeaux" (packet), Hedelius, 200 tons.

The owners of these vessels were Joseph Sims, Lewis Clapier, Willing & Francis, Savage & Dugan, Stephen Girard, Snowden & North, J. & R. Wain, Joseph Brown & Co., G. & H. Colhoun, W. Crummond, Morton & Wilson, A. Piesch, Fausat & Mann, and T. & L. Gilpin.

Beside the above, there were a large number of second-class ships, but staunch and strong, which undertook and performed extensive voyages. Some of these were as follows:

China trade—"Delaware," Moore; "China," McPherson; "Dispatch," Benner; "Mount Vernon," Kerr; "Ganges," Phillips; "New Jersey," Cooper; "Columbia," Dixon.

East India trade—"Benjamin Franklin," Weeks; "George Washington," Farris; "Monticello," —; "Fabius," Norris.

Bordeaux trade—"Mars," Wilson; "Charleston" (packet), Silliman; "Andrew," Watkin; "Sheffield," Cowper.

Amsterdam trade—"Fair American," Fraley; "America," Lelar; "Robert," Alcorn; "John Buckley," Clay; "Happy Star," Cox; "Swanwick," Penrose; "Atalanta," Tucker.

Antwerp trade—"Neptune," Scott; "Connecticut," —; "Diana," Mingle; "James," Skinner; "Philadelphia," Cushing.

Liverpool trade—"Rose," Hamilton; "Prosperity," Burk; "Bristol" (packet), Day; "Rebecca," Low; "Annawan," Holmes; "Hercules," Bradford; "Cleopatra," Arundel; "Pigeon," Collet.

London trade—"Columbia," Elder.

West India trade—"Active," Vernon; "Maria," Calvert; "Charles," Sites; "Louisiana," —; "America," Jones; "Three Sisters," Lillibridge; "Peace and Plenty," Roland; "Thomas Chalkley," Eldridge; "Mercury," Patterson; "Fanny," Kitchen; "Maysville," Ryan; "Clothier," Dandelot; "Two Brothers," Ellis; "Temperance," Reilly.

Geneva and Messina trade—"Matilda," Strong.

Leghorn trade—"Good Friends," Thompson; "Hannah," Yardley.

Tonningen trade—"Pittsburg," Brown.

Belfast trade—"Edward," Craig.

Londonderry trade—"Brutus," Craig.

New Orleans trade—"Cleopatra," Arundel.

Charleston trade—"William," —.

Ships for general freight or charter—"Sally," Hunt; "Margaret," Gardner; "Louisa," Wilson; "Columbian" (packet), Hunt; "Active," Stotesbury.

The owners of some of these vessels were T. & L. Gilpin, Barker & Ansley, M. Eyre, Jr., S. Meeker, J. Baker, W. & J. Steel, Vanuxem & Clark, Samuel Coates, Francis & Curwen, J. Hollingsworth & Co., J. W. Fousatt, Robert Bines, B. & I. Bobien, Nixon, Walker & Co., Dale & Rienholz, Stephen Girard, and William Brown. When we remember that there were many brigs and schooners also engaged in the foreign trade which were owned in Philadelphia, we may estimate that our commercial marine was in 1805 in a flourishing condition.

The arrivals from foreign ports in 1805 were 547; clearances, 617. Consters arrived, 1169; cleared, 1231; total, 3564. The tonnage in 1800 was 103,663 tons. In 1805 it was probably 110,000 tons.

the First Light Infantry, Capt. Francis Shallus, was held on December 22d, to consider the threatening state of public affairs.

Early in January, 1806, the citizens of Philadelphia marked their appreciation of the heroism of the American army and navy by splendid banquets at Vogdes' Hotel, January 2d and January 9th, to Gen. Eaton and Capt. Stephen Decatur. Eaton, of Connecticut, Revolutionary soldier at the age of sixteen, graduate of Dartmouth College, captain under St. Clair and Wayne in the West, American consul at Tunis, and ally of Hamet, fugitive bashaw of Tripoli, had led a band of four hundred adventurers, including but nine Americans, across the desert, and had captured Derne, after difficulties so great that his expedition ranks high on the list of soldierly achievements. Capt. Decatur was the hero of Tripoli, the pride and honor of the nation's navy, then unconsciously training for the coming struggle with England. At the dinner of January 9th, Capt. Bainbridge, Stewart, Shaw, and other officers of the navy were present. James Milnor presided; Joseph Lewis and Thomas Hale were vice-presidents.

A fire occurred January 21st at Howland's tavern, "near the Permanent Bridge," west side of the Schuylkill. The landlord, his wife, and four children were rescued, but their colored servant perished, and the building was reduced to ashes. Though the weather was excessively cold and the hour 3 A.M., upwards of five thousand persons hurried to the fire along the slippery streets, being very anxious about the safety of the bridge, but the wind rose, blowing from the west, and saved that structure. Another fire of unusual extent broke out on Dock Street, and by a curious coincidence on May 9th, the anniversary of the disastrous fire of 1791 in the same street. It began about 8 P.M. in a trunk-maker's shop on the north side, between Third Street and the Bank of Pennsylvania, and spread for two hours despite the efforts of firemen and citizens. The flames traveled from where they originated along Dock Street to Third, and up the latter street nearly to Chestnut. Eastwardly the fire was carried down Dock Street to Go-forth's Alley, and up the latter to Carter's Alley, and along Carter's Alley to a point near Third Street. Thirty-two buildings, about twenty of which were dwellings, were destroyed. Embers and sparks flew over a large area, setting fire to a three-story brick house on Front Street and to vessels at anchor in the Delaware. The strong wind carried them across the river, and the citizens of Camden were obliged to watch their roofs assiduously till the flames lessened. When the burnt district was rebuilt, Carter's Alley was extended to Third Street. A meeting was called at the City Hall for relief of the sufferers by the fire, many of whom were destitute; some had been injured by falling timbers and brick, one, Lewis Breimer, dying from his burns. John Inskeep presided, Thomas P. Cope was secretary, and sufficient was

raised to care for the sick and relieve the necessities of the destitute.

Manufacturing interests occupied the attention of legislators. In January the inventor, John Biddis, of whom mention has been made, was granted privileges in the nature of a lottery for selling rights to make potato-starch, sago, hair-powder, and shoddy, he having represented that the secrets were so simple that his only hope of remuneration was by this plan, and seeming to lack faith in making money in the manufacture of those articles. A more promising scheme was suggested in an address published in January by Walter Franklin, Archibald Binney, and Abraham Small, stating that the difficulty in selling goods would be lessened by establishing a central warehouse, where manufactures might be concentrated instead of being scattered about various markets. They proposed the establishment of a company "for the encouragement and sale" of woolen, linen, and cotton goods of home manufacture. Two months later this resulted in the formation of the Philadelphia Society for the Encouragement of Domestic Manufactures, and Stephen Girard was chosen the first president. There was evidently a growing desire to get rid of middlemen methods. Merchants were separating into wholesale and retail classes, and manufacturers also were adopting different business habits. Philadelphia was becoming a commercial metropolis. This year, too, the manufacture of flannel was commenced in Philadelphia.

February 1st witnessed the formal opening of the fine bridge over the Delaware at Trenton, built by Theodore Burr. Formerly passengers from Philadelphia to New York went by boat to Burlington and Trenton, thence by stage. But now the course of travel changed, and stages ran all the way. Turnpike tolls were high, and by October the stage-line owners raised the fare. Each stage paid \$5.50 in tolls between Philadelphia and New York. Four lines ran daily (except Sunday), the "Diligence" at 8 A.M., and the "Industry" at 9 A.M., charging \$5.50 per passenger. The "Mail Pilot" left at 10 A.M., fare \$8.00, and the "Mail," at noon, only carried six passengers, fare \$8.50. Each person was allowed fourteen pounds of baggage. Though the roads to New York were in tolerable condition, those to Baltimore were miserably cared for, and turnpikes were advocated. Meanwhile, and to avoid land carriage, a new packet line was established, with connection by stages. The boats left Paul Beck's wharf, Philadelphia, every week-day. At New Castle stages took passengers over the Peninsula to Court-House Point, on the Chesapeake, where connections were made with another packet line. The Delaware line had three boats, commanded by Capts. Milnor, Robinson, and Whildin; the Chesapeake line, of four boats, was commanded by Capts. Trippe, Taylor, Owens, and Ferguson. Wharves and warehouses were built at the termini of each route. Petitions continued to

reach the Legislature regarding the proposed Pittsburgh road by the Juniata route, and February 24th a company was given the right to incorporate and build a turnpike from opposite Harrisburg to Pittsburgh *via* Bedford. The shares were to be fifty dollars each. The subjects of internal improvement and connection with the West were treated of in various journals. A writer in the *Aurora* estimated that the cost of each trip by a wagon to Pittsburgh and back was two hundred and fifty dollars, which amount could be very much lessened by the construction of a good road. He suggested that wagons should be provided to run regularly to Pittsburgh, and depicted the advantages that would arise from the establishment of a line of packets on the Ohio between Pittsburgh and Louisville. At the latter place there would be a portage of two miles; and from here to St. Louis and New Orleans the water-course would be unobstructed. This writer foreshadowed many improvements that have since been made. He suggested the feasibility of a canal between Louisville and Shippingsport (now called Portland), to pass the rocky portion of the river at the falls of the Ohio, and the erection of ship-yards below the rapids.

In February also a company was incorporated to bridge the Schuylkill at Gray's Ferry. The height, after much discussion, had been fixed in General Assembly at seventy-five feet above low water. At that time the highest mast of the largest schooner owned in Philadelphia, the "Unity," was sixty-three feet, and so sixty-five feet was by many thought a sufficient height for a bridge. The interests of Gray's estate were carefully guarded, and two hundred shares of bridge-stock at one hundred dollars per share were ordered to be transferred for the franchise of the floating bridge and for toll-rights, roadway, etc. The enterprise seemed premature, and sufficient subscriptions were not obtained. March 31st, the upper bridge and the Lower Ferry on the Schuylkill were regulated by an act providing that the skipper of every vessel should blow a horn on crossing the Schuylkill bar, again near the Lower Ferry. The penalty for failing to open the floating bridge without delay was fixed at twenty-five dollars.

The judiciary system was altered by an act passed February 24th, and the Nisi Prius Courts established. Cases were no longer tried by the Supreme Court in banc, but only at Nisi Prius, and by one judge. There were two districts in the State, and the eastern one comprised the city and county of Philadelphia, and the counties of Bedford, Somerset, Westmoreland, Fayette, Greene, Washington, Allegheny, Beaver, Butler, Mercer, Crawford, Erie, Warren, Venango, Armstrong, Cambria, Indiana, Jefferson, Clearfield, and McKean. The court was to sit at Philadelphia on the second Monday of December and the third Monday of March. By the same act the courts of Quarter Sessions and Common Pleas were assigned to districts, the city and county of Philadelphia

being the first district. By act of March 1st the provisions of the mechanics' lien law, which were found beneficial in the city of Philadelphia, were extended to the county.

The Philadelphia Bank, which had agreed to pay the State a bonus of one hundred and thirty-five thousand dollars besides other inducements, found it hard to pay up their stock within the term allowed, and applied for an extension of the charter. The Assembly passed an act extending it until May 1, 1824, and the State reserved the right to, at any time, subscribe for stock of the value of two hundred thousand dollars.

Early in May the City Councils changed the method of assessing personal property, hoping to be able to relieve real estate of some of its taxation, and to reach property that had heretofore escaped. According to the new plan, two assessors were appointed for each ward, to ascertain, within their respective jurisdictions, property of the following descriptions: all wrought plate, merchandise, stock of any description, bonds and mortgages, coaches, chariots, phaetons, chaises, riding-chairs, other carriages, and horses, kept by any person for his or her own use, for the purposes of traveling or pleasure; and all offices and posts of profit, trades, occupations, and professions (ministers of the gospel of every denomination, mechanics, manufacturers, and schoolmasters, only excepted). The assessors, together with the treasurer and the city commissioners, were to value the property for what they thought it would sell for in ready money; and at their discretion rate the offices, occupations, and professions, having due regard to the profits arising from the same, and estimate the income of all persons who did not follow any trade, occupation, or profession. Provided, that household furniture in any one house was not to be taxed unless the valuation of the same exceeded eight hundred dollars. A tax of two hundred dollars per annum was also directed to be levied on theatrical entertainments, and fifty dollars per annum on all articles "used at any public show or exhibition, for which payment is required from those who use the same." These provisions were looked upon as very burdensome, and their existence was made a strong ground of opposition to the re-election of those members of the Councils who voted for the ordinance.

The Chamber of Commerce in May passed resolutions approving of a proposed exchange. The capital stock of "The Philadelphia Tontine Exchange" was to consist of one thousand shares, at not more than two hundred dollars each. It was intended that the shares should lapse, as the subscribers died, until the last Monday in December, 1845, when the whole estate should be sold and distributed among the survivors. As soon as seven hundred and fifty shares were subscribed for, the managers were to call a meeting and organize the institution. John Inskeep, Timothy Paxson, Henry Pratt, William Montgomery,

Robert Ralston, John Craig, John Clement Stocker, Thomas W. Francis, Daniel W. Coxe, James C. Fisher, John Stille, James W. Fisher, and Robert Waln were on the committee, but the project was not successful. Meanwhile James Kitchen, who kept the old City Tavern on Second Street above Walnut, which was now called "The Merchants' Coffee-House," proposed to satisfy the mercantile convenience by keeping it for the purposes of an exchange. William Renshaw, who had leased the elegant mansion-house of William Bingham in Third Street above Spruce, opened subscriptions for the purpose of maintaining the premises as "The Exchange Coffee-House." He proposed to keep a marine diary, a register of vessels for sale, accommodations for auctions, ships' letter-bags, etc. An attempt was made, after the failure of the Tontine enterprise, to obtain subscriptions to "The Philadelphia Exchange Company," fifteen hundred shares at one hundred dollars each, but this plan also was a failure. Renshaw soon found that "The Exchange Coffee-House" was not remunerative, and abandoning that part of his plan kept the same establishment as "The Mansion-House Hotel."

The difficulties with foreign cruisers, chiefly this year, with those of the English caused energetic appeals to the government. At a meeting of merchants and ship-owners of Philadelphia, held at the Coffee-House above alluded to, a memorial to the President and Congress was adopted. It was signed by Thomas Fitzsimons, chairman, R. E. Hobart, secretary, and in behalf of the whole by Joseph Sims, James Yard, John Craig, Thomas W. Francis, Thomas English, Robert Waln, Robert Ralston, W. Montgomery, Thomas Allibone, Manuel Eyre, Jr., Abraham Kintzing, George Latimer, Joseph S. Lewis, Philip Nicklin, Daniel W. Coxe, Chandler Price, Lewis Clapier, and Jacob G. Koch.

The "new doctrines" of the British Court were declared to be not only novel and hostile to neutral rights, but inconsistent with the former declarations of the ministry, and extraordinary in the time and manner of their annunciation. Complaints were also made of aggressions by Spain and violations of the treaties made by that power. The license of pirates and plunderers in the West Indies had become almost unbounded, "and the defenseless and unprotected state of our shipping exposes it to the most outrageous ravages of the daring and unprincipled."

Work upon the Delaware and Schuylkill Canal was suspended because of the slowness with which subscriptions were paid. The Susquehanna and Schuylkill Canal was also greatly delayed by financial difficulties.

The City Councils memorialized the General Assembly in regard to the powder-magazine at Walnut Street, Schuylkill, near the thickly-settled part of the city, and urged its removal. The Councils ordered that "each watchman should carry a tin trumpet to spread

fire-alarms." Later in the year there was a curious difficulty between the two Councils relative to the firing of guns during the holidays. Common Council desired the repeal of the law prohibiting their use at this season. Select Council wished the mayor to enforce that law, and, after a long wrangle, the subject was tabled.

First and last, throughout 1806, political questions were pre-eminent. A resolution was introduced in the Legislature in January by Holgate, of Philadelphia, who offered a resolution censuring Thomas McKean Thompson, Secretary of the Commonwealth, for a breach of privileges of the House, perpetrated while a committee was examining the accounts of Samuel Bryan. A resolution was attached declaring that it was the duty of the House to protect persons attending committees, and that Thompson's conduct was a breach of privilege. Sergeant and Milnor offered a counter-resolution declaring that the motion of Holgate was presented "in a manner novel, unprecedented, and extraordinary, and may cause the people of Pennsylvania to suppose that the House is arrogating powers vested by the Constitution in other branches of the government."

Holgate's resolution was lost. The Federalists, joined to the Governor's faction, had a majority in the House, and they defeated Duane, who had been a director in the Pennsylvania Bank. In July the Governor appointed Dr. George Buchanan, his son-in-law, as physician at the Lazaretto. Dr. Buchanan had for seventeen years been a citizen and resident of Maryland, not arriving in Pennsylvania until after the appointment was made. Such nepotism created a stir. The *Aurora*, a few months later, under the title of "The Royal Family," gave the following list of the persons connected by blood or marriage with the family of the Governor, who held office in the State, with their remuneration, viz.: Thomas McKean, Governor, \$5333.33; Joseph B. McKean (son), attorney-general, \$5000; Thomas McKean, Jr. (son), private secretary, \$400; Thomas McKean Thompson (nephew), Secretary of the Commonwealth, \$2150; Andrew Pettit (son-in-law), flour inspector, \$5000; Andrew Bayard (brother-in-law to Pettit), auctioneer, 2500; Dr. George Buchanan, of Baltimore (son-in-law), Lazaretto physician, \$2500; William McKennan (brother-in-law of T. McKean Thompson), prothonotary of Washington County, \$1000; Andrew Henderson (cousin to the Governor), prothonotary of Huntingdon County, \$800; William Henderson (cousin to the Governor), brigade-inspector of Huntingdon County, \$150; John Husted (father-in-law of T. McKean Thompson), clerk in the comptroller-general's office, \$850; Joseph Reed (a near relation of Pettit and Bayard), prothonotary of the Supreme Court, \$2500. Even before this list was published the *Aurora* was being sued by the Governor on three libel cases, and by Marquis D. Yrujo, another son-in-law, on three more charges. Before the close of July

Duane was the defendant in sixty or seventy libel suits, and kept the staid old city in a state of turmoil, wondering what he would publish next. Governor McKean turned out all the "friends of the People" from office, as far as possible, and gave a chief justiceship to William Tilghman, a Federalist. The progress of national events combined to render the local animosities in Pennsylvania more bitter. Burr, the arch apostate, overlooking the stormy political field north and south, deemed that State cohesion was rapidly decaying, and studied with greater zeal the region beyond the mountains. Some time in April Governor McKean added materially to the quarrel by attending the annual dinner of the St. George's Society, Philadelphia, at which a toast "To the King" was drunk. The "True Republicans," a few days later, at their annual meeting, adopted the following toast: "William Pitt, the common pest of mankind, and Thomas McKean, the pest of Pennsylvania, alike the admiration of the Sons of St. George and alike entitled to the *plaudits* of freemen."

The Tammany Society, at its meeting in May, "proceeded in great state to the wigwam, at Rowland Smith's, Spring Garden, bearing the general flag of the General Council of Sachems, the appropriate flag of each tribe, and the peculiar insignia of the society,—the great key, the bugle horn, the calumet, and the sheathed tomahawk." The affair was rendered more imposing by the appearance of a new band of music, composed of performers upon six clarionets, four flutes, two horns, two bassoons, one bass-drum, a psaltery, and some violins. Dr. Michael Leib was Grand Sachem. Among the toasts adopted was the following: "The Clodpoles of Pennsylvania: they scorn tyrants. May their next efforts be as successful in resisting them as they were in resisting Thomas McKean's friend, George III., and the Sons of St. George."

Dr. Leib declined a renomination to Congress, but was in October elected a member of the Pennsylvania Legislature, there to lead the opposition to the Governor. The Federalists and Constitutionalists (or "Quids") made a coalition ticket in the First Congressional District, but the regular Democratic nominees, Dr. John Porter, Jacob Richards, and Joseph Clay, were elected. Their candidate for sheriff, Frederick Wolbert, received the highest number of votes, but charges that 97 illegal votes had been polled led the Governor to interfere. He appointed John H. Brinton and Samuel Wetherill, of Philadelphia, Dr. Joseph Strong and Richard Renshaw, of Southwark, Manuel Eyre and Thomas Barnes, of the Northern Liberties, and Joshua Sullivan, of Frankford, commissioners, under the act of 1799, to investigate the vote for sheriff. They reported "that 91 illegal votes had been cast," and the Governor set aside the election, Gen. John Barker, the then incumbent, holding office till the 1807 election. The attacks of the enemies of the Governor grew so fierce that

his message, sent to the Legislature in December, contained pointed allusions to them.

The Governor also recommended a consideration of remedies for this evil, and suggested the passage of a law to compel every printer who assailed a citizen to publish his defense, also a registry of the names of printers and editors of newspapers and periodicals, and that whenever a grand jury should present a press as a public nuisance, the editor must be bound in sureties for his future good behavior, and the court be authorized to suppress the paper for a limited time. The committee to which the Governor's address was referred reported in the House a reply, general in its terms, in which no reference was made to the suggestions upon this topic. When this report came up for consideration, Dr. Michael Leib moved the adoption of a substitute which took strong grounds against the views of the Governor. This address then referred to the Constitution of the United States securing the liberty of the press, the odium excited by the sedition law, and it concluded with quotations from the inaugural speech of President Jefferson in favor of the liberty of the press. The House avoided a contest on the subject by postponing both the original address and the proposed substitute. According to modern views, the libel law was pretty effective as then administered. About this time the grand jury of the Mayor's Court indicted Duane for publishing a toast given at a celebration: "General Arnold and Governor McKean: both beans of one kidney."

On the 15th of November the regular Democrats celebrated their triumph, and also the new non-importation law, which prohibited certain manufactures from being sent abroad. It was an exceedingly stormy day, but the Tammany Wigwam meeting was a success. Dr. Leib presided, and the toasts were hailed with shouts and with salutes from artillery placed under shelter. Stephen Girard "gave a barrel of gunpowder" towards this noisy indorsement.

Some time during 1806 a new scientific organization, the "Philadelphia Mathematical Society," was established, Robert Patterson, president; Samuel Wylie, secretary; Joseph Clay, treasurer; and Messrs. Clay, Wylie, and Delmar, corresponding committee. It was decided to give premiums for the best treatises on mathematical subjects, and early the next year they announced an offer of fifty dollars to the author of the best system of practical surveying, and thirty dollars to the author of the best essay on the theory of arches to support weight or pressure.

The business outlook was dark indeed at the beginning of 1807. Everything depended upon commerce, but Trafalgar had been fought and Napoleon had issued his Berlin decrees. The mighty whirlwind that had toppled thrones into the dust was surging in wider and yet wider circles till not a fishing-smack off Gloucester, not a factory in Pennsylvania, not an industry of the active American people, on land or sea, but was threatened with immediate de-

struction. Rates of marine insurance rose to ruinous heights, commercial enterprise seemed paralyzed. Throughout the year impressments and unwarrantable aggressions, such as the affair of the "Chesapeake," caused the greatest indignation against England, and every current set steadily towards war. One after another hopes of negotiation were destroyed, and the vexatious, harassing, indirect war of regulations calculated to hamper and ruin our commerce went on with unabated vigor. Congress endeavored to retaliate, and the country was slowly prepared for defense. These national issues tinged all public meetings, and indeed predominated everywhere until the actual outbreak of hostilities.

Philadelphia's income suffered with her commerce, and many needed improvements were delayed. In January, 1807, persons living west of Broad Street petitioned to be separated from the eastern part of the city, and exempted from the Councils' taxes. They wished to tax themselves for paved streets, for pumps, and for other improvements long and grievously denied them. Their memorial said, "Our situation now is deplorable. Our streets are worked into a mere quicksand; our footwalks are destroyed, so that communication with the market seems almost impossible; and we are insulted by the calls of the tax-gatherer for moneys from which we derive no benefit." A communication upon the subject in the *Aurora* stated that in 1806 there had come up the Schuylkill one hundred and thirteen vessels, with cargoes of plaster, flour, lumber, etc., to the amount of four thousand two hundred and fifty tons, which had to be transported over the miserable roads of that section. The City Councils issued a counter-memorial recounting what they had done in previous years for that section, calling attention to its sparsely-settled condition, whole squares being without a house or fence. In conclusion they pleaded lack of means to do all that was desirable, and asked leave "to tax auctions, concerts, and theatrical exhibitions," but this request was denied. The city commissioners a month or so later were ordered to pave High Street from Ninth to Twelfth "to a width of eighteen feet on each side, measuring from the curbstone." The middle was filled in with earth for a roadway. A license of twenty-two dollars per year was required upon private street-lamps. The Court of Quarter Sessions was applied to for leave to bridge Minnow Run, in Schuylkill Front, north of Market Street.

In April the Philadelphia and Lancaster Turnpike Company was made, by act of Assembly, a perpetual incorporation.

A new bank, the "Farmers' and Mechanics'," was formed in February; capital stock \$700,000, in shares of fifty dollars each. When, some time later, they applied for a charter, though offering a large bonus to the State, their petition was rejected.

This Legislature incorporated the "Philadelphia Society for the Encouragement of Domestic Manu-

factures," established, as already described, in 1803. Their capital stock was \$10,000, in two hundred shares, and for five years they were allowed to make advances on goods stored in their warehouse at No. 6 North Third Street. Here the society, in June, advertised silk-worms for sale, and did all they could to encourage sericulture, probably one of the earliest efforts made to this end in America. The society also established a floor-cloth factory on Chestnut Street above Twelfth, in a building afterwards called the Gothic Mansion. Two looms were placed in it "for making a cloth of strong quality, between sail-duck and Russia sheeting." The largest loom would make the stuff seven yards wide, and one man could weave from thirty-five to forty-two yards in a day. The proprietors advertised to sell the best quality at two dollars per square yard. They also gave notice that they were ready to take "worsted carpets, worn or otherwise, even if unfit for use, if neatly darned, so as to be flat and free from lumps or holes," and "ground" them on one side, and without ornaments, for seventy-five cents per square yard. Carpets, it was announced, were "*coated for mourning*" in four days, at thirty-seven and a half cents per square yard. About this time Robert Gibbs established a fulling-mill upon the banks of the Schuylkill, about two miles from the city, near the Upper Ferry, where "all colors" were dyed on silk, cotton, and linen, finished in the same manner as those imported from Europe; and John Harrison established an important business, having succeeded in making oil of vitriol.

Some time in February an alarm over an incendiary fire in "Budd's Alley" caused official correspondence between Mayor Wharton and the Councils, and five hundred dollars reward was offered for the capture of the villains. Anxiety to further protect the city continued for some time. In November the "Union" and "Hand-in-Hand" fire companies urged additional protective measures, and also offered the city a bell. Common Council decided to hang it in the City Hall cupola, but Select Council refused to accept the gift, and it was presented to St. James' Episcopal Church, where it yet remains. This bell had had a checkered career. In 1750 the fire companies gave it to the academy on Fourth Street, and it passed into the hands of the university, but when that institution was removed to Ninth Street the authorities returned the bell to the firemen.

Military elections, pledges of aid to the government, patriotic meetings and addresses were the most prominent features of the summer of 1807 in Philadelphia. At the election late in June, Michael Bright was elected brigadier-general of the First Brigade, and Dr. Michael Leib brigadier-general of the Second Brigade. Hugh Ferguson was elected colonel of the Eighty-fourth Regiment; Jonas Symonds, of the Fiftieth; — McLloyd, of the Twenty-eighth; William Duane, of the Twenty-fifth; Daniel McCaraher, of the Twenty-fourth; Philip Lowry, of the Forty-

second; John Thompson, of the Sixty-seventh; Robert Kennedy, of the Seventy-fifth; John Northrop, of the Eightieth; George Fagundus, of the Eighty-eighth; Samuel Hergesheimer, of the One Hundred and Fortieth.¹

June 28th, intelligence of the "Chesapeake" outrage reached Philadelphia. The story is a familiar one. The British man-of-war "Leopard," supported by the frigate "Melampus" and the seventy-four "Bellona," fired into the "Chesapeake," June 23d, outside of the Virginia Capes, killed four of her crew and wounded eighteen, and seized three men who were claimed as deserters. The nation felt humiliated beyond expression, and a wave of intense indignation swept over the country. Patriotic Philadelphia was not last to denounce the affair. A meeting held July 1st in the State-House yard, Matthew Lawler presiding, Joseph Hopkinson secretary, resolved to support the government, and pledged themselves that the citizens of Philadelphia would discountenance all intercourse with the vessels of war belonging to Great Britain, and would withhold from them all supplies or assistance that might be necessary to their aid and subsistence. The Committee of Correspondence appointed to carry out the objects of this meeting was composed of Matthew Lawler, Charles Biddle, Paul Cox, David Lenox, Thomas Forrest, Richard Dale, Walter Franklin, George Clymer, Michael Leib, Thomas Leiper, Francis Gurney, James Engle, Joseph Hopkinson, George Bartram, Edward Tilghman, William Linnard, and Michael Bright.

The next day the Philadelphia Militia Legion offered its services to the government, and they were accepted. The Legion at this time contained only eight hundred and sixteen men, and recruiting was recommended. The addition of *pikemen* was suggested by Gen. Shee, with esponsions for officers of the line. A number of volunteer companies were organized, one of which bore the cumbrous title of "The Young Men of Correct Democratic Principles." The President called for 100,000 militia, and Pennsylvania's quota of the draft was 15,600, of which Philadelphia City and County were required to furnish 88 artillery, 177 cavalry, and 1500 infantry. Gen. John Shee was superseded in the command by Gen. John Barker, dubbed by the *Aurora* "Maj.-Gen. Nightcap," and in August he called upon Gens. Bright and Leib for the required contingent. His address on this occasion was characterized by the *Aurora* as "a piece of rhodomontade." In December the First Brigade paraded two thousand uniformed men, and the County Brigade had three thousand in line.

¹ The numbers of these regiments were according to the military order, which did not give consecutive numbers to the regiments of each brigade. The militia were, by act of April, 1807, to consist, in city and county, of one division in two brigades. Each brigade was to contain four or more regiments of eight companies, of from sixty-four to one hundred men each. Volunteer companies must contain at least forty men.

State and local politics were in their chronic condition of excitement. The virulence of the opposition to Governor McKean took every conceivable form. Representatives Leib and Engle desired a committee to investigate his conduct; but the motion was lost, January 31st, by vote of thirty-nine to thirty-three. His enemies, however, rallied to another assault, this time upon his conduct in setting aside the election for sheriff of Philadelphia. In this case, by vote of forty-three to thirty-eight, the committee of inquiry was ordered. March 19th, Governor McKean, through Joseph B. McKean, attorney-general, attempted to have Michael Leib and William Duane arrested for conspiracy, but the Supreme Court refused to grant the warrants, Leib being a member of the Legislature.¹ The committee reported seven charges against the Governor, and in April they were, by vote of forty-three to forty-one, referred to the next Legislature. A bill was then passed to prevent Moses Levy, recorder of Philadelphia, from practicing in any court, but was promptly vetoed, and failed to pass over the veto. In May, Thomas McKean, Jr., who had the previous autumn challenged Dr. Leib, was arrested, and in October the grand jury found indictments against both young McKean and his second, Maj. Dennis. Indictments against Leib for accepting the challenge were ignored. The friends of Simon Snyder, long an aspirant for the governorship, in February persuaded John Binns, proprietor of the *Northumberland Argus*, to remove to Philadelphia and establish a newspaper. It appeared May 27th, *The Democratic Press*, as a tri-weekly, but within a month was published daily. This was the first newspaper in America which bore the title *Democratic*, and Duane, who was at first friendly to the enterprise, thought the name impolitic. By September Binns had lost this good will by advocating a scheme of Nathaniel B. Boileau, of the Legislature, and by favoring district meetings instead of county meetings for nominations. Binns was thereupon expelled from the Tammany Society, and from the "Society of the Friends of the People." Duane had his usual crop of libel suits to gather,—Daniel Clark, Congressional delegate from New Orleans, Marquis Yrujo, and Joseph Lloyd sued him for various alleged libels. He was nominated in the fall to the State Senate, "hoping," said the *Gazette*, "to be made president of the Senate and *pro tem*. Governor should the proposed impeachment succeed." But the union of Federalists and "Quids" was too much for Duane. They elected Edward

Heston, defeated Wolbert, sheriff nominee, electing Donaldson, his old opponent, and were generally victorious in the autumn elections in city and county.

The enmity between the opposing parties was nowhere more manifest than in the consideration of national affairs. They battled long in the Legislature over "an address to Thomas Jefferson" begging him to be again a candidate. It was finally passed, but he transmitted a firm refusal. In December in the State Senate it was resolved,—

"That the late outrages committed on our sovereignty as a free and independent nation have not, perhaps, been exceeded in the history of civilized nations;" and that a joint committee should be appointed to address the general government, with assurances of our support and co-operation in such measures as Congress may think proper to adopt. On the 31st was presented the draft of an address to President Jefferson, declaring "that warlike reparation should be demanded" of Great Britain, and pledging the Legislature to sustain the measures of the general government to effect that object, "at the hazard of everything dear and valuable to man." The consideration of this address came on in January, 1808. A motion was made in the House to strike out the words, "Resolved to die like freemen. Rather than submit to become vassals of Great Britain, they are ready to offer up their persons and their fortunes on the altar of the country." This was lost by a vote of thirty-two yeas to fifty-four nays. Several amendments proposed by the Federalists were lost, and the address was eventually carried by a vote of sixty-one yeas to twenty-five nays."

A few other events of 1807 deserve mention. John Dunlap, Thomas Leiper, Matthew Shaw, Stephen Decatur, and John Singer were appointed commissioners "to sell the powder magazine at Walnut and Asheton Streets" (before reported as dangerously near other buildings), and to build one less than a mile from the city, to hold ten tons of powder, and one or more over four miles distant, to hold larger quantities.

Late in November Daniel Clark, of New Orleans, a noted merchant and Congressional delegate, was given a dinner at Renshaw's Mansion House hotel. Thomas Fitzsimons presided, assisted by Robert Wharton, and Messrs. Jackson Pratt, Biddle, and Bayard were managers. Clark had helped to save the officers, passengers, and crew of the ship "Argo," of Philadelphia. "The wreath of honor belongs to him who saves his fellow-men" was the first of the seventeen toasts.

Some Federalist merchants of Philadelphia appealed during 1807 to Congress for the repeal of the non-importation act, and were charged with British sympathies. December saw the passage of the embargo act against all vessels in the United States destined to foreign ports, and "the grass began to grow on the wharves, and ships rot at their moorings." The issue had been raised over which parties fought for many weary months. Within a few weeks after the embargo act was passed the British Orders in Council of November and Napoleon's Milan decrees reached America, and deepened the feeling of gloom in commercial circles.

On the last day of 1807, resolutions were introduced into the Councils suggesting that, since Congress was dissatisfied with the miserable accommodations of Washington City, and since resolutions favoring the

¹ The *United States Gazette* of March 30th copied a paragraph from the *Lancaster Journal* in reference to this application to the effect that Duane said, "If the warrant had been granted, in less time than twice twenty-four hours we would have had seven hundred men at Lancaster. The thunder and blitzen of the Northern Liberties, the wild Irish of Irish-town, and all the butchers of Philadelphia would have turned out. We would have pressed all the wagons and carriages in Philadelphia, and made the cartridges and cast the balls in the wagons coming up."

removal of the seat of government would soon be offered, a committee ought to be appointed to see what provisions Philadelphia could make. The county court-house was offered for this purpose, and a very lively debate in Congress followed, but the removal bill was lost by a few votes.

The Board of Health in this year began the City Hospital on a lot south of Coates Street and east of Schuylkill Fourth Street, intended for receiving patients from the city and suburbs who had malignant fever. The main building was fifty feet front and forty-two feet deep, and was three stories high. There were wings two stories high, and each one hundred and eight feet long by twenty-two feet deep. Piazzas extended the whole length, inclosed with Venetian blinds. The accommodations were for four or five hundred patients, and the building was ready for occupancy some time in the following year.

CHAPTER XXII.

FROM THE EMBARGO TO THE CLOSE OF THE WAR OF 1812-15.

THE injurious effects of the embargo act, that remarkable experiment never before tried by any nation, began to be felt very early in 1808. January 16th the discontented, hungry, and penniless sailors then in Philadelphia assembled, and marching to the City Hall, under the folds of the Stars and Stripes, made an appeal to the mayor, Robert Wharton, and respectfully wished to know what they should do. He replied that they "constituted an unlawful assembly," and ordered them to lower the flag under which they had marched through the streets. Having done this, he spoke to them further, expressed his pity for their condition, and said it was not in his power to give them immediate aid; that the government thought the embargo was necessary, and that they ought to disperse peaceably, but added that the Chamber of Commerce had the matter under consideration. The sailors appear to have gone home quietly to await events, and the Chamber of Commerce hastening its deliberations, appointed a committee of five, Thomas W. Francis, Robert Ralston, Manuel Eyre, Samuel Keith, and Daniel Smith, who reported in favor of assisting the distressed sailors. Subscriptions were taken up among the merchants in their behalf. In the State House of Representatives Thomas P. Cope tried to obtain an appropriation of five thousand dollars, but failed. For a time, however, they were cared for, but by April subscriptions ceased, times were hard beyond conception, and men really wealthy had little ready money. The sailors, after further appeals, went to other places, many of them to Halifax, Nova Scotia, where they entered the British service, and helped to fight England's battles

on the high seas. Thus our commercial policy lost us many a strong arm that would gladly have been found on the side of the United States when, four years later, the long-smouldering fires burst forth into flames of war. The embargo act met with the most violent opposition in many parts of the country, and infractions of its provisions became frequent, particularly along the New England coast, also by way of Lake Champlain. Satires and caricatures of the administration became numerous and bitter. One of the most remarkable ones was "The Embargo," a poem written by William Cullen Bryant, then a lad of thirteen, and was aimed at what he called the "terrapin policy" of the government. The precocious youth wrote,—

"Curse of our nation, source of countless woes,
From whose dark womb unreckoned misery flows,
Th' embargo rages like a sweeping wind,—
Fear lowers before, and Famine stalks behind."

It was found necessary to pass supplementary acts to prevent evasions of the law, and increasing its stringency. Petition after petition was sent to Congress, but without avail. Propositions to repeal the act and let merchants arm their own vessels were voted down. The leaders of the Federalists denounced the whole policy; they said that America sadly over-rated her own importance if she supposed that by holding herself aloof from commercial intercourse with the world she was hurting any one but herself. It was in vain that Quincy, of Massachusetts, Dana, of Connecticut, Gardiner, of New York, and Philip Key, of Maryland, led the opposition. February 20th, in Congressional debate, Gardiner exclaimed that the embargo was but a cunning scheme to aid France; it was "forging chains to fasten us to the car of the imperial conqueror." Meanwhile, however, the unjust "Orders in Council" of England, which had chiefly roused the wrath of America, had been attacked by a powerful minority in England itself. Lords Erskine, St. John, Lauderdale, and Holland made unanswerable arguments against the legality and the expedience of such measures; petitions from merchants of Liverpool, London, and many other cities were presented and argued for by the famous Henry Brougham, afterwards peer and lord chancellor. One eminent merchant, Alexander Baring, in his able "Inquiry," said that more than three-fourths of all vessels engaged in commerce in America had suffered from aggressions of British cruisers. But the classes of intelligent thinkers on both sides of the Atlantic, who urged the total and immediate abandonment of the policy of orders, decrees, and embargoes, failed to convince the majority. In March, Napoleon issued his Bayonne decree, "directing the seizure of all American vessels, because none could be lawfully abroad since the passage of the embargo act." To appeals from America the surly conqueror returned only a disdainful silence; to similar appeals the English ministry answered with

bitter sarcasm, and the charge that the embargo was intended to aid France.

Throughout the States of the Union the influence of the embargo was felt, during the spring and summer of 1808, in every department of trade, in politics, social life, and industries of every sort. The approaching Presidential election roused all parties to put forth their strongest efforts. Madison, Monroe, and Clinton were candidates in the Democratic party. The Federalists nominated Pinckney and King, but Madison and Clinton were elected. Meanwhile the agitation continued to increase. In September letters which the officers of merchant ships lying idle at Philadelphia had written to President Jefferson and his courteous but firm reply were published. The officers said that they were out of employment, and were without financial resources; the President said that the embargo was for the good of the country, was necessary, and was successful. The captains and first, second, and third mates of a large number of vessels then met at the White Horse Tavern, Capt. Richard O'Brien presiding, and Capt. Samuel Peacock as secretary. They showed the most patriotic feelings, resolving "not to adopt political measures, but to leave each person to exercise his own judgment." They resolved further that British and French depredations upon commerce and persons on the high seas demanded the adoption of wise measures; that the only alternatives were the embargo or war; that America was in an unprepared state for the latter measure; that seventy thousand citizens and nine-tenths of the commercial capital of the nation had been exposed to the depredations of the enemy; that the embargo laws were the least of these evils. The Legislature of Pennsylvania in December adopted resolutions declaring against the measures of Great Britain and France. An amendment declaring that the embargo was approved as a surety for the maintenance of the freedom of the ocean was carried by a vote of seventy-two to twenty. A protest was filed by nineteen members declaring that they did not think that the embargo was a measure of wisdom, and that they could not consent to express unlimited confidence in the wisdom or patriotism and integrity of any administration. On the 12th of December a motion was made by Banks, declaring that the embargo was actuated by the purest patriotic views, "yet inasmuch as certain evils, which it is expected will be partial in duration, do exist—to wit, the great scarcity of the circulating medium in almost all parts of the commonwealth, by reason of the reduction of prices of staple commodities—that a committee be appointed to consider what measures ought to be adopted to stop the distress and sale of property for the payment of debts in this commonwealth." This resolution was adopted. Similar resolutions supporting the principle of the embargo were passed by a majority of the State Legislatures, and aided to support the adminis-

tration through the partisan conflicts, the struggles, animosities, assaults, and various manœuvres that characterized the second session of the Tenth Congress. Eminent lawyers of the New England States began to declare that the act was unconstitutional, transcending the powers delegated by the States to Congress. "The arguments used by the Virginia nullifiers and secessionists in 1798 against the alien and sedition laws were used in New England in 1808 against the embargo laws." The measure which, it was believed, would starve English manufacturers and West India plantation-owners into recognition of American rights brought far greater evils upon our own industries than it inflicted elsewhere. Yet here, as in most economic experiments on a large scale, there was another side to the story. Some of the results of the embargo act were highly beneficial to the United States. It greatly helped the development of many industries; it stimulated inventive genius, and hastened the progress of manufactures to a degree before unknown. Importations of foreign goods were necessarily stopped, the energies of a restless and ingenious people were forced into new channels. In October the *Aurora* said in justification of the administration,—

"The embargo has built, or nearly built, ten thousand houses in this city. The embargo has erected two manufactories of shot in this city, which forever secures the circulation at home of about two hundred thousand dollars, hitherto sent abroad to pay for shot. For shooting birds alone we sent two hundred thousand dollars abroad. Philadelphia now, from the two towers erected for casting patent shot, can, after supplying all America, supply all Asia besides.¹ . . . We have two manufactories of red lead already established, whose capacity is competent to supply the whole country with red lead and with litharge. A manufactory of white lead is also going on."

Early in the year the Philadelphia Manufacturing Society was established, with a capital of fifty thousand dollars in one thousand shares. Israel Israel, Elisha Gordon, Tench Coxe, Mathew Carey, William Y. Birch, A. Philson, David Jackson, Samuel Wetherill, Jr., and Joseph Jones were the managing and subscription committee, who, in April, published an address saying that they meant to use water-power and erect buildings and machinery for making cotton, woolen, and linen cloths and other goods. In July the "Premium Society" offered premiums in money for broadcloths, fancy cloths, dressed flannel in imitation of Welsh, flannel of cotton-chain filled in with wool, the best cotton goods twilled and raised on one side to imitate flannel; for the first thread-mill set up to make gray and colored thread; for cotton cloth suitable for clothing of working persons; for the best sheeting of linen chain and cotton filling; for the best imitation of Russia iron sheeting, and for

¹ These shot-towers were both completed about the same time. On the 20th of October, Bishop & Sparks advertised that they were ready to furnish American patent shot at the factory, in Southwark (it was on the north side of Carpenter Street, between Swanson and Front), or at No. 49 South Wharves. On the 27th, Paul Beck advertised that he had erected "a patent shot-factory, upon as large a scale as any in Europe." This factory was situated between Arch and Race Streets and Schuylkill Front and Second Streets.

Raven's duck. It turned out that there was no competition for more than a few of these premiums. Col. David Humphrey, of Connecticut, "importer of one hundred merino sheep," received an award for the best piece of broadcloth. Premiums were awarded to the managers of the almshouse and of the house of employment in Philadelphia for the first thread- or throwing-mill set up, to Daniel McGinnis for cotton shirting, to Stoddart & Gilbert, of Connecticut, for cotton cloth, and to the managers of the almshouse for cotton sheeting.¹

The improved prospects of industry were celebrated by the manufacturers and mechanics of Philadelphia, November 17th, by a dinner, which was given in the room formerly occupied by the United States Senate, at the southeast corner of Sixth and Chestnut Streets. Col. Humphrey, of Connecticut, was present. John Dorsey, president of the festival, appeared in a suit of American broadcloth made from merino fleece. The vice-presidents were Abraham Small, John Harrison, Samuel Smith (currier), John Miller, and Joseph Strong. A toast was drunk, "The Best Mode of Warfare for our Country—the artillery of carding and spinning machinery, and the musketry of shuttles and sledges." In the State House of Representatives, in December, Gordon moved that a bounty ought to be paid by the State for every full-blooded merino ram and ewe, and for full-blooded rams of the Leicester breed, which might be brought into the commonwealth in the next ten years; that sheep ought to be exempted from taxation: that one dollar per head for each sheep owned ought to be deducted from the valuation of the property of such owner previous to assessing the value of the same for tax purposes; that ten sheep ought to be secure thereafter to every person from attachment or execution for debt; and that any military company clothed in an entire uniform of homespun cloth should be completely armed and accoutred at the expense of the State. This year also saw the secure establishment of the manufacture of artificial mineral waters. Messrs.

Cohen & Hawkins had begun it in 1807, at No. 38 Chestnut Street, imitating seltzer, soda, Balston, Saratoga, and Pyrmont. In 1807 they also tried to establish a company, the "Philadelphia Mineral Water Association," capital twenty thousand dollars in four hundred shares, but failed in the scheme, and dissolved partnership.

The value of the waters was certified to by Drs. Benjamin Rush, Thomas Parke, William P. Dewees, John Monges, John Syng Dorsey, René La Roche, James Mease, Philip Sing Physick, Adam Seybert, and Isaac Parrish. Cohen carried on the manufactory in 1808 at No. 31 South Second Street, afterwards at No. 35 South Second Street, and later in the same year at Dock and Second Streets. The water was furnished from fountains or in bottles; and during 1808, George Shaw, at No. 98 Chestnut Street, Robert Harris, at No. 196 Market Street, and perhaps others, supplied it to customers.

Allusion has been made to national politics and to the excited condition of local and State politics also. The entire year 1808 was marked by deeply interesting events in Pennsylvania politics. The stubborn and aristocratic old Governor McKean, as soon as the Legislature assembled, was greatly assailed by his enemies. The committee appointed to investigate his conduct made their report, and sustained most of the charges made against him. In regard to the appointment of Dr. George Buchanan as lazaretto physician, the report stated that he had been an inhabitant and a citizen of Maryland for seventeen years preceding his appointment in Pennsylvania, and that his commission bore the date of July 4, 1806, three or four days before his arrival in this State. Concerning the practice of stamping public documents, the committee said, "The fashion which has been introduced by the Governor of having his name stamped upon the evidences of property by means of a *fac-simile*, and that, too, before they are completed by the proper officers and passed through the necessary forms, is calculated to produce endless strife and contention, and to render uncertain the tenure of property conveyed by the State."

In reply to this report, and to the accusations generally urged against him, the Governor sent a long communication to the Legislature justifying or explaining the circumstances complained of. In regard to the appointment of Buchanan, it was argued that the position of lazaretto physician was not a county office, and that it was not within the prohibitions of the Constitution. Upon the charge of "stamping" his name, he said that the charge seemed "to be predicated upon a supposition that there exists some constitutional rule or some statutory direction requiring the use of a quill dipped in ink to legitimize the Governor's signature when affixed to any official document. But all that can be gathered from the Constitution on the subject is the use of the word 'sign' when the Governor approves a bill or grants a

¹ The *Aurora* of November 15th contained a list of the principal manufactories in Philadelphia, as follows: "John Dorsey, Chestnut Street above Twelfth (Gothic mansion), floor-cloths and carpets; John McAnley (near the permanent bridge), ditto; John Thorburn & Co., North Third Street, printed calicoes; John Hewson, Jr., Third Street, calicoes and pocket-handkerchiefs; W. E. Lehman, W. E. Smith & Sons, South Third Street, Windsor and fancy soaps; Dr. Joseph Strong, South Second Street, white and red lead, litharge, etc. (The factory was at No. 486 North Third Street, opposite the Globe Mills.) Binney & Ronaldson, South Street, letter-founders; Harrison & Co., South Second Street (factory at South Street wharf, Delaware); Thum & Bitters, South Third Street, ditto, glassware, bottles, etc.; Paul Beck, Bishop & Sparks, shots; R. Hovenden & Co., South Second Street, red lead; Dr. Smith, Second Street, annatto; Joseph Lehman, Market Street, refining camphor; Capt. Towers, twine, bagging, thread, etc." To these may be added the Mays Works of Oliver Evans & Co., on the angle bounded by Ninth Street, Wood Street, and the Ridge road, south by Vine Street, which were extensive, comprising an iron-foundry, pattern-shop, steam mill for turning and boring heavy iron and grinding plaster, and for making machinery for steam-engines, and for manufacturing wool, flax, cotton, etc.; a playing-card manufactory, by Thomas De Silver, No. 152 South Sixth Street.

commission; and although many acts of Assembly mention the Governor's signature, and sometimes require that he shall *sign* particular instruments, the form of the signature and the manner of signing are nowhere designated and prescribed." The Governor then proceeded to argue that a *fac-simile* stamp may be a signature, that it is not more susceptible of forgery than a written one. "Deprived of the use of both his hands by a sudden and severe disease, it is inconceivable in what other mode the attestation of his name could be given to a public document." To the reception of this protest the enemies of the Governor objected. When first received the House refused to place it on the journal by a vote of forty-two ayes to forty-three nays. But this vote was soon changed by the defection of one of the anti-McKean party, and the protest was therefore inserted by a vote of forty-three to forty-two. Since a majority for impeachment could not be obtained, and since at the Democratic caucus at Lancaster soon after Simon Snyder was nominated for Governor, the McKean fight was dropped by all parties. Duane and Leib were not enthusiastic over Snyder, and said that a "junto," or, as we should now say, a "ring," controlled him for selfish purposes. At this time the Pennsylvania Democrats were divided into two great parties, the "Friends of the People" (Leib and Duane) and the "Society of Independent Democrats" (Boileau and Binns). The Federalists again nominated Ross, of Pittsburgh; the "Quids," or Constitutional Democrats, John Spayd. "Free trade and no embargo" was the Federalist war-cry. The old issues were broken up by Governor McKean's retirement as not eligible under the Constitution; all McKean's friends hastened to rally to Madison's support. By the new election law passed in March the city and county of Philadelphia were made one senatorial election district, entitled to four senators; the city had five representatives and the county six. Dr. John Porter and William Anderson were elected to Congress, and Dr. Benjamin Say took Joseph Clay's place in that body. The returns showed that Ross had 2737 votes in the city and Snyder had 2047; that Ross had 2897 votes in the county and Snyder 3860. Stephen Girard had more votes for a seat in Councils than had any other man on the ticket. The Democrats controlled the Councils and elected Gen. John Barker mayor. The whole State vote was: Snyder, 67,975; Ross, 39,575; Spayd, 4006. Dr. Leib ran behind his ticket, but was returned to the Legislature, and elected by that body United States senator.

As soon as the political campaign closed, Duane, of the *Aurora*, was pelted with libel suits, and several of the old ones were brought to a trial. The case against Leib and Duane, in relation to means taken to force the Governor, in 1806, to commission Wolbert as sheriff of Philadelphia, was decided for the defendants. Gouverneur Morris obtained a verdict for four hundred and twenty-five dollars damages from Duane, for a

libel published Dec. 8, 1800. In the McKean cases, on one count, that Duane had charged the Governor with improperly withholding a major's commission, the plaintiff won; on another count, of charging the Governor with despotic conduct, the verdict was for the defendant. Duane's suit against Joseph B. McKean (the Governor's son) for alleged assault by defendant and thirty others of the City Troop resulted in acquittal. Peter Miercken's suit against Duane failed. Duane had been so sturdy and unhesitating a friend of the administration, that President Madison now appointed him lieutenant-colonel of a rifle regiment in the regular service, a place which for some time was in effect a *sinecure*.

Just before the election in Pennsylvania, which resulted in Snyder's triumph, an article which caused much excitement appeared (July 28th) in the *Democratic Press*. It was signed "J. B.," and was believed to have been written by John Binns, the editor. The *Federal Republican*, of Baltimore, published an offensive parody, copied into the *Freeman's Journal*, of Philadelphia, and Binns sued McCorkle, of the latter paper. On the trial it was showed that Gen. John Barker wrote the first article.¹

¹ This article was entitled "The Political Creed of an Old Revolutionary Officer." It contained thirty-one items and specifications, the most important of which were the following:

"I believe our prosperity, growing strength, and unparalleled increase of commerce hath filled the cabinet of St. James with jealousy and envy.

"I believe one million of guineas are annually distributed in this country among British subjects, old Tories, traitors, and apostate printers, for the purpose of deceiving and dividing the people, for that is their last hope.

"I believe the guineas are now flying through Pennsylvania for the election of Mr. Ross, in which, if they succeed, I shall set it down as the first step towards, not a Federal, but a British triumph; for I believe Pennsylvania to be the keystone of the great arch of Democracy, —take away the key, and the arch must fall.

"I believe what is falsely called Federalism, —I call it Toryism, because all the traitors and English agents fall into their ranks, —if that kind of *ism* should succeed throughout the Union, their first steps would be to force on a war with France, not that they love fighting, but to furnish them with a feasible plea to become the friend, ally, and partner of a cruel, unjust, tyrannical, bloody, profligate, and bankrupt government.

"I believe James Madison possesses every qualification requisite and is fully competent to discharge the duties of President of the United States, and that he will pursue the line laid down by Mr. Jefferson. I hope he will be elected.

"I believe James Ross to be a scholar, a statesman, and a gentleman, but very wrong in his politics, better suited to London than Philadelphia, and therefore I think ought not to be Governor.

"I believe that Simon Snyder possesses a strong mind, good natural talents, inflexible integrity, uncontaminated Republicanism, and a sound judgment, and therefore ought to be Governor.

"I believe there has not been an election since we were a nation of more importance or which called more for republican candor than the approaching one; for Toryism, Treasonism, Englishism, and Federalism (so called), aided by lies, intrigue, and gold, will be played off against honest Democracy.

"I believe that while the councils of this country are governed by the principles of 1776, do justice to individuals and to nations, prefer peace to war, the saving of blood to the shedding of it, sustain the same character abroad and at home as they now have, pursue the same course that they have for now eight years past by maintaining the strong neutral ground they have taken, making Justice their guide, Peace their path, and Mercy their citadel, the navy of England and the armies of France combined may attempt but cannot shake it."

After the Democratic State victory in October the "Young Democrats of Philadelphia" met at the Shakespeare Hotel and celebrated the event. Samuel Keemle presided, and George Bartram was vice-president. After the Presidential election they held "a Whig festival" at Mrs. Saville's, in Spring Garden, Gen. Leib presiding, assisted by Judge Wolbert, John Dorsey, and Michael Bright. Lieut. Cake fired salutes from two pieces of artillery. Fotteral's band played patriotic airs. Among the toasts was the following, by Matthew Lawler: "A head wind and a chopping sea, a lee shore, both pumps going, and a short allowance to any person that would pay tribute to a foreign nation for permission to carry on the commerce of the United States."

The parades and meetings of the soldiers were more frequent in 1808 than for several years previous. Drilling in convenient halls took place throughout the winter, and when spring opened a series of sham fights was instituted to train the volunteers. The first occurred in March, near Mrs. Saville's tavern, in Spring Garden, Capt. Fotteral's "Independent Blues" and Capt. Graves' "Philadelphia Volunteers" taking part. In March an act of Assembly recognized the "Philadelphia Legion," up to this time a volunteer association of uniformed flank companies, as a military body capable of choosing its own officers. They elected lieutenant-colonel and other field-officers, and in May made their first parade under the new system in an elaborate expedition to train the volunteer troops.¹ The plan included an embarkation by water, a landing, a march of manœuvre, an attack, the defense of a town, the incidental movements of light troops, and all the evolutions of modern tactics which the nature of the ground and the force would admit of. In this affair the companies of Fotteral, Graves, Boyle, Morris, and Col. John Thompson participated. Boats were volunteered by shipmasters in port, and were formed into two squadrons, with Capts. Benners and Webb respectively as commodores. The troops embarked in three divisions at Market Street Ferry, at the old ferry, and at Arch Street Ferry. Twenty-five boats held the contending forces. They were rowed to Smith's Point, N. J., where a landing was made, and a forced march ordered to Woodbury. The first corps retreated, the other pursued, and brisk skirmishing, followed by a sham battle, took place. June 22d the whole legion took part in another affair on a grander scale. Col. Jonas Symonds was commander of the day, and appointed as his staff Capt. S. E. Fotteral, Col. William Duane, Maj. Peter Christian, and D. Sharp, acting quartermaster-general. The first bat-

talion of artillery was under Maj. Shaw. The cavalry was under Maj. Leiper. The flotilla, in three squadrons, commanded by Commodores Benners and Webb, was composed of sixty boats, respectively manned by the following shipmasters, who had volunteered for the occasion, viz.: Capts. Kitts, Cranston, Hartwell, Norton, Grevy, Sellers, Tully, Rowe, Wing, Stanley, Gillespie, Sloan, Williams, Smith, Watkins, Park, Barclay, T. Kennedy, H. Kennedy, McGinnis, Burns, Roberts, Warner, Martin, Singleton, Mingle, Whitehead, Shedaker, Bingham, T. Ray, G. W. Williams, Calhoun, Winnemore, H. Ray, Robinson, Peacock, Bunker, Brewton, W. Johnston, Crow, Phillips, Handy, Remington, Riddle, Dehart, Kitchen, Molony, Browne, Wade, Devereux, Wallington, Davenport, Herod, Garwood, Gardener, Brewer, Rennolds, and Pickle.

The first division consisted of Binney's light infantry as flankers, Capt. Shaw's artillerists with a field-piece, a company of lansquenets, formed of militia officers, under Capt. Moore, Fotteral's light infantry, Boyd's new company of artillerists with field-piece, Morris' light infantry flankers of the reserve, Graves' infantry as reserve, and Fiss' riflemen. The second division, commanded by Col. Duane, consisted of Leiper's cavalry, Uhle's rifles, Fittler's artillery with field-piece, Hill's flying artillery with two pieces and two tumbrils, Cress' artillerists with field-piece, Thompson's, Boyle's, and Walters' light infantry, and a corps of militia officers with firelocks, acting as infantry. The reserve division was composed of the Frankford company (Maj. Duncan), Fiss' rifles, and Norton's artillery.

According to general orders it was proposed "that one division should be considered as an invading enemy and the other a defending army;" that the first division should land from the boats under a fire protected by water-batteries and a resistance; "the passage of a river in retreat and its defense against pursuers; the defense of defiles; the attack in flank and rear, and on a flank by ambuscade at the same time; the loss of cannon of an advance-guard, and the retreat covered by riflemen; the retreat through a long defile to a cover and occupation of a strong position, and there the retreating party to make a stand; a pitched battle, in which should be displayed the special uses of a rifle corps in action, flying artillery, pikes in the charge of a line and in defense of artillery, and charge of cavalry, and the use of a reserve in deciding a battle." The place chosen for these evolutions was at the mouth of Frankford Creek, and from thence to Frankford, where the reserve was stationed. Over twenty thousand people witnessed the sham battle, and it was pronounced a great success. But the opposition journals, particularly the *Philadelphia Gazette*, insisted that it was held for the purpose of rejoicing at the disgrace of the American flag by the attack upon the "Chesapeake" frigate. "The repose of the city," it was said,

¹ The uniform of the Independent Volunteers was thus described: "A long blue coat, red lapel-facings, white lining, and to show a blue front, with silver lace. Chapeau brass, with red feather and black top. White pants in winter, blue in summer." The estimated expense per uniform was twenty-six dollars. This company had the gayest uniform among the volunteers of that day.

"was disturbed at an early hour by Irishmen assembled to commemorate the affair of the 'Chesapeake.' This proceeding is in the genuine spirit of blundering. We have heard of nations celebrating their glories, but never till now of their perpetuating the recollection of disgrace." The affair was called "The Battle of Point-no-Point," and long was a stock subject with the song-writers of the time, as the "Battle of the Kegs" had been a generation before.

While political struggles and military evolutions occupied the public attention, quieter but no less important forces were at work modifying society and influencing the times. One of the most important events of the year was the opening of "The Hollow School," on Pegg's Run, in the Northern Liberties, January 11th. In 1807 the "Philadelphia Association for the Instruction of Poor Children" had organized, afterwards incorporated, with membership limited to forty-five. William Sansom and Thomas Scattergood gave them two lots of land near Pegg's Run (on the line of Margaretta Street below Second). Here the society built "The Adelphi School," with two rooms and accommodation for six hundred pupils, on the Lancaster system, then in use in New York, and promising great results. Children between the ages of five and fifteen were admitted. Subscribers paid four dollars a year and fifty dollars for a life membership. This was the noted "Hollow School" of which, in 1860, a gentleman wrote, describing its appearance in 1818. He says,—

"The population of Philadelphia at that day was comparatively small,—scarcely a tenth of the present number,—while field and meadow, running stream and woodland, with but an occasional farm-house, mill, or factory greeted the eye as far as it could range north and west of Sixth and Coates Streets. Even at the time of which I speak, Philadelphia could boast of five or six public schools, under the management of a board of directors, with Roberts Vaux, Esq., as president. The majority of those directors were of the Society of Friends. They were much respected and loved by the pupils, for whom they always had a smile or word of encouragement. The school in which it was my fortune to be placed was situated on Pegg Street, the boys' front resting on Adelphi Alley, the entrance for the girls being on New Market Street. The building was of two stories, substantially erected with brick walls, and was capable of accommodating three hundred boys and as many girls. The seats were generally all occupied, the vacancies being filled up as fast as they were made. The hollow, from which the school derived its cognomen, was the general play-ground of the boys, lying on a level with the banks of the stream known as Pegg's Run, which is now arched over by Willow Street. The descent to the hollow was in winter a great resort for boys to sled down hill; while in rainy seasons the creek, which the Indians called Cohoguinque, was often so swollen that its waters would submerge the entire hollow, affording many an adventurous embryo navigator a fine opportunity to display his skill in paddling the logs and timber which drifted down, or were carried up by the tides. In the summer seasons the bed of the creek would often be left nearly dry; and frequently have I joined juvenile exploring parties, who, armed with clubs to resist the attacks of tanners' dogs,—of which a goodly number infested the banks,—would thread its dark and tortuous ways in search of its, to us, mysterious source. Add to all these advantages of locality the reputation that the hollow bore as a favorite nightly haunt for 'unclean spirits and pale ghosts,' and you have a spot as well calculated to develop the organ of marvelousness or ideality as the most imaginative mind could desire."

He proceeds to describe the mild *régime* of Mr. Ely, the teacher in charge in 1818, but two years

later Joseph Ketler, of Lancaster, took his place. He was a severe disciplinarian, and his name became a terror to evil-doers. The gentleman from whose reminiscences we have quoted describes the punishments in use as follows,—

"The 'cage' I have, with other victims, occupied many a time and oft. There was nothing particularly objectionable in it save that it was rather close in warm weather, though it had several doors with venetian blinds or slats for ventilation; and had it not been for the certainty of the flagellation which awaited us when called upon to come forth, which anticipation would always keep the neighborhood of the doors rather clear from what otherwise might have proved an obstruction, we would have considered our incarceration rather in the light of a pleasant little relaxation from the incessant round of duties we were obliged to perform. Whipping upon the bare feet with a rattan—to receive which the culprit was required to lie on his back, while the master slipped a noose around his ankles to facilitate the operation—was one of the modes of punishment resorted to with truant-players. A strong oaken paddle about fourteen inches long, having a termination about the size of the palm of the hand, was used on all ordinary occasions of punishment. This was applied to the bare palm, and was varied on extraordinary occasions by being brought in lively contact with the ends of the digits, grouped so as to receive, each one, its appropriate share of the invigorating influence. It was no uncommon thing for mothers to bring their refractory children to school, when their own harsh treatment had failed to produce the desired effect, and earnestly entreat Mr. Ketler to try his modes of punishment upon them; such was the custom of the times, and so universal was the resort to corporeal torture but a third of a century ago. The gag was very seldom brought in requisition, though I have often seen it out of use. It was intended to curb the boisterous demonstrations of those who were wont to vent their indignation in threats, curses, or loud cries. A leaden cover for the mouth, with a block of wood attached to enter between the teeth and strings to secure it in its place, made up the entirety of this formidable instrument. The story of suspending a boy by the thumbs has doubtless been much exaggerated. I am not aware of such a thing having been done while I remained at school, though it may have happened during my absence, as I was often sick for weeks and months during the latter part of my Hollow School career. I am cognizant, however, of this fact, namely, that Mr. Ketler retained his position until some time after the school was removed to the new building in Third Street above Brown, a few months prior to which my good mother had thought proper (for some apparent injustice) to withdraw my name from his list of pupils."

In January, 1808, the Legislature received a report from the commissioners who were to locate a site for a new powder-magazine. They had chosen a suitable spot four miles outside of the city, and an act passed February 25th appropriated five thousand dollars for the building.

It was in January, also, that the directors of the "Farmers' and Mechanics' Bank," for some time a copartnership, again applied for a charter, and made several proposals. They offered to the State two and a half per cent. upon the net profits; or ten per cent. upon the excess of profits above six per cent. on the capital; or to pay fifty thousand dollars and loan the State fifty thousand dollars for ten years, at five per cent. interest; or to subscribe one hundred thousand dollars to the Northern Turnpike Company to Pittsburgh, forty thousand dollars worth of the stock to be the property of the State; or to subscribe to one-third of the stock of the turnpike company, provided it did not exceed two hundred thousand dollars; or, if the State would subscribe to one hundred and fifty thousand dollars of the stock of the bank, fifty thousand dollars of the sum to be assumed by the bank, the State should have a right to elect four directors,

and the bank to extend the capital to one million two hundred thousand dollars; or to pay the State seventy-five thousand dollars in installments, if the capital allowed was two million dollars. The committee of the House reported in favor of the one hundred and fifty thousand dollars subscription. In the report it was said that the banking capital of Pennsylvania was not increased in a ratio with the wants of the community, in consequence of which paper money of other States came in. The arguments of the friends of the bill were not sufficient, and it failed to pass. The opponents of paper money determined to check such proceedings, and Mr. Lacock introduced a bill into the House for preventing the formation of associations of individuals for the purposes of banking and stock-jobbing. It passed both chambers, and was approved by the Governor March 28th.

The Philadelphia Bank this year completed its

particularly interesting because exhibiting in a strong light the feelings with which staid Philadelphia then regarded such things. It seems that Messieurs Epervil and Hipolite, in December, 1807, had given one or two concerts and masked balls on a small scale, and received encouragement to enlarge the scheme. So, January 28th, Epervil advertised in the *Aurora* that, "in consequence of an earnest invitation from a numerous circle of genteel and friendly persons," he had been induced to give three masquerade balls in the city, "having previously taken all the necessary precautions to insure an agreeable, decent, and select assembly." The number of subscribers was limited at two hundred and fifty, at the price of six dollars for the series. The religious community was indignant, and took immediate steps to prevent them, and John Sergeant introduced in the House of Representatives a resolution declaring that the tendency of

masquerades was demoralizing. The matter was pushed through both Houses without delay; and upon the 15th of February an act was passed declaring masquerades and masked balls to be common nuisances, and directing that the persons who allowed masked balls to be given in their houses, the persons who set them on foot, and those who attended them, should each be subject to imprisonment not exceeding three months, and to a fine between fifty dollars and one thousand dollars, besides giving surety to be of good behavior in future. This law prevented masquerade balls from being given in the city for half a century.

The first race-course in Philadelphia was established early this year. It was in the Northern Liberties, on the old York road, "at the corner of Nicetown," and a number of races were held there in the summer for small stakes and purses.

The ministers preached against it, and some efforts were made to put an end to its public use, but public taste was changing, and the races were well attended. The place was afterwards known as Hunting Park. A number of years ago some public-spirited citizens bought it, and afterwards presented it to the city of Philadelphia for a public park.

Street improvements progressed rather better than in 1807. March 26th a legislative act was passed referring to that part of the township of Moyamensing bounded by Passyunk road, Federal Street, Passyunk township, and Cedar Street, and declaring that the freeholders thereof were erecting buildings and making improvements, but for want of some general regulation the buildings were irregularly placed, and it had become necessary that the lines of the streets and alleys should be laid out and surveyed. Philip Peltz, John Kessler, and John Maitland were appointed commissioners, the plans of new streets to be

THE OLD PHILADELPHIA BANK.

new building at the northwest corner of Fourth and Chestnut Streets. It was sixty by forty-three feet square, built of brick and stone. There was a dwelling for the cashier south of it on Fourth Street. The space north to Chestnut Street was inclosed by a low wall and an iron railing, and was handsomely laid out with graveled walks and shrubbery. Amid the shades of the latter, on the western side of the garden, were lodges for the watchmen, built in Gothic style, to correspond in appearance with the main building. This banking-house was said to have been the first specimen of the pure fourteenth century style of architecture ever built in the United States, and was one of the finest works of its architect, Mr. Latrobe. It was demolished in 1836, to make room for the marble building of the Philadelphia and Western Banks.

One of the excitements of the early part of 1808 grew out of concerts and masquerade balls, and is

filed in the Court of Quarter Sessions, and subject to the approval of that court. Provision was also made for the election annually thereafter of three regulators, who, with the supervisors, were to see to paving the footways, fix the depth of lots, provide pumps for use in case of fire, etc.

Early in April a delegation of Oneida Indian chiefs was shown over the public buildings and banqueted at the expense of the city.

May 7th an unsectarian "Bible Society" was established to distribute the Bible to the poor. It was resolved that its field of labor should be Pennsylvania, New Jersey, and Delaware. The design of the association was "to distribute the Bible in the native speech of those who may be disposed to read it." English and German Bibles were printed for this society during the year, and preparations were made for a translation of the Scriptures into the Welsh and Gaelic languages. The copies printed were without note or comment. The entrance-fee was five dollars, and annual fees two dollars. The first president was Bishop White. The society grew, and Jan. 10, 1810, was incorporated as "The Bible Society of Philadelphia." In 1840 the name was changed to "The Pennsylvania Bible Society."

In May of this year Roman Catholic citizens assembled, and choosing Mathew Carey president, and Thomas Hurley secretary and treasurer, founded "The Roman Catholic Society of St. Joseph," for the maintenance and education of orphan children. They secured a house on Sixth Street, above Spruce, next to the Church of the Holy Trinity, and here the asylum remained for many years.

The noted Naglee-Brouvard case occurred this summer, and excited strong public interest upon its trial in the Court of Quarter Sessions. John Naglee, of Philadelphia, was there arraigned for an assault on Capt. Brouvard, the commander of a French privateer schooner, lying in port. The facts of the case, brought out on the trial, created much sympathy for Naglee. Two years before, a Swedish schooner, of which Naglee was supercargo, had been captured on a voyage from Philadelphia to Cuba, by the privateer "Dolph," of which Brouvard was then commander, and taken into Baracoa. While proceedings were pending there in a prize court, one-half of the cargo, of which Naglee had the care, was stolen from the vessel and taken on shore, to avoid a restoration, if it should be decreed. Brouvard, with a file of Spanish soldiers, also attempted to arrest Naglee. The latter applied to the governor of the port for protection, and the schooner was ordered to St. Domingo. Naglee followed in another vessel and found, upon his arrival, that his schooner and cargo had been condemned and his personal property taken by Brouvard. In his anger he told the latter, "I am now in your power, and must submit; but if I ever catch you in any part of the United States, except Christ Church, I will have my revenge!"

In 1808, Brouvard came to Philadelphia to refit and take in supplies. His privateer was at the shipyard, and he and the French vice-consul were examining her, when the unforgetful and unforgiving Naglee appeared on the scene. He made no parley, but struck Brouvard, pushed aside the vice-consul who tried to interfere, and in a few minutes more had knocked Brouvard down, tore the epaulettes from his shoulders and the cockade from his hat. Turneau, the French minister, complained to the government, and the United States district attorney began prosecutions against Naglee in two courts for an assault on Brouvard and the vice-consul "against the peace and dignity of the Commonwealth of Pennsylvania" and "in defiance and contravention of a treaty made between the United States and Napoleon, emperor of France, king of Italy," etc. Naglee pleaded guilty to the assault on Brouvard, and not guilty to the other. Mr. Dallas appeared for the government and Bradford and Hopkins for the defendant. The jury acquitted Naglee of the assault on the vice-consul, but on Brouvard's indictment he was sentenced to pay a fine of one hundred dollars and costs. This amount was made up voluntarily by collections among the citizens, and the officers of the courts gave up their fees.

A census of the city proper was taken in 1808, being authorized by both Councils, and the returns enable us to realize how small, as compared with what are called cities now, this energetic and thriving Philadelphia was then. With a total population of less than fifty thousand persons, over five thousand of whom were negroes, the city made its influence widely felt in science, literature, and the useful arts. The full census report was as follows:

	White Males over 16.	White Males under 16.	White Females over 16.	White Females under 16.	Free Persons of color.	Slaves.	Total.
Locust Ward.....	1,089	589	943	629	241	1	3,975

A new charitable institution, the "Female Hospitable Society," was organized in the autumn by a number of ladies. They had a visiting committee, a governess, a treasurer, and a secretary. One object was to procure old clothes, cloth remnants, etc., and make them over for the use of friendless orphans,

also to become acquainted with such, and give them sympathy and help. They afterwards bought flax and gave it out to poor women to spin, hiring a wareroom at No. 1 Appletree Alley. For this work the making of garments for sale was afterwards substituted.

The year 1809 opened with increased bitterness of feeling between the Democrats and the Federalists over the embargo act. January 9th Congress passed the new enforcing act, exercising hitherto unheard-of and despotic powers over trade. Throughout New England, as soon as the news was received, public meetings were held, and handbills were circulated calling on citizens to stand firm and refuse to obey the act. As a temporary expedient the embargo might be borne, but as a permanent policy it was, New England and New York said, cowardly, indefensible, and intolerable. Even the hated "Orders in Council" of the English cabinet were far preferable. Federalist newspapers clothed their columns in black, and headed them with the words, "Liberty is Dead." Gen. Lincoln, port collector of Boston, and many other custom-house officers, resigned their positions. January 24th a Boston town-meeting memorialized the Legislature, denouncing the enforcing act as arbitrary and unconstitutional, and resolved that all who helped to carry it into effect should be considered "enemies of the State of Massachusetts." The patriotism of the American people never suffered a severer test than during the ruinous stagnation and disastrous fluctuations that marked business from 1808 to 1812. Yet patience and obedience to law ruled everywhere. In the Southern and Middle States the evil results of the embargo act were much less felt than in New England. Philadelphia, however, was crowded with idle sailors and with suffering merchants. January 23d the friends of the embargo met in the State-House yard, Capt. William Jones chairman, and Robert McMullen secretary. Speeches were made and resolutions of support sent to the President. The "Friends of the Constitution, Union, and Commerce" immediately announced that they would meet at the same place, January 31st. But the Democrats, at a meeting at George Grubbs' Sorrel Horse Tavern, agreed that they also would attend this Federalist meeting, "in order to express their approbation of the late measures of the government." Other and similar Democratic meetings in other wards showed that an organized attempt would be made to break up or nullify the Federalist meeting on the 31st, and political excitement ran very high during the few intervening days. When the time came the Federalists marched to the State-House yard, and organized their meeting.

Commodore Thomas Truxton was called to the chair, and George Clymer was appointed secretary, supported by a strong body of sailors, who acted summarily towards those who attempted to disturb the meeting. Resolutions were passed which heartily supported the Union. They denounced publications

calculated to foment discord, and to deceive foreign nations as to our internal divisions. They resolved that the continuance of laws imposing an embargo would be unjust, impolitic, and oppressive; and they declared that the embargo, as a means of coercion, was weak, inefficient, and useless. The enforcing law they denounced as a direct invasion of the principles of civil liberty. The committee appointed to draft a memorial to Congress consisted of Thomas Truxton, Thomas Fitzsimons, George Clymer, Timothy Paxson, Joshua Humphreys, Robert Waln, Benjamin R. Morgan, James Milnor, and Charles W. Hare. Among others present were Commodore Richard Dale, Col. James Read, Gen. Francis Gurney, Capt. John Dunlap, Samuel Wheeler, and Moses Levy. During the entire afternoon efforts were made to break up the meeting. Several hundred Democrats came upon the ground with drums beating and colors flying, and made a violent attempt to get possession of the stage, but they were driven off by the sailors. They then stood back, as near the stand as they were allowed to come, and by the beating of drums and by hissing they attempted to prevent the resolutions from being heard when read. After the objects of the meeting were accomplished, the sailors (estimated by the *United States Gazette* to be one thousand in number) crowded around the stand, and, taking the chair from the stage, placed "their adored Truxton" in it, and carried him in triumph to the Coffee-House, where he addressed them in a short speech, "after which they made the air resound with their acclamations, and marched off in good order and in high spirits." The *Aurora* spoke of the meeting as of British sympathizers, and, February 1st, said, "For two or three days exertions were made to bring out as many dependents upon the British merchants as possible. Sailor boarding-houses were resorted to. They were told that the meeting was to remove the embargo, and that there would be plenty of good grog for them at the Coffee-House. Some landlords of sailor boarding-houses promised one day's board paid for each man brought. Money was promised and a subscription. Two hundred persons in sailor uniform were brought forward. The mob was conducted in British style at elections, where the minority try to put down popular rights.

"The people were hired;
They huzzaed as they were bid;
They marched in the van of the
Ladylike and fine-dressed folks;
They took possession of the place before the time;
They shouted and huzzaed when ordered,
And they struck any one who came near them.

"When necessitated to retreat they tore up tables and chairs and threw them among the crowd. Many received violent wounds. At Phineas Bond's house (the British consul's) they huzzaed for Mr. Bond and King George," said the *Aurora*. The latter spiteful assertion was untrue. The *United States Gazette* says that seven hundred dollars "was contributed for

relief of distressed seamen." As soon as the Federalists retired the Democrats took possession, organized another meeting, and passed resolutions condemning those already passed. Col. John Barker, then mayor, violently denounced the Federalists, particularly Timothy Pickering. Then a procession was formed and marched through the principal streets. The *Aurora* said there were eighteen thousand men in the ranks; but Poulson's newspaper said there were not four thousand, and that the whole procession, walking three abreast, passed a given point in eighteen and a half minutes; this, if true, shows the number to have been much less than four thousand. A week later Pickering was hung in effigy in front of the town hall, in Second Street, Northern Liberties. This proceeding is said to have been led by Col. Barker.¹

February 10th the Federalists had a dinner at the Mansion House "in honor of Col. Pickering and the minority." Two hundred and fifty persons took part. Thomas Fitzsimons presided in the first room, Commodore Truxton in the second, and George Latimer in the third. There were present Messrs. Dana, Livermore, Gardener, Milnor, and Jenkins, members of Congress, Judge Griffiths, of New Jersey, Bishop White, and others. Among the toasts were several aimed at Jefferson, such as these: "A Philosopher in Dignified Retirement: may he find full employment in forcing exotics, coercing bullfrogs, and pinning beetles by the side of butterflies;" "the Embargo Acts of the Terrapin Congress: the worst they ever cooked in the legislative caboose;" "the Sword of Independence: may American blades never have French handles."

The State Legislature, as strongly Democratic as ever, passed a resolution recommending the members of the next Legislature "to appear in clothes of domestic manufacture." Various resolutions, passed at different times during the year, supported the administration in all particulars, but the factions of the party in Philadelphia continued to quarrel. Duane and Leib did all that lay in their power to injure Governor Simon Snyder; Binns and the "Associated Friends" were not slow in their replies. The contest over the method of nominating candidates for county offices was renewed, and what the *Aurora* called an "apostate ticket" was run, but without success.

National affairs were sufficiently gloomy. Adams, DeWitt Clinton, and the *Boston Patriot* made charges of the existence of the "Essex Junto plot" to form a new confederacy under British protection. Quincy, Story, and other leading Federalists strug-

gled night and day to persuade the Democratic majority into more vigorous preparations for a not unlikely war, into an increase of the army and navy, but little was done in either direction. Suddenly, and to the great surprise of the administration, the New England and New York Democrats left the majority, yielding to the pressure brought to bear by their constituents, and on the 1st of March the "Embargo Act" was repealed. A non-intercourse act was passed that only applied to England and France, and excluded French and English ships of war from American ports. March 4th, Madison took the Presidential chair. Shortly afterwards (April 19th) there came a lull in the fierce and partisan conflict. The President issued a proclamation saying that the British minister, Erskine, had received news that the "Orders in Council" of 1807 would be withdrawn by June 10th, after which time, said the President, trade with Great Britain would be renewed. Through May and early June the blessings of the Federalists were abundantly showered on the administration. All the Atlantic seaport towns rejoiced, and the praise of the President by his former enemies was so warm that some of his party grew jealous. In Philadelphia, June 10th, "the day of renewed commerce," at five o'clock in the morning, a number of sea captains, mariners, and citizens left Walnut Street wharf, upon the Delaware, in a fleet of boats, led by the "Dusty Miller," and firing salutes as they went down the river, landed at Gloucester Point, N. J., where a meeting was organized, of which Capt. John Dhelson was president, and Capt. Moses Griffin vice-president. At the dinner, among the toasts was the following: "The Embargo: Wise at first, but—too tedious to mention." The boats returned in the evening, experiencing the fury of a heavy squall before they reached the city. On the same day "the revival of commercial intercourse with Great Britain" was celebrated, by one hundred gentlemen, by a dinner given at the City Hotel.² Francis Gurney presided, and Messrs. Stocker, Lewis, and Milnor were vice-presidents.

All this rejoicing was premature. July 31st, Mr. Erskine³ was forced, with mortification, to tell the President that the whole arrangement had fallen through. Erskine was recalled; England rejected

² The City Hotel, in Third Street, below Arch, was first opened to the public on this occasion. The *Philadelphia Gazette* said, "The début of the hotel was such as to give ample promise of making a very conspicuous figure, and proving highly useful to the public. The building is second to nothing that our country contains. Indeed, when we take into consideration the number, convenience, dimensions, and excellence of the apartments, it is, perhaps, not too much to say that it is the foremost house of the kind in the United States." Among the toasts given were the following: "The People of the United States and of Great Britain: united in interest, and assimilated by education and manners, may they never be set at variance by the mistaken or sinister policy of their rulers."

³ Erskine, eldest son of the famous Lord Chancellor, succeeded to his father's titles in 1823. In 1800 he married the daughter of Gen. John Cadwalader, of Philadelphia, who died in 1843. His own death occurred in 1853.

¹ The *United States Gazette* subsequently in an attack upon Mayor Barker, said, "See him on the rostrum, swearing, cursing, and employing language at which a Hottentot would blush, a Christian tremble. See him there, the chieftain of a lawless mob ripe for riot and desolation, and mark him subsequently at the town hall, president over the drunken oblations of a factious assembly, convened to satiate their vengeance by abusing and burning in effigy an old and venerable patriot."

terms honorable to both nations and highly favorable to herself, hoping thus to further encourage sectional disputes; President Madison was compelled to issue a proclamation, August 9th, declaring the non-intercourse act in full force as regarded Great Britain. Francis James Jackson, conspicuous in the disgraceful attack on Copenhagen, was the new British minister at Washington. The mere fact of sending such a representative at such a time was evidence of England's unfriendliness. Jackson was quarrelsome, overbearing, insolent, so that he was soon told that no communications would be received from him, and his recall was requested. Meanwhile the few American vessels abroad ran greater and greater risks each month; Danish privateers cruised in the North Sea; French privateers and men-of-war kept watch over each bit of beach and nook of harbor, and new French victories extended their power over the Baltic, much of the coast of Spain, and the shores of Italy. When Congress reassembled it was occupied almost entirely with foreign relations. It showed an increase of Federalists, and many of the State elections had exhibited the same feature.

Owing to a long train of interesting circumstances the commonwealth of Pennsylvania, in this year, found itself in danger of armed collision with the government of the United States. What is known as the "Fort Rittenhouse" affair was the culmination of a controversy older than the Federal Constitution, and for several days it caused a great excitement in Philadelphia. The story begins in a heroic episode. During the Revolutionary war the British sloop "Active," *en route* from Jamaica to New York, with stores for the British army, was captured by Capt. Gideon Olmsted and three other Connecticut sailors. They had some months before been captured, taken to Jamaica, and there forced to join the "Active's" crew, but rose one night off the Capes of the Delaware, and made for Little Egg Harbor. Two days later the Pennsylvania State cruiser "Convention" and the privateer "Gerard" boarded the "Active," took possession as a prize, carried it into Philadelphia, and libeled it in the State Court of Admiralty, claiming that when they took possession the capture was not complete, the fourteen Englishmen being confined below the hatches and liable to escape. A jury was impaneled to settle the facts, and the court, on their findings, gave one-fourth of the prize to the crew of the "Convention," one-fourth to the State of Pennsylvania as owner of the cruiser, one-fourth to the "Gerard," and only one-fourth to Olmsted and his associates. The latter appealed to Congress, which decreed the whole prize to the sailors. The validity of this Congressional order was disputed by the Pennsylvania State judge in admiralty, on the ground that the finding of the jury was conclusive as to the facts. The prize was therefore sold under his order, and the money paid into court in spite of an injunction from the Congressional committee. The matter

was brought before Congress, which by vote sustained its own right to reverse the decision of a State court. The appointment of a committee of conference by the Pennsylvania Legislature was then requested by Congress. But this was denied, and the State judge was ordered to pay over the proceeds. David Rittenhouse, the State treasurer, then received the one-fourth part awarded to the commonwealth, and gave the judge a bond of indemnity.

Rittenhouse resigned his office in 1788 and settled all his accounts. In order to save his land he retained the certificate of Federal debt in which the proceeds of the action were invested, and funded them in his own name when the Federal debt was funded for the benefit of the true owners. Olmsted and his companions brought suit for the money in the State courts. At Rittenhouse's death, June 26, 1796, the matter was undecided. In 1801 the State treasurer called upon his daughters, Mrs. Elizabeth Sergeant and Mrs. Esther Waters, both widows, the executrices of his estate, to deliver over the certificates and pay the accrued interest. They could not do so till the Olmsted suits in the State court were settled. That court finally, on technical grounds, declined to interfere. McKean, then chief justice, afterwards Governor, declared that the Congressional Court of Appeals could not reverse the findings of the admiralty jury. But the Supreme Court of the United States had decided that the Federal courts succeeded on questions of prize the Continental courts, and Olmsted next applied to the District Court of Pennsylvania, which tribunal, in 1803, ordered the Rittenhouse heirs to pay the claim, now about fifteen thousand dollars. McKean, now Governor, urged the Legislature to counteract this, and they at once passed a bill commanding the executrices of Rittenhouse to pay the money into the State treasury, and pledging the faith of the commonwealth to hold them harmless from the consequences. The money was accordingly paid over by them, and during four years nothing more was done except in the way of negotiations, which proved fruitless. The United States district judge hesitated to move in a matter which would bring on a collision between the State and the Federal authorities, but he was finally compelled to proceed by a peremptory mandamus from the Supreme Court.

It was now February, 1809, and Governor Snyder notified the Legislature, on the 23d, that the United States District Court would issue an order to the United States marshal, John Smith, to arrest the persons of the executrices and hold them prisoners till they paid the money. It was his duty, he held, to resist this under the pledges of the act of 1803.

March 2d the Legislature sanctioned this view, and the Governor then ordered Brig.-Gen. Michael Bright, of the Philadelphia militia, "to protect the daughters of Rittenhouse." Legislature and Governor lamented the seeming necessity of this step, and the

latter was desired to correspond with the President. The ladies lived in adjoining houses on Arch Street, one of which had been the home of their father, the famous mathematician and philosopher. March 23d a guard of State militia was posted on Seventh and on Arch Streets. The next day, when Marshal Smith tried to serve the writ, he was prevented by crossed bayonets from entering the house. To his demands and arguments they replied that "they must obey orders." He twice attempted to enter, then retiring, he summoned a *posse comitatus* of two thousand men and fixed upon April 14th for the service of the warrant. The Legislature were alarmed, and, though passing an act reaffirming the State's claims, they appropriated eighteen thousand dollars "to be used as the Governor might see proper," thus opening a door for retreat. The Governor at once wrote to Madison, deploring the collision, but hoping the President would discriminate between opposition to the laws and constitution and resistance to the illegal decree of a judge. But Madison, who held strong views as to the sacredness of judicial decisions, replied that if necessary he must aid in the enforcement of the Supreme Court decree. On the 10th of April the United States marshal entered Mrs. Sergeant's house to arrest her, but she escaped into Mrs. Waters' house, and the guard drove the marshal back. After the marshal's call for two thousand troops, Gen. Bright had ordered two regiments to be in readiness. The people in Philadelphia were about equally divided on the questions at issue, and though war was hardly expected, some sort of conflict seemed inevitable. But the marshal, on April 13th, climbed several fences, gained access to Mrs. Sergeant's house through a back window, and arrested her. No rescue by force was attempted, though threatened, a writ of *habeas corpus* being obtained instead, and marshal and prisoner called before Chief Justice Tilghman. Attorney-General Franklin and Jared Ingersoll argued for Pennsylvania, District-Attorney Dallas and Mr. Lewis for the United States. The chief justice in his decision laid down the broad principle that if the United States District Court exceeded its jurisdiction, it was his right and duty as a State judge to discharge the prisoner. But he recognized in all its force the doctrine that the Federal courts had succeeded to the Continental admiralty jurisdiction, and that they alone had a right to decide upon the validity of the original action of the Congressional Court of Appeals. Upon this view of the case he remanded the prisoner to the custody of the marshal, abandoning altogether the question of State rights.

Governor Snyder at once paid over the money to the marshal, and thus released the daughter of Rittenhouse. But Gen. Bright and his men were already indicted for resisting the serving of the writ, and were soon tried in the Circuit Court before Judge Washington. Their defense was that soldiers were bound to obey orders. The jury, after being kept

together three days and three nights, brought in a special verdict to the effect that the defendants had resisted the marshal's authority under the laws of Pennsylvania, leaving the Court to pronounce judgment on their guilt or innocence. The Court then pronounced them guilty. Bright was sentenced to three months' imprisonment and a fine of two hundred dollars, and his men to one month's imprisonment and a fine of fifty dollars each. After a few days' imprisonment they were released by the President, on the ground that they had acted under a mistaken sense of duty, and were honored by Democratic citizens with a public dinner, at which the mayor presided. A letter of thanks from Governor Snyder was read, declaring his sense of their fidelity and patriotism. It was proposed in the Legislature to give them pecuniary compensation, but this attempt did not succeed.

The *Aurora* found in these proceedings much material for attacks upon the Governor, who was accused of being favorable to a dissolution of the Union, and guilty of treason against the United States. William Findlay, State treasurer, and Boileau, Secretary of State, were also attacked. A more violent quarrel thus arose among the Democrats of Philadelphia and vicinity. The Snyderites soon forgot their zeal for a new Constitution, but carried out their favorite scheme for arbitration instead of jury trial, when either party preferred the former. This Legislature also, to prevent McKean's suits from success, exempted from indictment "any publications examining into the doings of the Legislature or of public officers," but this act was to expire in three years by limitation. Other acts restricted the power of judges to punish for contempt, etc.

The best thing done by this Legislature was an act to provide for the education of the children of the poor. The assessors, at the annual assessments, were directed to receive from parents the names of children between five and twelve years of age whose parents were unable to pay for schooling; and the county commissioners were authorized to grant certificates of the fact; and the parents were authorized to send their children to the most convenient private schools, free of expense to them, the same to be paid out of the county treasury. This law extended to the entire State, and is frequently referred to as the origin of the common school system of Pennsylvania.

Early in 1809 "the chain bridge" over the Schuylkill was finished. In 1807 Robert Kennedy, who occupied the tavern at the falls of that river, was given right to use the water-power, and he was also to build locks there. It was expected that mills would be built at this point. The next year permission was given to Mr. Kennedy and Conrad Carpenter to build a bridge and levy tolls. Kennedy's mill-site was sold to Josiah White and Erskine Hazard, and they built a rolling-mill and wire factory. The bridge had two abutments and two piers all of hewn stone, and was

of three spans, two of one hundred and fifty-three feet in length. The chain support used was then a great novelty. It was defective in construction, however, for in 1811 it broke down from the weight of a large drove of cattle.

In February the "Philadelphia Society for Promoting Agriculture" was incorporated. It had first been established in 1805.

An act of Assembly, passed February 23d, directed that thereafter three inspectors of the prison should be elected by City Councils, three by the commissioners of the Northern Liberties, and two by the commissioners of Southwark, to serve for one year.

The act of Assembly of March 16th directed that three county auditors should be elected annually for the city and State.

Another act, intended to prevent accidents by fire, was passed the same day. It prohibited the distilling, boiling, or manufacture of turpentine oil east of Tenth Street in the city or in Southwark, or in Moyamensing east of Seventh Street, or in the Northern Liberties, "including the village called Spring Garden," unless said distilling or boiling be in an open place, at least thirty feet distant from property that might be injured, or in a complete fire-proof building.

March 10th a number of Philadelphians met and established a "Society for Vaccinating the Poor." On the 20th a constitution was adopted which provided for the appointment of an acting committee of twelve members, a clerk, a treasurer, and six physicians. The terms of membership were two dollars per annum. The committees were to seek in the various districts of the city and liberties for subjects for vaccination, and the physicians were to vaccinate them free of expense.

The "Farmers' and Mechanics' Bank Association," so often a suppliant for a charter, obtained it March 16th, to last till May 1, 1824. Capital limited to \$1,250,000, in shares of \$50. The State was given \$75,000 in stock for this privilege. Joseph Tagert was made president and Joseph Clay cashier.

March 17th the Marine Insurance Company was incorporated, to continue till Jan. 1, 1827; capital, \$3,000,000, in shares of \$100; John Leamy, president; office of the company at No. 45 Walnut Street.

March 22d the company to build a permanent bridge over the Schuylkill opposite Flat Rock was incorporated, with a capital of \$10,000.

Interest in internal improvements continued to be shown. The legislative act of the previous year, authorizing the Governor to subscribe for shares in various turnpike companies, was carried out. The "Philadelphia, Brandywine, and New London Turnpike Company" was chartered to build *via* Chadd's Ford to the State line towards Baltimore.

March 31st an act was passed relating to "the numerous and expensive poor in Germantown township." The people of that township were authorized to buy a house and lot of ground for a poor-house, and to

put it in repair. Samuel Mecklin and Jacob Summers were appointed managers for the lower district, John Johnston and Anthony Johnston for the middle district, and Jacob Holgate and Jacob Miller for the upper district, who were to be a body corporate and politic under the title of "The Managers for the Relief and Employment of the Poor of the Township of Germantown, in the County of Philadelphia." Two managers were to be elected yearly in each district by the citizens, and to them was intrusted the appointment of collectors of the poor tax, etc.

This Legislature authorized a terminus for the first telegraph line in the region. It extended from Philadelphia to Reedy Island, Delaware Bay, and was built by Jonathan Grout for the Chamber of Commerce. Reedy Island was State property, and special permission to use it as a station had to be obtained. The act recited that he "had erected a line of telegraphs from Philadelphia to Port Penn, for the purpose of the transmission of the earliest intelligence from Delaware Bay to Philadelphia, and *vice versa*." The first communication sent by this line was on the 8th of November, announcing the arrival in the Delaware of the ship "Fanny" from Lisbon.

A difficulty in reference to a piece of ground long used for burying purposes occurred this year. A petition was sent to the Legislature stating that a burying-ground on the west side of the Schuylkill, which had been for many years used as a free place of interment by people of all sects, had been taken possession of by the Society of Friends in the year 1806, who then fenced it in and kept the gate locked, refusing the privilege of using the ground to other religious sects. The subject was referred to a committee which, in March, reported that they were of opinion that the Society of Friends had no exclusive title to the said burying-ground. They recommended that a bill be prepared to vest the title in the county commissioners for the use of the public, which was carried by a vote of fifty-three to twenty-seven. Immediately afterward Jesse Williams, Thomas Parke, William Penrose, and Samuel Bettie sent a petition to the Legislature claiming the property, and requesting permission to show "that the conduct of the society has been upright." This was referred to a committee which reported favorably to the society. They stated that "the said burial-ground was applied, very early after the foundation of the province, for the accommodation of Friends, who held their public meetings at stated intervals at Duckett's farm, on the west side of the Schuylkill, adjoining said farm. It appears by public records that survey had been made of said ground for a burial-ground. Although the title is not complete, there is strong presumptive evidence that it has been held by the society for one hundred and twenty years, and positive evidence that they have exercised ownership for sixty years. Although persons of various sects have been buried in the ground, there has generally been an application

to, and permission of, the Society of Friends (cases of improper intrusion excepted). This conduct has been misunderstood, and an impression created that it belonged to the public."

A petition was presented to the Legislature in the early part of the year for the incorporation of a "color and paint company" in Philadelphia. John Bradford, of the city, who had obtained a patent for an improvement in making boots and shoes, asked the State for permission to dispose of the patent-rights by lottery. John G. Baxter, of Philadelphia, who had constructed a machine for manufacturing flax and hemp into yarn, was recommended to the Legislature by special message from the Governor in March. His machine could run thirty or more spindles, and was calculated to save the work of twenty-six persons out of thirty. The committee which considered the case recommended a donation of three hundred dollars to Baxter, but the Legislature refused. John Cook set up a paper-hanging manufactory in Race Street, near the Schuylkill, under the direction of Charles Smith, formerly foreman of Caldcleugh & Thomas. Manufacturers of Philadelphia petitioned the Legislature for the use of the ground floor of the State-House for "the factory hall of Pennsylvania and the exhibition of domestic manufactures." The bill passed the House, but failed in the Senate. On the 19th of May the manufacturers and mechanics of the city and county had their second annual dinner at the Shakespeare Hotel, northwest corner of Sixth and Chestnut Streets.

July 4th the members of the "Pennsylvania Society of the Cincinnati" resident in Philadelphia repaired to the neighborhood of Paoli, in Chester County, where they had built a monument to the memory of their associate, Maj.-Gen. Anthony Wayne, and held the dedication ceremonies. It was placed in Radnor churchyard, adjoining St. David's Protestant Episcopal Church. It was probably the first monument to the memory of a Revolutionary patriot erected by others than their relatives.¹

¹ This monument bears the following inscriptions:

ON THE NORTH SIDE.

"Major-General Anthony Wayne was born in Chester County, Pennsylvania, in 1746. After a life of honor and usefulness he died in December, 1796, at Erie, Pennsylvania, then a military post on Lake Erie, Commander-in-chief of the United States. His military achievements are consecrated in the history of his country and in the hearts of his countrymen. His remains are here deposited."

ON THE SOUTH SIDE.

"In honor of the distinguished military services of Major-General Anthony Wayne, and as an affectionate tribute of respect to his memory, this stone was erected by his confederates in arms, the Pennsylvania State Society of the Cincinnati, July 4th, 1869, the thirty-fourth anniversary of the Independence of the United States of America, an event which constitutes the most appropriate eulogium of an American soldier."

It may not be generally known that the remains of Anthony Wayne were first interred near the block-house which stands on the high bluff which commands the entrance to the harbor of Erie; and they lay there until 1800, when his son went on from Chester County, Pa., to Erie, in a sully, and removed them to their present resting-place.

"The Pennsylvania Society for the Improving the Breed of Cattle" held a cattle show at Bush Hill on the 18th and 19th of July, under the auspices of Lawrence Seckel, president, and Thomas Cradock, secretary. They offered premiums amounting to nine hundred dollars for the best cattle and sheep, adding that they did not "think it worth while to offer a premium for merino sheep, as the public ought to be fully aware of its importance."

The first fountain possessed by Philadelphia was built in 1809. A wooden figure of a nymph, upon whose shoulders was perched a swan, was placed in a circular basin in front of the engine-house at Centre Square. From the throat of the bird issued a jet of water, and smaller jets sprung up from the feet of the figure. The figures were carved by Rush. The entire affair was considered a great novelty, and one of the sights of the city. This figure was afterward removed to Fairmount. Rush's model was the beautiful Miss Nancy Vanuxem, daughter of James Vanuxem, merchant, who was at that time a member of Select Council and a member of the Watering Committee. She afterward married Nathan Smith, and died in 1874 at an advanced age. This statue has been since perpetuated in bronze at Fairmount Water-Works, near Callowhill Street entrance. To the taste of persons of the present generation it seems unusually chaste in design; but it was denounced when first erected as immodest.

Among the local improvements of 1809 was the enlargement of the market on South Second Street, which now extended from Pine to Cedar Street. The western moiety was appropriated to the use of the country people. The inability of the city government to execute much-needed improvements elsewhere is shown by the fact that Chestnut Street, between Ninth and Eleventh, was paved by Thomas Pratt and John Vallance, who advanced the money upon the pledge that City Councils would repay them in four years.

The officers of the First Division had, the previous year, offered a fifty-dollar gold medal to the author of the best national song sent to the President within a given time. The premium was awarded this year to some very stilted verses. Some of those rejected were soon after published and thought much more meritorious, though none were above mediocre in quality.

Among the great events of 1809 were those connected with the use of steam for propelling boats and cars. In June the steamboat "Phoenix" arrived at Philadelphia from Hoboken, N. J. She was the seventh steamer that had navigated the Delaware;²

² The preceding six experiments were: John Fitch's skiff-steamboat, first navigated in front of the city, July 26, 1786; the steamboat of forty-five feet in length, navigated by Fitch and Voight, on Aug. 22, 1787; Fitch's steamboat of sixty feet in length, navigated from Philadelphia to Burlington, December, 1789, the same boat running regularly as a passenger and freight boat between Philadelphia, Trenton, Burlington,

and the first that had dared the ocean's perils. She was built by John Cox Stevens, and intended as a passage boat between New Brunswick and New York. But Fulton and Livingston having procured from the State of New York an assignment of the rights of John Fitch, securing a monopoly for all boats and vessels navigated by fire and steam, Col. Stevens found that the employment of his boat in the waters of New York was restricted. He therefore sent the vessel to Philadelphia as an assistant to the line of packets and stages upon the line to New York. Robert L. Stevens, his son, determined to risk the trial; and accordingly, with a small crew, he left New York in the month of June. A fierce storm overtook them. A schooner in company was driven off to sea, and was kept out several days, but the "Phoenix" made a harbor at Barnegat. After the tempest subsided, Stevens succeeded in bringing the boat round into the Delaware. The return trip between Philadelphia and Trenton was made July 5th, and there were nearly forty passengers on board. The "Phoenix" had "twenty-five commodious berths in her cabin, and twelve in the steerage, with other ample accommodations for passengers." She was "constructed with masts, so as to be able to take advantage of favorable winds, and save fuel."

Railroad experiments began in good earnest this year, Thomas Leiper being the projector. His experimental railroad, the first ever laid down in America, was set up in September in the large yard attached to the Bull's Head Tavern, in Third Street above Callowhill, in the Northern Liberties. Professor Robert Patterson, of the University of Pennsylvania, Callender Irvine, superintendent of the United States Mint, and John Glenn, agent for Thomas Leiper, certified that they were

"present at a satisfactory experiment by Thomas Leiper, of this city, of the great utility of railroads for the conveyance of heavy burdens,—an improvement which a few years ago was introduced into England and some other parts of Europe,—as in many cases a cheap and a valuable substitute for canals. In the above experiment a railroad was laid of two parallel courses of oak scantling about four feet apart, supported on blocks or sleepers about eight feet from each other. On this railroad, which had an ascent of one and a half inches in a yard, or two degrees and twenty-three minutes, a single horse, under the disadvantage of a path of loose earth to walk on, hauled up a four-wheeled carriage, loaded with the enormous weight of ninety-five and a half hundred, or ten thousand six hundred and ninety-six pounds."

In the notice of these experiments in the *United States Gazette* of Sept. 29, 1809, it was said,—

"Nor can we close this brief notice of an interesting work without paying a merited tribute of applause to the patriotic enterprise of the gentleman who has been the first in America to engage in it; and we hope he may derive as much advantage from it as such an example to the public fully entitles him to."

Bristol, Chester, Wilmington, and Gray's Ferry, in the summer of 1790; the "Perseverance," built by Fitch's Steamboat Company, to be sent to New Orleans in the same year, and driven upon Petty's Island in a storm; the side paddle-wheel steamboat of Samuel Morey and Burgess Allison, built at Bordentown in 1797, and navigated to Philadelphia and back; and Oliver Evans' nondescript, a steam-carriage on land, a steam-boat in the water, the "Eruktor Amphibolis," in 1805.

In the *Aurora* of September 27th, Thomas Leiper and George G. Leiper invited proposals for contracts "for digging part of a railroad from our quarries on Crum Creek to our landing in Ridley, Delaware Co. The distance and level, ascertained by Reading Howell, is exactly three-quarters of a mile." They also desired to contract "for making and laying the rail part of the same, consisting of wood." Specifications were to be furnished by Large & Winpenny at their manufactory, adjoining the Bull's Head Tavern, Northern Liberties.

A sham battle took place November 20th, in which a part was taken by the cavalry under Maj. Leiper, the riflemen of Uhle and Fiss, Hill's light artillery, and Town's, Rush's, Meeker's, Walter's, Read's, and Thompson's infantry on one side, under Maj. Lewis Rush. On the other side were Eringhaus' hussars, Humphreys' cavalry, Binney's and Hoffman's rifles, Boyd's artillery, and the infantry companies of Fotheral, Graves, Grant, and Boyle, under Maj. Graves. Shaw's and Ashton's artillery were subsequently attached to the First Division, and Erringer's to the Second. The whole affair was under command of Maj.-Gen. John Steele.

Governor Snyder, in his message to the Legislature in December, congratulated the members upon the progress of improvement during the year. The development of the country, as shown in the building of barns, houses, bridges, and the construction of turnpikes, gave cheering evidences of prosperity. "Our mills and furnaces are greatly multiplied. New beds of ore have been discovered. We have lately established in Philadelphia large shot manufactories, floor-cloth manufactories, and a queensware pottery on an extensive scale. These are all in successful operation, independent of immense quantities of cotton and wool, flax, hemp, leather, and iron, which are carefully manufactured in our State, and which save to our country the annual expenditure of millions of dollars."

The surviving officers of the Revolutionary war met at the Shakespeare Hotel on the 25th of December, Dr. John Keemle in the chair and Daniel Broadhead secretary. They passed resolutions declaring their confidence in the government and their determination to support it, to which President Madison made a suitable reply.

The foreign relations of the United States continued doubtful and almost hostile throughout 1810, and efforts to obtain a better understanding were fruitless. January 3d the President's message considered the raising of more troops to be necessary, recommending that twenty thousand volunteers be accepted for service at the shortest warning. The Philadelphia cavalry companies petitioned the Legislature the following week for leave to form a regiment, but failing, organized in June as a voluntary association, Robert Wharton, colonel, and John Smith, major. They had an "annual training" in October on "the com-

mon," but a gloom was cast over the day by an accidental discharge of muskets by which one citizen was killed and five or six were wounded. The great "military fête" set for November 1st, under Maj. Lewis Rush and Col. Fotteral, was therefore postponed.

In March the President, hearing through Minister Pinckney that the restrictive orders and decrees would soon be repealed, informed Congress, and May 1st the non-intercourse and the non-importation laws were withdrawn, and an act excluding French and English war vessels was substituted. The French revoked their Berlin and Milan decrees, so far as they applied to the United States; stubborn England made petty objections, and refused on purely technical grounds. Meanwhile, Napoleon refused to indemnify the Americans for vessels seized under the Rambouillet decree of March 10th; seizure, confiscation, and sale of vessels and cargoes, impressments of sailors, complex entanglements of diplomatic falsehood, seemed to characterize the proceedings of both the powerful nations against which the United States had rightful cause for indignation; English cruisers hung along our coasts, disregarding our neutrality and our jurisdiction; France reigned on the continent, but the great nation from whom we had parted in anger, our kindred in language and blood, was supreme upon the ocean, and her tyrannies pierced far more deeply. It was England, not France, that, according to the best authorities, had impressed over six thousand sailors from peaceful American merchantmen. The Secretary of State placed the number at six thousand seven hundred; Lord Castlereagh, in the British Parliament, acknowledged that sixteen hundred had been impressed.

March 19th the Pennsylvania Legislature indorsed the administration, and denounced the conduct of France and England. They also ordered "that no British precedent should be read or quoted in courts of justice, nor any British decision made after July 4, 1876, except those on maritime and international law." They also negatived resolutions sent from the Massachusetts Legislature, calling for a constitutional amendment to prohibit an embargo for more than thirty days.

State politics were in the usual and chronic turmoil. In January the *Aurora* printed some attacks on Governor Snyder, which were signed "Conrad Weiser." The worst possible construction was placed on the "Fort Rittenhouse" affair, and the words "rebellion" and "high-handed" were used. But Nathaniel B. Boileau, the secretary of the commonwealth, was assaulted with the fiercest invectives. Restless Leib and discontented Duane were still leaders of this faction; John Binns supported the State administration. "Under McKean," said this writer, "the Legislature was bullied and abused. Under Snyder it is caused and corrupted." February 14th, at a meeting at the State-House, Philadelphia, "the conduct of Simon Snyder in calling out an armed force to oppose

the constitutional authority of the general government" was severely condemned. In May, at the annual Tammany Society meeting, William Duane gave the "long talk," and all the State flags were decorated except that of Pennsylvania; this was muffled and clad in mourning, "as the State suffers from dishonor."

Binns came in for his full share of the personal abuse, founded on the accusation that he had turned Queen's evidence in the O'Coigley trial in England some years before, and thus saved his neck, the charge being high treason. Counter charges, explanations, and pamphlets were of course abundant. Things were badly mixed and unpleasant. The old question about method of nominating was revived. The friends of Snyder favored district meetings, while his enemies supported the old plan of county meetings. At a county meeting held at Mrs. Saville's, near Spring Garden, August 20th, of which William Binder was chairman and E. D. Corfield was secretary, resolutions were passed to support candidates for General Assembly, Congress, State Senate, House of Representatives, sheriff, etc., by general vote. Dr. Leib said that nominations by county meetings had been successful since 1795, that there was no good reason for changing, and that it would be a submission to a faction which had, under various names, distracted the county for years. A personal attack was made upon Ebenezer Ferguson and others. The Democratic Ward Committee supported the plans of Duane and Leib, and in their report said,—

"During the administration of Governor Mifflin, parties were not marshaled against each other with strength and energy. Hence the people accepted him at the instance of a few citizens casually assembled in Philadelphia. In 1799 people thought little of the mode in which McKean was nominated. All that was wanted was a person from the Republican ranks. The nomination was made by thirty promiscuous and self-created organs of the public will. In 1802, McKean was nominated by a similar association of persons. The next three years of his term did not pass so acceptably. In 1805, for the first time, a portion of the Legislature undertook to nominate, and their choice was Simon Snyder."

This, it was said, was "done by intrigue," which was also the case in 1808. The proceedings of this committee were signed by Thomas Leiper, chairman, and by George Bartram, secretary.

About this time the anti-Snyder party established "The Whig Society of Pennsylvania," "the general object" of which, it was declared, was "the cultivation of virtue in politics." Thomas Leiper was president; Robert Patterson, Richard O'Brien, vice-presidents; John W. Thompson, treasurer; Thomas Waterman and Isaac Boyer, secretaries; and Michael Leib, James Engle, George Bartram, William J. Duane, and Robert Patterson, committee of correspondence.

Meanwhile the Federalists had kept quiet during this conflict, biding their time and nursing their strength. They celebrated February 22d as a national holiday. The "American Republican Societies" met at the State-House, and about five hundred persons walked from that place up Sixth to Market Street, and down Market Street to the First Presbyterian

Church, where an oration was delivered by Dr. Charles Caldwell. A dinner in Prune Street, below Sixth, in a building which had been erected for a cotton-factory, concluded the ceremonies.¹ The cavalry paraded under Col. Wharton, also several companies of infantry. A large company also assembled at Renshaw's. There was a dinner, at which James Milnor presided and Jonathan B. Smith was vice-president. "The Incorporated Washington Society" dined at Henry Meyers'. There were toasts and speeches at all those places. The Fourth of July was also kept by the Federalists, seven hundred of them dining at Peter Evans', near the permanent bridge, under a large tent. The Revolutionary flag of the First City Troop was displayed, and Capt. Summers' artillery replied with salutes to the toasts. Dr. Caldwell delivered the oration at this place. The Society of the Cincinnati dined at Foquet's, and the Sons of Washington at the Mansion House, James Milnor president, Jonathan Smith and Samuel F. Bradford vice-presidents. The First and Second City Troops exercised and dined at Mendenhall's Ferry, two miles below the Falls of Schuylkill.

In October the Federalists elected most of their candidates, much to the surprise and chagrin of the Democratic factions. The "American Republicans," as the Federalists were now called, nominated for Congress James Milnor, Thomas Truxton, and Thomas B. Dick; for sheriff, Francis Johnston. The Snyderites, or new-school Democrats, nominated Dr. Adam Seybert, William Anderson, and Dr. John Porter for Congress, and John Dennis for sheriff. The old-school Democrats, or anti-Snyderites, nominated for Congress Seybert and Anderson, but placed the name of Robert McMullin in place of Porter. For sheriff they nominated Frederick Wolbert. The election resulted in the defeat of the Leib faction, and of the new school in their special candidates. The Federalists carried Johnston for sheriff, and elected one State senator, Charles Biddle; the Snyderites elected Humphreys. They carried a majority of the City Councils, and elected Robert Wharton mayor. Milnor, Seybert, and Anderson were sent to Congress. The Whig Society, in November, ascribed the defeat of their ticket to the overpowering and irregular action of the officers of the State government, and wound up their manifesto by still more bitter charges against Governor Snyder. The attempt of the Leibites to overthrow the legislative caucus for the nomination of Governor also failed.

Banks and financial affairs occupied public attention. The question of the renewal of the charter of the United States Bank was undecided, and a meeting to urge such renewal was held at the Shakespeare Hotel, Edward Penington, chairman, John Conrad,

secretary (Dec. 21, 1809). This stimulated State bank projects, and January 20th the Mechanics' Bank was organized, capital stock seven hundred thousand dollars in shares of fifty dollars apiece. When, the following month, the subscription-list was opened there were not only a sufficient number of subscribers to take up the stock, but from six hundred to seven hundred persons, who were anxious to do so, could not obtain access to the building. They withdrew, organized another bank, called the "Commercial," and one million of dollars were subscribed forthwith. In the course of that day projects were started for the formation of five additional banks. One of these schemes ended in the establishment of the Bank of the Northern Liberties. But on the 19th of March a legislative act was passed prohibiting unincorporated banks and banking associations from issuing notes. The stockholders in the Bank of the Northern Liberties then applied to the General Assembly, offering as a bonus for a charter to contribute a sum towards building a bridge over the Susquehanna at Harrisburg. This offer was made because, by vote of February 21st, the capital was to be established at Harrisburg before the close of October, 1812.

The petitions presented in December, 1809, urging enlargement of the school system, received favorable attention from the Assembly in January. "The Union Society" of Philadelphia, for founding schools for colored people, was sanctioned,—Arthur Donaldson, president; William Simmons, vice-president. In February the House committee reported favorably on a lottery scheme for "the academy of Rev. John W. Doak, pastor of the Presbyterian Church in Frankford," where "Latin, Greek, and the globes" were taught.

In February the effort was made to move the almshouse of the city and county to a farm, and a bill was brought in for that purpose. The report to the Assembly said that the building was crowded, over a hundred persons living there in idleness; but the proposed act failed to pass. The prison inspectors of Philadelphia begged the Legislature for more help in building the new Arch Street prison, saying that \$85,821.12 had been received from the sale of city lots, and that they had expended \$85,600.84. They wanted twenty-five thousand dollars more to complete the prison and put up the wall. The committee made a favorable report, but the matter was not taken up during the year. The same month Charles Wilson Peale, artist and museum-owner, petitioned that the city and county of Philadelphia should be allowed to convert the vacant wings of the State-House into fire-proof offices, and that perpetual use of the upper part should be granted to the museum. The educational features of the collection were referred to, and Dunn, chairman of the legislative committee, reported favorably. Another act of the Assembly ordered the barracks in the Northern Liberties to be sold. March 19th a very important act was passed, which gave to

¹ This building was afterwards occupied by the Prune Street, City, or Winter Tivoli Theatre, and by Jefferson Medical College as its first location.

the corporation of the city of Philadelphia a right to extend any of the market-houses whenever it was thought proper, and there were some discussions in the newspapers as to the propriety of doing this on High Street from Fourth to Sixth.

The City Councils were busy with local regulations and measures of public usefulness. In January resolutions were pressed with much earnestness in favor of the city becoming an insurer of property from loss by fire and other dangers. The Common Council passed a resolution authorizing a memorial to the Legislature to give the corporation power to effect insurances from loss by fire in the commonwealth of Pennsylvania. This was not sanctioned by the Select Council, and the proposition was subsequently renewed, but was not successful. The City Councils, after having for several years held the small, triangular, tree-covered lot bounded by Spruce, Front, Dock, and Little Dock Streets, for the purposes of a public square, leased a portion of it to the keeper of a board-yard, who destroyed the trees and erected a number of "tailors' slop-shops" upon it. The rest of the ground was used for the storage of lumber and for the accumulation of manure. The whole was inclosed with a rough board fence, and was soon considered a public nuisance. Remonstrances were sent to the City Councils, but they met with no attention.

In the latter part of this year various matters of local regulation were suggested in Councils. The most interesting ones were to number and license drays, to regulate the size of bakers' wheelbarrows, to establish street patrols on Sunday, and to pave the centre of the wharves, so as to furnish a convenient footway in muddy weather.

Late in June the two floating bridges, one at the Upper Ferry, the other at Gray's Ferry, were destroyed by a flood, delaying travel, and causing considerable loss to property on the banks of the rivers.

In this summer the first steam ferry-boat was used to carry passengers between the city and Camden. It was called the "Camden," was commanded by Capt. Ziba Kellum, and built by Joseph Bispham. The course was from the lower side of Market Street to the foot of Cooper Street. There was no deck, and it was used for the transportation of passengers only. Horses, cattle, and wagons were still rowed across the river in large old-fashioned boats, called "horse-boats."¹ Other steamboat lines had already been established. The "Phoenix," through the summer of 1810, went from Philadelphia to Chester in two hours and twenty-five minutes, and returned in two hours and thirty-five minutes. The trip from Bordentown to the city was made in four hours, including stoppages. In July the "Phoenix" was advertised to leave Philadelphia at half-past two o'clock P.M. on Monday,

Wednesday, Thursday, and Friday, for Bordentown, arriving in the evening. Stages were ready there to take passengers to the Raritan River, passing through Trenton and Princeton to the Raritan steamboat at New Brunswick, connecting stages running to Elizabethtown Point, whence sailing packets could be taken for New York, and also to South Amboy, where there were also packets in waiting. The fare to New York by the Raritan route was \$4.25; to Elizabethtown Point \$3.75; and to South Amboy \$3. When the boat was ready to leave Philadelphia a tin horn was blown, and hundreds of persons assembled to witness her departure.

John Stevens published, in November, proposals to establish a line of steamboats between Philadelphia and Wilmington, thence overland to the head of Elk River, and from thence by steamboat down that river and Chesapeake Bay to Baltimore. He estimated that seventy-five thousand dollars would be sufficient capital, in shares of one hundred dollars each. He suggested that the steamboats should be built one hundred and thirty feet long and twenty feet beam, and thought that they might be finished by the 1st of June in the ensuing year. Stevens thought that the annual expense would be about seven thousand dollars, and that the line could carry each way fifteen to twenty tons of goods or merchandise. Thirty tons at thirty cents per hundredweight would yield one hundred and eighty dollars a day for the three boats. He calculated upon ten through passengers daily each way at \$3.50 apiece, and as many more between Philadelphia and Wilmington, and figured out a very alluring profit on this modest estimate.

The water lines of travel did not, however, have things all their own way. The "Phoenix" steamboat route to New York found opposition in the "Expedition" line of stages through to New York in one day, without change, for \$8. A slower stage, the "Diligence" line, made the trip for \$4.50, and the "Accommodation" only charged \$3.50. William T. Stockton & Co. were the proprietors. About this time John Tomlinson & Co., of Philadelphia, and Samuel Spangler & Co., of York, established a line of stages to West Chester, Lancaster, and Columbia, leaving the city on Mondays, Wednesdays, and Fridays, and reaching Columbia the same night. The coaches were among the first in the United States to have steel springs. The fare to York was nine dollars.

The contest in relation to the burying-ground on the west side of the Schuylkill, north of Market Street, was renewed by a petition of the Society of Friends, presented in the House January 7th, requesting that the title might be vested in trustees for the use of the society. The Board of Health shortly afterward presented a petition, asking that the same lot be made a public burying-ground. The Senate then passed a bill vesting the property in the Society of Friends, but it was lost in the House by forty yeas to fifty nays. The Senate then passed a bill vesting the ownership

¹ "Horse-boat" was also a term applied to boats worked by horses, the animals' strength being applied to the propulsion of the machinery; another name of the latter class of vessels was "Team-boat."

of another lot on the west side of the Schuylkill, near the Upper Ferry, in the Guardians of the Poor for a burying-ground. This burying-ground had also been used for free interment for many years, and did not seem to have an owner. The House, however, refused to pass this bill.

The rechartering of the United States Bank was one of the most important discussions which occupied Philadelphians during this year. January 23d, a meeting was held at the Coffee-House, of which Joseph Grice was chairman, and Robert Waln secretary. A committee, consisting of Thomas Fitzsimons, Stephen Girard, William Davy, Emanuel Eyre, and Robert Waln, was appointed to draft a memorial to Congress in favor of the recharter of the bank, and to appoint a committee of five to proceed to Washington to urge the matter before the National Legislature. This meeting was followed the next day by another, composed of master-mechanics and manufacturers, held at the Shakespeare Hotel, in Market Street. General John Barker was chairman and Frederick Foering secretary. This meeting adopted resolutions, and appointed Jacob Vodges, Thomas Ogle, George Ord, Samuel Smith, and Frederick Foering a committee. The *Aurora* and the Democratic party took the other side of the question. In February the General Ward Committee of Philadelphia (new-school Democrats) sent a memorial to Congress against rechartering the bank. Congress was unwilling, and the time named in the original charter expired in March without the passage of the bill rechartering the institution. In the early part of the year the Legislature had passed resolutions instructing the senators and representatives in Congress to vote against it. Holgate, of Philadelphia County, in December, 1810, had offered a long preamble and resolutions, seconded by Shearer, of the same county, arguing that the charter of the bank was unconstitutional.

The State banks were alarmed, and the Philadelphia Bank, in January, sent a memorial to the Legislature, stating that "said bank will be exposed by the dissolution of the Bank of the United States to a serious reduction of its dividends, and that the most injurious consequences will ensue to the community at large." The memorial asked if the Legislature would adopt no measures opposed to "the memorials of citizens, merchants, manufacturers, mechanics, and others, and would refrain from an expression of sentiment." The Bank of North America also sent in a protest against Holgate's resolutions. Notwithstanding these expressions of dissent they were pressed in the House, and were carried by a vote of sixty-eight yeas to twenty nays. The Senate made some amendments which were concurred in. On the 18th of March the trustees of the late United States Bank sent a petition to the Legislature praying a charter of incorporation or the full amount of the original capital, with permission to employ any part of it in

such other State or States as may authorize the same. The committee reported favorably, but when it was brought up it was negatived by a vote of thirty-four yeas to fifty-five nays. In December the trustees of the bank again petitioned for a charter, but without success.

The House of Representatives in January passed an act to incorporate the American Color and Paint Company, which was lost in the Senate. Difficulties in the way of obtaining acts of incorporation appear to have been more numerous under the Constitution of 1790 than under its successor of 1838.

In the early part of the year there was much suffering among the poor for want of fuel. In February firewood was very scarce, and hickory sold at twenty dollars per cord.

Lotteries continued to be petitioned for. In February the Legislature refused permission to the superintendents of the Callowhill Street market-house to raise thirteen thousand dollars in this way to defray the debts on the building.

The same month the Guardians of the Poor memorialized the Legislature for authority to sell the almshouse property on Tenth, Eleventh, Spruce, and Pine Streets and buy a farm; they also desired that the keepers of the Arch Street prison should be obliged to receive all drunken, idle, and disorderly persons. The committee reported against the desired sale, thinking the almshouse well located already.

About this time the new hall, built on Second Street near Christian by the commissioners of Southwark, approached completion, and February 10th was partially opened; by August it was entirely ready for use and was occupied.

The First and Second City Troops celebrated Washington's birthday at Barnum's Hotel. On that day, also, the Society of the Sons of Washington dined at Renshaw's Mansion House hotel. The members wore their badges containing an excellent miniature likeness of Washington, set in gold, and accompanied by suitable inscriptions. The president was James Milnor; Vice-Presidents, Jonathan B. Smith and Samuel F. Bradford; Secretary, Robert S. Stephens; and Treasurer, Samuel Relf. Civilities were also interchanged between the society and the First and Second Troops and Independent Volunteers, all of which were dining on the 22d of February.

A great deal of interest centred about the efforts made to develop better communication by land or water between various districts and counties. It was really a more vital question to the people than any local politics. The interior of the State wanted more turnpikes; the suburbs of Philadelphia complained of the poor roads and difficulties of reaching the business portions of the city. The Legislature was more liberal than ever before. An act was passed at this session making a large number of appropriations of sums of fifteen hundred dollars and over for building, repairing, and improving county roads in twenty-

eight counties of the commonwealth. In February a meeting was held at Samuel Hergesheimer's, at Point Breeze Tavern, in the Neck, of which Israel Israel was chairman and Samuel Keemle secretary. Resolutions were adopted complaining of the bad condition of the roads, "which has frequently cut us off from access to the city." The resolutions went on to say that, as there was no probability that the roads in that section of the city would ever be improved by turnpiking, the Legislature should be addressed with a petition to grant a part of the county taxes to the township of Passyunk for the improvement of roads.

The state of the western part of Philadelphia at this time may be imagined from the proceedings in regard to Minnow¹ Run,¹ a stream which few would suspect ever flowed over ground where all traces of it have long since been obliterated. A resolution was passed to build a bridge over this stream of the width of seven feet, parallel with and at the distance of one hundred feet north of High Street. It was added, "The passage from Minnow Run to High Street is not convenient for carriages now." The Guardians of the Poor being anxious to have Spruce Street, between Eighth and Eleventh, paved, permission was given them to employ the paupers in that work. Chestnut Street was also directed to be paved from Eleventh to Broad Street, if money sufficient was subscribed by citizens, to be repaid in six years.

A petition was presented to the Assembly in the early part of the year, asking that the inhabitants of Moyamensing should receive a charter of incorporation. The committee of the House reported against it. A supplement was passed March 30th to the act incorporating the District of Northern Liberties of March 9, 1803. It gave power to the commissioners to establish a nightly watch, to fix up public lamps, and to levy taxes for the support of the same, the commissioners also to have power and jurisdiction on the west side of Sixth Street. A supplement to the

District of Southwark Act was passed on the 1st of April, which transferred the jurisdiction in laying out streets in that district, formerly exercised by the Supreme Executive Council, to the Court of Quarter Sessions.

A notable incorporation, under an act of March 30th, was one by which Gen. Francis Swain, James Sharswood, Henry Nixon, Joseph Starne, Matthias Harrison, Francis Deal, John H. Duy, John Marclay, Alexander Crawford, Nathan Levering, Jr., and Levi Pawling were appointed commissioners to receive subscriptions for the organization of a company "for making an artificial road, beginning at the intersection of Vine and Tenth Streets, Philadelphia, and thence to Perkiomen bridge, in the county of Montgomery." The corporation was entitled "The Ridge Turnpike Company." The capital stock was divided into fifteen hundred shares, at fifty dollars each. The route, it was declared, should be, "as near as may be consistent with economy and utility, along, over, and upon the bed of the present road leading from the intersection of Vine and Tenth Streets, in the city of Philadelphia, to Wissahickon Creek, thence to Barren Hill, thence to Norristown, in the county of Montgomery, and thence by the nearest and best route to Perkiomen bridge, in the county aforesaid." It was directed that the road should not be less than forty feet nor more than sixty feet in width, and that twenty-four feet at least in breadth should be an artificial road, bedded with stone and gravel. Rates of tolls were established. The road was to be commenced in three years, and finished in seven years. On the 2d of April a supplement was passed to the Philadelphia, Brandywine, and New London Turnpike Road Act, which granted permission to lay out the route "over the road leading from Schuylkill to Darby, commonly called the Woodlands road, where said road diverges from the Philadelphia and Lancaster turnpike."

Another attempt to establish canal communication with the west and northwest counties of the State was begun this year. April 2d the "Union Canal Company" was incorporated. The preamble stated that earlier companies had failed, from various reasons, and described how the stockholders of the Schuylkill and Susquehanna and of the Delaware and Schuylkill Canal Companies had formed a joint stock company, under the title of "The Union Canal Company of Pennsylvania." It was declared that all acts passed in favor of either company were repealed, their corporate titles abolished, and the new title of the united corporation made "The Union Canal Company of Pennsylvania." Each holder of one share in the Schuylkill and Susquehanna Navigation Company was to have two shares of Union Canal Company stock, and each Delaware and Schuylkill Canal stockholder was to have one share. The corporation was also given the right to contract to furnish water to the city of Philadelphia, the district of the

¹ Minnow Run commenced at Bush Hill in two springs, one of which was east of the Bush Hill mansion, near the neighborhood of the present Buttonwood and Sixteenth Streets. The other was west of the mansion, about Buttonwood and Eighteenth Streets. The eastern branch flowed south, nearly to the line of the present Callowhill Street, and then crossed in a southwestern direction, diagonally, the squares between Sixteenth and Seventeenth, Vine and Callowhill, and Seventeenth and Eighteenth, Vine and Callowhill, and united between Race and Vine Streets, within the inclosure of what is now known as Logan Square, with the western branch, which flowed between Eighteenth and Nineteenth, crossing west of Nineteenth, between Vine and Callowhill, and returning eastward to the point of union with the other branch about the centre of Logan Square. The course was then south, between Eighteenth and Nineteenth Streets, crossing Race and Cherry Streets. North of the latter, and near Nineteenth, another branch united with the stream which flowed westward from the neighborhood of Centre Square. The run then crossed Arch Street, between Nineteenth and Twentieth, receiving a little stream into it at the point of junction, which rose near Market Street between Eighteenth and Nineteenth, and flowed northwestwardly. Minnow Run, from this point, ran diagonally, crossing Filbert Street, between Twentieth and Twenty-first, and then ran due west about half-way between Filbert and Market Streets, and emptied into the Schuylkill north of ground now occupied by the City Gas-Works.

Northern Liberties, the county commissioners, and to private individuals and corporations. They were also empowered to raise by lottery three hundred and forty thousand dollars,—a residue of the sum granted to be raised in that way by the companies of which they were heirs.

Bridge companies were unusually active. March 28th the Assembly passed a law appointing Samuel Richards, Philip Wager, John Britton, Jr., Cadwalader Evans, and Abraham Sheridan, commissioners, to receive subscriptions to the stock of a company "for erecting a permanent bridge over the Schuylkill at or near where the floating-bridge of Abraham Sheridan is at present situate, known by the name of the Upper Ferry, in the county of Philadelphia." There were to be eight hundred shares, at fifty dollars each. It was ordered that this bridge should be at least thirty feet wide, with a good railing on each side. The property was to continue in the company for twenty-five years. Rates of toll were provided for. Funerals and military processions were to be exempt from charge. The amount of receipts exceeding nine per cent. per annum profit was to be applied to the purchase and redemption of the shares. The bridge was to be commenced in two years, and finished in five years. On the 20th of March an act was passed authorizing Joseph Kirkbride to erect a bridge over Frankford Creek, "where his ferry is now kept," near Bridesburg. It was to be sixty feet in length, eight feet clear above the water. It was also to be provided with a draw eighteen feet wide. Kirkbride was to take tolls; and his bridge was ordered to be commenced within a year, and completed within four years. April 2d the Schuylkill Falls Bridge Company was incorporated. The preamble recited that Robert Kennedy and Conrad Carpenter had conveyed all their interests in the site of the Schuylkill Falls bridge, under the act of the 22d of February, 1808, to certain trustees for the use of themselves and others, subscribers to the stock for the bridge. Robert Kennedy, Paul Cox, Samuel Wheeler, John Johnson, Algernon Roberts, Thomas McEwen, John Thorburn, Walter Franklin, Francis Johnston, Reading Howell, and William T. Donaldson were incorporated as the president and managers of the Schuylkill Falls Bridge Company. The erection of the new bridge was necessary because of the destruction of the chain-bridge at Schuylkill Falls a few years before. James Finley, in an article published January 17th, said, "The breach of the Schuylkill bridge by a drove of cattle is an occurrence which deserves attention. An ill-judged clip or coupling-piece broke, with which two parts of the chain were joined together."

The growth of the city and its increased litigation made the facilities of the Court of Common Pleas far too little in trial of civil causes. March 30th an act was passed establishing the "District Court for city and county of Philadelphia, to have jurisdiction in sums exceeding one hundred dollars, and to consist of

a president judge and two assistant judges, the first to receive two thousand dollars per annum, and the others five hundred dollars each. Their terms of office were limited to six years. The prothonotary of this court was to be the prothonotary of the Common Pleas. It was organized May 6th, Joseph Hemphill presiding, and Anthony Simmons and Jacob Sommer assistants. The two latter were not learned in the law; one had been a goldsmith, the other a farmer. Seventy-five lawyers were admitted to practice in this court in June.

Some time in May, Capt. Grassin, of the French privateer "Diligente," who had captured the ship "Hebe," of Philadelphia, Capt. William Ogle, some time before, arrived in the harbor, and proceedings were commenced against him. The "Hebe" had purchased her release, but in some way Capt. Grassin had not carried out his agreement. In July, Mayor Wharton bound him over in the sum of five thousand dollars, to answer a charge of arming in the port contrary to acts of Congress. Charges upon tonnage had been increased about this time, the Port Wardens having power to raise it two and a half cents per ton above previous rates. Commercial interests suffered greatly from the condition of national affairs.

Everything combined to keep up public interest in military exercises; the prospects of war were too alarming to allow of neglect. Therefore the sound of drum and bugle was often heard this summer in the streets of Philadelphia. The Legislature passed an act March 30th, granting new privileges and enlarging the regiment of artillery of the First Brigade, First Division, also organizing the cavalry of Philadelphia into a regiment. The artillery was to have one colonel, one lieutenant-colonel, two majors, and twelve captains. Each company was to be organized with one captain, a first and second lieutenant, two cadets, four sergeants, four corporals, eight artificers, and eighty privates. The twelve companies were to be placed in three battalions as soon as five hundred men were enrolled, and one company of horse or flying artillery was to be attached to each battalion. The uniform of the artillery regiment was as follows: a long, dark-blue coat, faced and lined with scarlet; collar and cuffs of the same (scarlet), with yellow buttons, stamped with the letters "First Regiment," the button-holes and edges of the coat trimmed with gold lace or yellow silk binding; cocked hat, with a red feather and the cockade of the State; blue pantaloons, edged with yellow or buff; vest with yellow buttons, stamped "First Regiment;" short boots; a cartridge-box to fasten around the body, and to contain at least fourteen cartridges; a buff bayonet-belt with an oval plate in front, with the arms of the State stamped thereon, and the letters "First Regiment, Pennsylvania Artillery." The horse or flying artillery uniform was to be a short, blue coat, faced with scarlet; collar and cuffs of the same, the trimmings to be the same as for the foot artillery. One

thousand State arms were to be issued to the regiment. It was required to be ordered out for exercise not less than six times, nor more than twelve times, in a year. The cavalry regiment was to have one colonel, one lieutenant-colonel, and two majors.

The cavalry regiment was organized on the 29th of April by the election of Robert Wharton colonel, John Smith as lieutenant-colonel, Caleb Hughes and Samuel Mifflin majors. A sham battle was fought on the 6th of May, under command of Gen. John Steele, the opposing forces being officered by Maj. Lewis Rush and Col. George Bartram. The field of battle was on the west side of the Schuylkill River, near the Upper Ferry bridge. The attack was made by crossing from Fairmount. May 27th a numerous body of regular troops from New England, under command of Col. Boyd, passed through Philadelphia on their way to Pittsburgh. There were large crowds on the streets and at the windows. In October another military *fête*, similar to that in May, took place on Broad Street, near Centre Square. Col. Wharton had command of the cavalry, and Col. Ferguson of the artillery. Brig.-Gen. Bright, aided by Col. Irwin and Maj. Borden, commanded one of the armies in the sham battle, and Brig.-Gen. Duncan, with Maj. Dillingham and Dennis, commanded the other. August 21st a dinner was given to Gen. Pinckney at Barry's Union Hotel, corner of Second and Union Streets. Charles Biddle was president, and Maj. Lenox was secretary. The First and Second Troops presented an address to Gen. Pinckney on the 5th of September. In October the officers of the cavalry regiment were notified by Aaron Denman, adjutant, that they should meet for officers' drill opposite the first turnpike gate on the German-town road.

The fire department had proved efficient in times of need, and in June one thousand dollars was appropriated by City Councils to the fire and hose companies, being, it is believed, the first time that a contribution had been made by the Councils for the support of the fire department. A disastrous fire occurred at Newburyport, Mass., also in June, and the loss was estimated at two millions of dollars. A meeting of citizens was held at the Philadelphia City Hall June 15th. Robert Ralston was chairman and James Milnor was secretary. Committees were appointed in all the wards to solicit contributions, and a considerable amount of money was raised, which was forwarded to the sufferers.

During the summer the markets were disturbed by persons who were not butchers cutting up meat and selling it in the market. This was the commencement of what in later years led to the butcher-and-shinner difficulties. The butchers held several meetings, and petitioned Councils for an ordinance against them.

Mention has already been made of the monument to Gen. Wayne that the "Society of the Cincinnati" were building at Radnor, Chester Co. Being finished,

it was dedicated June 5th of this year. Adam and James Traguair were the builders, and their work was much admired. Among the militia that marched to Radnor and assisted in the dedication ceremonies were the First City Troop, Lieut.-Com. Crawford; Second City Troop, Capt. Thomas Cadwalader; Third City Troop, Capt. Samuel Meeker; Fourth City Troop, Lieut.-Com. Clopp; First County Troop, Lieut.-Com. Haas; Second County Troop, Capt. Humphreys,—forming the associated regiment of volunteer cavalry of the city and county of Philadelphia. The "Society of the Cincinnati" thought the time was appropriate, and passed resolutions that a monument to Washington was desirable. Their committees were not able to raise the necessary funds, and the project languished for some time. July 4th the society met in Philadelphia. The cavalry, infantry, and artillery paraded through the streets, and escorted their guests to Zion Church, at Fourth and Cherry Streets, where an oration was delivered by Charles Biddle. The Pennsylvania Society dined at the Mansion House, Maj.-Gen. Charles Cotesworth Pinckney, the president-general of the society, being president.

There were some local incidents during the summer of 1811 worthy a passing word. William Duane, of the *Aurora*, lost a libel suit instituted by J. E. Smith, steward (in 1804) of the lazaretto, and the verdict against him was for eight hundred dollars. Three female convicts, two black and one white, dug their way under the walls of the Walnut Street prison and escaped. The Councils authorized commissioners to take down the east and west walls of the State-House and put up iron palisades instead, but finding that there were legal difficulties, an act of the Legislature was afterwards obtained. One of the sensations of the year was an attempt to kidnap Stephen Girard. Two men arranged a plan to seize him by enticing him to visit a certain store upon a proposition to buy goods. Their idea was to obtain possession of his person, and then compel him to draw checks for whatever sums of money they chose to demand. Girard discovered the plot before an endeavor was made to put it into operation. The men were arrested and bound over to answer. They were in prison several months, but in March, 1812, they were acquitted.

Over all the local events of 1811, however, the shadow of national gloom and of approaching war was deep and unbroken. National, State, and city politics by turns agitated the minds of Philadelphians. In February Mr. Pinckney, our envoy to England, having exhausted all his arguments, returned to America, but Augustus J. Foster was appointed envoy to the United States "to settle the Chesapeake affair and other disputes." March 2d another act of Congress opened the way still further for reconciliation. But it was hard to believe in peace; many citizens felt that the nation's honor would be compromised by further efforts to avoid the inevitable conflict. An American ship was captured by a British cruiser

within thirty miles of New York. Early in May Capt. Dacres and the "Guerrière" impressed a native of Maine from the brig "Spitfire" when only eighteen miles from New York, and other cases determined the government to send out some of the new frigates. May 16th, in the evening, the forty-four-gun frigate "President," under Commodore Rodgers, encountered the British sloop "Little Belt," forty miles northeast of Cape Henry, and broadsides were exchanged. Contradictory and indeed irreconcilable stories were told by the commanders. The Democrats accepted the statement that the British were the aggressors; the Federalists claimed that the American vessel had made the attack in order to force a declaration of war. Partisan spirit seldom reached a greater height; the opposition press was crowded with unpatriotic assaults on Commodore Rodgers. Meanwhile in the West events of peculiar importance were occurring. Elks-watawa, under the guidance of Tecumseh, had devoted six toilsome years to rousing the superstition of the Indians; they had welded together a strong confederacy of tribes, and threatened the existence of the infant settlements from Vincennes to Kentucky. Harrison called for aid, and the old Indian-fighters sprang to arms. November 7th, under the oaks of Tippecanoe, surrounded by marshes and grass-grown prairie, was fought the battle where Daviess fell, where Tecumseh's league was shattered, where Harrison gained the glory which made him President. November 4th the Twelfth Congress assembled, called together by special proclamation. The Federalists had only six senators and thirty-six representatives. Henry Clay, war candidate, was chosen Speaker by a vote of seventy-five to thirty-eight. The message was firm but not bellicose. The Committee on Foreign Relations, in their report adopted December 16th, said,—

"The period has arrived when, in the opinion of your committee, it is the sacred duty of Congress to call forth the patriotism and resources of the country. By the aid of these and the blessing of God we confidently trust we will be able to procure that redress which has been sought for by justice, by remonstrance, and by forbearance in vain." The committee recommended Congress to second the proposition of the President by immediately putting the United States "into an attitude demanded by the crisis, and corresponding with the national spirit and expectations." The bill to increase the regular army was amended to allow the enlistment of twenty-five thousand additional men. Appropriations were made, and the President authorized, whenever necessary, to call on the Governors of the States for a quota of one hundred thousand militia, instead of fifty thousand, as had been recommended.

Politics in Philadelphia were marked by the usual struggle between factions. The animosity between the old and new schools of Democratic politicians had not ceased to have its effects. Although both

wings supported Snyder, they were in other matters apparently as hostile as ever. The new-school Democrats had the influence of the State administration. The old-school Democrats, under Leib and Duane, were without power, and represented only dissatisfaction. The Tammany Society held its meeting on the 13th of May at the Widow Long's. Brother John Thompson delivered the "long talk." Seventeen toasts were duly honored. George W. Bartram offered a strong personal toast, aimed at Binns, which was followed by "The Dead March" and three groans. The new-school party met at the usual time at the house of George Fagundus, sign of the "Cock and Lion," in the Northern Liberties, and nominated, on the city and county ticket, for senator, Isaac Worrell. In the county they nominated a ticket for the Assembly, and supported John Dennis for coroner, and Forrest, Barclay, and Schafer for auditors. The old-school Democrats, having been badly beaten in previous contests, were inclined on this occasion to recommend the policy of union.

The *Aurora* rather favored the proposed alliance. In September delegates chosen from the two wings of the party held a meeting at John Miller's, No. 63 North Fourth Street. For senator John Connelly was nominated; for county commissioner, Abel Evans; for coroner, William Shannon; for county auditors, Maj. John Holmes, Philip Peltz, and William Piersol. Mr. Connelly declined the senatorship, and George Summers was nominated. Upon the representative ticket for the county this convention placed the names of John Thompson, George Morton, William Paul, John Carter, Francis Ingall, and Samuel Castor. The Federalists in the city nominated a full Assembly ticket, embracing the names of Benjamin R. Morgan, Thomas McEuen, Samuel Hodgdon, John Clawges, Sr., and John Drinker. For senator from the city and county they nominated John Jones, of Lower Dublin; Jonathan Roberts for county commissioner; Thomas Hopkins for coroner; and for auditors, Timothy Paxson, Thomas P. Cope, and Joshua Comly. It was found that no union of the Democratic wings was possible.

The friends of union of Lower Delaware Ward declared that "the efforts to obtain a union had not been met generally with the spirit of harmony, but were followed by meetings in several wards under the direction of executive officers and office-holders." The North Mulberry Ward resolutions regretted that "ward meetings had been called of friends of a particular man." In Southwark, at Commissioners' Hall, resolutions were passed against the proceedings of "a general ward committee styling itself Democratic," etc. The attacks were very strong against Binns, and as the canvass went on the spirit of harmony was entirely lacking. The result, as might have been expected, was that the Federalists carried their city ticket. In the county there was a new-school triumph. The election resulted as follows: Total

vote in the city and county for senator, Worrell (New School), 3259; Jones (Federalist), 3044; Summers, (Old School), 1661. County commissioners, Fitler (New School), 3294; Roberts (Federalist), 3100; Evans (Old School), 1543; coroner, Dennis (New School), 3680; Hopkins (Federalist), 3035; Shannon (Old School), 1731; auditors, New School, Forrest, 3227; Barclay, 3226; Schafer, 3225; Federalists, Paxon, 3077; Cope, 3075; Comly, 3074; Old School, Piersol, 1565; Peltz, 1564; county Assembly, New School, Heston, 2019; McLeod, 2015; Holgate, 2011; Groves, 2011; Shearer, 2001; Duncan, 1984; Old School, Castor, 1401; Ingall, 1390; Thompson, 1378; Carter, 1372; Paul, 1370; and Morton, 1351.

In the State Snyder received 52,319 votes; William Tilghman, not nominated, but voted for by some Federalists, received 3609. There were 1675 scattering votes, of which more than 400 were polled in favor of a well-known local character,—Richard, commonly called "Dicky," Folwell.

The State election for Governor was very quiet. Simon Snyder's administration had been able and popular. There was no opposition within his own party, the "Quids," in 1808, having but 4000 votes in the whole State. The Federalists did not nominate any State ticket.

Clay, in the House of Representatives, spoke for the buckskin-clad pioneers of Kentucky and Ohio when he exclaimed that though Philadelphia, New York, Boston should fall into British hands, though the Atlantic seaboard States were invaded, yet the West would save the government. Jan. 14, 1812, \$1,500,000 was appropriated for arms and equipment, \$400,000 for the navy, and \$500,000 for coast defense. State after State promised to support decisive measures. The *Aurora* made the figures "6257," the number of impressed American citizens, the keynote of many a war editorial. Philadelphia merchants still deprecated hostilities.

On the 1st of April a meeting was held at the Merchants' Coffee-House of merchants, traders, and others interested in American property in Great Britain. Alexander Henry acted as president, and Samuel F. Bradford as secretary. It was resolved that there was great danger of injury to American merchants, not only by forfeiture of their property in Great Britain, but by the suspending of contracts and the confiscation of debts. A committee was appointed to memorialize Congress. A few weeks later Congress issued proposals for a subscription to a national loan of eleven millions of dollars before the war had commenced. In May it was announced that the subscriptions in Philadelphia toward this loan were: By the Bank of Pennsylvania, \$500,000; by the Farmers' and Mechanics' Bank, \$300,000; by the Philadelphia Bank, \$100,000; by the Bank of North America, \$100,000; by individuals, \$545,800; by an "officer of the general government," \$60,000; and by a "French gentleman," \$40,000. Total \$1,645,800. But the funds

that were available seemed totally inadequate. Albert Gallatin, in his report of January 10th, had given a gloomy account of the financial condition of the country, and matters showed no signs of improvement.

The affair of John Henry, once a wine-dealer in Philadelphia, also at one time an editor of a Philadelphia paper, attracted public attention in the spring and summer. Henry was a secret emissary of the British government, if the revelations he made by letters from Philadelphia to our government can be trusted.

The "True Republican" Society celebrated its anniversary on the 7th of May, at the house of brother Frederick Meyers. Capt. Reed's band furnished the music, and there were seventeen toasts. The Tammany Society listened, during the same month, to a "long talk" by Joseph T. Clement. Dr. Michael Leib was re-elected Grand Sachem, and George Bartram, father of the Council. Among the toasts was the following: "Foreign tribes strive to make us vassals. They outrage our rights. The common path of nations is no longer free for us. Slaves only submit to oppression. Let us then unbury the tomahawk which lies hid under our great wigwam, to assert our rights and avenge our wrongs."

A Democratic meeting was held at the State-House May 20th, Capt. William Jones being president, and James West, secretary. The resolutions were strongly worded in favor of war. The *United States Gazette*, speaking of it, said that there were two thousand persons present, including boys, and that "among other characters present were Lieut.-Col. John Binns (he had just been appointed aide-de-camp to Governor Snyder), Daniel Addis, Charles J. Ingersoll, John L. Leib, and James Carson." The meeting was a source of disagreement between Binns and Duane. The *Aurora* did not publish the proceedings. The Federalists consulted on the crisis through a convention of delegates from the wards. This body adopted an address declaring "their firm and unqualified conviction that the United States are not impelled to the war by necessity, nor invited to it by expediency."

May 18th, with Madison's renomination in the Congressional caucus, the die was cast, but war was not actually declared till the 18th of June. The debate in the House was of historic interest. Pennsylvania and the States south and west gave sixty-two votes for it and seventeen against. The States north of Pennsylvania gave seventeen for it and thirty-two against. The Smith and Leib faction, long advocates of war, suddenly tried to delay the bill. It passed the Senate by a vote of nineteen to thirteen. The next day President Madison issued his proclamation. The country, despite the years that war had been an approaching and visible evil, was but poorly prepared for the conflict. Disunion prevailed in national councils; the Essex Junto Federalists were opposed to the war, and New England Congregational ministers thundered from their pulpits in strong appeals

for peace at any price. We had undertaken an offensive war to force England to respect our maritime rights, and yet the nation lacked unity.

Philadelphia was patriotic to the core. Prompt consultation was had as to whether the citizens, principally the merchants, might not be able to build a ship-of-war for the use of the government, as in 1798 they built the frigate "City of Philadelphia." A meeting for this purpose was held near the end of June. Jacob Gerard Koch subscribed five thousand dollars to this fund as a gift, but added, "If it is intended to loan the ship I will build a ship-of-war myself for the government." This proposition was not carried out, probably because those who were interested in it perceived a better method of assistance by fitting out privateers.

Four days after intelligence of war reached the city the cavalry regiment of Col. Robert Wharton, Lieut.-Col. John Smith commanding, offered its services to the general government. This precedent was followed immediately afterwards by the Philadelphia Legion, Col. Lewis Rush. On the 1st of July a meeting of the staff and commissioned officers of the First Division was held at Harvey's tavern, in Spring Garden. Maj.-Gen. Isaac Worrell was chairman, and Maj. Frederick Foering secretary. The committee to draft resolutions consisted of Gen. Wharton, Gen. Duncan, Cols. Peter L. Berry, Thompson, Erwin, Snyder, Hergesheimer, Smith, Duncan, and Ferguson. They recommended that the volunteer and militia companies which they represented should unite with the constituted authorities in whatever measures of defense were deemed necessary. They also recommended that a special session of the Legislature should be convened. On the same day a meeting of citizens beyond the age of forty-five years, who were not liable to military duty, was held at the Indian King Hotel, in Market Street. Charles Biddle was chairman, and George A. Baker secretary. They resolved to form themselves into a military association to aid the civil authority in maintaining order. The committee appointed to arrange for the organization of the company was composed of the following citizens: Upper Delaware Ward, John Miller; Lower Delaware Ward, George A. Baker; High Street Ward, William Wray; Chestnut Ward, Bernard McMahon; Walnut Ward, William Smiley; Dock Ward, Levi Hollingsworth; New Market Ward, Capt. William Jones; North Mulberry Ward, Alexander Cook; South Mulberry Ward, John Barker; North Ward, Paul Beck; Middle Ward, Robert Patterson; South Ward, Conrad Hanse; Locust Ward, James E. Smith; Cedar Ward, John Douglass; for the Northern Liberties, John Goodman, Jacob Beitler, Frederick Sheetz; for Southwark, Robert McMullin, Archibald Binney, William Linnard, Isaac Hosey, Michael Freytag, Norris Stanley, and Capt. Glover. Each of the members of this organization agreed to furnish himself with a musket, bayonet, cartouch-box, and

twelve charges of powder and ball. The officers were to be chosen by elections in the wards, and the association was originally called "The Venerable Military Corps." Subsequently the title was changed to "The Military Association of the City and Liberties of Philadelphia of Friends of the Government of the United States."

The only force immediately effective was connected with the uniformed volunteer militia. In the First Brigade were Col. Ebenezer Ferguson's artillery regiment, the cavalry regiment under Col. Robert Wharton, and the Twenty-fourth Regiment of infantry, Col. S. F. Fottel. Gen. Bright, of this brigade, died in February, and Col. Wharton was his successor. The militia regiments of this brigade were the Twenty-fifth, Col. Samuel Erwin; the Twenty-eighth, Col. Samuel Glause; the Fiftieth, Lieut.-Col. George Bartram; and the Eighty-fourth, Col. Peter L. Berry. The quota of the First Brigade was eight hundred and eighty-eight. Lieut.-Col. John Smith's cavalry regiment made up three hundred and twenty-two of these, and Col. Lewis Rush's Legion added four hundred and five more. William Etris, brigade inspector of the Second Brigade, gave notice on the 23d of June that nine hundred and sixty-four men would be required. They were to be taken from the Forty-second, Sixty-seventh, Seventy-fifth, Eightieth, Eighty-eighth, One Hundred and Fortieth, One Hundred and Fifty-fifth, and One Hundred and Fifty-sixth Regiments. The Legion resolved, on the 29th of July, to offer its services to the Governor as part of the quota of Pennsylvania. Its board of officers said that they could muster five hundred men, and could soon double the number. On the Fourth of July the volunteer companies paraded. The strength of the regiment of cavalry was three hundred and twenty-two men, and of Col. Rush's Philadelphia Legion four hundred and five men. On that day there were various military celebrations in Philadelphia. The officers of the army dined at Bush Hill; the Twenty-eighth Regiment at Harvey's, in Spring Garden; and the Independent Volunteers at Patterson's, on the banks of the Schuylkill. Col. Winfield Scott was sent to Philadelphia by the United States government to organize a regiment for the regular service. The camp was pitched on the west side of the Schuylkill, near the Upper Ferry. Among the officers were Capt. Charles Smith, of the Light Dragoons; Capt. James N. Barker (son of Gen. John Barker), of the artillery; and Lieut. Thomas M. Powers. These officers dined at Bush Hill on the Fourth of July. The organization was known in the United States service as the Second Artillery.¹

¹ Gen. Winfield Scott, in a speech in Philadelphia in 1852, said, "I owe many thanks to Philadelphians and to Pennsylvanians. Across your river Schuylkill, in 1812, I had the honor to form a camp, where a regiment was prepared for the defense of the Canada frontier and for the plains of Canada. That regiment was composed almost exclusively

Congress had passed an embargo law on the 4th of April, which expired on the 2d of July. The 30th of July was solemnized as a State fast-day, and was generally observed in Pennsylvania. The 20th of August was observed as a day of fasting and prayer throughout the United States.

In July all British subjects in Philadelphia district were given notice to report their names, occupation, residence, etc., to the United States marshal.

The "Old Hob" Society held a meeting on the 4th of July at the "Green Tree," Walnut Street, and adopted, among others, the following toasts: "May the fate of the Tories of the Revolution be a warning to the highfliers of the present day." "May the Tories in New England repent, or be damned!" "Safe-keeping to all who are dissatisfied with the liberties and independence of America." The Twenty-eighth Regiment, celebrating the day in Spring Garden, adopted, as a toast: "Commodore Rodgers—When he meets a little belt or a big belt, or any kind of a British belt, may he succeed in giving them a good belting!" The Independent Volunteers, Capt. Samuel Borden, dined at Patterson's Schuylkill Hotel. Private Clement S. Ellick offered the following toast: "May the hides of the British garrison at Quebec be speedily tanned in their own vats!" At the First Light Infantry celebration the following toast was duly honored: "Our Secret Enemies—May they ever keep in mind that the tar of Virginia and the feathers of our own farms keep in store abundance of stock for the accommodation of gentlemen of that kidney."

The other side of public sentiment was shown by

of Pennsylvanians. My gratitude for that regiment is unbounded, and never will the recollection of it fade from my remembrance. There I had the honor to meet some of the finest young men the country ever produced. I refer to the Biddles, Thomas and John, who came out of the army majors, a distinction they were eminently deserving of for their gallantry and excellent services. The father of these Biddles—Charles Biddle—I recollect was a Revolutionary hero, and was at the head of the Committee of Safety in October, 1814, when Philadelphia was threatened with invasion, when your homes were threatened with destruction, and when the United States Treasury was bankrupt. He was a noble man, and his memory I will ever cherish. Thomas Lieper, who kept a tobacco-house in Market Street, was another great patriot, and his memory also will be held in grateful remembrance along with other worthy and good men of that day. Thomas Cadwalader was another gentleman who, while living, I loved, and who, now dead, I honor. He was a member, if I recollect aright, of that same Committee of Safety which, when the United States Treasury refused to pay a dollar, went and borrowed funds on their own credit for the defense of your now beautiful city of Philadelphia."

The following is a description of the United States army uniforms at this time: Artillery (officers), chapeau-bras bound around the edge with black ribbon; yellow buttons, golden tassels, and loop; black cockade, with gold eagle in the centre; white feather, three inches in height; blue coats, scarlet collars and cuffs; white cloth, or cassimere, breeches, and single-breasted vests. Artillery (soldiers), cocked hats; blue coats, with scarlet cuffs, and standing collar; pants, white in summer and blue in winter; vests of white cloth. Infantry (field officers), chapeau-bras. Platoon officers, black caps of cylindrical form; cockade and eagle on the left side, to rise one inch above the cap, oblong silver plate in front, with the name of the corps, number, and regiment; white plume in front; blue coats, scarlet collars and cuffs; white vests and pantaloons. For privates a similar dress.

Federalist meetings. The Federalists of Upper Delaware Ward held a meeting in July. Those were invited to come "who are attached to the principles of the Father of his Country, and who are opposed to the deleterious measures of the present administration." The resolutions said, "It is with despondency we view a war declared, which, if successful to the most sanguine wishes of its promoters, must end in our own ruin and a complete subservency to the mandate of the diabolical and detestable destroyer of mankind—Napoleon Bonaparte." In North Ward it was

"Resolved, That a long experience has shown us the insufficiency of our present rulers to place our beloved country in that independent position among nations which we ought to hold, and that at a moment when commerce, the basis of our national prosperity, is almost annihilated, when wars, direct taxes, and paper money are our only resource for supporting a war prematurely declared, and a hateful tyrant is forcing us into a destructive alliance, it becomes proper at our ensuing election to confide our public trusts to men pure and enlightened, who will demand redress the moment insult or injury is offered, and not decline a peace when peace can be procured on honorable terms."

A meeting was called of citizens of High Street Ward who "desire to secure to the country an able and independent administration, who can supply the treasury without paper money, and procure an honorable peace without foreign auxiliaries."

The Democrats of Locust Ward, in July, adopted resolutions in favor of sustaining the government, among which was the sentiment,—"Should the intemperance of despair instigate to deeds of disaffection, we will maintain the Union against domestic traitors as well as foreign enemies." The North Mulberry Ward resolutions declared, "That the resolutions adopted and published by a meeting in Lower Delaware Ward of persons styling themselves Federalists, deserve the severest reprobation of all real Americans, and it is recommended to such gentry to recollect that Nova Scotia may not be as safe a retreat for them in this war as it was for the Tories in 1776." The Walnut Ward Democrats resolved, that "those who in 1798 determined to give millions for defense, but not a cent for tribute, must have greatly degenerated if, in 1812, they would give millions for tribute rather than one cent for defense." The *Democratic Press*, July 1st, published an article accusing Gregg and Leib of voting with the Federalists in the United States Senate against the war eleven times, and added that they "did not vote for the war until there was a majority without them."

Privateers began to be fitted out with great speed. July 4th, at noon, three of these vessels, which were lying in the Delaware in front of the city, fired salutes. They were the "Atlas," Capt. David Maffett; the "Spencer," Capt. Morse; and the "Matilda," Capt. Noah Allen. They sailed soon afterwards, and the "General McKean," Capt. Lucet, followed a fortnight later. Their voyages were probably profitable, but the risk was very great. The "Matilda," under Capt. Taylor, sailed on the 7th of July, and before

she reached the Capes a mutiny took place, and forty of the crew were lodged in New Castle jail. Capt. Taylor was replaced by Capt. Allen, who captured and sent into Savannah, in September, the British ship "Goellet," Capt. Reed, with salt, steel, etc.; also the "Ranger," a British privateer brig of ten guns; the schooner "Jingle," with coffee, cocoa, etc.; the schooner "Manger," with cocoa, etc.; and the schooner "Woodburn," with coffee. Capt. Heard, of the "Ranger," was wounded, and died in the Pennsylvania Hospital. He was buried with the honors of war by officers of the army and navy and the Philadelphia Blues, under Capt. Rush. In July the "Matilda" had a fight with five armed British ships. With one of fourteen guns the contest was rather warm for about half an hour, but the other four ships coming up rapidly, the "Matilda" took advantage of her superior speed and escaped, after having sustained a running fire. The British brig "Esther and Elizabeth," laden with fish and dry goods, was sent in on the 5th of August by the "Governor McKean." The same vessel returned in the latter part of August, bringing in the packet "Prince Adolphus," of eight guns, which was bound to Falmouth, from Martinique. A New England schooner was also recaptured from a British privateer, and thirty prisoners released. Other prizes were taken during the year 1812 by these armed vessels. The "Hazard," Capt. Singleton, which was added to our offensive fleet in August, in December recaptured and sent in the Philadelphia ship "Aristides," from Liverpool, which was detained without reason.

The privateer "Spencer," Capt. Morse, and the schooner "Shadow," Capt. Hight, went out for cruises in the summer, but returned without success. The "Atlas," Capt. Maffett, arrived in September from a long cruise. Two large armed Jamaicamen, with valuable cargoes, were taken by her after a severe action, in which she lost nine killed and nineteen wounded. Prize-masters were put on board, and one of them, the ship "Pursuit," of London, was brought into port, the other, the "Planter," was probably recaptured by a British frigate. The "Revenge," William Butler commander, in the latter part of the year sent in the British schooner "Lorama," loaded with sugar. She also captured the sloop "Kate Canning," with a cargo of sugar, the ship "Neptune," and the "Cyrus," of Belfast. The sloop "Polly," captured by the "Revenge," was sunk off Chincoteague.

Towards the end of the year the fleet of privateers belonging to Philadelphia was enlarged by the addition of the schooner "Snapper," Capt. Green, and the "Rattlesnake," commanded by David Maffett, formerly of the "Atlas." The "Rattlesnake" (vessel) was built by Andrew Seguin, of the Northern Liberties, for Andrew Curcier, and was pierced for eighteen guns. On her way down the Delaware she was upset at Reedy Island in a sudden gale. The pilot and

twenty of the crew were drowned. The vessel was raised, brought up to the city, and subsequently sailed for France. She made no captures of importance, and was prevented from returning to port for many months by the blockade of the Delaware.

Honors to the naval heroes of the war were lavishly bestowed by Philadelphia. News of the capture of the British frigate "Guerrière," Capt. James R. Dacres, by the United States frigate "Constitution," Capt. Isaac Hull, was received September 3d. It was determined to present pieces of plate to "Capt. Hull and our townsman, Lieut. Charles Morris." A meeting was held September 5th. Commodore Richard Dale presided, and John Sergeant was secretary.¹ Capt. David Porter arrived in September in command of the United States sloop-of-war "Essex." During his cruise he captured the ship "Alert," of twenty guns, and nine other prizes. The "Essex" was refitted, and sailed October 28th for the South Pacific. She captured British property worth several millions of dollars, and was finally taken, in defiance of the laws of nations, in the neutral port of Valparaiso, by the British frigate "Phoebe," of thirty-six guns, and the sloop "Cherub," of twenty guns. News of the capture of the British frigate "Macedonian," Capt. John S. Carden, by the United States frigate "United States," Capt. Stephen Decatur, reached Philadelphia on the 8th of December. On the 10th of December Common Council, on motion of Liberty Browne, passed resolutions eulogizing the gallantry of Capt. Stephen Decatur, and it was resolved to present him with a sword. On the 10th of December, Capt. Jacob Jones, of the United States sloop-of-war "Wasp," whose capture of the British sloop-of-war "Frolic," Capt. Thomas Whinyates, was just then the subject of general congratulation, arrived in the city. He was escorted into town by the First Regiment of Pennsylvania Cavalry, under the command of Col. Smith. On the next day he was, together with such of his officers as were with him, entertained at the City Hotel, corner of Second and Union Streets, by the citizens of Philadelphia. Chief Justice Tilghman presided, and patriotic sentiments were duly uttered and honored. A subscription was also commenced to furnish Capt. Jones and each of his officers with a piece of plate. The gift that Lieut. James Biddle received was a silver urn upon which was a representation of the battle between the "Wasp" and the "Frolic," and the following inscription:

¹ Pictorial skill was engaged to illustrate this triumph. Two days after the news was received, T. W. L. Freeman announced that he would publish on the 1st of October, at No. 53 Walnut Street, two prints, each twenty by fourteen inches,—one representing the capture of the "Guerrière," and the other a full-length picture of Capt. Hull. These were to be furnished at the following prices: For prints, five dollars each; proofs, seven dollars; colors, ten dollars. Another print of the battle between the two ships was announced to be published on the 31st of September, from a drawing by William Strickland. Size, eleven by sixteen inches. Price, one dollar and fifty cents plain; two dollars, colored.

"To
LIEUTENANT JAMES BIDDLE,
United States Navy,
from the early friends and companions of his
youth, who, while their country rewards
his public services, present this
testimonial of their esteem
for his private
worth.
Philadelphia,
1813."

The Legislature of Pennsylvania voted the thanks of the State and a sword to the same gallant officer.¹ But though our naval victories were thus glorious, defeat and disgrace attended the American army. Hull's expedition and surrender, the Queenstown defeat, Smythe's strange inaction, retreat, and failure, Dearborn's mortifying disasters in the Lake Champlain region, all contributed to rouse the spirit of the people and teach them needed lessons. A disciplined navy never failed; an undisciplined army never triumphed. Canada, the key of the situation, lay open to assault, and good generalship would have captured both the Upper and Lower Provinces in a single campaign, thus, perhaps, changing the entire political history of the northern half of this continent. Inefficient commanders prolonged the war far beyond its natural duration.

As the fall elections drew near the Democrats held meetings and adopted resolutions, few of them worth quoting now.

On the election-day "the Democratic cordwainers"

resolved to meet at McKarher's tavern, and to visit in a body the election-grounds at the State-House and

at the Northern Liberty town-house. Their banner bore the inscription, "War is declared! Tories, clear out! Democrats, unite and conquer!"

The Federalists in September nominated for Congress in the city and county Joseph Hopkinson, Joseph S. Lewis, Samuel Harvey, and William Pennock. The Assembly ticket for the city was headed with the name of Benjamin R. Morgan. The Democrats nominated for Congress Adam Seybert, William Anderson, Charles J. Ingersoll, and John Conard. In the city proper the vote for the Democratic candidates for Congress was 2984; for the Federalists, 2815. The majority of the city councilmen were carried by the Democrats, and a Democratic mayor, Gen. John Barker, was elected. On the Congressional ticket in the city and county the Democrats had

6981 and the Federalists 6081 votes. The Madison Democrats carried both the city and the county delegations to the Legislature. The Presidential election took place in October, and there was a partial division in the Democratic party. Duane and Binns favored Madison and Gerry. The Federalists decided to support George Clinton for President and Jared Ingersoll for Vice-President. At the election the whole vote of the city and county was: For the Madison electors, 6988; for Clinton, 4639. Even in the city, so long held by the Federalists, that party was overthrown, the vote being for Madison, 2936; for Clinton, 2657.

Governor Snyder in December sent a message to

the Legislature, and reported what the State had done to aid the war. The government had called

CAPTAIN JAMES BIDDLE.

¹ Honors and more substantial rewards were lavished on the heroes of the "Wasp." The Legislature of Delaware, of which Capt. Jones was a native, appropriated twenty-five thousand dollars to him and his companions as a compensation for the loss of prize-money by the recapture of the "Frolic" by the British ship-of-war "Poictiers," which happened two hours after the surrender of Whinnyates. The Legislature of the same State ordered the presentation of a gold medal to Jones, and one of silver to each of his officers. The night of the Philadelphia banquet a procession of sailors and officers of the merchant marine marched through the streets with flags and transparencies. The caricaturists took up the subject, and Charles, a Philadelphia engraver, produced the well-known picture, called "A Wasp on a Frolic; or a Sting for John Bull." It represented the customary figure of the Briton pierced by the exceedingly long sting of a wasp.

James Biddle, son of Charles and nephew of Commodore Nicholas Biddle, was born in Philadelphia on the 18th of February, 1783. He was educated at the University of Pennsylvania. He and his brother

Edward entered the navy in 1800 as midshipmen in the frigate "President." Of seven brothers, John and Thomas served in the regular army in the war of 1812, Richard and William L. served actively in the militia, and Nicholas in the State Legislature. James made a cruise in the Mediterranean under Capt. Murray, and afterwards under Bainbridge. His conduct while in those waters, and especially at Tripoli, was distinguished by great courage and nautical skill. While off Tripoli, in October, 1803, he was wrecked in the frigate "Philadelphia," and was a prisoner among the semi-barbarians of that region for nineteen months. On his return, in 1805, he was promoted to a lieutenantancy, and was in active service most of the time until the war broke out in 1812, when he sailed in the "Wasp," Capt. Jones, in which he acquired special honor in the fight of that vessel with the "Frolic." As first lieutenant of the "Wasp," he led the boarders in the brilliant action with the "Frolic" on Oct. 18, 1812. Captured by the "Poictiers," 74, and taken to Bermuda, he was exchanged March 5, 1813, made master commander, and given a flotilla of gun-boats on the Delaware. While

upon Pennsylvania for four thousand militia to go into actual service. These troops rendezvoused at Meadville and Pittsburgh. The public arms were in a wretched condition, old and rust-eaten, and many which had belonged to the State were scattered and held in private hands. There were not enough cartouch-boxes, and other military stores were wanting. Seven hundred and fifty extra muskets and cartouch-boxes were made by the Governor's orders. In the wooden military arsenal at Philadelphia the public ordnance was exposed to injury by dampness. Clothing and blankets were wanted by the militia, which the Governor thought ought to be furnished at public expense. The Legislature passed a law allowing the Governor to supply the State troops in service of the United States with blankets, watch-coats, and other clothing. A bounty of ten dollars was ordered to be paid to such volunteers and militia as might cross the line into Canada.

In the early part of the year news of the frightful destruction of the Richmond Theatre, on Dec. 26, 1811, caused a feeling of horror everywhere. The citizens of Philadelphia deeply sympathized with the sufferers. A meeting was called at the court-house January 6th, Edward Ingersoll in the chair, and A. S. Coxe secretary. It was determined that a tablet should be prepared with a suitable inscription and transmitted to Richmond, to be placed in the church which it was proposed to build upon the site of the theatre. The theatrical establishments were greatly injured in their business. The managers of the new theatre in Chestnut Street published an address to the public claiming that their building was safe.

Turning to quieter topics,—for the currents of daily existence flowed on much the same in busy "Philadelphia town,"—we find that one of the first events of 1812 was an attempt, fortunately unsuccessful, to repeal the legislative bill for "instructing the children of the poor gratis in Philadelphia." The reason given was, "the great number of poor children and the extravagant charges for their tuition—amounting in some instances to nine dollars per quarter, including stationery, which, if charged universally,

would amount to the enormous sum of sixty-five thousand eight hundred and eighty-eight dollars—being the sum that is at present necessary to defray the county expenses." It was stated that persons not qualified gathered children together in schools for the sake of the public payment. March 31st, an act relating to Philadelphia gave the commissioners authority, before sending poor children to school, to fix upon teachers, and to furnish books, stationery, etc. It also gave them authority to establish public schools, when approved by City Councils and the commissioners of the Northern Liberties and of Southwark.

The Sons of Washington celebrated the 22d of February at the Mansion House Hotel. James Milnor was president; Jonathan Bayard Smith and Samuel F. Bradford, vice-presidents; Robert S. Stephenson, secretary; and Samuel Relf, treasurer. The society had a banquet, and the toasts were patriotic rather than partisan. Bishop White, Chief Justice Tilghman, Jonathan Williams, and Capt. Charles Stewart, of the United States navy, were present.

In January the North American Fire Insurance Company petitioned for permission to undertake life insurance also, but failed, and March 10th the Legislature passed an act to incorporate "The Pennsylvania Company for Insurance on Lives and Granting Annuities and Reversions." John Welsh, John Warder, and Jacob Shoemaker were appointed commissioners to open subscriptions for five thousand shares of stock, at one hundred dollars each.

Petitions were presented to the Legislature in January from inhabitants of the village of Hamilton, asking for the enactment of a law to prevent the great delay occasioned by the passage of vessels, rafts, etc., through the draw of the Gray's Ferry bridge. Petitions for the abolition of capital punishment first made their appearance at this session. They received but little attention, and were laid upon the table. Petitions were presented to the Legislature in January from Luzerne County for the incorporation of a company for raising and vending of stone-coal, the first proposition made in the State for incorporating a company for such purposes.

In February an act was passed to order and direct the removal of all State offices and records to Harrisburg in the succeeding month of April. Under this law many records were removed, particularly those affecting titles to real estate in Philadelphia, which did not in any way concern the interests of the Commonwealth. On the 10th of March an act was passed to authorize "the further improvement of the State-House yard." It was enacted that the city might take down the south wall and erect palisades, leaving a space for a gateway, and fixing suitable folding-gates therein. A city ordinance providing for the improvement was passed in April, and the south wall ordered to be taken down. In November the *United States Gazette* complained that "the old, unseemly portal to the State-House yard still remains."

in command of the "Hornet" he was blockaded in New London, Conn., but escaped, and March 23d, off the island of Tristan d'Acunha, captured the British brig "Penguin," after a sharp action, in which he received a wound in the neck. April 27th he displayed his seamanship in escaping from the "Cornwallis," 74, after a chase of four days, during which he threw overboard his guns and equipments to lighten his ship. For his action with the "Penguin" Congress voted him a gold medal, Philadelphia voted him a service of plate, and other honors were bestowed upon him. He was promoted to post captain Feb. 28, 1815, and continued in active service until his death. In 1817 he took possession of Oregon Territory; in 1826 he signed a commercial treaty with Turkey; from 1830 to 1832 he commanded the American squadron in the Mediterranean; from 1838 to 1842 he was governor of the Naval Asylum in Philadelphia; and in 1845, while in command of a squadron in the East Indies, he exchanged the ratifications of the first American treaty with China. He was at Japan, and, crossing the Pacific, he engaged in some of the scenes in the war with Mexico on the coast of California. He returned home in March, 1848, and died at Philadelphia on the 1st of October following.

Twenty-five thousand dollars were also appropriated by the Legislature toward completing the new prison in Philadelphia. March 24th the county commissioners were authorized to build fire-proof offices in the State-House, also for the prothonotary of the Supreme Court.

The Legislature passed several important acts in March; one authorized any State bank to make loans to the United States government. A new Congressional Apportionment bill was passed on the 13th, which provided for an election upon a general ticket. Delaware County was excluded, and the city and county of Philadelphia was formed into one district, to elect four members.

The building of a road from Harrisburg *via* Carlisle and Bedford to Pittsburgh was authorized. The State subscribed for seven thousand shares, and also assisted the northern route *via* Lewistown. The stockholders of the Bank of the United States again applied for a State charter, but notwithstanding very liberal offers the charter was refused.¹ March 24th the Legislature incorporated the township of Moyamensing, under the title of "The Commissioners and Inhabitants of Moyamensing, in the County of Philadelphia." The citizens were directed to vote at the first election at the house of William Daily, South Sixth Street, on the third Friday in March. Nine commissioners were to be chosen, one-third of them for one year, one-third for two years, and one-third for three years. An act was also passed for the relief of insolvent debtors in the city and county of Philadelphia, which gave to the Governor the right to appoint three commissioners of insolvency, and with authority to the latter to appoint three curators. The law extended the right to insolvents two years resident in Philadelphia to petition for leave to assign their estates for the benefit of their creditors. In December a report was presented in the House recommending the repeal of the insolvent law.

March 31st the Upper Ferry Bridge Company was authorized to build connecting turnpikes from the Lancaster road and the Wissahickon road, so as to open more direct routes to the bridge. The western section was afterwards opened, but not turnpiked. From the bridge westward it was in later time known as Bridge (now Spring Garden) Street. On the east side of the river the authority given permitted the

turnpiking of Callowhill and Morris Streets as far as Tenth. April 28th the corner-stone of the bridge was laid by the Grand Lodge of Ancient York Masons, Past Grand Master Jonathan Bayard Smith officiating. The work of construction proceeded steadily, and eight months later, January, 1813, it was opened to the public.² This bridge was long a famous one. The chord of the arch was three hundred and forty feet four inches, being ninety-eight feet greater than the span of any bridge hitherto known. The rise of the arch was twenty feet, the elevation above the water was thirty feet, and the entire length of the bridge was four hundred feet. At the centre of the arch the width of the structure was only thirty-five feet. It gradually widened on both sides until it reached the width of fifty feet four inches at the abutments. The designer of the bridge was Lewis Wernwag, previously a resident of Frankford. His first work in the bridge-building line was at Frankford, over the creek, which obtained for him such a reputation that his plans for the Schuylkill bridge, though novel, were favorably considered. Wernwag was assisted by Joseph Johnson. The architectural design for the exterior was made by Robert Mills, and presented a striking appearance. Another bridge enterprise, a proposal to erect an arched and covered bridge over the Schuylkill River at Gray's Ferry, by an incorporated company, caused much difficulty about this time and during subsequent years. Councils insisted that it should have an arch at least seventy-five feet above high water. The company was incorporated under an act of 1800, but no steps were taken to carry out the provisions of the charter. Thomas Pope, architect and landscape-gardener, was probably one of the applicants for authority to construct the Lancaster and Gray's Ferry bridges. In February he published an article describing his "flying, pendent, lever bridge," without centres or supports of any kind. A model was exhibited in Pope's school-room, in Library Street. It was announced in June that a bridge upon Pope's plan was to be erected over the Susquehanna, having a span of six hundred feet. One of the immediate results of the building of Upper Ferry bridge was a rise in real estate in that region. John Britton, Jr., published in April his proposals to sell lots upon ground-rent in Mantua village, extending from the neighborhood of the Upper Ferry bridge to the new permanent bridge.

The subject of the burying-ground on the west side of the Schuylkill above the Middle Ferry was again brought before the Legislature by petition of the Society of Friends for a confirmation of their title, and

¹ They expressed willingness to subscribe \$175,000 to the road from Harrisburg to Pittsburg, authorized by the act of April, 1811; \$100,000 to the road from Northumberland to Waterford, in Erie County; \$50,000 to bridges over the Susquehanna at or near Columbia; \$30,000 for improving the navigation of the Lehigh River; \$30,000 for a turnpike from the east end of the Perkiomen bridge to Reading; \$15,000 for a bridge over the Delaware between Black's Eddy and Wells' Falls, the stock to belong to the Commonwealth; \$20,000 for a road from Berwick to Newtown, in New York State; \$15,000 for the Centre turnpike; and \$15,000 for the improvement of North and South road, Wayne County. The proposed capital was \$5,000,000. And as a still further inducement, in addition to the offers previously noticed, the bank stockholders offered to loan to the State \$500,000 at five per cent. interest, to be used for improvements.

² This bridge was destroyed by fire Sept. 1, 1838, and was replaced by a wire suspension bridge from the plan of Charles Ellet, architect and civil engineer, which was finished Jan. 2, 1842. The latter becoming decayed, it was replaced in 1875 by a fine, large bridge built by the Keystone Bridge Company. While making repairs for the latter structure the old corner-stone laid in 1812 was displaced, and the copper-plate laid by the Masonic Order in that year was found in good condition.

by citizens that the property might be dedicated as a public burying-ground. Report was made by a committee of the House, at the end of March, entirely favorable to the Quaker title.¹ The subject, however, was laid over till another term. On the 18th of June the City Councils passed an ordinance to prevent the interment of deceased persons in the public squares of Philadelphia. The preamble recited that for a considerable time the public square on the north side of Sassafras Street had been used as a place of interment for the bodies of persons dying at the almshouse, at the State prison, and at the Pennsylvania Hospital, and of strangers not belonging to any religious society. This was deemed an infringement of the rights of the citizens. It was ordered that no one should be buried, after July 10th, in any of the public squares. It was also ordered that the city commissioners should inclose with a board fence, for a cemetery, the lot of ground belonging to the city of Philadelphia, situate on the south side of Lombard Street, between Ninth and Tenth Streets.

The commissioners of Southwark passed an ordinance authorizing the erection of a public market-house (afterwards the Wharton market) on Moyamensing road, commonly called Old Second Street. It was to be one square in length, and to extend from Prime Street to Federal Street. Proposals for building it were invited in March. In 1813 the Legislature ordained that the space of one hundred feet on each side of the road laid out by Joseph Wharton and others, about 1767, "should be a public market-place forever."

Among the local events of interest were the following: The District of Southwark, by an ordinance of May 4th, at a cost of five thousand dollars established a nightly watch, and ordered lamps to be erected and maintained. May 20th a public dinner was given at the Mansion House to Count Nicholas Pahlen, minister from Brazil to the United States, who was about to return to his native country. Thomas W. Francis was president, and William Meredith was secretary. The project of damming the river Schuylkill began to attract public attention in April and May. John Mullooney became director of the Washington Pottery in Market Street, near Schuylkill Sixth, in June. Oliver Evans about this time completed his plan of a cylindrical globular

steam-boiler. He gave notice of prosecution in June to John Negus and others, whom he said were violating his patent.

In September, J. & F. Grice, of Kensington, launched the steamboat "Delaware," to run on the Baltimore line. Daniel Large built the engine. In November, William Renshaw opened the new "Mansion House Hotel," built by Thomas Leiper, at the southeast corner of Market and Eleventh Streets. In December, P. C. Labbe began calico printing at No. 206 Cherry Street. A meeting of the citizens of the Northern Liberties in Penn township was held in December at the house of Col. George Mintzer. Capt. William Paul was chairman, and Thomas Lippincott secretary. It was resolved to collect funds for the relief of the wives and children of soldiers in service. In November, McCorkle, of the *Freeman's Journal*, in a libel suit against Binns, tried before Judge Brackenridge, recovered a verdict of five hundred dollars.

Stephen Girard, in May, 1812, bought the bank building on Third Street, south of Chestnut, and went into banking on his own account. A statement was soon published that Girard had executed and recorded a deed of trust to David Lenox, Robert Smith, Robert Waln, Joseph Ball, and George Simpson, so that, in the event of his death, "no delay nor obstruction in the payment of the moneys deposited with him may ensue, but that all business may be transacted with like promptitude and punctuality that it could in the lifetime of Girard."

Early in the summer the necessity of moving the water-works from Chestnut Street, Schuylkill, became apparent. The *Aurora* of August 7th said, "We understand that it is the serious intention of the City Councils to remove the present establishment of the water-works to a more eligible situation, to supply the city with water of better quality and at less expense." It was suggested that the use of a steam-engine would be made unnecessary by bringing water from an elevation sufficient to force it by its own gravity into the city, "as is the case in several cities and towns, as in Mount Holly and Wilmington, where the water is conveyed in pipes from the hills in the vicinity. The plan, we understand, is to bring the water from Morris' Hill, near the Upper Ferry, on the Schuylkill." The *Aurora* said that some objections existed to this place, but not in such a great degree as applied to the site at Chestnut Street. An opinion was expressed that a better place might have been obtained farther up the river. A few days later the *Aurora* published a communication in opposition to the proposed water-works, saying that the water there was as impure as at Chestnut Street. Edward Clarke, in an article in the same paper, suggested that the water should be brought from the Wissahickon rather than from Morris' Hill. William Rush replied in favor of the site near the Upper Ferry. The subject was discussed by Rush and Clarke in several

¹ It stated that in 1684 the Society of Friends held a meeting at the house of Thomas Duckett, on the west side of the Schuylkill, near the site of the present permanent bridge, from the records of which meeting, bearing date 2d of Seventh month, 1684, it is shown that orders were taken for inclosing and paying for a fence for a burial-ground. In an original deed from Samuel Bradshaw to John Gardner, 24th of Seventh month, 1712, for a portion of land purchased in 1697 from John Duckett, near the said bridge, it is described as "bounded on the west by lands belonging to a meeting-house." From the depositions of aged witnesses the lot is shown to have been used as a burying-ground by, and considered as belonging to, the Society of Friends from very early in the last century to the present time. The committee reported that the Society of Friends had a complete equitable title to the lot in question, and provision ought to be made for removing doubt on the subject.

papers and replies. An address, signed "A Citizen," on "A Permanent Supply of Pure Water" was published in the *Aurora* of November 5th. The writer was in favor of a permanent dam near Morris' Hill. He said that the fall of the river from low-water mark to the mouth of the Wissahickon was computed at twelve feet. The rise of the tide was five and a half feet, the mean head upward of nine feet, and in every way sufficient for an undershot wheel. The plan was mainly proposed for water-power purposes and manufactures. Meanwhile the committee of Councils had been considering many different schemes. The hope of obtaining a supply by means of the Union Canal, which would bring the water into the city, was only abandoned after it became certain that the canal would never be built. In 1810 or 1811 the Water Committee directed Frederick Graff and John Davis to make examinations. They reported several plans, one of which was to take the water of Wissahickon Creek by means of a race or canal to pumping machinery erected at the foot of Simes' Hill. The water was to be sent by proper mains to the top of the hill, one hundred and ten feet high, into two large reservoirs, projected to be built upon the summit; thence, by eighteen-inch pipes of iron, to the distributing-chest at Centre Square. The plan went back again to the employment of steam, and the site at Morris' Hill seemed most convenient. On the 1st of August, 1812, the steam pumping-works were commenced at the foot of Morris' Hill, to which, by direction of City Councils, was restored the ancient name, Fairmount. A substantial stone building, the same one now used for public hall and offices at Fairmount, was built at the foot of the hill, under direction of Frederick Graff. A Bolton & Watt steam-engine was obtained of forty-four-inch cylinder and six feet stroke. It worked a double-acting vertical pump, of thirty inches diameter and six feet stroke. The water was raised through a sixteen-inch iron main, two hundred and thirty-nine feet long, into the reservoir upon the hill, which was one hundred and two feet above low water in the Schuylkill. The capacity of the pump was 1,733,632 ale gallons in twenty-four hours, which was pumped upon a pressure of from two and a half to four pounds of steam upon a consumption of seven cords of wood daily. The Bolton & Watt engine was partly cast at Weymouth blast-furnace, New Jersey, and at the Eagle Works, southwest corner of William (now called Twenty-third Street) and Callowhill, an establishment existing from Revolutionary times, and said to have been built for casting cannon for the use of the American army. The water was pumped directly from the river. The works were finished and started on the 7th of September, 1815.

American manufactures were in great demand immediately after the breaking out of the war. Importations from Europe were nearly suspended, and many industries were suddenly anxious to obtain the

assistance of the State. Stephen Andres asked the State to buy his patent-right for a spinning and roving machine. Frederick Sanno asked for a loan of three thousand dollars to enable him to extend his cotton- and woolen-factory. William Little, of the Northern Liberties, succeeded in inducing the Senate to pass a bill aiding him in the manufacture of wire and silver-plate, but the House did not agree.

The first step toward the incorporation of the Schuylkill Navigation Company was made December 5th this year, by Josiah White and others, who presented a petition to the Legislature, though it was not acted on till the next year.

Perhaps nothing created a greater sensation in Philadelphia during 1812 than the announcement that perpetual motion had been discovered. Charles Redheffer, of Germantown, announced it early in the summer, and soon inserted an advertisement in the papers. Duane, of the *Aurora*, took much interest in the machines and, November 13th, wrote an editorial in which Redheffer was likened to Godfrey and Fitch; and it was predicted that, to the triumphs of Pennsylvania in the quadrant and the steamboat, perpetual motion was about to be added. As the contrivance was described in the first notice, it was said that "the power of gravitation was applied to produce a perpetual horizontal action, produced by the pressure of weights in two corresponding boxes, on a plane inclined in an angle of forty-five degrees." On the 10th of November a long account of a visit to this wonderful machine, signed "Bell," was published in the *Aurora*.¹

¹ The machine was described in this letter in the following terms: "It consists of a movable inclined plane, affixed by means of chains to an upright shaft or axle, with which the whole revolves. On this inclined plane a carriage, containing weights proportioned to the power required to be produced, is attached above by means of a cross-beam passing through an axle or shaft, which is made to move. Therefore the carriage, with the weight obeying the law of gravitation, and endeavoring to descend, propels the inclined plane, which forces the shaft to revolve, the shaft forces the cross-beam, and the cross-beam again restores the carriage to its place on the inclined plane, and in this manner the whole perpetually revolves. It will be immediately objected that the weight in the carriage is made to restore itself. It does so, and by an apparent absurdity,—that is, by the operation of two unequal levers constraining the cross-beam and wheel on which the inclined plane rests. I call them levers, because they act on the principle of the lever, though palpably they are not such."

The following was the original advertisement of Redheffer's exhibition:

"PERPETUAL MOTION.—THE CURIOUS, THE MECHANICAL, the learned and ingenious, may be gratified in seeing and in being convinced that that which for centuries has occupied, perplexed, and puzzled the philosophic and experimental world (and, indeed, by some of the greatest mechanical geniuses supposed beyond the reach of human invention) is now fully, completely and perfectly demonstrated in the SELF-OPERATING, SELF-MOVING MACHINE, constructed by the subscriber on principles purely mechanical, and now offered to the inspection of an enlightened people. Lovers of the arts and sciences will, it is confidently expected, be highly gratified in seeing and in contemplating that amazing display of genius which it has fell to the lot of an American to exhibit, which must, by the whole world, be allowed to surpass any invention heretofore discovered or made public wherein mechanism had the principal agency. It will for a few days be exhibited, from 9 o'clock forenoon to 4 o'clock afternoon, three doors below Mr.

Enthusiasm was now at its height. On the 26th City Councils passed a resolution appointing a committee to ascertain whether a machine upon the principle of Mr. Redheffer's invention "might not be made capable of raising to a sufficient height a sufficient quantity of water for the use of the citizens of Philadelphia." On the ensuing day the first published dissent to the alleged discovery appeared in the *Aurora*, signed "Rittenhouse." The writer averred that the machine had never been seen in actual operation for more than half a day, and avowed his belief that it was a deception. This was replied to by the editor of the *Aurora* a few days afterward. A Mr. Lukens next made an imitation of the machine, for the purpose of showing the facility with which a deception might have been palmed off upon the public, and to demonstrate that the machine was incapable of generating power. This attempt to demonstrate Redheffer's cheat was reprobated by the *Aurora* in indignant terms. The matter was now brought before the Legislature, and on the 15th of January, 1813, a committee was appointed by the House of Representatives of the State to examine into the justice of Redheffer's claim that he had discovered perpetual motion. He appointed the 21st of January for an examination of the machine. Before the day mentioned he notified the committee that it would not be convenient for him to be present, and afterward he said that he would not show it at all. This conduct was reported to the Legislature, and the committee was discharged. His newspaper champion in the *Aurora* now deserted him.

The City Councils on the 25th of February discharged their committee, appointed to inquire whether the works at Fairmount could not be carried on by perpetual motion. Redheffer took his machine to New York, where its fraudulent character was demonstrated by Robert Fulton.

National politics in the year 1813 opened with sharp debates on the floor of Congress. Quincy, of Massachusetts, leading the minority and denouncing the invasion of Canada,—“They would support a war of defense, not a war of conquest and annexation.” To this Clay responded, with an energy of which no printed speech can give an adequate conception, charging the Federalists with having thwarted the plans of their own government and with plotting disunion. He portrayed the situation of impressed American sailors in sentences that drew tears from his hearers. “And in Canada,” he cried, “the tomahawks of the Indian are whetted.” The Federalists also claimed at this time that the causes of war had been removed,—that England had agreed to repeal the ob-

noxious Orders in Council June 23d, only five days after the declaration of war. But news of this reached the United States before actual hostilities had begun. There were, however, difficulties in regard to the Dearborn armistice, the subject of impressment, the employment by England of secret agents, her encouragement of Indian hostilities, and many other subjects of dispute. Minister Russell did not leave London till September, 1812; nor did the English government issue letters of marque till October. There was ample time for negotiation, had England desired peace. Jan. 9, 1813, the British justificatory proclamation reached America, and enhanced the bitterness of the contest. From the West came news of the Raisin River battle and the atrocious Malden massacre, that cast Kentucky and Ohio into mourning for their best and bravest. Harrison's second campaign failed; in February, Gen. Jackson began his Florida expedition; Wilkinson was trying to fortify New Orleans. Meanwhile there were sea victories at least,—we had Nelsons, though as yet no Wellingtons. On the last day but one of 1812, Bainbridge and the “Constitution” captured the “Java.” Feb. 24, 1813, the “Hornet” defeated and sank the “Peacock.” But Madison was anxious for peace, and sent Gallatin, of Pennsylvania, and Bayard, of Delaware, to seek the mediation of Russia. March 12th, the Pennsylvania Legislature voted extra pay to the militia, and offered to loan the government a million dollars. Girard and Parrish, of Philadelphia, and Astor, of New York, about this time took the government loan at eighty-eight per cent.

The British blockade of the seaports became more stringent. In February vessels entered the Chesapeake and closed Hampton Roads and Norfolk. In the beginning of March a British squadron arrived at the mouth of the Delaware. It was commanded by Commodore Sir John P. Beresford, and consisted of the “Poictiers,” seventy-four; the “Belvidera,” frigate, Capt. Byron; the schooners “La Paz” and “Ulysses.” They commence to capture and destroy small craft, committing depredations on both sides of the Delaware. March 16th, Commodore Beresford made a demand upon the inhabitants of Lewes, near Cape Henlopen, for “twenty live bullocks, with a proportionate quantity of vegetables and hay,” promising to pay reasonable prices, but threatening destruction to the town in case of non-compliance. To this demand a defiance was immediately returned. The intelligence of this transaction caused the utmost excitement in Delaware, Pennsylvania, and New Jersey. Militia began immediately to pour into Lewes; and at New Castle and at Wilmington batteries were erected. The specie in the banks was removed to Philadelphia. The excitement in the latter city was intense, for it was practically defenseless. The troops had been withdrawn from Fort Mifflin, under Col. Izard and Lieut.-Col. Winfield Scott, and taken to the West. Only fourteen invalided soldiers were in the

“September 10.”

fort. The enemy might easily have sailed up the river and levied contributions on Philadelphia.¹ Meetings of citizens were held at once. The "Young Men's Democratic Association" met at Stratton's tavern, and formed the "Junior Artillerists' Company," numbering about eighty officers and men. Jacob Fisler was captain, William Roderfield first lieutenant, Joseph M. Porter second lieutenant, Joel B. Sutherland surgeon, Jonathan B. Smith quartermaster. Muskets were delivered to the company by Maj. Sharpe, and Gen. Bloomfield inspected them and accepted their services. March 23d they were sent down to Fort Mifflin, together with Capt. William Mitchell's company of Independent Blues. The fort was under command of Capt. James N. Barker,² of the United States army, assisted by Capt. Williams, of the Second Regular Artillery. These companies remained in the fort until the 7th of April, when they were honorably discharged, and their places filled by United States troops.³

Other companies were formed. The members of

¹ Gen. John Armstrong, Secretary of War, did not think Philadelphia in danger. In a letter to Col. William Duane, March 21, 1813 (*Historical Magazine*, new series, vol. iv. p. 61), he said, "I had anticipated two of your ideas, the call upon your Governor for one thousand effectives, and the mode of calling out militia generally. As to the first, it is a mere soporific to quiet the present spasms of the city, and which do not, I think, grow out of as comprehensive a view of what the enemy wish to do and can do, as might have been expected. . . . With the exception of those renowned places, Sag Harbor, New Bedford, &c., no place has made so much noise as Philadelphia. Pour a little oil on the waves of folly and of faction, for the latter are at the bottom."

² Capt. James N. Barker, who commanded the garrison, was an officer of the regular army, the son of John Barker, of the Revolution, a well-known Philadelphian during the last generation. Capt. Barker resigned from the army after the close of the war, was made an alderman of the city, and afterwards elected mayor. He wrote several plays and some valuable historical essays.

³ The Hon. James Madison Porter, second lieutenant of the Junior Artillerists, writing to Capt. Jacob H. Fisler in 1854, gives an account of the formation of the company. He says, "Col. Izard and Lieut.-Col. (now General) Scott, in the fall of 1812, had marched away all the troops from Fort Mifflin except fourteen invalids. During the winter of 1812-13 the ice in the Delaware protected Philadelphia from any hostile intrusion. As the ice disappeared in the month of March, a British naval force lay off the Capes of the Delaware, and the small force in Fort Mifflin could but feebly have resisted a naval incursion, which, in barges, might have passed up to Philadelphia, and, by rockets and other missiles, have laid the town in ashes, and escaped to their vessels. I happened to be at the Coffee-House when three or four Philadelphia merchants had just heard this news of the British force being off the Capes, which was entered on the Coffee-House books. They were violent Federalists, and began abusing Mr. Madison and his administration for leaving the city so defenseless. They were very violent. I remarked to them that it would be better for them to put their own shoulders to the wheel before they called on Hercules to assist them. I was then just past twenty years of age. One of them inquired of some person present who I was, designating me as 'an impudent young fellow.' He was told that I was a son of Gen. Porter, formerly colonel of artillery in the Revolution. They knew him personally, and said no more. I thought that if any movement was to be made toward manning the fort the Democrats ought to have the credit of it. Being secretary of the Association of Democratic Young Men, I stopped at Col. Binns' office, and found his paper had just gone to press. It was after twelve o'clock at noon. I stopped the press and had inserted a call for the meeting of the Association that night. I met several members of the Association during that day. They all approved of what I had done, and we all gave personal notice to as many of the members as we could reach."

the Washington Association were requested to meet in Washington Hall, then in Goforth Alley, running from Carter's Alley to Dock Street, on the 22d of March. They then organized the Washington Guards. Condé Raguet was elected captain; John R. Mifflin, first lieutenant; Michael W. Ash, second lieutenant; and Thomas Anthony, third lieutenant. Some time afterward a second company of Washington Guards was formed, under the command of Capt. John Swift. May 26th another company was formed, and named "State Fencibles." Among the original members were Joseph R. Ingersoll, Clement C. Biddle, Richard Willing, Hartman Kuhn, Joseph B. McKean, Henry C. Carey, Henry J. Biddle, James J. Barclay, Charles V. Hagner, John J. Brennan, James Page, and others. Clement C. Biddle was elected captain. This com-

pany was not required to go into service during 1813. They tendered their services to Governor Snyder on the 23d of September. The formation of a light artillery company, composed of carters and porters, was proposed in March, but the effort failed. A meeting was held in April of citizens over forty-five years of age for the purpose of assisting the measures of defense. They formed a company, and elected as captain the venerable Gen. John Steel, a Revolutionary officer; William Smiley was first lieutenant; Benjamin Nones, second lieutenant; Charles Alcorn, ensign.

The City Councils at first did nothing in the way of defense. The Common Council was Democratic, but the majority of the members of the Select Council were Federalists. March 19th a meeting was called. In Select Council there was not a quorum. Those

present were Andrew Bayard, John Hart, John Read, Robert Ritchie, and William Rush. Those absent were Samuel W. Fisher, Thomas Latimer, Joseph Morris, John W. Thompson, James Vanuxem, Robert Waln, and William Warner. The Common Council resolved that the unprotected state of the port of Philadelphia excited serious apprehensions from a sudden incursion of the enemy. It was resolved that a joint committee of three members from each Council should be appointed to take such steps as might tend to the better security of the port. On this committee were appointed from the Common Council Messrs. Liberty Browne, Dalzell, and Mullooney. The lower branch then adjourned until the following evening, when Messrs. Latimer, Read, Ritchie, Rush, Thompson, and Waln, of Select Council, were in their places; but Messrs. Bayard, Fisher, Hart, Vanuxem, Morris, and Warner were absent, so that no business could be done. Strong resolutions against the majority of Select Council were introduced by Peter A. Browne, and the citizens were recommended to assemble on the 23d, at the county court-room, "to consider what is best to be done for the safety of the city." This object had been partly anticipated by a meeting on the 20th forming an association for the protection of the harbor and ports of the river Delaware, at which Richard Willing was chairman, and John Sergeant was secretary. Richard Willing, Hartman Kuhn, Samuel Israel, G. Reinholdt, and Clement C. Biddle were appointed to prepare a plan of defense. At the meeting on the 23d these proceedings were ratified, and the conduct of Select Council denounced.

During this interval British ships were cruising up and down the Delaware. The schooner "Fanny," of Charleston, was chased by a British vessel off Lewistown, and was run ashore. The crew, endeavoring to remove the cargo, were assisted by seventy-five militiamen, who took bales of cotton from the vessel and erected a breastwork, from whence they annoyed the enemy, who finally destroyed the schooner. March 23d, Governor Hazlett, of Delaware, arrived at Lewes, and sent a letter to Commodore Beresford, inquiring if he was still determined to destroy the town. To this a reply was made that the conditions were not hard, nor opposed to the law of nations, and that, if denied, whatever suffering would fall on the town or people must be attributed to their own obstinacy. On April 24th the county cavalry, Capt. James Miles, marched from Philadelphia to Lewes, and the next day the militia legion, Col. Lewis Rush, the regiment of cavalry, Col. Smith, and the artillery regiment, Col. Ebenezer Ferguson, were ordered to hold themselves in readiness to march under the command of Brig.-Gen. Robert Wharton. Late in March Stephen Girard's fine ship "Montesquieu," from Canton, with a cargo worth one million five hundred thousand dollars, was captured by the British at the capes. She had sailed from the United States in 1810, and from Canton in November, 1812, and so

the captain was ignorant of the declaration of war. Girard finally ransomed the ship for one hundred and eighty thousand dollars in specie.

The threatened bombardment of Lewes did not take place until the 6th of April. On the evening of that day the "Belvidera" and two small vessels approached the town and commenced firing thirty-two-pound shot, after which a flag was sent on shore renewing the demand for bullocks, provisions, and a supply of water. Col. Samuel B. Davis replied that neither demand would be complied with. Capt. Byron answered that the refusal was cruel to the inhabitants, especially to the women and children. The bombardment then commenced, was replied to by an American battery on shore, and firing was kept up for twenty-two hours. About one thousand eighteen- and thirty-two-pound shot were fired, besides bombs and rockets. The shells fell short, the rockets passed over the town. Many houses were damaged by the balls. On the afternoon of the 7th preparations were made to land. Several boatsful of men approached the shore, but before they could disembark they were recalled by a signal from the squadron.

While these events were occurring, the force of public opinion in Philadelphia was compelling the Select Council to more decided action. According to a request from the mayor, a Council meeting was held April 2d, and a joint committee appointed. Many citizens' meetings also took place. They called upon the national government for aid to protect the Delaware, but it was evident that the government was without means, there being, April 1st, only two million dollars in the treasury. May 6th the merchants' meeting at the Coffee-House, Charles Biddle presiding, and John Sergeant secretary, agreed that it was clearly the duty of the citizens of Philadelphia to provide for a more complete defense. They recommended the appointment of committees to collect subscriptions in each ward. This fund was to be placed at the disposal of fifteen citizens, who were entitled "The General Committee of Superintendence for the Protection of the River Delaware and the City of Philadelphia." The members were Charles Biddle, Henry Pratt, Daniel W. Coxe, Henry Hawkins, Charles Macalester, Robert Waln, Chandler Price, James Josiah, Richard Dale, David Lenox, William McFadden, John Connelly, Thomas W. Francis, Manuel Eyre, and Daniel Smith. The committee was to co-operate with the United States officers and forces in the district. Two days afterwards the citizens of the Northern Liberties, Penn township, and Spring Garden held a meeting. Joseph Grice was president, and Samuel Potts secretary. A committee was appointed, consisting of Joseph Grice, Frederick Foering, Michael Brown, William Binder, Daniel Bickley, James Mitchell, J. M. Norris, Jesse Shelmire, Jacob Patterson, David Shuster, and Jacob Hoff. On the same day City Councils passed an ordinance authorizing the borrowing of thirty thousand dollars for the

purpose of defense, and appointing as commissioners on the part of Councils to consult and co-operate with the committees, Col. James Read, Commodore Richard Dale, and Capt. Henry Hawkins from Select Council, and Gen. John Steel, Thomas Leiper, and Capt. Gustavus Conyngham from Common Council.

April 29th and May 3d the British ships in the Chesapeake landed parties which burned and plundered Frenchtown and Havre de Grace, then depots of quite a lively trade between Baltimore and Philadelphia. A little later they burned Georgetown and Fredericktown, on Sassafras River. Coasting and bay trade was stopped, and the name of Admiral Cockburn became a terror. Commodore Beresford, with his squadron, were in Delaware Bay, but late in April sailed for Bermuda. In their place the "Statira" and the "Spartan" frigates, and the "Martin" sloop-of-war, with some tenders and barges, came to the station, the whole being commanded by Commodore Stackpole. On Sunday, the 29th of May, these vessels stood up the Delaware with a fair wind. Expresses were immediately sent out to alarm the country. The Delaware volunteers assembled. The Independent Blues were ordered to march from Camp Staunton to New Castle. The other companies stood upon their arms, ready for service in whatever direction they should be needed. The British forces contented themselves with stretching up the bay as far as Reedy Island, where they captured and burnt some shallops and small craft, and then returned.

On the 13th of May the first detachment of volunteers had marched from Philadelphia to the State of Delaware, under the command of Col. Lewis Rush. It consisted of the Philadelphia Blues, Capt. Henry Myers; the Independent Volunteers, Capt. Samuel Borden; and the Washington Guards. Each of these companies consisted of one hundred privates, fifteen officers, and two musicians. In four days they reached Staunton, on the Baltimore road, six miles below Wilmington. Here a permanent encampment was formed under the direction of Gen. Bloomfield, but the affair of May 29th showed the necessity of giving protection to those portions of the State of Delaware higher up the river. It was rumored that the enemy intended to make an attempt to destroy Dupont's powder-mills on the Brandywine. Col. Rush was ordered to take up a new position on Shellpot Hill, three miles north of Wilmington and one mile from the Delaware River, covering the place of debarkation at Hamilton's Landing. On the 2d of June Camp Staunton was abandoned, and the troops marched to Camp Shellpot, where they continued until about the 12th of July, when they took up a new station at Oak Hill, near Stille's Run, four miles west of Wilmington, and four miles south of Dupont's powder-mills. After the British descended the Chesapeake Bay, Camp Oak Hill was broken up, and on the 28th of July the troops reached Philadelphia. At the Woodlands they were feasted by citizens of Phil-

adelphia, after which they were escorted to the State House, and mustered out of service.

When the first alarm was raised the Commissioners of Defense began organizing a gun-boat squadron which, under the command of Capt. Angus, was ready for service by the end of May, and soon went down the Delaware, in order to repulse marauding expeditions. It consisted of nine armed boats, and the "Leopard" and "Camel," armed sloops. Soon afterward the "Spartan" and "Martin" sailed for Halifax, and the "Statira" was reinforced by the aid of the frigate "Junon." The application to the United States government for additional defenses was so far successful that a negotiation was entered into with the State of Delaware for the cession of the Pea Patch Island. The Secretary of War then addressed the City Councils, and promised that fortifications should be erected thereon if the city would loan the United States government twenty thousand dollars for that purpose, which was soon after agreed to. The inhabitants of the Northern Liberties raised sufficient money to build the "Northern Liberty" galley, which was launched from Grice's ship-yard, Kensington, about the middle of June. It was seventy-six feet long, and fifteen feet beam, and was commanded by Samuel Rinker. The State Fencibles were present at the launch June 29th.

Capt. Angus, with eight boats and two block sloops, discovered the British sloop-of-war "Martin," which had returned to the Delaware, on shore at Crow's shoals and attacked her. The "Junon" came to her aid, but the American boats fired with the greatest accuracy. The American gun-boat "No. 121," under the command of Sailing-Master Sheed, had by accident fallen out of the line, and was prevented from recovering its situation by a strong ebb tide. This boat was made the special object of attack by ten British barges. Sheed was a mile and a half from the flotilla, and it was impossible for them to afford him assistance. While endeavoring to escape by the aid of his sweeps, he kept up a steady fire with his long gun at the advancing enemy, but the carriage gave way, and seven boats, with two hundred and fifty men, were able to board him, and carried off their prize, with forty prisoners. Sheed had seven men wounded, and the British had seven killed and twelve wounded, four of whom died from their injuries. Gun-boat "No. 125," Sailing-Master Moliere, was slightly damaged. Gun-boat "No. 121" was abandoned by the British, found on shore at Absecon, and cut up by the beachmen for the iron and brass. Sheed was sent to Halifax, where he was confined, with eight others, in an apartment of scarcely more extensive area than the Black Hole of Calcutta.

During 1813 the British blockading squadron was kept up in force at the capes of the Delaware. In the latter part of the year there were upon the station the frigates "Neimen," "Narcissus," and "Belvidera," the sloop-of-war "Jasseur," and two tenders. These

cruised continually between Chincoteague and Egg Harbor, and prevented all intercourse between Philadelphia and the ocean. The columns of the newspapers usually appropriated to "ship-news" contained little but intelligence of marine affairs elsewhere. Prices began to rise, murmurs and discontent ensued, and there was a disposition to resist. In the latter part of December the citizens of the Northern Liberties resolved that they would not pay a higher price than twenty-five cents per pound for coffee, and expressed great indignation at citizens who had used their capital for purposes of speculation. The Federal papers frequently published, under the head of "ship-news," burlesque accounts of the arrival of wagons and teams.¹ The privateer fleet, in consequence of the blockade of the Delaware, was not able to do much execution. The "Snapper," of four guns, was captured in January, when four days out, by the British frigate "Eolus," commanded by Lord Townsend, and sent into Bermuda. The "Rattlesnake," Capt. Maffett, managed to get safely to sea in March. The "Governor McKean" left Philadelphia for Bordeaux, France, was captured on the way, and sent to England. The patriotic association formed in June began the creation of a fund for the aid and support of the wives and families of soldiers while in service. The government called on Pennsylvania for a thousand men, and the quota was made up with very little difficulty.

Some sense of protection was afforded in the autumn by the presence of the Thirty-second Regiment of regulars, who were camped at "Camp Duane," near Darby. Their officers were: S. E. Fotteral, colonel;

S. B. Davis, lieutenant-colonel; G. H. Hunter, major; A. H. Holmes, major; Captains, George F. Goodman, William Smith, Samuel Borden, Thomas Town, John Steel, Jr., J. J. Robinson, J. B. Smith, H. H. Davis, Robert Patterson, and Peter P. Walter.

After they had been there some time, it was determined by the ladies of the city to present the regiment with colors. The troops were marched from Darby to the State-House, where the flags were presented by Miss Baker, and received by Ensign Copes. The soldiers then marched to Centre Square, and were banqueted by the citizens.

A number of dinners to officers of the army and navy were given in Philadelphia during 1813. The first, in January, was by the Second Artillery to Lieut. Isaac Roach, of the United States army, on his return from the West. He was their former comrade, and in after-years mayor of the city. The affair took place at McKaraher's New Market Tavern. February 1st, Capt. Stephen Decatur was escorted to his hotel by Col. Smith's cavalry, Col. Ferguson's infantry, and a part of the Philadelphia Legion. Three days later he was banqueted at Renshaw's Hotel, corner Eleventh and Market Streets. In March money was raised for a testimonial to Capt. Bainbridge, and November 27th he arrived, and was escorted into the city, and honored with a dinner at McLoughlin's, Chief Justice Tilghman presiding, Charles Biddle, A. J. Dallas, and John Smith, vice-presidents.

The "Argus" in June captured no less than twenty-one English merchantmen in the British Channel, but in August yielded to the "Pelican." Three of our larger vessels and several of the smaller cruisers were blockaded, and September 3d the "Enterprise," Capt. William Burroughs, in capturing the "Boxer," lost her gallant commander, a native of Philadelphia. A movement was begun to erect a tablet to his memory, but the matter was neglected. September 10th, Perry swept the enemy from Lake Erie, and on the 24th Philadelphia was illuminated in honor of his victory, won by ships that Pennsylvania militia had protected while building. In October City Councils passed a vote of thanks to the heroes of Erie, and directed that a sword of American manufacture should be presented to Commodore Perry. October 21st there was another illumination, one in honor of the defeat of Proctor by Harrison. A triumphal arch forty feet in height was erected at the intersection of Eighth and Race Streets, and decorated with paintings illustrating the battle. Many private houses attracted attention, among which was the dwelling of Jacob Gerard Koch, corner of Ninth and Market Streets.

But the campaigns of the year ended in gloom. Hampton's bootless expedition, Wilkinson's abandonment of the attack on Montreal, the loss of Fort Niagara, the outbreak of the Creeks under British and Spanish instigation, and the Fort Mimms massa-

¹ Some of these items were very amusing. The following from the *United States Gazette* of November 6th will serve as an example:

"FREE TRADE AND TEAMSTERS' RIGHTS.

[Cut of a four-horse wagon, flagstaff rising from the middle of wagon, with a flag bearing the words 'No Impressment.']

"JEFFERSONIAN COMMERCE.

"INLAND NAVIGATION.

"Tho' Neptune's trident is laid by,
From North to South our coasters ply;
No sails nor rudders need these ships,
Which freemen drive with wagon whips!"

"HORSE-MARINE NEWS.

"PHILADELPHIA, October 22.

"Commerce, thundering loud with her ten thousand wheels."

"Arrived yesterday afternoon, from Connecticut, a fleet of merchantmen, with cargoes of cheese, etc., under convoy of the 'Nathan' sloop-of-war, Commodore Hall. They anchored safely in Third Street bay, but, finding the markets dull, the signal was hoisted for sailing, and they bore away for Baltimore. The fleet consisted of the following flat-bottomed vessels, each drawn by four oxen, viz.: the 'Nathan,' Commodore E. Hall; 'Non-Intercourse,' Captain J. B. Goodwin; 'Jefferson,' J. H. Fancher; 'Madison,' J. Wetter; 'Monroe,' E. Grilley; and a store-ship."

In the same paper is an account of a dreadful accident met with by a wagon:

"Encountered a rough sea, which bore him on his beam-ends, sprung his main axletree, broke one spoke, and sprung several of his main larboard wheels. His cargo shifted with such force that it stove his tailboards, broke his larboard railings, and carried away his canvas by the board."

cre, all helped to add weight to misfortune. Jackson's brilliant Indian campaign and the recapture of Detroit were our only successes on land. The Chesapeake was occupied by British ships, and their buccaneering expeditions were so contrary to laws of civilized warfare that the newspapers denounced them as "Water Winnebagoes." New England's opposition to the war grew steadily stronger; hints of separate peace alarmed the government, that in December had revived the restrictive system in its most complete form.

Turning to local Philadelphia political celebrations, we note the organization, in January, of the Association of Democratic Young Men of the city and liberties. Jonathan B. Smith was elected president; Joel B. Sutherland and Samuel F. Earle, vice-presidents; James M. Porter and Joseph Le Clerc, secretaries; and Robinson R. Moore, treasurer. A Junior Democratic Society was instituted in the Northern Liberties, of which John D. Goodwin was president.

The "Washington Association," established in 1811, celebrated the 22d of February at the Academy in Fourth Street, and Charles S. Cox was the orator. The "Washington Benevolent Society" met the same day at the Olympic Circus, and was joined by the Washington Association and the First City Troop. Charles W. Hare delivered an oration, and a dinner followed, to which six hundred persons sat down, and Commodore Richard Dale presided. July 5th the same societies met at the Olympic, and heard an oration from Joseph R. Ingersoll. They then proceeded to the Lebanon Garden, corner of Tenth and Cedar Streets, where about eight hundred persons dined. The eleventh toast was, "The War—Begun without just cause, conducted without energy—may it end without disgrace." The first company of Pennsylvania artillery was present, and fired salvos after each toast.

These celebrations excited counter-displays among the Democrats. The first was on the 4th of March, when the Association of Democratic Young Men met at the Universalist Church in Lombard Street. The platform on which the orator and officers were stationed was carpeted with the British flag. Two American flags were suspended from the pulpit. Jonathan B. Smith delivered the address; after which the society dined at Stratton's Hotel.

The struggle between Federalists and Democrats was less bitter than usual, though some strong addresses were issued. Charles J. Ingersoll, a prominent politician, and afterward author of a "History of the War," published an "Address to the Citizens," which the Federalists ridiculed mercilessly. Nominations followed, and for Assembly the Federalists proposed in the city Benjamin R. Morgan, Charles W. Hare, Condé Raguette, Thomas Kittera, and John Clawges, Sr.; in the county, James Worth, Samuel Breck, Abraham Duffield, James Whitehead, John C. Lowber, and Joseph Bird. The Democrats nominated in the city for Assembly, William J. Duane, Thomas

Sergeant, John Connelly, Jacob Mitchell, and Joseph McCoy. Jacob Shearer was nominated for the Senate in the county by the Democrats; and, as in former years, this choice created dissatisfaction. In October, William Binder published an address to the Democrats, in which he complained of the nominations, as dictated "by the insolence of Binns," a foreigner. September 18th the opposition met in force at the house of James Harvey, Spring Garden. Jacob Shearer, candidate for senator, was rejected, and William Binder was nominated. Jacob Fitler was disapproved of, and Isaac Worrell, or Richard Palmer, were recommended. John Thompson and Adam Dewey for county commissioners were rejected in favor of Michael Speel and Cornelius Trimnel. Of the county nominees for Assembly, Joel B. Sutherland, Charles Souder, and Isaac Heston were rejected, and George Morton, Tiberius J. Bryant, and John McLeod nominated in their places. When the contest was carried to the polls, Shearer was chosen senator, and the straight Democrats carried the city for the Assembly, electing Duane, Sergeant, Connolly, Mitchell, and McCoy. On the other hand, the bolters elected, from the county, John Holmes, Charles Souder, Joel B. Sutherland, Jacob Stahn, John Carter, and Isaac Heston, also John Thompson for county commissioner, and Jacob Dewey for the unexpired term of Fitler. The auditors elected were William Newbold, Philip Peltz, and Jacob Clements. For sheriff, Jacob Fitler was elected. The *United States Gazette* charged that the election was carried by fraud, a United States regiment, recruited in the city, having been brought from Delaware County to vote for the Democrats.

The State Legislature was kept unusually busy. In January the House passed a bill to give the United States two ships of war, the "Philadelphia," of forty-four guns, and the "Presque Isle," of twenty, but the Senate voted against it. In February the House received two petitions from Philadelphia, saying that the number of negroes in the city was 9672 on record, and 4000 runaways not on record, who were becoming nuisances. The petitioners prayed for a law that all people of color should be registered; that authority should be given to sell for a term of years the services of those of them who were convicted of crimes, and that a tax be levied on them for the support of their own poor. The Pennsylvania Abolition Society remonstrated, and no action was taken. A bill was introduced into the General Assembly, in February or March, to dispose of the public buildings and lot in Philadelphia. It was proposed to divide the yard equally by two streets of twenty feet in width,—one running north and south, the other east and west,—and to lay out the ground in building lots. Against this proposition City Councils protested, declaring that the Legislature had no power to sell the ground, and thus prevented the passage of the bill at the spring session.

By an act of March 12th the Governor was authorized to subscribe one million dollars to a loan of sixteen million dollars authorized by act of Congress, and to borrow the money to pay for it from the banks of the State. In March he sent a message to the House, stating that the United States government intended to build a seventy-four-gun ship and a frigate at the navy-yard in Southwark, and asked that the Legislature suspend the right of opening streets through the yard during the war, which was done. He (Governor Snyder) also vetoed the bill for chartering twenty-five new banks, with a capital of nine million five hundred and twenty-five thousand dollars. The principal ground of objection was that the creation of such corporations induced speculation. The Legislature settled the Upper Ferry graveyard dispute, by vesting its ownership in the guardians and overseers of the poor, and provided "that nothing herein shall be construed to impair the right or interest any person or persons may now have in said land."

March 25th a supplementary act to the incorporation of the Delaware and Chesapeake Canal declared that if Maryland would make her portion of the Susquehanna River a public highway, and if the government of the United States would subscribe for eleven hundred and fifty shares; Maryland for two hundred and fifty shares, and Delaware for one hundred shares, Pennsylvania would subscribe for three hundred and seventy-five shares.

March 26th the widening of Moyamensing road at Wharton Market was reaffirmed.

March 29th an act provided fifteen thousand dollars for building a brick arsenal in place of the frame one in Philadelphia. It was completed in December, and was "large enough to hold twenty-eight pieces of artillery and apparatus, one thousand muskets, one thousand tents, six thousand knapsacks, and one thousand camp-kettles." By another act, passed in March, that part of Penn township lying between Vine Street and the middle of Hickory Lane, and between the middle of Sixth Street and the middle of Broad Street, was incorporated under the title of "the Commissioners of Spring Garden." There were to be twelve commissioners elected at the first election, to be held at the school-house of the Spring Garden Association on the first Monday in May.

It will readily be supposed that field-sports found little encouragement during these busy war-times, but a notice that appeared in the daily papers some time in January shows that there were still some who loved to follow the hounds. It read as follows:

TALLIO! TALLIO! THE HOUNDS.—A beautiful Highland fox, recently caught, will be let loose, to gratify the lovers of the chase, on Thursday next, January 21st, at 11 o'clock, near the sign of the Golden Fish, kept by C. Young, at the west end of the Permanent bridge.

"JOSEPH RHODES,
"No. 304 Market Street."

Other local happenings and enterprises deserve mention. The city received authority in the early part of the year to lay pipes from Fairmount, in Penn township, to connect with the city works. In March J. Silliman started two ferry-boats "on a new plan, propelled by a newly-invented sculling-machine, which occasions no rocking or other disagreeable motion." In May an advertisement appeared in the *Aurora* offering to rent as pasture-grounds the Southeast (now Washington) Public Square during the pleasure of Councils, and also the lots on the south side of Lombard Street, between Ninth and Eleventh, used as the city burying-ground. Councils in June passed an ordinance authorizing the building of a market-house on Broad Street, between Chestnut and High Streets. The plan was to be the same as that of the Second Street Market. The Washington Benevolent Society bought a lot on Third Street, above Spruce, and prepared to build a hall there. Manufactures received more general attention. The Philadelphia Sugar Refining Company was organized. The Mutual Assistance Coal Company of Philadelphia for the Promotion of Manufactures chose Thomas Dobson as president, and George Worrell as secretary. The Pennsylvania Society for Improving the Breed of Cattle gave its first exhibition and cattle-show at Bush Hill on the 12th of November.

An anti-vaccine agitation occurred during the summer. The Philadelphia Vaccine Society, established in 1809, managers Thomas Wistar, Samuel Biddle, and others, memorialized the Legislature, reporting that four thousand nine hundred and eighty-seven persons had been vaccinated; they had, however, no more vaccine matter, and desired assistance in procuring it. The subject was discussed, and their petition denied.

The improvement of river navigation was still a leading question. November 16th a meeting of the citizens of Philadelphia, Chester, Montgomery, and Berks was held at the house of Jared Brooks, in Norristown. Gen. Francis Swayne was chairman, and Samuel Bayard secretary. Horatio Gates Jones, of Roxborough, Levi Pawling, of Norristown, Gen. Joseph Heister and John Adams, of Reading, and Samuel Baird, of Pottsgrove, were the committee. They urged the incorporation of a company to make a lock-navigation on the Schuylkill from Sheridan's (Upper Ferry), in the county of Philadelphia, to Jacob Dreibelbis's mill, in the county of Schuylkill. On December 7th a meeting for the same purpose was held in the city at the house of Henry Myers. Samuel Wetherill, Jr., was chairman, and Cadwalader Evans, Jr., secretary. A committee was appointed to memorialize the Legislature, and correspond with the committee appointed at Norristown. It consisted of Samuel Wetherill, Jr., Gen. Jonathan Williams, Samuel Richards, John Mullowney, Josiah White, Robert Kennedy, and Cadwalader Evans, Jr. Still another meeting for this object was held in

Schuykill County, at Orwigsburg, on December 13th, at the house of J. Reifschneider. Dr. James McFarland was chairman, and George Dreibelbis secretary. The resolutions offered by James B. Hubley suggested that the productions of the interior of the State of New York could be brought in, and the products of Schuykill County sent to that State. It took much work to overcome the prejudices in the minds of many conservative farmers against the scheme. They feared the overflow of their meadows, the increased height of freshets in spring.

River steamboats increased. A new line was established to New York. The "Camden," Capt. Bunce, ran on the line to Burlington and Bordentown. The "Philadelphia" arrived from New York in October. The "New Jersey" ran to White Hill. The "Twins," owned by Poole & Springer, crossed the Delaware at the upper Market Street ferry, making regular trips. In December Oliver Evans, the inventor, published an address about railroads that shows clearly how little of the capacity of steam was then known, even by so laborious a student and daring an experimenter as Evans.¹

The year 1814 was one of the most exciting periods in the history of Philadelphia, and, indeed, of America. A new spirit inspired the national government and united the people for aggressive war. The sad

news of Bladensburg revived Revolutionary zeal; from the ruins of Washington Congress doubled taxes, established sufficient revenues, and entered upon more energetic and successful measures. Internal improvements and great inventions—steamboat, railroad, and cotton-gin—were struggling into splendid life. The country was at last learning its own strength. But there was depression in business, and extreme high prices prevailed in Philadelphia. The Revolutionary plan of fixing limits to prices could no longer be adopted, but January 1st the citizens of Oxford and Lower Dublin met and resolved not to purchase brown sugar unless it was sold at twenty cents a pound, loaf-sugar at twenty-one cents, and coffee at twenty-five cents. For West India molasses they professed themselves willing to give one dollar a gallon, and one dollar and twenty-five cents a gallon for sugar-house molasses. The people of the Northern Liberties on the same day held meetings, at which they agreed to pay no more than twenty-five cents a pound for coffee, and expressed great indignation at speculative citizens. The United States government had passed an act in 1813 making it necessary that stamps should be placed upon writings, and the grocers of the city held a meeting in January—M. W. Thompson, chairman, and William Patterson, secretary—and resolved not to buy any goods at auction unless the auctioneers paid the stamp duties.

Of celebrations and public banquets, the first occurred February 18th, when a dinner was given to Maj.-Gen. Jacob Brown at Washington Hall, Chief Justice Tilghman presiding, and Maj. Jackson, vice-president. February 22d the Washington Association and the Washington Benevolent Society listened to patriotic addresses and afterwards had a banquet, John C. Lowber presiding. The First City Troop celebrated the same occasion, and Paul Allen wrote a song for the festivities. July 4th the Washington Association and Society listened to an oration from Nathaniel Chauncey, and then dined at Masonic Hall. September 16th, Henry Clay, who was on his way to Ghent to serve as one of the United States treaty commissioners, was given a banquet at the Washington Hall Hotel.

Affairs in Europe were of the greatest importance. The anti-Gallican party hailed with joy the news of the battle of Leipsic and of the entry of Wellington into France. January 22d, at Elliot's Tavern, a meeting was held, Gen. Robert Wharton, chairman, and it was resolved to give a public dinner "in honor of the Emperor Alexander and the King of Sweden, the friends and allies of the United States, and of the splendid victories their arms accomplished in defense of the rights of the people and the freedom of the world; in honor of the generous virtues and heroic courage of the people of Germany, in redeeming their independence and breaking the shackles of slavery; in honor of the glorious, magnanimous, and successful efforts of the patriots of Spain and of Portugal to

¹ This curious document deserves remembrance, as it shows that he was not able to understand the possibility of attaching a steam-engine to the cars or carriages on the railroad, and of dragging along a number of them at the same time. The ascent of an altitude of more than two or three degrees by a steam-engine with a train was not considered feasible. Hence he was driven to the suggestion of sending the locomotive to the top of the hill before the cars, to drag them up with a windlass and rope. In order to check the danger of a descent the steam-engine, it was suggested, might be sent ahead, while the cars could be let down carefully by ropes. His own words are as follows: "Mr. John Elliot has suggested that paths be made for the wheels of carriages to run on, of hard substances, such as turnpike roads are made of, with a rail between them, set on posts, to guide the tongue of the carriage; and that they might travel by night as well as by day. Others have proposed lines of logs, flattened at the top, with a three-inch plank pinned on them, to bear the carriage and to guide the wheels, these strips of plank to be renewed as often as necessary, and while the logs may last and be sufficient to hold the pins. The expense of repairs would be trifling. . . . Mr. Samuel Morey, of New Hampshire, proposes that the two railways be laid as near each other as will permit, in order to let the carriages pass in opposite directions, and to cover the whole with a slight shed, to protect the passengers from the injury of the weather. . . . But railroads are best," he continues, because, "if they cannot be brought to a level, yet they may be brought to within two degrees and a half,—the deviation allowed by law on turpikes,—and which would do very well. And in cases of great ascents the steam-carriage might be detached and ascend by itself, to take a stand and haul the others up by a rope and cylinder, or by a windlass. In other cases the loaded carriages might be let fall astern by veering ropes to them to slack their motion until the steam-carriage has reached descending ground, and then the rope might be wound up again."

He adds, "As soon as any of these plans are adopted, after having made the necessary experiments to prove the principle, and having obtained necessary legislative protection and patronage, I am willing to take of the stock five hundred dollars per mile, of the distance of fifty or sixty miles, payable in steam-carriages or steam-engines invented for the purpose forty years ago, and will warrant them to answer the purpose to the satisfaction of the stockholders, and even to make steam-stages to run twelve or fifteen miles an hour, or take back the engines if required."

repel their unjust and cruel invaders, and in exultation at the final overthrow of a system fatal to peace, liberty, commerce, and universal happiness."

In February it took place at the City Hotel, Col. Jonathan Williams presiding, and the minister of Spain and the consuls of Russia, Spain, and Sweden being present. A few days later the native Germans, Hollanders, and Swiss celebrated Napoleon's defeat by a dinner at the Masonic Hall. Michael Freytag presided, and C. G. Lechleitner was vice-president. The principal toast was "The Emperor of Russia,—A monarch who has a twofold claim upon our esteem." Sentiments were also offered in honor of the King and Crown Prince of Sweden, Field-Marshal Blücher, and Kutusoff, Schwartzenberg, Wittgenstein, Platoff, Bulow, De Yorck, and other soldiers.

The Legislature, January 18th, passed resolutions in favor of the policy, on the part of the national government, of securing hostages for those who were threatened with trial and execution for treason by Great Britain. A number of naturalized citizens who had been natural-born British subjects, but who had renounced their allegiance upon becoming citizens of the United States, were being treated as traitors. It was one of the doctrines of Great Britain that native-born British subjects could never renounce their allegiance. In March twenty-three British prisoners, among them Maj. De Villette and other officers, were brought to the city and confined in the Arch Street prison, where they were considered hostages. Next month eighteen of these prisoners escaped from their place of detention by sawing off the iron bars of the windows. Eighteen hundred dollars reward was offered for their capture, and some were retaken, but a number escaped.

Lulled into confidence by the inactivity of the British, the "Commissioners of Defense" in Philadelphia reported, and were in February discharged. The gunboats they had equipped were still in service on the river, but the blockade was less vigilant, and quite a number of vessels passed in and out. A few privateers slipped out. The "Young Wasp," Capt. Hawley, made some captures in March, but being chased by a British frigate off Rockaway, was compelled to run a prize on shore. The boats of the frigate then set it on fire. This vessel was out upon a cruise of seven months, captured seven prizes, and returned safely to port. The "Rattlesnake," Capt. Maffett, was also at sea, and on one occasion was chased by two seventy-fours and two brigs, but succeeded in escaping. In March a report that a British ship of the line, two frigates, and a sloop-of-war were in the bay, caused the gun-boat flotilla to sail from New Castle, but no depredations were attempted by the enemy.

Adam and Noah Brown, on the 23d of March, launched a sloop-of-war. In March there were on the stocks in the Delaware two ships-of-war of seventy-four and forty-four guns, eighteen gun-boats, six barges, two blockade sloops, and a schooner. The

fleet of galleys on the Delaware now numbered nineteen gunboats, six barges, and two block sloops. There were also building at Philadelphia the "Franklin," seventy-four, and the "Guerrière," forty-four. The latter was launched May 20th, from the ship-yard of James and Francis Grice, at Mount Pleasant.

Alarm was again caused in June by the appearance of the frigate "Belvidera," which sailed some distance up the bay under false colors. The barges were then got out, and they chased a shallop as far as Fisher's Island, but the boats being fired at from the shore and some of the sailors wounded, they returned. The flotilla immediately went down as far as Cape May, but the British frigate had left the station.

A new militia act was passed in March, dividing the State into sixteen divisions, each of two brigades. The city of Philadelphia comprised the First Brigade and the county the Second. Provisions were made for drafting troops needed for the defense of the State or national government. It was ordered that the uniform of State, division, or brigade officers should be blue coats, faced and lined with buff, other particulars to be determined by the commander-in-chief. Volunteer companies were allowed to adopt their own uniforms. The State cockade was ordered to be blue and red. Robert Wharton, commander of the City Brigade, who was an active Federalist, was superseded, in July, by George Bartram. The latter was succeeded, in August, by Thomas Cadwalader. Thomas Snyder was appointed brigadier-general of the County Brigade, succeeding William Duncan. Maj.-Gen. Isaac Worrell remained in command of the division.

The air was filled with rumors of British advances. July 11th four British barges attacked Elkton, Md., and were repulsed by the militia. The story, however, that they had landed reached Philadelphia. Commodore Rodgers marched at once with two hundred and fifty marines; the crews of the new gunboats were sent on board; the citizens began to rally. A company was formed by the residents of North Mulberry Ward July 13th at Samson-and-the-Lion Inn, corner of Crown and Vine Streets. The First Regiment of Cavalry was directed to hold itself in readiness to march. The Federal Republican Young Men met at Peter Evans' tavern, corner of Sixth and Carpenter (Jayne) Streets, and formed the second company of Washington Guards. The shipmasters and mariners assembled at the State-House, Capt. B. Huggins in the chair, and formed the "Philadelphia Marine Artillery." Capt. Norris Stanley, Thomas Reilly, John Annesley, Edward Jones, Ezra Bowen, Jacob Benners, and Edward Wallington were appointed a committee to draft rules. The Flying Artillery was revived. The citizens of the Northern Liberties and of Kensington met at Christopher Lee's and formed a volunteer company. The Senior Military Association, composed of citizens over forty-five years of age, met three times a week for exercise.

The Second Military Drill Association was changed to the Union Guards. The Franklin Flying Artillery became an active company. A requisition being made at this time by the general government upon the State of Pennsylvania for fourteen thousand men, the State Fencibles, Capt. Clement C. Biddle, and the Benevolent Blues, Capt. Andrew C. Reed, were the first to volunteer. Meanwhile Commodore Rodgers, reinforced by Lieut. Morgan with two hundred and fifty more marines, had reached Elkton, but found no enemy there. They sent word to Philadelphia, and the bustle of the first excitement passed away. Companies were still raised, however. The citizens of the Northern Liberties met at Widow Ling's, Fourth Street, and resolved to form themselves into "The Military Association of the Northern Liberties." A meeting to form an artillery company was held at Peter Fisher's, in Filbert Street, John Boyd, chairman. "The men professing the principles of Washington," assembling at Peter Evans', organized into the volunteer company of Washington Artillerists. On the 3d of August the First Regiment of Artillery, Col. John Hare Powel, marched to Potters' Field and fired a salute "in honor of Gen. Brown's victory over the British army in Canada."

During these events the dictates of benevolence were not neglected, and in accordance with resolutions passed at a public meeting, June 16th, large sums of money were collected to relieve the inhabitants of war-desolated Germany. John G. Wachmuth was president, and C. L. Manhardt was treasurer of the enterprise, and committees were at work in every ward.

A committee was appointed June 9th, by the City Councils, to correspond with the authorities of the State and United States, to ascertain what measures of defense were to be adopted for the bay and river Delaware, and to inquire whether the fortifications proposed to be erected on the Pea Patch were to be carried on. This committee consisted of Messrs. Leiper, Steel, Brown, and Thompson. About two weeks afterwards Messrs. Leiper, Mullowney, L. Brown, and Thompson were deputed to visit Harrisburg and Washington for the same purpose. They made report on the 14th of July, and were empowered to consult with the corporations of the Northern Liberties, Southwark, Wilmington, and New Castle, but nothing was done.

August 25th this state of inactivity and fancied security was suddenly ended, couriers riding in hot haste, and flying rumors spreading the alarm before them. Washington had fallen, and Ross might even then be advancing on Baltimore and Philadelphia. The time for Pennsylvanians to fight for their own firesides might be at hand. The next morning at ten o'clock an unusually large town-meeting of the citizens of Philadelphia and all the adjoining districts assembled in the State-House yard. Ex-Governor Thomas McKean, then eighty years of age, presided,

and Joseph Reed, for many years city recorder, acted as secretary. A committee was appointed to draft resolutions. Its members were Jared Ingersoll, of the Philadelphia bar, father of Congressmen Charles J. and Joseph R. Ingersoll; Charles Biddle, vice-president of the Supreme Executive Council of Pennsylvania under the first Constitution, and father of Nicholas Biddle; John Sergeant, an eminent lawyer, member of Congress, and afterwards Whig candidate for Vice-President; John Goodman, alderman of the Northern Liberties, and member of the Legislature; Robert McMullin, of Southwark, a shipwright, and a man of much influence; Thomas Leiper, at whose house Jefferson was nominated, at this time president of Select Council of Philadelphia; John Barker, ex-mayor, sheriff of city and county, and father of Capt. James N. Barker, afterwards successively alderman, mayor, and port collector. This committee in a short time reported the following resolutions, which were at once adopted:

"Resolved, That Charles Biddle, Thomas Leiper, Thomas Cadwalader, Gen. John Steel, George Latimer, John Barker, Henry Hawkins, Liberty Browne, Charles Ross, Manuel Eyre, John Connelly, Condy Ruguet, William McFadden, John Sergeant, John Geyer (mayor), and Joseph Reed, of the city of Philadelphia; Col. Jonathan Williams, John Goodman, Daniel Groves, John Barclay, John Naglee, Thomas Snyder, J. W. Morris, and Michael Leib, of the Northern Liberties and Penn township; James Josiah, Robert McMullin, John Thompson, Ebenezer Ferguson, James Ronaldson, Peter Miercken, Richard Palmer, and P. Peltz, of Southwark and Moyamensing, be a committee for the purpose of organizing the citizens of Philadelphia, of the Northern Liberties, and Southwark for defense, with powers to appoint committees under them; to correspond with the government of the Union and the State; to receive offers of service from our fellow-citizens in other parts of the State and Union; to make arrangements for supplies of arms, ammunition, and provisions; to fix on places of rendezvous and signals of alarm; and to do all such other matters as may be necessary for the purpose of defense.

"Resolved, That our fellow-citizens who have been drafted under any requisition of the President of the United States, or have offered their services, be requested to consider themselves subject to the direction of the said committee, provided that the directions of the said committee shall in no respect contravene the orders of the general or State government.

"Resolved, That the committee be authorized to make such applications as they may deem necessary for the purpose of procuring an adequate disbursement of the funds provided by the commonwealth for military purposes.

"Resolved, That the committee be authorized to call upon the City Councils and upon the corporation in the northern and southern districts in the name of the citizens to make such appropriations as may be necessary for the purposes aforesaid.

"Resolved, That the committee be authorized and requested to make provision for the families of such of the drafted militia and volunteers as during their absence on service may be in want of assistance."

Thus ran the ringing resolutions. Of the members of the Committee of Defense, those not hitherto spoken of deserve a few words. Henry Hawkins was a sea-captain and a Federalist; Gen. Thomas Cadwalader, the son of a Revolutionary general, was a lawyer and a Federalist, and one of his sons, John, became United States district judge, and George afterwards became a general; John Steel, a native of Lancaster County, had long been collector of the port; George Latimer, a Federalist and merchant, was in the Legislature; Liberty Browne was president

of the Common Council; Capt. Charles Ross was a Federalist; Manuel Eyre, bank director, belonged to a family of noted ship-builders; John Connelly was in the Legislature; Condé Raguet was a leading Federalist, writer, and editor of the *Gazette* and other journals; William McFadden was a retired sea-captain; John Geyer, mayor, had been for years a printer; Col. Williams was Franklin's grand-nephew, had been head of the West Point Military Academy, and in 1814 was elected to Congress, but died before taking his seat; Daniel Groves, a bricklayer, was in the State Senate; John Barclay, an ex-judge, was a bank-president, and a Federalist; John Naglee, father of Gen. Naglee, who served in the last war, was a lumber-merchant; Thomas Snyder afterwards commanded a brigade; Isaac Norris was a ship-chandler; ex-Senator Michael Leib was postmaster of Philadelphia; James Josiah, an old sea-captain, was the first to display the American flag in London harbor after the Revolution (on the "Andrea Doria," a classic name dear to liberty); John Thompson, a shoemaker, was representative and county commissioner; Ferguson was a magistrate; James Ronaldson, type-founder, had a hand in most of the early improvements of Moyamensing; Peter Miercken was a sugar-refiner and Federalist; Richard Palmer, prothonotary of the Court of Common Pleas, was afterwards alderman; Philip Peltz was a Passyunk farmer and market-gardener; his grandson was, in 1867, receiver of taxes in Philadelphia; John Goodman was the secretary of the committee, and his minutes are printed in volume viii. of the "Memoirs of the Pennsylvania Historical Society."

The newspapers, without regard to party, urged the people to support the committee by word and deed. There were now but two parties,—“the country and its invaders;” the time for action had come; the past was forgotten, and, as we have seen, a number of the committee were Federalists. On the afternoon of the 26th the committee met, organized, and appointed a committee of four persons for each ward in the city, twenty-one for the districts of Northern Liberties and Penn township, and twenty-six for Southwark, Moyamensing, and Passyunk. They were to promote and encourage the formation of volunteer companies into battalions and regiments. The superior committee next authorized Robert Wharton, William Jackson, Enos Bronson, Charles W. Hare, William Meredith, Henry Nixon, and George Gillespie, to raise one or more companies of light infantry for the special defense of the city and environs, and to form them into battalions. The Committee of Defense then divided itself into sub-committees, to direct needful measures in regard to correspondence, supplies, defense of the Delaware, to organize citizens into military bodies, and to make provisions for the families of militia. By concert with Gen. Bloomfield, it was determined that the signal of alarm should be six guns, fired from Fort Mifflin, the navy yard, and the arsenal. On hearing this warning, the drums of the city and liber-

ties were to beat to arms. Immediately the militia, equipped for field duty, were to parade on Broad Street, the line extending southwardly from Chestnut Street. It was resolved to erect field fortifications immediately for the defense of the city; and officers of the topographical engineers were detailed under the superintendence of Gen. Jonathan Williams.

The City Councils met the same day, and voted that three hundred thousand dollars should be borrowed and placed under the control of the Committee of Defense. The corporations of Northern Liberties and of Southwark each resolved to raise one hundred thousand dollars for the same purpose.

Gen. Bloomfield resolved to organize a camp at Kennett Square, in Chester County, about thirty-six miles southwest of Philadelphia, thirteen miles from Wilmington, and eight or nine miles from Chadd's Ford, and the First City Troop, Capt. Charles Ross, was detailed for vidette duty between the Chesapeake and the Delaware. The latter marched, August 28th, for Mount Bull, a height on the Chesapeake Bay, five miles from Turkey Point and thirteen miles from Easton. This situation commanded an extensive view of the bay, and from thence the line of videttes was organized, extending to the camp at Kennett Square and to Philadelphia.

August 26th the State Fencibles, Capt. Clement C. Biddle, marched from the city to the place of general rendezvous. The next day the Independent Artillerists, Capt. Andrew M. Prevost, the Independent Blues, Capt. Peter A. Browne, and the second company of Washington Guards, Capt. Joseph R. Ingersoll, followed. August 28th the Junior Artillerists, Capt. Jacob Cash, Jr., left the city. The first company of Washington Guards, Capt. Condé Raguet, took up the line of march on the 29th, and on the 30th were followed by the third company of Washington Guards, Capt. Thomas F. Pleasants, and a detachment of militia under the command of Lieut.-Col. Peter L. Berry and Majrs. Jacob Vogdes and William Bozorth, which consisted of the first company city militia, Capt. James Perle; the second company, Capt. Reuben Gilder; the third company, Capt. Justus P. Bullard; the fourth company, Capt. Peter Fenton. Between the 1st and 12th of September these were reinforced by the Independent Volunteers, Capt. Daniel Oldenbergh; first company Union Guards, Capt. William Mitchell; second company Union Guards, Capt. Joseph Murray; second troop City Cavalry, Capt. William Rawle, Jr.; and Northern Liberty Artillerists, Capt. John Naglee. The camp at Kennett Square was designated Camp Bloomfield, and Capt. Charles W. Hunter drilled the volunteers, acting as brigade major under Gen. Bloomfield. On the 7th of September Lieut.-Col. Clemson, of the United States army, assumed command of the troops, which were then reinforced by some regulars.

Reorganization proceeded rapidly, and several other camps were established in swift succession. The

entire autumn was occupied in drilling new recruits and preparing for the expected foe.¹ But the chief interest of the story centres in and around the city of Philadelphia, where the greatest energy was displayed in raising troops and building fortifications. Meetings of all sorts abounded, and the newspapers were crowded with reports of their proceedings. Volunteers were abundant, and camps of instruction were formed near the city. One of these cantonments, Camp Taylor, was near the United States Arsenal. At Camp Mifflin there were, in September, companies commanded by Capts. Sutherland, Huston, Buckius, and Fess, who elected Joel B. Sutherland major, and Joseph McCoy adjutant. Another encampment was formed at Bush Hill, where the reserve was stationed under the command of Gen. Snyder.²

¹ The camps must have been lively places to visit. In the middle of September Gen. Thomas Cadwalader relieved Col. Clemson. The latter, with the regular troops, encamped at Iron Hill. The eight companies of infantry in camp were soon organized into a regiment, and elected Clement C. Biddle, colonel; Condy Raguet, lieutenant-colonel; Joseph R. Ingersoll and Samuel S. Voorhees, majors; Michael W. Ash, adjutant; Francis R. Wharton, quartermaster; Thomas R. Peters, paymaster. In order to fill up the commands of other companies, Hartman Kuhn was elected captain of the State Fencibles, John Swift of the Washington Guards, second company, and John R. Mifflin of the Washington Guards, first company. On the 10th of September the artillery companies were formed into a battalion, and Andrew M. Prevost was elected major, and James M. Linnard was elected captain of the Independent Artillerists. The staff of Gen. Cadwalader consisted of John Hare Powel, brigade major; Richard McCall and John G. Biddle, aides-de-camp; Henry Sergeant, assistant quartermaster-general; David Correy, assistant deputy-quartermaster. On the 17th of September the troops left Kennett Square and marched towards Wilmington, encamping for the night on Gregg's farm, three miles and a half from the latter place. On the 20th the brigade changed its position to Camp Brandywine, half a mile distant. Here they were joined by the State Guards, Capt. Henry Meyers; Mifflin Guards of Delaware County, Capt. Anderson; Frankford Volunteer Artillerists, Capt. Thomas W. Duffield; Franklin Flying Artillery, Capt. Richard Bache; Washington Artillerists, Capt. Cornelius Stevenson. Camp Brandywine was only maintained for nine days, when Camp Dupont was chosen, about two miles westward. Thither repaired from the city the second company of Independent Artillerists, Capt. Samuel Paxson, and the Independent Riflemen, Capt. John C. Uhle; also the Reading Washington Blues, Capt. Daniel D. B. Keim; the Union Rifles of Union County, Capt. Ner Middlewarth; the Selinsgrove Riflemen, Capt. John Snyder; the Union Rifles of Montgomery County, Capt. John Rawlins; the Delaware County Fencibles, Capt. James Serrill; and a regiment of riflemen, under Col. Thomas Humphreys, consisting of Northampton County riflemen, Capts. Horne, Shurtz, and Dinckley; of Lehigh County troops, under Capts. Rinker, Hess, and Ott; of Chester County troops, under Capt. Christian Wigter; of Montgomery County troops, under Capts. Hurst, Robinson, Matthews, Crosscup, Fryer, Sands, and Sensitive; of Bucks County troops, under Capts. Alexander McClean, William Purdy, and William Magill. On the 14th of November Maj. Prevost's artillery battalion was formed into a regiment. Maj. Prevost was elected colonel; Cornelius Stevenson and Thomas W. Duffield, majors; John G. Hutton, adjutant; Jacob Peters and Lewis M. Prevost, quartermasters; James Smith, surgeon; and Robert O'Neill, sergeant-major. By these changes there were vacancies in some of the companies, which were filled up by the election of Samuel C. Landis as captain of the Washington Artillerists, and Bela Badger as captain of the Frankford Artillerists.

² To show the public spirit, the organization of some of these companies may be mentioned more in detail. A meeting of the teachers of the city was held on the 30th of August, at George Shuch's, in Decatur Street. The principal promoters of this scheme were Henry J. Hutchins, William J. Bedlock, Joseph Hutton, John Duffy, Benjamin H. Rand, John L. Peek, and George Dennison. They resolved to form themselves into an association for home defense. There was also a call for

The Committee of Defense thought that field fortifications should at once be thrown up on the western side, from which an attack might first be expected. The works which were planned were: fortifications near Gray's Ferry, a redoubt opposite Hamilton's Grove, on the west side of the Schuylkill, a fort at the junction of the Gray's Ferry and Darby roads, a redoubt upon the Lancaster road, and a redoubt upon the southern side of the hill at Fairmount. To construct these works required much labor, and they could not have been built without the voluntary labor of the citizens. A hearty enthusiasm was shown in this service. Companies, associations, societies, and the artificers of different trades organized themselves for the work. Day after day these parties left the city at from five to six o'clock in the morning, with knapsacks or handkerchiefs containing a supply of food, and marched down to the fortifications, to a day of toilsome work at an occupation to which but few of them were accustomed. This labor commenced September 3d, and continued until October 1st, when the field-works were finished. This work was done by parties having the following numbers: housecarpenters, sixty-two; victualers, four hundred; the Tammany Society, four hundred; painters, seventy; hatters and brickmakers, three hundred; Fourth Washington Guards, one hundred and sixty; Rev. Mr. Staughton and the members of his church, sixty; printers, two hundred; crew of the privateer "Wasp," one hundred and forty; watchmakers, silversmiths, and jewelers (on Sunday, the 11th), four hundred; cabinet-makers and joiners, eighty; cordwainers, three hundred; Washington Association, seventy; True Republican Society, seventy; teachers, thirty; friendly aliens, five hundred; Freemasons (Grand and subordinate lodges), five hundred and ten; Washington Benevolent Society, five hundred; Sons of Erin, citizens of the United States, two thousand two hundred; Tammany Society (second day), one hundred and thirty; German societies, five hundred and forty; colored men, six hundred and fifty; citizens of Germantown, four hundred; Scotchmen, one hundred; friendly aliens (second day), one hundred and fifty; Sons of Erin, citizens of the United States (second day), three hundred and fifty. The colored people also

"a meeting of pious men, whose conscientious views would deter them from joining other corps where they could not enjoy themselves as much as in this corps, which is formed for the defense of those rights, both civil and religious, which the Father of all mercies has committed to our care." Among the advantages of this branch of the church militant it was announced were these: "Those who read their Bibles will find that Gideon, Baruch, Samson, Jephtha, David, Samuel, and the Prophets subdued kingdoms, quenched the violence of fire, waxed valiant in fight, and turned to flight the armies of their enemies."

The French citizens formed themselves into a company called the Philadelphia Chasseurs. Several companies were formed for city defense. Among these were the Philadelphia Guards, Philadelphia Volunteers, City Guards, Northern Liberty Guards, Western Rifle Rangers, fourth, fifth, and sixth companies of Washington Guards, Schuylkill Guards, Volunteer Greens, Philadelphia Fencibles, Lawrence Infantry, Independent Artillerists, second company, and a company of pikemen formed in Southwark.

gave a second day to the work. Other bodies also participated. Among these were the Franklin Benevolent Institution, the Howard and Lawrence Beneficial Societies, and the Philadelphia Benevolent Society. The physicians labored at the works, as did the artists, and many others, so that when the fortifications were completed about fifteen thousand persons had worked upon them, each for one day. In lieu of labor many gave money, the committee collecting about six thousand dollars. Upon arriving at the fortifications the citizens, divided into companies, were put to work. At ten o'clock the drum beat for grog, when liquor sufficient for each corps was dealt out to its captain. At twelve o'clock the drum beat for dinner, and more grog was furnished. This was also the case at three and at five o'clock. At six o'clock the drums beat a retreat, when, said the general orders, "For the honor of the cause we are engaged in, it is hoped that every man will retire sober."

These works were principally laid out by Col. I. Fonciu, a French officer who had lived in Philadelphia for many years. He returned to France in September, after receiving a special vote of thanks from the Committee of Defense. His plans were carried out by a volunteer association of field engineers, both civil and military, composed of the following gentlemen: Chief Engineer, Gen. Jonathan Williams; Chief Assistant, Col. I. Fonciu; Topographical Department, Dr. R. M. Patterson, William Strickland, Robert Brooks, William Kneass, and Jonathan Jones; Superintendents of the Works, Thomas M. Souder, Joseph Cloud, Adam Eckfeldt, Isaac Forsyth, Nicholas Esling, Samuel Richards, Spencer Sergeant, John Coxe, Frederick Sheble, George W. Morgan, Frederick Gaul, Joseph Watson, Thomas McKean, Jacob S. Otto, Alexander Ramsey, William Davis, Samuel Nicholas, Jacob Clements, William Spohn, William Whitehead, Frederick Eckstein, Conrad Wesener, James J. Rush, Thomas Hart, Aaron Denison, and Joseph P. Zebley; Commissary Department, Stephen Kingston, Peter Wager, Thomas P. Roberts, and Anthony Groves; Topographical Engineers, in the service of the United States, Maj. Roberdeau and Capt. Clarke, assisted by Robert Frazier.

One of the early matters of discussion in the committee was the manner in which spies should be detected. In September they reported that the best plan would be to invite citizens generally to report all persons of suspicious character to the mayor, or to some justice of the peace, to be legally proceeded against. This method, it was thought, would be highly efficacious, "inasmuch as it would make every citizen the guardian of his own rights, and would strike terror in the minds of those incendiaries who now infest our city with impunity." As an auxiliary measure, it was resolved that keepers of stage-offices, commanders of steamboats, ferrymen, and toll-gatherers should be instructed to furnish lists of passen-

gers arriving and departing, and of suspicious persons.

The attention of the Committee of Defense was at once directed towards the needed defenses upon the Delaware. It was recommended that a fort should be erected near Red Bank, on the Jersey shore, and sixty volunteers offered their services. Application was made to the Governor of New Jersey for authority. It was recommended that obstructions by twelve sunken vessels of from one hundred to two hundred tons each, and three smaller ones, should be placed in the channel near Fort Mifflin; that a fort should be erected one mile above the mouth of Mantua Creek, on the Jersey shore, and a battery at the wharf of the hospital on Province Island. The Marine Artillery, Capt. Annesley, were stationed at Fort Mifflin. Application was made to Gen. John Armstrong, Secretary of War, for the building of a battery of thirty-two 24-pounders on the Pea Patch, and for suitable fortifications at Newbold's Point and Red Bank. Capt. Babcock, of the engineer corps, thought that he could do no more than provide for the erection of two martello towers at the Pea Patch. The Committee of Defense and Councils desired more permanent fortifications. They built a martello tower in the Northern Liberties. Gen. Swift, of the United States army, accompanied members of the committee down the Delaware in September, and prepared plans for the fortifications on the Pea Patch and Newbold's Point. Thomas Clarke, of the topographical engineers, had undertaken, for twenty thousand dollars, to erect a tide-bank around a part of Pea Patch Island which would inclose about eighty acres, and also to build a wharf, and execute other work necessary for permanent fortifications.

The Committee of Defense desired a force of United States regulars near Philadelphia. Two thousand regulars were named as sufficient. The Secretary of War had not the troops to spare, and it was resolved to apply to the Governor, and request that he would apply to the Secretary of War for such an encampment; also to ask that authority should be given to the city of Philadelphia to enlist three regiments of infantry. Governor Snyder sent a brigade of militia, under Gen. Spering, from the counties of Lehigh, Pike, Northumberland, and Columbia, which was quartered at the Arch Street prison.

September 8th the committee reported that,

"In the opinion of your committee, all measures short of the authority of the Commonwealth, legally exercised, would be found ineffectual, inasmuch as the inhabitants of the part of the country through which the enemy must pass would be proportionably injured. Recommendations, therefore, could only operate on the few who prefer the public benefit to private prosperity; and the most virtuous and patriotic citizens would, consequently, be the most exposed to these burdens or privations. Your committee is therefore of opinion that the chairman of the general committee, or a special committee appointed for the purpose, should without delay wait upon the Governor of the State, and request him to appoint proper persons to carry into effect, on the first landing of the enemy, the following indispensable measures:

"1. To cause all horses, cattle, and every species of vehicle to be driven

into the interior, out of the possible reach of the enemy, so as to deprive them of every means of transportation.

"2. To drive off or carry away every animal of every description that may serve for food, and to carry away (or destroy, if there should not be time to carry away) all provisions of every kind.

"3. To draw the lower box and take away the spear of every pump, and all the apparatus by which water may be drawn from wells.

"4. To impede roads as far as possible, and to stop all narrow passes by felled trees, or by such other means as time and circumstances may permit.

"5. To take an indispensable wheel from every mill, so as to prevent the possibility of its being used when in the enemy's possession."

Early in its proceedings the Committee of Defense discussed the raising of black troops. August 27th, L. M. Merlin, an upholsterer at No. 192 Lombard Street, and a French Canadian, wrote a letter in French to the committee on which the sub-committee reported August 30th,—

"That it has taken into consideration the letter in French addressed to the general committee by Mr. L. M. Merlin; that the writer of said letter makes a proposition to have organized a legion of people of color, to be called the Black Legion, and to be commanded by white officers; that it seems improper to the committee to have the proposed legion organized at this time, when there is so short a supply of arms and accoutrements for our white citizens; but the committee thinks that under a proper regulation these people of color might be employed as fatigue parties on the work,—to act, in a manner, detached from the white citizens who may be so employed."

No further reference to the subject is found in the minutes of the Committee of Defense. During the summer and autumn, however, there was a brigade of blacks recruited for United States service in Philadelphia, but by whom does not seem to be now known. In "The Condition, Elevation, Emigration, and Destiny of the Colored People of the United States," by Martin Robinson Delaney, published in Philadelphia in 1852, a quotation is made from a pamphlet by W. C. Nell, of Boston, which, after speaking of the services of colored men on the fortifications at Philadelphia, says, "A battalion of colored troops was at the same time organized in the city under an officer of the United States army, and it was on the point of marching to the frontier when peace was proclaimed."¹

¹ Citizens living in 1814 agree that there was an organization of black troops in Philadelphia that year, and one of them has stated that he remembers having several times seen the colored soldiers march to Christ Church to attend religious services. In a communication to the *Dispatch*, some years ago, a citizen stated that he remembered to have "seen a company of colored troops, under command of Capt. Bussier, marched on the ice across the river Delaware (in 1815) to Camden."

The raising of colored troops had also been suggested to the general government. Among the few papers saved from the burning of the War Office building, after the war of 1814, is the following:

"INSPECTOR-GENERAL'S OFFICE, THIRD MILITARY DISTRICT,

"Wednesday, Aug. 23, 1814.

"Gen. John Armstrong, Secretary of War, Washington:

"SIR,—I have just been informed by my good friend, Col. A. Denniston, that you have in contemplation to raise a regiment of blacks. Should this be the case, I solicit permission to tender my services to assist in recruiting such a regiment, confident that in Pennsylvania (the place of my nativity) I should be able in a short period to enlist from three hundred to five hundred men. Any information or recommendations you may require respecting me shall be furnished from the most respectable military characters in this and the Fourth Military District.

"Permit me to refer you to the Secretary of the Navy and Richard Rush, Esq., who, I believe, have some knowledge of me.

On the 14th of September news arrived of the landing of the British near Baltimore, and of the expected attack upon that city. The excitement now culminated. The headquarters of Gen. Gaines, corner of Eleventh and Market Streets, was surrounded by thousands of anxious persons. There were rumors of a heavy engagement long before intelligence of the bombardment of Fort McHenry was received. The greatest agitation prevailed, and the chances of an attack upon Philadelphia were canvassed. While this state of uncertainty prevailed, the city treasurer addressed the Councils to know if he had authority to remove the public books and papers, if the Committee of Defense should so decide. A resolution granting him this privilege was passed, and the city officers were ordered to pack up their papers, books, and documents so that they might be easily removed. The news of the British retreat caused great rejoicing. September 29th, Gen. Winfield Scott was received with military honors and escorted to his hotel. Gen. Edmund P. Gaines was at this time commander of the Fourth District, including Philadelphia.

Many applications were made to the committee by inventors. Joseph G. Chambers, in September, proposed to organize a company to act with repeating fire-arms, and the sub-committee reported favorably. Chambers was then authorized to form a company, and the Secretary of the Navy ordered fifty such guns to be made. In October, Robert Fulton, of New York, sent a letter to Bernard Henry, which was referred to the Committee of Defense, in which he said,—

"I have prepared for you a torpedo, with its fulminating lock, from which any number required can be made, either for anchoring or for the various modes of attack and defense which I have explained. But it is to be understood that I do not give to you, or to the Committee of Defense of Philadelphia, any right to draw emolument for the use of my invention. A law has been passed by Congress, with a view to encourage the practice of torpedoes, that grants half of the estimated value of all vessels of an enemy that shall be destroyed by means other than vessels of the government. Having labored for fifteen years to introduce the practice of submarine explosions, and being inventor of the machinery, I cannot throw away the fruits of so many years of exertion and expense; nor will the public, who seek only for protection, require it of me."

This torpedo was sent on, and the committee paid Mr. Henry one hundred and thirty dollars for it.²

Some experiments were made on a floating chain,

"I am at present detailed by the commanding general of this district as acting inspector-general, during the arrest of Col. N. Gray.

"Soliciting your attention to my application, I am, with sentiments of the highest regard, sir,

"Your most obedient servant,

"P. P. WALTER,

"Capt. Co. I, Thirty-second Regiment, Acting Inspector-General Third Military District."

² Jan. 1, 1815, Fulton wrote again, describing a new invention of his, a torpedo-boat with a submarine wheel. The committee wisely concluded that it would be prudent to insist that such a boat should first be tested. The Secretary of the Navy was then written to, to inquire whether he approved of Fulton's torpedo-boat, whether it would be accepted as a temporary substitute for the frigate, and if the money raised for building a frigate could be diverted for the torpedo-boat, but the reply was unfavorable.

costing one hundred and eleven dollars. Over twenty-one thousand dollars was paid for hulls sunk in the Delaware. In November, George Clymer sent a letter to the committee relative to the defense of the Delaware by steam vessels of war. The sub-committee said it was "unable to comprehend Mr. Clymer's mode of warfare for want of accurate description. Every inventor is bound to exhibit either a demonstration of his invention on known principles, or the result of actual experiment attested by competent judges."

The steam frigate "Fulton the First" had been launched at New York, and great expectations were entertained of the value of the vessel. The "Committee of Vigilance and Safety," of the city of Baltimore, in November applied to the Secretary of the Navy, William Jones, for the construction of a steam floating battery. He replied that if they would raise one hundred and fifty thousand dollars, and place the sum to the credit of the United States in any bank of Baltimore, the amount should be applied to building a battery, and the government would give the builders six per cent. United States stocks to the amount of the subscriptions. Secretary Jones then wrote to Philadelphia, making similar offers. He said, "A single vessel of this kind, together with the defenses and obstructions, now, I understand, in operation at the Pea Patch, would render the Delaware perfectly secure, and would supersede the immense expenditure, loss, and anxiety which the inhabitants of its shores must otherwise sustain."

The Philadelphia committee, November 18th, resolved to raise money for a steam frigate. A few days afterward they resolved to call upon New Castle, Wilmington, and the inhabitants of the adjacent country to contribute toward the expense of the defenses on the Pea Patch and the building of a battery. Wilmington subscribed fifteen thousand dollars, and paid five thousand dollars to the Philadelphia committee within five weeks. The committee in regard to subscriptions for the steam frigate reported that subscriptions to the amounts expected could not be procured. It then was resolved to petition the Legislature for an appropriation of the auction duties usually paid into the State treasury, but the news of the negotiation of a treaty of peace, which reached the city after the beginning of the year 1815, put an end to this, and the Wilmington money was refunded. Late in November the Secretary of the Navy authorized George Harrison, navy-agent at Philadelphia, to enter into a contract for the building of a steam floating battery upon the plans of Fulton, adopted in building the frigate at New York. Permission was given to build it in the navy-yard, either by the builders of the "Fulton" or by others.

The troops at Camp Dupont were drilled steadily during the summer and autumn. About the middle of November six companies, under the command of Lieut.-Col. Raguet, were marched to Camp Gaines,

two miles below New Castle, until that time occupied by Col. Irvine with a detachment of regular troops, who were ordered to take up a new station farther down the Delaware, to prevent an anticipated landing of the enemy. Col. Raguet remained at Camp Gaines until a storm occurred, which filled many of the tents with water. Repairing to New Castle, the soldiers were quartered in a church, the court-house, and a private dwelling. In addition to these troops, composed of citizens of Philadelphia, there had been nearly ten thousand State militia encamped near Marcus Hook, under the command of Gen. Isaac Worrell. November 30th, "the Advance Light Brigade" broke up the encampment at Dupont, and marched to Wilmington, where the detachment from Camp Gaines and New Castle joined it. The whole body, numbering over three thousand, then took up the line of march homeward, and on the 2d of December entered the city, presenting to their delighted kindred and friends such a sight as had not been seen in Philadelphia since the Revolution. They were marched over the permanent bridge to the headquarters of Gen. Gaines, at Eleventh and Market Streets, and thence to the State-House, where they were dismissed. Shortly afterwards they were mustered out of service, but were expected to be ready for more efficient action in the spring. The brigade of Gen. Snyder marched back a few days afterwards. And thus ended the military operations of 1814 in Philadelphia. A few days later, Gen. Spering, commanding a brigade of militia quartered at the Arch Street prison, made application to the Committee of Defense for assistance in procuring shoes and stockings for his men, who were about to march over a dreary country to their homes, and four thousand dollars were appropriated.

Local politics were not entirely suspended even during the excitement of the war. Col. Robert Patton, postmaster since Oct. 2, 1789, died January 3d, and after a fierce struggle Dr. Michael Leib, in February, carried off the prize. Richard Bache, aided by Binns and Randall, was his chief opponent. Ingersoll, Conard, and Seybert, congressmen from Philadelphia, voted for a suspension of the embargo, and were abused by their party friends. Binns, in his *Democratic Press*, charged the Society of Friends with having declared against war contribution, and in October some of them wrote to Governor Snyder denying it. In autumn the Democrats nominated for Congress Adam Seybert, Charles J. Ingersoll, William Anderson, and John Conard. The Federalists nominated Jonathan Williams, Joseph Hopkinson, William Milnor, and Thomas Smith. In the county the new-school Democrats nominated for the Assembly Jacob Holgate, J. Holmes, John Carter, John D. Goodwin, and Joel B. Sutherland. The old-school Democrats, belonging to the Leib party, held the usual opposition meetings, and nominated for the Assembly Joseph Engle, George Morton, John Kessler, Corne-

lius Trimnel, Samuel Castor, and John Cochrane. In the city the Federalists nominated for State senators Nicholas Biddle and William Magee. At the election the political status of the previous year was reversed, and the Federalists carried the city and county for their congressmen, senators, assemblymen, city councilmen, county commissioners, and auditors, every office, in fact, except coroner, to which John Dennis was elected by a small majority. For Governor Col. Isaac Wayne, Federalist, received in the city and county 5674 votes; Simon Snyder, Democrat, 4573 votes. By this victory the Federalists, for the first time in many years, sent a county delegation (J. Whitehead, C. Wheeler, Dr. De Benneville, Samuel Breck, T. Bird, and J. Thum) to the Assembly.

March 18th, a bill to charter forty-two new banks was passed, vetoed by the Governor, and passed over his veto. Three were to be in Philadelphia and two in the county. August 30th, after the capture of Washington, the banks of Philadelphia suspended specie payments, a measure which was followed by the banks of New York, and by all others throughout the country. The banks said that they were compelled to suspend in order to keep the entire specie capital of the country from being exported. A meeting of merchants and traders was held at the Coffee-House on the day after the suspension, Thomas M. Willing chairman, and Robert Richie secretary. It was resolved to sustain the banks, and to take their notes as usual.

The suspension eventually caused a great deal of trouble. The scarcity of coin for the purposes of business was so general that large numbers of notes for small sums, or "shinplasters," were issued by individuals.¹ In November a proposition was made that the city should issue small notes, less than one dollar in amount, but the Councils refused.

Early in 1814 resolutions were introduced into Councils in favor of having watchmen and lamps in Centre Square. It was finally agreed to place watchmen at the Centre Square engine-house only. The lighting of the city was somewhat difficult in consequence of the increasing scarcity of oil,—a result of the war, which interfered with the whale fisheries. In February, E. Clark proposed to light the city with tallow and old fat instead of with oil. In March the City Commissioners were authorized to make experi-

ments, and in April a resolution was introduced into Common Council to purchase Clark's patent-right for lighting streets for six thousand dollars. An amendment to pay two thousand dollars was carried, but the project was finally rejected. In September a plan of Philip Mason's for burning tallow was examined. Five hundred dollars were soon appropriated to alter the public lamps in accordance with Mason's plan for burning tallow or lard. In December further action was taken in that direction.

The Athenæum originated in this year at a meeting held February 9th, of which Roberts Vaux was chairman. It was resolved to establish a reading-room at the southeast corner of Chestnut and Fourth Streets. Upon the permanent organization of the association, William Tilghman was elected president, James Mease vice-president, and Roberts Vaux secretary.

The Washington Benevolent Society and the Washington Association celebrated February 22d with orations from Condé Raguet and Richard S. Coxe. July 4th the Washington Benevolent Society listened to an oration by Dr. Charles Caldwell, and then dined at the Lebanon Garden. Their new hall was begun this year. Proposals were issued for a loan of one hundred and twenty thousand dollars. The corner-stone of Washington Hall was laid in August by Robert Wharton. The Society of the Cincinnati on the same day dined at the Mantua Hotel, north of Hamilton Village. The Tammany Society celebrated their anniversary day in May by a parade and celebration in the wigwam at Richmond, kept by Brother Trotter. They also had a celebration, July 4th, at the wigwam in Spring Garden.

A meeting was held in February, of citizens of Southwark and of New Jersey, and it was resolved to establish a steamboat to run between the Point House and Gloucester Point. The steamboat "Bristol," launched this year, ran from Arch Street ferry, under the control of Jacob Meyers. He announced that the boat was built at the "joint expense of citizens of Burlington, Bristol, and Philadelphia, without any view to profit, but merely for the accommodation of the public." A few other items are perhaps worth record. March 22d a company was incorporated for improving the navigation of the river Lehigh. Among the commissioners were Robert Wallace, John Naglee, lumber merchant of the Northern Liberties, Thomas Stewardson, and Joseph Grice. George Clymer gave notice in April of this year that he had completed on a new plan an iron printing-press, which was to be seen at William Fry's printing-office, Prune Street, between Fifth and Sixth Streets. Certificates were given afterwards by Professor Robert Patterson and Oliver Evans.

In April, Mr. Palmer proposed to the Councils to filter the water at Fairmount. A contract was authorized with Oliver Evans in June for building an engine at Fairmount, with power to raise three million five hundred thousand gallons of water from the

¹ The following is a specimen of this sort of currency:

Six-and-a-quarter cents.	6 1/4 cts. {	Chest of Tea and hogshead. } No. 233.
I promise to pay the bearer on demand, in Groceries, or Philadelphia Bank Notes, at No. 130 North Water street, six-and-a-quarter cents.		
JOHN THOMPSON.		
Phila., December 10, 1814.		

Sixteen for One Dollar.

Schuylkill in twenty-four hours, at a cost not exceeding twenty-three thousand dollars. On the 3d of August the First Regiment of Artillery, Col. Powell, fired a Federal salute at Potter's Field in honor of Gen. Brown's victory over the British army in Canada. In September the Common Council resolved that all the "uninclosed part of northeast public square east of Seventh Street and south of the oil-house be cleared off, so far as the same is not inclosed, and that the militia, or any company or companies thereof, or any military association, shall be permitted to drill or parade on said open ground when cleared." Permission was given at the same time to use the southeast square for military exercises. A whale was taken in the Delaware near Trenton, in the autumn, and was exhibited near the High Bridge, Kensington. It was twenty-four feet eight inches long, and the girth of its body was fifteen feet.

But nothing that had occurred for years had a greater bearing on the future of Philadelphia than certain experiments with Schuylkill coal, reported December 14th in the *Union and United States Gazette*. They took place at the wire-mills of White & Hazard, Falls of Schuylkill. Figures were printed showing the amount of work in heating and rolling iron, which had within a certain time been done by aid of the Pennsylvania coal, and also a statement of what was usually accomplished by the use of Virginia coal in the same period of time. The result was greatly in favor of anthracite coal. This may be said to be the first successful experiment in the use of the anthracite coal made in Philadelphia, and it was the beginning of the use of an article of fuel the value of which in subsequent years is beyond all estimate. Charles V. Hagner, in his "History of the Falls of Schuylkill," thus describes the circumstances attending this experiment:

"White & Hazard were using, in their rolling mill, bituminous coal. They knew of the large body of anthracite at the head of the Schuylkill, and early commenced making experiments with it. They had some brought down in wagons, at an expense of one dollar per bushel,—twenty-eight dollars per ton,—expended a considerable sum of money in experimenting, but could not succeed in making it burn. The hands working in the mill got heartily sick and tired of it, and it was about being abandoned. But, on a certain occasion, after they had been trying for a long time to make it burn without success, they became exasperated, threw a large quantity of the 'black stones,' as they called them, into the furnace, shut the doors, and left the mill. It so happened that one of them had left his jacket in the mill, and in going there for it some time afterwards he discovered a tremendous fire in the furnace, the doors red with heat. He immediately called all hands, and they ran through the rolls three separate heats of iron with that one fire. Here was an important discovery, and it was, in my opinion, the first practically successful use of our anthracite coal, now so common. This important discovery was the simple fact that all that was wanted to ignite it was time, and to be 'let alone.' All this may appear strange now, but the men employed in that mill—and every one else who used the bituminous coal—were accustomed to see it blaze up the moment they threw it on the fire, and because the anthracite would not do so they could not understand it, and the more they scratched and poked at it—an operation necessary with the bituminous coal—the worse it was with the anthracite. Upon making this discovery, Josiah White immediately began to make experiments in contriving various kinds of grates to make the anthracite applicable for domestic use, in which he finally succeeded to admiration."

This coal was sent down from the Lehigh by Hill-house, Miner & Cist. It was the first ark-load of that coal which had reached the city. It was delivered August 14th to Stellwagen & Knight, who were selected as agents to dispose of it. The ark held twenty-four tons, and the expenses of getting the coal to the city, including mining, hauling, and the building of the ark, were three hundred and thirty dollars and seventy-seven cents, so that the coal cost the owners about fourteen dollars a ton to land it in Philadelphia. It was a portion of this cargo that went into the hands of White & Hazard.

Charles Miner, in a letter to Samuel J. Packer, written in 1833, says further,—

"But while we pushed forward our labors at the mine,—hauling coal, building arks, etc.,—we had the greater difficulty to overcome of inducing the public to use our coal when brought to their doors, much as it was needed. We published handbills in English and German, stating the mode of burning the coal, either in grates, smiths' fires, or in stoves. Numerous certificates were obtained and printed from blacksmiths and others who had successfully used the anthracite. Mr. Cist formed a model of a coal-stove, and got a number cast. Together we went to several houses in the city, and prevailed on the masters to allow us to kindle fires of anthracite in their grates, erected to burn Liverpool coal. We attended at blacksmiths' shops, and persuaded some to alter the 'too-iron,' so that they might burn the Lehigh coal; and we were sometimes obliged to bribe the journeymen to try the experiment fairly, so averse were they to learning the use of a new sort of fuel so different from what they had been accustomed to. Great as were our united exertions (and Mr. Cist, if they were meritorious, deserves the chief commendation), necessity accomplished more for us than our own labors. Charcoal advanced in price, and was difficult to be got. Manufacturers were forced to try the experiment of using the anthracite, and every day's experience convinced them, and those who witnessed the fires, of the great value of this coal. Josiah White, then engaged in some manufacture of iron, with characteristic enterprise and spirit brought the article into successful use in his works, and learned, as we have understood, from purchases made of our agent, its incomparable value."

The year 1815 opened with abundant preparations for a vigorous campaign. News of the battle of New Orleans, January 8th, was not received at Philadelphia till February 5th, and the "Guerrière," lying in the Delaware, fired a national salute. Before that time Gen. Jackson was scarcely known; but his services and bravery, even at this early period, brought the idea of his being an available Presidential candidate to the minds of some of the people. On the 4th of July, at various dinners in honor of the occasion, complimentary toasts to Gen. Jackson were received with great applause. All of them were eulogistic in tone, and declared that his services at New Orleans demanded the admiration of the country and some future reward.¹

On the 13th of February news of the signing of a treaty of peace with England was received in Philadelphia. Mayor Wharton announced that there should be a general illumination, which took place

¹ At a dinner held at the wigwam, on Sixth Street, Spring Garden, among the toasts was the following, from Mr. Gray, of the firm of Gray & Wylie, teachers, residing in Locust Street, above Ninth: "Maj.-Gen. Andrew Jackson, for his services a Presidency of the United States." This toast was laughed at and laid aside for awhile, but it was so often called for that they reluctantly read it. This was probably the first nomination of Jackson for President.

on the evening of the 15th of February. The two bridges over the Schuylkill were illuminated brilliantly. Paul Beck's shot-tower, near Arch Street and the Schuylkill River, rose up like a pillar of fire, the top being crowned with one hundred and sixty lamps. There was an illuminated arch thrown over the streets at the intersection of Eighth and Callowhill Streets. Another, at Eighth and Market Streets, was decorated with a transparency representing an Arcadian shepherdess attending a flock of merino sheep. At Locust and Eighth Streets an arch was decorated with paintings of ships and naval trophies. At Eighth and Sansom Streets a painting representing Peace bore the motto, "Peace is the Nurse of the Arts." In front of the Masonic Hall was a gigantic figure of Charity.¹ The theatre was adorned with appropriate emblems. Peale's Museum shone brilliantly. The office of Poulson's *Daily Advertiser* was likewise decorated. The private houses generally were adorned with appropriate devices, among the most conspicuous of which was the mansion of Jacob Gerard Koch, northwest corner of Ninth and Market Streets. There were afterward various galas and festivities. John Scotti gave, in May, at Vauxhall Garden, northeast corner of Broad and Walnut Streets, a brilliant ball in honor of peace and of the hero of New Orleans. The ball-room was illuminated with six thousand lights.¹

Proposals were issued for striking a historical medal, the design to be drawn by Sully, and the engraving to be done by Reich, "from the designs of a well-known literary character, corrected by persons of acknowledged patriotism and taste." The medals were to be from two to three inches broad. The price of a copy in gold was to be fifty dollars; in silver, ten dollars; in bronze, one dollar. A grand Te Deum, with full accompaniments, was sung at St. Augustine's Church on the 26th of February.

At the conclusion of the war some of the privateers belonging to the city were at sea. The "Spencer" put to sea on the 11th of January, the commander being ignorant of the treaty of peace and of the battle of New Orleans. The "Young Wasp," Capt. Hawley, at the beginning of February sent in the "Margaret" as a prize, and on the 7th of March sent in a brig. The "Perry," privateer, arrived a day or two previously. In the middle of March there were still

several vessels at sea under privateer commissions. The "Young Wasp" came in at the end of March. Shortly afterward the flotilla of 1813-14 was disposed of by auction, and eighteen gun-boats, three barges, and one pinnace were sold at the navy-yard. The frigate "Guerrière" sailed for New York about the middle of March. The "Franklin," seventy-four, was launched from the navy-yard on the 21st of August of this year.

The city assumed the debts contracted by the Committee of Defense, and paid the Bank of Pennsylvania the interest on the sum of \$100,000 advanced by that corporation. The committee having a cash balance of \$13,000, paid the city \$11,666.66, and to the districts of Northern Liberties and Southwark \$666.66 each. They likewise held \$95,000 in six per cent. stock of the United States, which was thus divided: to the city, \$85,258; Northern Liberties and Southwark, \$4871 each. The bank received the stock from the city as collateral security for the loan of \$100,000. In September the Committee of Defense transferred \$48,270.23 of stock to the city, which was also assigned to the bank. Thus closed the war of 1812, and the citizens of Philadelphia turned with renewed energies to the development of their commercial and industrial interests.²

² In 1868 a number of the surviving soldiers of the war of 1812 met in the Supreme Court room, Philadelphia. Alderman Peter Hay presided, and in the course of his opening remarks he said, "Most of our members served in defense of Baltimore or of Philadelphia, and were instrumental in saving those cities from capture, or worse. So late as 1814 Philadelphia was utterly without defense, if we except the weak and imperfect work of Fort Mifflin. The advance light brigade, under Gen. Thomas Cadwalader, the main army at Marcus Hook, with the New Jersey brigade of militia near Billingsport, under the gallant old Revolutionary soldier, Gen. Ebenezer Elmer, in all probability preserved Philadelphia from a worse fate than that of Washington; and what was of hardly less importance, though perhaps not generally known to the mass of our citizens, saved from destruction the powder-works of Messrs. Dupont, which, at that time, furnished nearly the whole supply of that indispensable article for the United States troops. The Philadelphia volunteers received no bounty, furnished their own uniforms, the officers their sidearms, were not paid even the paltry sum then allowed till months after the restoration of peace, and then in a depreciated currency. These, however, are things of the past, generally unknown or forgotten."

Col. John Thompson, of the Executive Committee, reported forty-four deaths during the previous year. Among these deaths were three of the vice-presidents of the association, Messrs. Samuel Sappington, Matthew Newkirk, and Col. John S. Warner. We notice the decease of a number of other active members,—William Weaver, Owen T. Abbott, Joseph Worth, Charles Haverstick, Isaac Barnes, Dr. William Gibson, Capt. Thomas Hand, George Rockenberg, Hugh Dean, Francis Lasher, and John Miller.

The committee submitted the following resolutions:

"Resolved, That whilst we rejoice that our State Legislature, at its last session, had the grace to re-enact the law of 1866, granting an annuity of forty dollars to certain Pennsylvania soldiers of the war of 1812, which, by some unexplained legislative legerdemain, had been repealed shortly after it went into operation, we regret exceedingly that, in order to receive even this pittance, applicants are required to prove themselves paupers by their own oath, supported by the oath of another citizen, rather than do which some prefer to suffer penury in silence.

"Resolved, That we earnestly request the Senate of the United States, before the close of the present session of Congress, to pass the bill sent to that body from the House of Representatives, granting pensions to the few remaining soldiers and sailors of the war of 1812, whose numbers are daily diminishing with fearful rapidity, and many of whom are

¹ The first vessel which sailed for the United States with news of the ratification of the Treaty of Ghent was the schooner "Transit," Capt. Hughes, which brought as passenger Mr. Carroll, Secretary of Legation, with a copy of the treaty. The "Transit" was the official vessel, and ought to have been the first to arrive. But she was beaten by the British sloop-of-war "Favorite," which sailed from Falmouth ten days after and arrived at New York Feb. 11, 1814, two weeks before the "Transit" reached a Northern port. The hulk of a vessel entitled "The Messenger of Peace" was after the war drawn up on Windmill or Smith's Island, and used for many years as a bar-room. The masts were taken down, and the hull was roofed over. Access to the vessel was obtained through a door cut near the stern, to which high wooden steps led. The stern of the vessel was toward the river, with the name "Messenger of Peace" painted upon it. It was probably the hull of the schooner "Transit."

CHAPTER XXIII.

FROM THE TREATY OF GHENT TO THE CLOSE OF THE QUARTER-CENTURY.

THE war of 1812, with its varied incidents, reflected honor upon the devotion of Pennsylvania. She had contributed her full quotas of men, her full proportion of money, and her sons had distinguished themselves on land and sea. Commodore James Biddle, the hero of the "Hornet," was born in Philadelphia. Stephen Decatur, that Bayard of the sea, spent much of his life in this city, and his remains lie in the cemetery of St. Peter's Church. Two of the five commissioners who signed the Treaty of Ghent were Philadelphians. One James A. Bayard, graduate of Princeton, was a lawyer and leader of the Federalists; the other, Albert Gallatin, native of Switzerland, tutor in Harvard, Democratic leader of the House, Secretary of the Treasury, minister to France, president of distinguished societies, was one of the most remarkable men that ever came to the United States. Dec. 24, 1814, that treaty was signed, and the news, reaching Philadelphia early in 1815, was celebrated, as described in the last chapter. But still our privateers were at sea, still British ships were captured, still battles went on by land, still prisoners languished in dungeons, for news in those days traveled slowly.

George Coggeshall's "History of American Pri-

dependent on public charity or the aid of their old companions in arms for the supply of their urgent necessities, none of whom can be under the age of threescore years and ten."

The following members were elected officers for the ensuing year: President, Peter Hay; Vice-Presidents, Capt. William T. Elder, James Peters, Col. John Swift, Col. Joseph S. Riley, Col. Francis Cooper, Col. John Agnew, Col. Joseph P. Leclerc, Capt. John Wilson; Corresponding Secretary, Hiram Ayres; Recording Secretary, John H. Frick; Assistant Secretary, Gen. Charles M. Prevost; Treasurer, James Benners; Executive Committee, Col. John Thompson, Capt. Jacob H. Fiesler, Col. C. G. Childs, Robert O'Neil, Gen. John Davis, of Bucks County, Charles Lombart, and Joshua M. Bethell.

vateers and Letters of Marque" is full of thrilling stories of the sea and episodes of desperate courage. Vessels fitted out by private merchants laid the foundations of many a princely fortune through the dark days of the war of 1812, and did much to convince England of the impossibility of the task she had undertaken. The "Shadow," of Philadelphia; the "Saratoga," "Governor Tompkins," and "General Armstrong," of New York; the "Comet," "Non-such," "Chasseur," "Kemp," and "Lottery," of Baltimore; the "Decatur" and "Saucy Jack," of Charleston; and dozens of other vessels made famous records, capturing or destroying thousands of dol-

lars' worth of property, and creating the most wide-spread terror. In all there were two hundred and fifty private armed vessels sent out, forty-six with letters of marque. Baltimore, New York, Salem, and Boston sent out one hundred and eighty-four, and Philadelphia, Portsmouth, N. H., and Charleston, S. C., sent out the rest. About sixteen hundred British merchantmen were destroyed. Manuscript log-books still contain much that has never been published in reference to the adventures of these gallant free-lances of the ocean. The famous "Hartford Convention," with its twenty-six delegates, was still

Albert Gallatin

in session when the war closed, and January 4, 1815, they presented the result of their labors, in resolutions deeply tinged with States-right doctrines, and advocating restrictions on the powers of Congress. When the news of peace reached Washington, Feb. 13, 1815, stocks and government bonds rose. Merchandise fell one or two hundred per cent. Private expresses were sent in every direction. Medals and commemorative designs were made. One of the finest allegorical pictures of the time was published in Philadelphia, by P. Price, Jr. Madam Plantou was the artist, and Chataignier the engraver. Minerva dictates terms of peace to Britannia; America passes in triumph to the Temple of Peace; the ruins of the

capitol lie in the background. It is a composition possessing distinct features of merit.

Feb. 17, 1815, the treaty was ratified by the Senate. It in nowise secured immunity from the "search and impression claims" of England, but it settled disputed boundaries, and acknowledged our exclusive right to navigate the Mississippi. In England the treaty was very unpopular. It was welcomed by all classes in America. Too long had we been kept from what was instinctively felt to be our appointed task,—the development of the great West, the sowing of the prairies, the conquest of the Rocky Mountains, the dominion of the Pacific slope, the shaping of mighty States, the building of new cities, the government of commonwealths as yet unnamed, the weaving of networks of steel over leagues of desert, to link town with town, ocean with ocean,—these triumphs, and such as these, awaited the keen American intelligence.

When the war of 1812 closed the grand total of American capital in both personal and real property, including public lands estimated at \$1,000,000,000, was only about \$7,200,000,000. The President wished a standing army of twenty thousand men, but half that number was considered sufficient as a peace establishment. The Northwestern Indians were pacified at a great council held in September. In the House of Representatives there were in 1815 one hundred and seventeen Democrats and sixty-five Federalists. Harrison of Ohio, and Tyler of Virginia were among the new members; Clay was again in the Speaker's chair.

The currency of the country was in a bad way; New York bank-notes at fourteen per cent. discount, and Philadelphia and Baltimore notes at sixteen per cent. The new debt was \$63,000,000 in 7's and 6's, and \$17,000,000 in treasury notes, besides many claims of individuals. The necessary expenditures were over \$40,000,000 a year, and to meet this a tariff on imports was increased to an average of forty per cent. over the ante-war rates. A suggestion that was made in Congress about this time, by Rhea of Pennsylvania, excited much comment. When appropriations were being made to rebuild the capitol he made a fiery speech in which he proposed to encircle the ruins with iron railing, to let the ivy grow and cling to the smoke-blackened marble, and to write on a brazen tablet, "This is the effect of British Barbarism."

Philadelphia, as we have seen, settled quietly back into the paths of peace and commercial progress, after one enthusiastic illumination in honor of the treaty. But we have sufficient evidence that the financial difficulties of the times were very great. Suspension of specie payments had put every one in debt. The Assembly had, in December, 1814, given banks privilege to issue more notes than before, and this privilege lasted till February, 1815, in which interval a great many were issued. There was no coin in circulation; notes of two cents face-value were issued and were circulated in immense numbers, often by individuals

who never redeemed them, and in fact never expected to.¹

Politics were as lively as ever. The Federalists often joined forces with the old-school Democrats. In September the latter published a three-column review of local politics in Philadelphia for a dozen years previous. John Goodman was chairman and James Thackara secretary of the meeting which promulgated it. The document recommended John Sergeant as a candidate for Congress, Col. Isaac Boyer as State senator, John Miller as county commissioner, and Robert McMullin as auditor. For representatives to the Legislature in the county, the old-school Democrats nominated Michael Leib, Cornelius Trimnel, Jacob Winnemore, Samuel Castor, Andrew French, and John P. Colcord. The Federalists also nominated John Sergeant for Congress, but severed on the others. For senator they named Benjamin R. Morgan; for county commissioner, Frederick Axe; and for auditor, Cornelius Stevenson. In the city they nominated for Assembly, Thomas McEuen, John Hallowell, John Reed, Thomas Rutter, and John M. Scott. The new-school Democrats nominated a full city ticket, but without hope of election. They also nominated for Congress, John Conard; senator, John McLeod; county commissioner, Timothy Matlack; auditor, Philip Peltz; and a full Assembly ticket in the county: Joel B. Sutherland, Jacob G. Tryon, Jacob Holgate, Joseph B. Norbury, John Holmes, and George Morton. At the election the Federal and old-school candidates were generally successful. Sergeant was elected to Congress, Morgan to the Senate, Axe as county commissioner, and Stevenson as auditor. In the county the old-school legislative ticket was carried by majorities of less than three hundred.

Among the events of the early part of 1815 were the formation of the "Religious Tract Society for the Dissemination of Religious Sentiments in the Community;" also, the purchase by the commissioners of the Northern Liberties of the old barracks property on Third Street, below Green, after the Revolution used as a tavern, and, by act of February 8th, converted into "Commissioners' Hall." The poor suffered much during the winter of 1814-15, and February 27th Chief Justice Tilghman presided at a meeting for the relief of the poor, held at the county court-house. In April the committees reported that

¹ The following is a copy of a two-cent note of this period, the dimensions of which were four inches in length by two in breadth:

they had collected \$6376.24, and had distributed \$3358.11 in the city. This winter a soup-distributing society was formed, Mordecai Lewis being president. The charitable societies connected with the various churches were kept busy responding to the numerous calls for help.

A long struggle, of which little has hitherto been said, came to the surface early this year in a petition to the Legislature from the City Councils asking for leave to make all the country people pay rent for their stalls, stands, etc., in the markets. The hucksters and retailers were at the bottom of the movement, but it failed, the Legislature stoutly refusing to curtail the ancient privileges of the farmers, market-gardeners, and ruralists generally. The Councils on March 23d established a fish-market on High Street, east of Water Street. At this time the cattle-market was on the west side of Southeast Square, on the line of Seventh Street, and petitions were sent to the Councils to have it removed. In April it was resolved that the cattle-market should cease at that place after the 1st of May, and that "persons bringing cattle to market should be notified that they could take them to the place where the hay-market is kept, in Sixth Street, above Callowhill."

The Legislature passed a new State apportionment bill in March. The city and county were made one senatorial district, to elect four senators. The city was given four members in the House, and the county six. An act was passed to authorize the Governor to appoint commissioners to lay out and mark a road, beginning at or near the west end of the Middle Ferry bridge over the Schuylkill River, thence along the road called "the Marlborough Street," etc., to the bridge "now erecting at McCall's Ferry over the Susquehanna, in Lancaster County." The Pennsylvania and New Jersey Steamboat Company was incorporated by act of March 11th, with authority to build a ferry from Philadelphia to Kaighn's Point, N. J., capital not to exceed fifty thousand dollars; shares, twenty-five dollars each. They also incorporated "The President, Managers, and Company of the Schuylkill Navigation Company," those being days when long names abounded in such enterprises; they fixed the price of stock at fifty dollars per share, and two hundred shares had to be subscribed for to organize; among the commissioners were Samuel Wetherill, Jr., Jonathan Williams, Samuel Richards, Robert Kennedy, and Josiah White, of the city; Conrad Carpenter, Francis Deal, and Joseph Starne, of the county; and there were commissioners for other counties. Another incorporation was the "Flat Rock Bridge Turnpike Road," with nine hundred shares at fifty dollars each; they were to build a road "from where the Flat Rock bridge road intersects the Ridge turnpike, near Robinson's mill, up the river Schuylkill to Gulph Creek, and by the shortest and best route to the Gulph road, near the bridge below the Bird-in-Hand Tavern in Montgomery County." The com-

missioners were Lewis Rush and James Traquair, of the city, and Joseph Starne, Horatio Gates Jones, and William Alexander, of the county. The charter of the Gray's Ferry bridge came up again, but the Legislature insisted on arches of seventy-five feet height, and the City Councils petitioned against the height of forty feet wanted by the company.

Early in May the "manufacturers of Philadelphia" attempted to organize a society. The committee consisted of Thomas Leiper, dealer in snuff and tobacco; George Worrall, iron; James Whittaker, nails; Samuel Emory, white wax candles; John Sangy, jeweler; David Simpson, silver-plater; William Camm, hats and caps; Philip Jones, umbrellas; William Levis, paper; Jonathan Lukens, saddles; Alexander Campbell, boots and booties; Frederick Gaul, beer and ale; George Laws, tanner and currier; and William Seal, silversmith. They do not seem to have made any permanent organization. About this time the Mutual Assistance Coal Company, for the promotion of manufactures, issued an address, in which there was an interesting report upon the trials made of stone-coal as a fuel. It was declared that the coal could be easily ignited and burned, and an interesting account was given of the Schuylkill coal region.

Quite a number of city improvements were made this year. In May a resolution was adopted by Common Council that, as soon as the owners and occupiers of property in the vicinity of Southeast Public Square paid fifteen hundred dollars into the city treasury, the Councils would construct a culvert, remove the paving-stones, lumber, and dirt from the line of Seventh Street, lay the footways with gravel, put up an open fence on the Seventh Street front, and repair the fence around the remainder of the square. Shortly afterwards it was resolved that when the owners and occupiers of property near the Southwest Public Square loaned eight hundred dollars for three years, free of interest, to the city, the Councils would inclose that square with a substantial fence of rough boards. In September another bill passed the Common Council to inclose the Northeast Public Square. The money was raised for the Southwest Square, and the fence was then put up.

About this time the Northern Dispensary was opened, at the corner of Green and Budd Streets, at the suggestion of the Philadelphia Dispensary.

Steamship navigation was increasing steadily. The steamboat "Eagle," which had been on the line to New York, cleared for Baltimore in June, under the command of Capt. Rogers. This boat, two hundred and sixty-one tons burden, was intended to ply on the new line between Baltimore and Philadelphia by the way of Elkton and Wilmington. The line was completed on the Delaware by the steamboat "Vesta," Capt. William Milnor. The fare was six dollars, but in December it was raised to ten dollars. On the 29th of that month the new steamboat "Baltimore" was launched from the ship-yard of

Vaughn & Bowers, in Kensington, intended to run in connection with the steamboat "Philadelphia," being built in Baltimore. The steamboat "Burlington," commanded by Capt. Jacob Myers, which plied between Philadelphia and Burlington, was burned at the latter place in June.

July 24th, news of the disastrous fire at Petersburg, Va., having been received, Chief Justice Tilghman presided and Roberts Vaux was secretary of a public meeting, at which a large sum of money was collected for the sufferers. An appeal to the public was made a month or so later by the "Philadelphia Bible and Missionary Society," Rev. Dr. Jacob Brodhead president, and books and money were liberally given to the enterprise.

November 30th, at Peter Evans' famous tavern, one hundred guests assembled, Charles Chauncey president, to celebrate Thanksgiving, for peace had come, abundant harvests crowned the land, Pennsylvania was evidently entering upon an era of unbounded prosperity. Rev. Ezra Stiles Ely had written a song for the occasion, and speeches and toasts were given.

Early in December the city was informed of a legacy, the Councils receiving a letter from Edinburgh, Scotland, informing them that John Scott, chemist, of Edinburgh, had bequeathed to the city of Philadelphia three thousand dollars in American three per cents., to be applied to the same purposes as Dr. Franklin's legacy; also four thousand dollars in three per cents., the interest to be expended in premiums to American inventors, men or women. No premium was to exceed twenty dollars, and each was to be accompanied by a copper medal with the inscription, "To the most deserving."

December 28th, a letter was received by the City Councils from James McMurtrie, who offered to introduce gas-lights. He said that, in company with Dr. Bollman, he had, while in Europe, examined gas-works in England, and thought there was no difficulty in establishing a manufactory in which gas should be made from wood. McMurtrie and Bollman hoped to connect these works with the manufacture of pyroligneous acid, which could be used in the preparation of white lead. Mr. Leaming offered a Council resolution saying,—

"WHEREAS, Gas-lights have, by actual experience in the city of London, been found to cost less and to yield a better light than oil lamps, and there is good reason for believing that they may be introduced with advantage into the city of Philadelphia, and as the materials for making the apparatus and preparing the gas are abundant in the United States, be it

"Resolved, That a committee of two members of each Council be appointed to ascertain facts, as far as they are able, relative to the effect and economy of gas-lights, and to procure for Councils copies of such books relative to the subject of gas-lights as they may deem useful, and to consider the practicableness and expediency of facilitating and encouraging the use of them in the city of Philadelphia."

The Common Council appointed on that committee Messrs. Leaming and Thompson, and the Select Council Messrs. Rush and Vaux, but nothing was done at that time.

The year 1815 closed without any further event of note in Philadelphia,—a year of quiet and growth. National affairs had moved along peacefully, and diplomatic relations were re-established with Europe. John Q. Adams was made minister to England, and Albert Gallatin to France. America had thrilled with indignation at the tales that released prisoners told of rotting hulks and of walled inclosures on desolate Devonshire plains, such as Dartmoor, where the guards in March causelessly fired upon the prisoners, killing five and wounding thirty-three. The year 1816 opened with questions of revenue and tariff uppermost in Congress, a Presidential campaign close at hand, internal improvements the most vital issue in each State, and coal and steam recognized as the leading factors of the industrial future.

Local and State politics were decidedly brisk from January to November. The new-school Democrats lost strength in Philadelphia. The old-school wing was opposed to the caucus nomination system, by which Congress and State Legislatures signified their Presidential preferences. They therefore met in the town hall of the Northern Liberties during August, and passed a series of resolutions protesting against the system.

On the 19th of September a convention of delegates appointed at this meeting, of which John Cochran, of Philadelphia, was chairman, met at Carlisle in order to select an electoral ticket to be recommended to the suffrages of the old-line Democrats of the State. An address was drawn up setting forth certain reasons against the authority of caucus nominations, and protesting against the practice of determining in a caucus composed of members of Congress who should be nominated for the offices of President and Vice-President of the Union. The convention then nominated an independent electoral ticket headed by Charles Thompson, of Montgomery County; Andrew Gregg, of Centre County; Joseph Reed and Matthew Lawler, of Philadelphia City; and Michael Leib, of the county. The Federalists generally were in sympathy with this old-school movement, and they in Locust, South, Upper and Lower Delaware Wards passed resolutions in October "against cabals and caucuses," and the controversy helped to throw unusual spirit into the October State election. The Democrats of the Northern Liberties met again October 18th, and supported the Carlisle nominations. The *United States Gazette*, October 22d, advised the Federalists to support the independent, or "new-school" movement.

The old-school party were not contented on this occasion with following in their old beaten tracks and being satisfied with running a separate legislative ticket in the county and uniting with the Republicans on the Congressional ticket. This time they were thoroughly aggressive. For Congress they nominated William J. Duane, Thomas Forrest, Adam Seybert, and William Anderson, the two last being

also on the new-school Democratic ticket, with the addition of Jacob Sommer and John Conard. The nominees of the Federalists were Joseph Hopkinson, John Sergeant, William Milnor, and Samuel Edwards, and this ticket was elected. A Federal ticket and a new-school ticket were put in the field in the city for the Assembly, the old-school party supporting Thomas Fitzgerald, James Thackara, and Jacob Edenborn, besides three candidates on Select Council and sixteen on Common Council tickets. Both in the Assembly and the Council the Federal ticket triumphed, and the same result was seen in the county, where the old-school candidates for the Assembly were Dr. William Rodgers, John R. Neff, Andrew French, Robert McMullin, Michael Leib, and George F. Goodman, while the new-school nominees were John Holmes, Jacob Holgate, Daniel Groves, George Morton, Jacob G. Tryon, and Joel B. Sutherland. In the city the Federal assemblymen were John M. Scott, John Read, Thomas McEuen, Thomas Morris, and Joseph Watson. For the possession of the various county offices there were several candidates. Commodore Thomas Truxton, Federalist, was elected sheriff; John Thum, also Federalist, county commissioner; and John Bacon, auditor. This revolution, so unexpected and yet so complete, may be said to have brought about the disintegration of the new-school party, as the successful candidates and others in thorough accord with them politically controlled the affairs of the county in the Assembly for several years.

After the excitement attending the result of the State campaign had subsided, the interest which had been felt in it was transferred, only in larger measure, to the contest for electoral tickets. The legislative caucus ticket, which was pledged to the election of Monroe and Tompkins, was headed by Paul Cox, William Brooke, and John Conard, but the independent or Carlisle Convention ticket was not pledged to any candidate, simply being opposed to the ticket of the other party. In city and county the independent ticket received 4110 votes, and the caucus ticket 2837 votes, but in the State the caucus ticket was successful, and the electoral vote of Pennsylvania, twenty-five in number, was polled for James Monroe for President, and Daniel D. Tompkins for Vice-President.

Manufactures were not neglected, however, even in the heat of politics, and the Assembly, on January 29th, passed an act creating White & Hazard, manufacturers of wire at the Falls of Schuylkill, a corporation under the title of the Whitestown Manufacturing Company. The firm also built a suspension bridge of wire across the falls, which was said to have been the first instance of wire being used in bridge-building, at least in this country.¹

¹ This bridge was one of the great curiosities of the time. Notice was given that only eight persons would be allowed on it at a time, but "A Visitor," writing to the *Gazette*, said that he "saw thirty people on it at

The local events of 1816 were extremely varied in character. Hardly a year for a quarter of a century had witnessed so much organization, the founding of new societies and the increase of old ones; certainly no year since the city was founded witnessed a more tragic occurrence than one which occurred in January, —the murder of Capt. John Carson by Lieut. Richard Smith. It was one of those passionate tragedies unhappily far too common in overwrought modern society. Capt. Carson in 1801 had married Ann Baker, daughter of a naval captain; in 1812 he went to Europe, remaining there till January, 1816. When he returned he found that his wife had sold the property, set up a china-shop, and, representing herself a widow, had been married, at Frankford, in October, 1815, to Lieut. Richard Smith, nephew of the noted Daniel Clark, of Louisiana. This was the situation when Carson returned. He agreed to forgive his wife, and Smith promised to leave the city, but on the evening of January 20th he went to the house, entered the room where Capt. Carson, his wife and children, also Capt. Baker and his wife, were sitting, and, drawing a pistol, shot Carson dead. The jury found him guilty, and he was hung; but while yet in prison Ann Carson attempted to force his pardon. She hired or persuaded several desperate men to make an attempt to steal the child of John Binns, who was Governor Snyder's most intimate friend; this failing, she endeavored to have the Governor himself kidnapped. These strange and audacious plots came to grief, and her agents were arrested and imprisoned until some time after Smith's execution.

The benevolent ladies of Philadelphia on January 29th incorporated the Orphan Society; membership two dollars a year, or thirty dollars for life members. The following ladies were elected officers: First Directress, Sarah Ralston; Second Directress, Julia Rush; Secretary, Maria Dorsey; Treasurer, Mary Yorke; Managers, Susannah Latimer, Elizabeth McLane, Rebecca Gratz, Abigail B. Warder, Hannah Parke, A. Denman, Sarah Henry, Margaret Latimer, Letitia Buchanan, Elizabeth Abercrombie, Debbie H. Malcom, Elizabeth Harkins, Wilhelmina Minor, E. Smith, Sarah Bacon, Eliza Brodhead,

a time, including rude boys running backward and forward." Charles V. Hagner ("Early History of Falls of Schuylkill, Manayunk," etc.) says, "White & Hazard had two mills on the western side of the river, —one a saw-mill, the other a mill for making white lead. The wire-mills were on the east side of the river. There were two buildings at one time. On one of the occasions of the breaking down of the Falls bridge, White & Hazard erected a curious temporary bridge across the river by suspending wires from the top windows of their mill to large trees on the western side, which wires hung in curve, and from which were suspended other wires supporting a floor of boards eighteen inches wide. The length of the floor of this bridge was four hundred feet, without intermediate support. The entire cost was one hundred and twenty-five dollars. They charged a toll of one cent per passenger, and when, from that revenue, the cost of the structure was realized they made the structure free. The works on the east side of the river were those of White & Hazard, and separate from those on the west side, which were established under water-power leases by White & Gillingham."

Ann L. Eyre, Rebecca Ralston, J. H. Phillips, Mary Richards, and Hannah Jones. This society grew out of one organized March 20, 1814, by ladies connected with the Second Presbyterian Church. They established a home for orphan children March 3, 1815. After this incorporation Messrs. John Cooke, Jacob Justice, James Wilmer, and Jonah Thompson presented to them a lot at the northeast corner of Cherry and Schuylkill Fifth Streets, now Eighteenth Street. The foundation was at once laid, and the building was occupied in 1818.¹ Other charitable and religious societies also prospered.

The Philadelphia Auxiliary Bible Society, which had been established in 1813, was assisted in its object by the institution of auxiliary societies in various parts of the city and county. The association of the southwestern section, including Middle, South, Locust, and Cedar Wards, was formed at a meeting February 6th, of which Alexander Henry was chairman. Two days afterward the Northwest Auxiliary Bible Society was formed within the limits of North Mulberry and South Mulberry Wards, and S. P. Glentworth was chairman. The Northeast Bible Society was formed February 14th, for High, Upper Delaware, and Lower Delaware Wards, and John White was chairman. Next day the Southeast Bible Society was formed for Chestnut, Walnut, Dock, and New Market Wards, and William Phillips was chairman. February 23d, the Auxiliary Bible Society of the Northern Liberties was formed, and March 16th, the Spring Garden Bible Society. Before this, however, on January 3d, in fact, the New England Society for Charitable and Social Purposes was formed, with Charles Chauncey president; Enos Bronson, Otis Ammidon, J. Barnes, Gideon Fairman, vice-presidents; Revs. William Rogers and E. S. Ely, chaplains; Thomas Lyman, secretary; George Hailes, assistant secretary; Asaph Stone, treasurer; Humphrey Atherton and William H. Dillingham, counselors; J. F. Waterhouse and Nicholas C. Nancrede, physicians; George A. Bicknell, Samuel Nevins, George Fobes, and John W. Lyman, stewards. Early in May were also organized the Religious Historical Society, for the purpose of collecting and preserving interesting historical documents, particularly those of an ecclesiastical nature. In 1816 Charles M. Depuy was secretary. The officers in Philadelphia were, in 1817, Jacob Brodhead, D.D., president; Rev. Jacob J. Janeway, Rev. James Milnor, New York, Rev. William Staughton, D.D., Rev. Samuel B. Wylie, Rev. Anthony A. Palmer, and Robert Ralston, vice-presidents. Rev. Ezra Stiles Ely was corresponding secretary; John Welwood Scott, recording secretary; Nathaniel Chauncey, treasurer; James R. Wilson, librarian. There were only thirteen members at this time; but they collected a fair library, some of which were manuscripts. Papers were read before the so-

ciety at its meeting, and some of them were published in the *Religious Remembrancer* by J. W. Scott. In December the friends of the deaf and dumb met, Chief Justice Tilghman presiding, John Bacon secretary, and tried to raise funds for the proposed Hartford Asylum. Laurent Clerc, a deaf and dumb pupil of the Abbé Sicard, was present under charge of Mr. Gallaudet. Charles Chauncey addressed the meeting, and considerable money was secured. Not long afterwards the newspapers advocated the founding of an asylum in Philadelphia, and the suggestion was afterwards adopted. During this year (October 1st) the Washington Benevolent Society took possession of their new marble building on the west side of Third Street, north of Spruce. All in all, the Philadelphia of 1816 had a right to feel proud of the spirit of benevolence and practical charity shown by her citizens on every occasion.

Bank-notes were continually depreciating. There were forty-one new banks chartered in 1814 by a foolish Legislature, and the suspension of specie payment enabled them to enlarge their issues to an unlimited extent. At first there was "plenty of money" and high prices, and every one was happy, but the notes of the Philadelphia banks depreciated fifteen or twenty per cent. before April, 1816. The banks took alarm, and began to contract their currency, bringing their notes to ninety-two per cent. by July, but many business failures occurred. The second Bank of the United States was established by Congress in 1816, at Philadelphia, capital, \$35,000,000. The president was William Jones; cashier, Jonathan Smith; assistant cashier, James Houston; first teller, Jonathan Patterson; second teller, Caleb P. Iddings. Among the public directors were the following citizens of Philadelphia: William Jones, Stephen Girard, and Pierce Butler. Among the ordinary directors were Robert Ralston, Chandler Price, Thomas M. Willing, John Bohlen, Thomas Leiper, Cadwalader Evans, Jr., Samuel Wetherill, Emanuel Eyre, Thomas McEuen, John Savage, Guy Bryan, John Goddard, James C. Fisher, and John Connelly. Philadelphia had a bank robbery to talk about in October. On the 21st of that month N. W. L. Learned broke into the Philadelphia Bank, but was unable to enter the vaults. From the desks he took three thousand dollars in notes, three hundred dollars in coin, and some silver plate, but was arrested and sent to prison for twelve years.

The Councils found plenty of occupation, as a brief account of various acts, local happenings, and problems in reference to streets, lights, etc., will show. The new fish market was ready for use in January. Turner Camac then issued proposals for the supply of fish and the building of ice-houses. In July, for the first time, fishing-vessels went to sea and brought the finny cargoes in ice to the Philadelphia market.

In January, William J. Allinson sent a communication to the Councils on the subject of gas-lights.

¹ This building cost twenty-six thousand six hundred and seventy-six dollars, and was of brick, three stories high, with attic and basement.

During the year the applicability of gas was made clear. In April the advertisements of Peale's Museum proclaimed that there would be shown in the apartments "gas-lights—lamps burning without wick or oil." The illumination was to be "with carbonated hydrogen gas on a new and improved plan." Dr. Kugler, a merchant, had charge of the enterprise. November 14th the Councils witnessed the successful lighting of the new Chestnut Street Theatre.¹

By an act of February 20th the act of April 4, 1798, allowing chains to be placed across the public streets in front of churches on occasion of public worship, was extended to the district of Northern Liberties. In March a law was passed which allowed piers to be sunk in the Delaware River at the borough of Chester. The military was reorganized and the uniform somewhat changed, the red and blue cockade being abolished. Jacob Mayland erected a saw-mill in Blockley township at Mill Creek, near Gray's Ferry bridge, and soon added a snuff-mill. A flour-mill had been built there several years before. In March prisoners were transferred from the old Walnut Street prison to the new one at Broad and Arch. A correction department was established for the reception and safe-keeping of "untried prisoners, witnesses, vagrants, servants, and apprentices." Some public-spirited citizens offered five hundred dollars donation to the city toward the improvement of the Southwest Public Square, a portion of which at that time was used for the reception of night-soil. The subject was referred to a committee of Councils, which reported in April that the Southwest Square, "in those parts not used for particular purposes, should be tilled and laid down with grass." Regarding the Southeast Public Square, it was proposed that the city carpenter-shop should be removed to Lombard Street. In the Northeast Square it was recommended that the high parts be plowed down and grass-seed sown. It was also recommended that the square should be planted with forest-trees, and other improvements inaugurated under the direction of the City Commissioners. The occupation of the Northeast Square by the German Reformed congregation continued. In September a fifteen years' lease of the ground to that congregation expired, and they asked that it should be renewed for ninety-nine years. The Councils gave a lease of two years and four months from the 20th of September. In December, Mr. Leaming, in Common Council, proposed the four public squares should be called Washington, Frank-

lin, Columbus, and Penn; also that statues of marble and bronze should be erected therein; but the Select Council refused to concur.

Street questions were numerous as usual. In April it was resolved that if the citizens of Penn township would pay half the expense of paving Vine Street, from Broad to the Schuylkill, the city would pass the bill. It was also desired to extend Seventh Street through Northeast and Southeast Squares, but in November the Councils passed a resolution directing that the Southeast Public Square should be fenced according to its patent boundaries, and that gates should be left open opposite Seventh Street for the use of foot passengers. The street opened on the west side of Southeast Square was named Columbia Avenue.

The smallpox prevailed in portions of the city in March, and the regular physicians and the Vaccine Society were kept very busy. In May, Mr. Vaux, in Common Council, offered a resolution providing for the gratuitous vaccination of the poor in indigent circumstances, which was passed. It provided for the appointment of vaccine physicians and the gratuitous vaccination of all persons in indigent circumstances, establishing a fee and compensation to the physician. This was the beginning of a system which has been maintained ever since. The city was divided into four districts, in each of which was a collector of vaccine cases and a physician. These officers were: Northeast District, Dr. John Austin; Collector, Richard Pryor. Northwest District, Physician, Dr. David J. Davis; Collector, John Lane. Southeast District, Physician, Dr. Joseph G. Shippen; Collector, Amos Roberts. Southwest District, Physician, Dr. Joseph G. Nancrede; Collector, Chamless Allen.

March 19th there was held a meeting of citizens interested in claims upon the United States government, for remuneration for spoiliations committed by the belligerent powers during the recent European wars. Henry Pratt was president, and a committee was appointed, consisting of the latter, with Robert Waln, Robert Ralston, John Coulter, and Daniel W. Coxe, to prepare a memorial to the President of the United States. Reminiscences of the war abounded, and gifts to its heroes were still being bestowed. The sword to Commodore Perry had cost seven hundred dollars. In January a service of plate, consisting of an urn and pitcher, made by Edward Chaudron, silversmith, had been presented by the citizens of Philadelphia to the widow of Capt. James Lawrence, of the "Chesapeake." March 5th, the Legislature resolved that a sword should be presented to "Capt. Charles Stewart, a native of Pennsylvania, for his valor in capturing at the same time the British ships 'Cyane' and 'Levant.'"

The City Councils early in the year sent a memorial to the Legislature stating that there were four thousand taverns and eighteen hundred tippling-houses in city and county. Means of repression were

¹ This was an important step forward. Warren & Wood, in their theatre bill on November 25th, said, "The theatre is to be hereafter entirely lighted with gas-lights, established under the inspection and control of Dr. Kugler. The managers are happy to be the first to introduce this system of lighting theatres, and flatter themselves that its superior safety, brilliancy, and neatness will be satisfactorily expressed by the audience." William Henry, copper and tinsmith, at No. 200 Lombard Street, near Seventh, constructed the whole apparatus. He put up a gas-machine at his own house, and invited Councils to call and examine the process. This was the first private residence in the United States lighted by gas. The gas committee made a report on the subject, but no definite action was taken.

urged. Educational matters attracted much attention. The act of April 4, 1809, had been altered in March, 1812, as before noted, but the war prevented the matter from receiving much attention. In November, 1815, the County Commissioners proposed a plan of education to the City Councils, which led, in January, 1816, to the appointment of a committee to consult with the commissioners of Southwark and of the Northern Liberties. It was not until 1818 that the details were sanctioned by the Legislature, when an act was passed providing for the education of poor children at the public expense in the city and county of Philadelphia, and forming the "First School District of Pennsylvania." Meanwhile the State-House was a source of difficulty. March 11th, the Legislature directed the sale of the building and lot. The city was to be allowed to purchase subject to certain conditions for \$70,000. The east and west wings of the State-House were confirmed to the city of Philadelphia.

On the 11th of April the mayor was authorized to contract with the Governor for the purchase of the State-House on the terms prescribed, and the money was raised by loan. A writer in the *United States Gazette* of April 19th declared that, so far as the law proposed to cut a street through the State-House yard, and to sell it out in lots to private purchasers, it was beyond the power of the Legislature, which already had been, by the act of 1769, pledged to keep the tract "a public green and walk forever."

In June the grand jury presented as a public nuisance the practice of flying kites in the streets. The mayor supplemented this, a few months afterwards, by a proclamation, in which he specified as nuisances the flying of kites, the rolling of hoops, the ringing of bells by vendors of muffins, the sweeping of gravel from the interstices of stone pavements, and the placing of merchandise on the footways.

Jacob Rush, judge of the Court of Common Pleas, some time in June asked the attention of the Councils to the subject of connecting the Walnut Street sewer with the sewer which passed through the county prison at Sixth and Walnut. The citizens who agreed to loan five hundred dollars for this work had paid the money into the treasury.

In June, also, the Pennsylvania and New Jersey Steamboat Company bought Fulton's patents as far as related to their use "five miles north and south of Kaighn's Point." Peale, of the Museum, urged the claims of his collection, and some time during the summer a public meeting was held, Charles Biddle, chairman. The resolutions declared that "the dispersion of the Museum by the death of the present aged proprietor, and the division of his property among his numerous descendants, would be a serious disadvantage to the city." Perhaps the most amusing event of which we have any record during this summer was the reappearance of Redheffer, the perpetual-motion claimant. He succeeded in securing the for-

mation of a committee of reputable gentlemen to examine his machine, but when the day of trial came refused to set his machine in motion, and the smiling public, after a fit of laughter, turned its back forever on the fraudulent inventor.

The last month of 1816 was marked by few important events except the reception by the Councils of letters from citizens of Lower Delaware Ward relative to "attempts lately made to fire the city." The mayor was authorized to offer five hundred dollars reward for the arrest of incendiaries; and a reward of twenty dollars was authorized for the arrest of persons who should raise false alarms of fire, and a nightly patrol was established.

Early in December a Council committee was appointed to look out a place for a public burial-ground in lieu of the Lombard Street lot, according to an act of the last Legislature granting said lot to the city. This was the lot on the south side of Lombard Street, between Ninth and Tenth Streets, running from street to street. It was three hundred and eighty-six feet in breadth, and seventy-six feet in depth north and south.

About the same time John A. Woodside was paid sixty dollars for painting the city arms, which was put up in the Common Council chamber, in a space formerly occupied by the central window, in the recess or "bay." This was the first instance of such a decoration of the Council chambers.

The national appropriation for internal improvement was three hundred and fifty thousand dollars, though six hundred thousand dollars more had been asked for. New York revived the Erie Canal scheme; Pennsylvania, Virginia, North Carolina, all started extensive projects. Congress voted money for a custom-house at Philadelphia. The duties levied on cotton and woolens were to favor the industries that had been created by the embargo and the war. The cotton manufacturers employed one hundred thousand persons, consumed twenty-seven million pounds of cotton, and produced eighty-one million yards of cloth, which sold for \$24,300,000. The value of the woolens produced was \$19,000,000. During 1815 and 1816 New England was shaken to its foundations by ecclesiastical disputes between Unitarians and Trinitarians, between Dwight and Channing. The discussion extended to Pennsylvania, as is amply shown in the chapters on Religious Denominations in this work. Western Virginians met in convention at Staunton, dissatisfied with their representation. Indian sessions in the Southwest enlarged the bounds of Carolinas, Georgia, and Tennessee. September 28th, Col. Clinch attacked and destroyed the Floridian fort on the Apalachicola, held by three hundred and fifty Indians and runaway negroes. This was the beginning of the Seminole wars. The government resolved to cease receiving irredeemable paper on Feb. 20, 1817. In October, 1816, Dallas resigned the treasuryship, and was succeeded by Crawford. To Congress, in

December, the revenue was reported as \$47,000,000, and the debt at \$105,000,000.

The year 1817 opened with a resumption of specie payments by the government. The new national bank went too freely into discounting notes of certain stockholders at Philadelphia and Baltimore, and curtailed its capital. Attempts to secure payment of our claims against Spain, France, Russia, and other governments were made, but with little success. John Trumbull was authorized to "paint four Revolutionary scenes" for the Capitol. Alabama Territory was established. The "American Colonization Society" was formed at Washington by Clay, Randolph, Judge Washington, Wright, of Maryland, and others. Monroe, soon after his inauguration, set out on a tour through New England, and "the era of good feeling" was fairly begun. Establishments of Spanish-American adventurers on Amelia Island, off northeast Florida, and on Galveston, on the Texas coast, were suppressed by United States expeditions. Late in November an Indian massacre on the Appalachicola roused the country.

Philadelphia had a good deal of "local politics" during 1817. In March a letter was published which had been written by Dr. Joel B. Sutherland, physician at the Lazaretto, to Joseph McCoy, who had been associated with him in the Legislature. This letter was dated at the Lazaretto, June 27, 1816, and directed to McCoy at the "New Market." In that epistle Sutherland said, referring, as was alleged, to the uncertainty of the Democratic nomination for Governor in the next year, "You may think me a d— strange creature, to be vacillating between Boileau and Findlay. But as you and I, and all politicians, are men of principle in proportion to our interest, I have written to you undisguisedly on this matter." McCoy, in April, published a letter in regard to the subject, in which he said, "During the last summer a letter addressed to me by Dr. Sutherland was taken from the mail, and carried to a haunt of political intrigue in this city, which it is not necessary to mention" (meaning Binns' *Democratic Press*). He added what he represented to be a true copy of Sutherland's letter, in which the last sentence was as follows: "But as you and I *know well*, these politicians are all men of principle in proportion to their interest." Binns then gave an account of the manner in which he got a copy of Sutherland's letter. He copied it, and sent for Josiah Randall, with whom he verified the copy and the original. Randall then wrote a certificate that it was correct, after which Binns sent a copy to Governor Snyder, also to Boileau and Findlay. He added that the letter published by McCoy, although it might be in the handwriting of Sutherland, was not the original letter, and he declared that the original phrase was, "But as you and I are politicians in proportion to our interest." Sutherland, on the publication of the letter, was removed, and Dr. George F. Lehman appointed. He

thereupon took the case to the Supreme Court, and it was decided that Lehman's commission was illegal.

The quarrel between the new-school and the old-school Democrats was prosecuted with its usual intensity. The new-school party favored nomination by a caucus, to be held by members of the Legislature at Harrisburg. In March the Federalists of the Northern Liberties resolved that they would not support a candidate nominated by the Harrisburg caucus, and that they would support the anti-caucus candidate, whoever he might be. The new-school Democrats, at Harrisburg in April, nominated William Findlay for Governor. A little later the opposition convention met at Carlisle, and nominated Joseph Heister.

In the city the Federalists nominated for the Assembly William Lehman, Griffith Evans, Samuel Worrall, Samuel Hodgdon, and John Purdon. The independent Republicans, or anti-caucus Democrats (the old-school party), nominated for Assembly in the city William J. Duane, James Thackara, Lewis Rush, Robert Kennedy, and Edward D. Coxé. The caucus, or Findlay, Democrats nominated George M. Dallas, John Jennings, Samuel Jackson, James Harper, and John Lisle. At the election, the Federal Assembly ticket was carried over the caucus, or Findlay, ticket by majorities exceeding twelve hundred. The old-school Democrats ran from five hundred to six hundred behind the new-school faction. For State senators the Federalists nominated John Read and Samuel Breck. The caucus Democrats named Horatio G. Jones and John Connelly. The independent Republicans (Heister men) nominated Thomas Fitzgerald and Joseph Stouse. The Federalists carried the whole ticket by votes of about four thousand eight hundred, gaining the election by majorities of from fifty to one hundred. The independent Republicans, or Heister men, had votes of less than two thousand five hundred. The Federalists elected their auditor (Samuel Pancoast) by a small majority. The caucus Democrats elected Philip Peltz county commissioner by a majority of six. John Dennis, caucus Democrat for coroner, ran eleven hundred above the highest opposition, though there were nine candidates in the field.

The contest for Governor was animated, and showed a serious division among the Democrats. In 1814 the entire vote for both candidates was over 80,000, but in 1817 Findlay and Heister polled an aggregate vote of more than 124,000. Findlay received 67,905 votes and Heister 66,300. In Philadelphia the vote was: For Heister, city, 3946; county, 3537; total, 7483. Findlay, city, 1551; county, 3030; total, 4581. Heister's majority, 2902. Such Federalists as voted cast their ballots for Heister. When the Legislature met in December three petitions were received, each signed by fifty persons, protesting against the election of Governor Findlay. Slaymaker, in the House, moved

to suspend the inauguration, which was lost. Two days afterwards two of the petitioners attended the Senate and asked to be heard. The parties desiring to contest the election were required to go on and make out their case after the Governor was in office. The real object was to prevent or postpone Findlay's inauguration, and this design having failed the contest was not carried any further.

At the beginning of the year the times were hard, business was dull, and as many people were turned out of employment, much suffering followed among the poorer classes of the community. Meetings for relief were held and considerable money subscribed, but in order to render the public benevolence systematic it was determined to form a society "for the purpose of ameliorating the condition of the poor, and for removing or preventing the causes which produce mendicity." Dr. Mease proposed a "savings-bank," under corporate authority. On the 13th of May "The Pennsylvania Society for the Promotion of Public Economy" was organized. It was determined there should be standing committees on the following subjects: Poor Laws, Public Prisons, Domestic Economy, Public Schools, etc. Robert Ralston was elected president, Robert Waln and Thomas Leiper vice-presidents, and Samuel Hazard secretary.

One of the first subjects which interested the members of the society was that of education, and the Lancasterian system of instruction was introduced into several of the schools in the city.¹ The assessors of the city and county returned in the summer of this year that the number of poor children to be schooled by direction of the County Commissioners, under authority of law, were three thousand and ninety-two.

Financial affairs were rather worse than better. Early in January, 1817, the second Bank of the United States went into operation. Being under a penalty of twelve per cent. per annum to pay specie on demand, it was against its interest that it should be the only institution which redeemed its notes, and consequently the first move of the directors was to induce the other banks to resume specie payments. They were not in a condition to carry out this measure, but they trusted to the forbearance of the community. A committee of the Legislature, in 1820, said that the resumption, which took place February 21st, was nominal, and adduced as a proof the fact that for a long time afterwards American and foreign

coins were at a premium. By this means, however, the United States Bank checked the tendency to draw coin from it. Having effected this much, loans began to increase enormously, and in a few months there were more bank credits than there had been before the State banks began the work of curtailment.

The interesting acts of Council and Legislature during the year referring to Philadelphia were numerous. In January, the Councils wished to borrow six hundred dollars from citizens to improve the Southeast Square. The same month John Wheatley presented to the city five hundred and fifty dollars, being the proceeds of one night's performance of West's Equestrian Company at the circus; to be used for charitable purposes, one-fourth for firewood for the poor. In January, also, the Legislature passed an act to authorize the Schuylkill Falls Bridge Company to sell its corporate rights to persons "who will undertake to erect a permanent bridge." A new chain bridge was soon commenced from the design of Louis Wernwag, architect, which was completed by Isaac Nathans, the builder, in the month of December. In March the Assembly passed an act incorporating the Gloucester and Greenwich Point Ferry Company. They also prohibited horse-racing on any of the public roads of Philadelphia City or County, under penalty of fifty dollars and the forfeiture of horses engaged in it. The same month the Governor was authorized to subscribe for one thousand shares of stock of the Schuylkill Navigation Company. At the same time eight thousand dollars were appropriated for building piers at Chester, on the Delaware. The Council committee on lights reported in March, and a standing "committee on gas-light" was appointed "to recommend when they think proper its general adoption." Some time in April John Hart, high constable of the city of Philadelphia, was tried before the United States District Court, Judge Bushrod Washington presiding, upon an indictment for having stopped the United States mail. He had charged the drivers with breaking city ordinances, in one case with "driving faster than six miles an hour," in another with not having bells attached to the horses, but was acquitted. In the Common Council June 5th, on motion of Roberts Vaux, resolutions of inquiry into recent steamboat disasters were passed, and Messrs. Vaux, Smith, and Lehman being appointed, addressed many questions to persons supposed to be acquainted with the subject. They made a long report, but could only recommend partitions of great strength between the engines and the cabins. Among the persons consulted were Professor Thomas Cooper, Joseph Cloud, Jacob Perkins, and Frederick Graff. The committee recommended, in the first place, a monthly boiler-inspection, with double safety-valves; one to be kept locked and accessible. The Common Council passed a bill in September to arch the dock and draw-bridge, and abolish the sand-dock at the corner of Dock and

¹ "A Complete Lancasterian School for Females" was opened in Pear Street in April by James Edwards, teacher. In the same month John Daniel Weston notified the public that he had introduced the Lancasterian system into the Northern Liberties at No. 422½ North Fourth Street, seven doors south of Poplar Lane. He said that he had acquired his knowledge of the system by having taught for four years under Joseph Lancaster in London. In June, Benjamin Shaw delivered an address before the Public Economy Society in favor of establishing schools on the Lancasterian system. Abel S. Trood opened a school on the Lancasterian system at No. 5 Appletree Alley in June. Edwards called his school the Lancasterian High School in the latter portion of the year. Edward Baker set up a Lancasterian school at No. 48 South Fifth Street in December.

Front Streets, but the Select Council demurred. Petitions were presented in October saying that Chestnut Street and several other streets leading westward "were too steep for a safe and convenient passage from the river Schuylkill; this was occasioned, they said, by the tunnel laid in Chestnut Street to convey the water from the Western to the Centre Engine-Works, which was no longer requisite." In December the Councils granted to the American Philosophical Society for seven years "the southeast and southwest rooms in the basement story of the centre house, at the Centre Square, and so much of the circular part of said building as is above the basement; and the roof of the said story, for the purpose of an astronomical observatory."

Society proceedings, receptions, and celebrations deserve a word of comment. Early in the year the "Belles-Lettres Society" was organized, with G. R. Barry as secretary. The Washington Benevolent Society at this time was under the conduct of the following officers: President, Commodore Richard Dale; Senior Vice-President, Robert Wharton. It held its usual celebration on the 22d of February, at Washington Hall. Charles Chauncey delivered the oration before the Benevolent Society and the Washington Society (another association), of which Charles S. Coxe was president. In the evening a birthnight ball was given at Washington Hall. The room was lighted by two thousand wax candles. Rush's statue of Washington was placed in a conspicuous position. Five hundred persons were present at these festivities.¹ Early in the month of May Joseph Bonaparte, ex-king of Spain, and Marshal Grouchy were in the city, and attended Gillies' concert at Washington Hall. But the greatest society event of the year was the visit of President Monroe, in June.

A meeting of the civil officers of the United States and State governments had been previously called, and it was arranged that a committee composed of seven representatives of each branch of service should be appointed to wait upon him. The following were selected: Federal officers, John Steel, Robert Patterson, David Caldwell, William Duncan, William Jones, James Glentworth, and Dr. John White; State officers, Joseph B. McKean, John Goodman, Thomas Truxton, Joseph Reed, Timothy

Matlack, Jacob Rush, and Peter A. Brown. At Fort Mifflin the barge of the "Franklin," seventy-four, decorated and manned by sixteen seamen, was ready. Having previously visited New Castle, he landed at the fort early on the morning of the 6th, and was received by Col. Moses Porter with a national salute. He was then rowed up the Schuylkill to Gray's Ferry, where he was received by the volunteer cavalry and a large number of citizens on horseback. Proceeding thence by the Hamilton road, he was received at the western end of the permanent bridge with a Federal salute fired by the Franklin Flying Artillery, Capt. Richard Bache. At the eastern side of the Schuylkill Gen. Thomas Cadwalader's brigade was drawn out to receive him, and the procession proceeded through the principal streets to the Mansion House. The next day he breakfasted with Mayor Robert Wharton; Joseph Reed, recorder, and the presidents of the Councils. He then visited the prison, the Pennsylvania Hospital, Peale's Museum, and Sully's gallery of paintings. From thence he went to the navy-yard, where due honors were paid by the officers and crew of the "Franklin." On his return he was waited upon by the Society of the Cincinnati, and addresses were delivered. He inspected the custom-house, the Bank of the United States, the mint, and the lot near the draw-bridge proposed as the site of the new custom-house, and left Philadelphia on the 7th for Trenton, N. J., on his way to New York and Boston. The last "society note" of the season is to the effect that in November a meeting was held at Renshaw's, at which was adopted the following: "*Resolved*, That within the city of Philadelphia, the residence of so much elegance and the resort of so much gayety, there ought to be public dancing assemblies." It was determined to open subscription-books at twenty dollars for each subscriber. The religious organizations of the city were active. In May the Philadelphia Sunday and Adults' School Union was formed, Alexander Henry being president. It was upon this foundation that the American Sunday-School Union was afterward established. The new orphan asylum at the corner of Cherry and Schuylkill Fifth Streets was opened on Sunday, May 4th, and a sermon was preached by Bishop White. July 23d there was a meeting to organize an auxiliary colonization society. Bishop White presided, and Jonah Thompson was secretary. This subject excited much attention among the negroes, who were opposed to the scheme. They held a meeting at Bethel Church, James Forten president, and Russell Parrot secretary. Resolutions were adopted denouncing the colonization scheme. In August they held another meeting, and a memorial addressed to citizens of Philadelphia was adopted requesting them not to join in the formation of such a society. But this opposition was not successful, and on the 12th of August "The Philadelphia Colonization Society auxiliary to the American Society for

¹ This ball was determined upon at a meeting held at the Washington Hall Hotel on the 4th of January, of which William Meredith was chairman, and Joseph P. Norris, Jr., secretary.

The meeting "*Resolved*, That on the eve of the approaching anniversary of the birthday of George Washington a ball shall be given by the citizens of Philadelphia; that the following gentlemen, members of the Cincinnati, be respectfully requested to act as managers of the ball: Mr. Charles Biddle, Maj. Lenox, Maj. Jackson, Commodore Dale, Commodore Truxton, Gen. Steel, Commodore Murray, Gen. Robinson, Judge Peters, Capt. Markland.

"That the following gentlemen be requested to assist as managers on the same occasion: Mr. Binney, Mr. Gillasspy, Gen. Cadwalader, Mr. Meredith, Capt. James Biddle, Mr. J. B. Wallace, Gen. Izard, Col. Prevost."

Colonizing the Poor People of Color of the United States" was organized. Bishop William White was elected president; Rev. William Staughton, Rev. Thomas Sargent, M.D., and Rev. J. J. Janeway were vice-presidents. In December "The Common Prayer-Book Society of Pennsylvania" was founded. Its object was to furnish prayer-books to poor Episcopal congregations. William Tilghman was president.

There were two disasters during the year. The first, in March (the 4th), was the burning of the house of a shoemaker named McDermott, No. 287, South Front Street, by which his five children were burned to death, a misfortune that created the warmest sympathy. The other disaster, in July, was the burning, fortunately with no loss of life, of the steamer "Vesta," of the new Baltimore line. The steamboat "Sea-horse" was brought from Elizabethport and took the "Vesta's" place. At this time the "Philadelphia," upon the Delaware, and the "Olive Branch," at the New York end of the route, formed one line between the two cities. Stages were run overland, carrying passengers and freight between the boats. The land carriage between Trenton and New Brunswick was twenty-six miles, and the fare in November was \$5.62. The "Sea-horse" ran to Bristol and Burlington, and connected with the Industry line of stages. The "Active," Capt. Bennett, ran independent to Burlington. The old line to Baltimore was composed of the "Delaware," Capt. Wilmon Whilldin, and the "Baltimore," Capt. M. C. Jenkins, on the Delaware River; the "Chesapeake," Capt. J. Owen, and the "Philadelphia," Capt. E. Trippe, on the Chesapeake. Sixteen miles of land carriage connected these boats. The new Baltimore line, *via* Wilmington and Elkton, was composed of the "Superior," Capt. William Milnor, and the "New Jersey," Capt. Moses Rogers. Passengers were taken from Philadelphia on Tuesdays, Thursdays, and Saturdays of each week. Before the burning of the "Vesta," the "Eagle" ran upon the Chesapeake, making a daily line. After the "Vesta" was burned the "Eagle" was withdrawn. The next year, 1818, there were some improvements in the river and bay steamboat lines. The Baltimore steamboat line, by way of Elkton, was established with increased conveniences, there being running on it the "Pennsylvania," Capt. Branson; the "Ætna," Capt. Kellum; and the "Bristol," Capt. Myers. Capt. Rogers formed an association with the design of building a steamship to run between Savannah and Philadelphia, but the effort was not successful. A packet line of sailing-vessels to New Orleans was, however, established in the month of August by Chandler, Price & Morgan. It was composed of the ships "Ohio," Capt. Simeon Toby; "Feliciana," Capt. N. Franklin; "Orleans," Capt. Grover; and "Margaret," Capt. H. Benners. In the navigation of the river there were some changes. The team-boat "Peacock" ran from Market Street Ferry to the Mineral Springs on the Rancocas and to Mount Holly.

The team-boat "Phoenix" was placed upon the line between Gloucester and Greenwich Point. It was propelled by the action of eight horses. A post-coach line was set up between Philadelphia and New York by way of Paulus Hook, starting from Judd's Hotel every morning at five o'clock, and arrived in New York the same afternoon. The United States mail coach, of the same line, started at three o'clock, and arrived at New York the next morning. A second line of post-coaches was connected with the steamboat "Bristol," which left Market Street every afternoon at three o'clock for Burlington. The coaches crossed New Jersey, and connected with a steamer, passengers reaching New York at 2 P.M. the next day. Another line of coaches left the Green-Tree Inn at 8 P.M., and reached New York at eleven the next morning.

National affairs in 1818 were largely occupied with our foreign relations. The government in April returned in a measure to the old system of commercial retaliation, but soon found it unprofitable. The slavery question began to loom up in greater proportions. A new fugitive slave law was passed. Gen. Jackson in January took the field against the Seminoles, captured the Spanish fort at St. Marks in April, and Pensacola in May, hung several Indian chiefs and the white men whom he found with them, and returned in triumph. Already he was widely spoken of as a future President.

Early in January Richard Bache established a new journal, *The Franklin Gazette*, in Philadelphia, chiefly to support Governor Findlay, and at the same time supersede the *Democratic Press*, but this hope proved futile. The old-school and new-school Democrats still kept up their contest over methods of nomination. The Federalists were disposed to take advantage of these dissensions, and passed resolutions declaring that they were opposed to manifestations of party spirit, and would "discard party distinctions, and unite with those who will sacrifice political prejudices and support men without reference to party names." Duane then advocated a union, and argued that the principles of the Democrats and the Federalists were the same. C. W. Hare, Independent candidate for Congress in the First District, published an address in October against caucus nominations. The Federalists adopted the independent Republican (or old-school) ticket, and ran for Congress, for the district comprising the city and county of Philadelphia and the county of Delaware, Thomas Forrest, John Sergeant, Joseph Hemphill, and Samuel Edwards. For senators, Michael Leib (old-school Democrat) and Condé Raguét were nominated. The new-school Democrats nominated Nicholas Biddle, John Connelly, George G. Leiper, and Jacob Sommer; for senators, Samuel Wetherill and Daniel Groves. In the city the Federal and old-school ticket for the Assembly was composed of John Purdon, William Lehman, George Emlen, James

Thackara, and Edward D. Coxe. The Democrats nominated Andrew M. Prevost, Dr. Samuel Jackson, Samuel Rush, James Harper, and John Wurts. In the county the Federalists and old-school Democrats supported for the Assembly Robert McMullin, James Dyre, Andrew French, William Binder, George F. Goodman, and Robert Carr. The new-school ticket was composed of John Holmes, William Weaver, Richard F. Bowers, Nathan Jones, Jacob Souder, and Joel B. Sutherland. John McLeod was run as an independent candidate against Sutherland. The Federalists nominated for county commissioner, Robert Brooke; for county auditor, William J. Baker. The new-school Democrats supported Mr. Ingalls for county commissioner and Peter Herzog for auditor. The Federalists carried their Congressional ticket—Forrest, Sergeant, Hemphill, and Edwards—by majorities ranging from 1000 to 1400. They elected their county commissioner, Robert Brooke, and auditor, William J. Baker. In the city the Federal Assembly ticket was carried. In the county Holmes, Weaver, Bowers, Souder, and Jones, new-school Democrats, and Robert McMullin, independent Republican and Federalist, were elected.

One of the first acts of the Councils during 1818 was the presentation to Commodore Perry of the costly sword voted in 1813 and finished in 1815.

The Councils had under consideration during 1817 a proposition for the purchase of the water-power of the river Schuylkill from the Schuylkill Navigation Company, but in January it was reported to be inexpedient to buy it. The subject of internal improvements now began to be urged, and Philadelphia subscribed to five hundred shares of the stock of the Schuylkill Navigation Company. A meeting was held in the Northern Liberties in February to urge the authorities of that district to introduce Schuylkill water for use within their jurisdiction. In February the Councils resolved that Charles W. Peale should pay twelve hundred dollars per annum for the use of the State-House, that they disapproved of his manufacturing gas in the State-House, and said he would be held responsible for any damage which might ensue. The two rooms on the lower floor of the State-House, occupied by the Supreme Court and by the District Court, were authorized to be rented to the county commissioner for twenty-six hundred dollars a year. Citizens residing west of Broad Street held a meeting at the Centre House Tavern in March, and protested against the manner in which the Southwest Square was allowed to be made a depository for filth, as also a lot near the Arch Street prison, with many other lots in the western part of the city. The Councils at length ordered the dirt and filth to be removed and the Square plowed. In May, Councils ordered that the public burying-ground lot purchased in March, 1816, adjoining the Vineyard, should be inclosed with a fence, and the Northeast Public Square

should be closed as a burying-ground after the 15th of June. A house for the gravedigger was built at an expense of three hundred dollars. This ground was on the northwest side of George Street, near the intersection of Charles Street, in the village of Francisville, at some distance west of the Ridge road. That portion of Francisville is now obliterated. The old burial-ground, which cost two thousand dollars, is intersected by the present Twentieth and Parrish Streets. The trouble with the German Reformed congregation, which had possession of a portion of the Northeast Square, continued. The church maintained its position in favor of a ninety-nine-year lease, which Councils were not willing to grant.

Late in the year the Councils agreed to appropriate five hundred dollars for a clock in the Market-Hall steeple, at Pine and Second Streets, provided that citizens raise the balance required, and a subscription-list was started.

The city was anxious to have the new custom-house well located, but the draw-bridge lot, which seemed very desirable, could not be sold without legislative permission, which was petitioned for but refused. This lot had originally been a swamp, and was intended to be granted to the city, on the 25th of October, 1701, with liberty to dig docks and make harbors there. Before that time, through inadvertence, it had been patented to John Marsh. John Penn afterward, about the year 1758, purchased it from Marsh and presented it to the city, as was intended by the charter. But in time the swamp became fast land, Dock Creek filled up, and the swamp was high ground. Vessels could not approach nearer than two hundred and fifty feet. The lot could not be used according to the original intention, and remained neglected for many years.

When the State Legislature first met a charge was brought by John Wurts, member from the city, against Thomas Sergeant, Secretary of the Commonwealth, accusing him of misconduct in office. A committee of the House reported in favor of Sergeant. The latter had tried to do a favor for Wurts by obtaining a clerkship for a friend of his, and the committee said that he was not guilty of corruption. In February the Legislature passed an act dividing the Northern Liberties into seven wards. The boundaries of the First Ward were from Vine Street to Willow, and from the Delaware River to Third Street; the Second Ward, from Third Street to Sixth, and from Vine to Willow; the Third Ward, from Third Street to the Delaware, between Willow and Green Streets, and Wells' Alley, commonly called Whitehall Street; the Fourth Ward, from Third Street to Sixth, between Willow and Green; the Fifth Ward, from Third Street to the Delaware River, between Green Street and Poplar Lane, and that part of Cocksink Creek called the Canal; the Sixth Ward, from Third Street to Sixth, between Green Street and Poplar Lane; the Seventh Ward, bounded by the

Cohocksink Creek on the north and east, Poplar Street on the south, and Sixth Street on the west. An act of Assembly was passed March 3d, which declared that all real estate in Spring Garden should be subject to the debts of the commissioners in pitching, curbing, or paving streets. This was the commencement of the municipal lien-claim system, afterward extended to the other districts so as to include charges for water-pipe and culverts. Application was made to the Legislature of New Jersey in November for authority to erect a bridge across the Delaware River to Windmill Island, opposite the city. It was represented that the distance from the shore to the island was twenty-two hundred feet, and that the latter was eight hundred or nine hundred feet wide. From the west bank of the island to the wharves of the city the distance was about eight hundred feet.

An article in the *Portfolio* in May showed clearly the condition of the city as regarded street improvements, and gives a pleasant picture of steady growth and progress. A portion of this article reads as follows:

"It must be gratifying to every liberal-minded man to see the gradual improvement of our city. The buildings which have been erected, and the streets which have been paved during the past ten years, by far surpass the most sanguine calculations of former days. Vine Street is built and paved as far as Ninth. Race Street is built and paved as far as Broad. Arch Street is built out entirely to Twelfth with beautiful houses, and is paved to Eleventh. Market Street is paved to Schuylkill Sixth, and is entirely built up as far as the Centre Square, and is partially built up on all the squares between Broad Street and the river Schuylkill. Chestnut Street is entirely built up nearly as far as Twelfth, and is paved and partially improved as far as Schuylkill Seventh, which is two squares west of Broad. Walnut Street is nearly built out to Eleventh, is paved as far as Twelfth, and will shortly be paved up to Thirteenth. Spruce Street is built up to Eleventh, and is paved to Broad. Pine Street is built and paved up to Ninth. South Street is partially improved as far as Broad, and is paved to Ninth. Broad Street is paved from Centre Square to Vine Street. All the streets running north and south as far west as Eleventh, and most of the intermediate and secondary streets, are paved in whole or in part, according to the extent of the improvements. What has very much contributed to the great extent of pavements within the last few years has been the enterprise—or, if you choose, the calculating spirit—of some of our citizens, who, in order to procure pavements in front of their property before the regular period arrived at which they would be made by the public, have loaned the money to Councils, free of interest, for such a term as would be likely not to make them a public burden before their regular turn. Thus, for the pavement of Chestnut Street west of Broad the money was loaned by the owners of the property interested for fourteen years, without interest. For the pavement of Walnut Street between Eleventh and Thirteenth the money was loaned without interest for seven years. And so of other streets. It is probable that further extensions of the pavements may be called for in the present and ensuing years upon the same principles of anticipation, and we hope that Councils will act upon a liberal system, and grant them, whenever the loan is for so long a period as to make it an advantageous contract for the city. It would not be difficult to show that where a loan is for a long period, the increase of taxes upon the property paved, arising from improvements and its increased value, would produce an extra revenue to the city more than sufficient to clear the city the whole cost of the pavement. Should this be the case, what motive could there be for refusing so reasonable a request as an offer to put money into the city treasury?—which unquestionably would have been the case in several late arrangements."

There were a few local events of the year that deserve mention. The Philosophical Society gave up

the idea of maintaining an observatory for a few years to come. The Washington Benevolent Societies of Philadelphia, Germantown, and other places celebrated the Fourth of July; Charles Pierce was orator. In June, Perkins & Jones advertised a "supply-pump" they had invented. George Bruorton about this time began an enameling and gilding establishment on Chestnut Street. Sellers & Pennock announced the manufacture of "riveted fire-hose." Oliver Evans gave notice that he had patented high-pressure steam-engines, "using strong globular or cylindrical boilers, being the only form admitted by Nature or Art by which the principles described, or elastic steam, can be used with safety." The city firemen met in July and declared, "There are now in the city and liberties thirty-four engines and fifteen thousand feet of hose, under the direction of forty-nine companies. These companies are all willing to receive new members. It is asked that Councils will pass an ordinance to prevent the use of water from the plugs, except under license from the city government." The "Philadelphia Southern Society" met in May, Pierce Butler president, and toasts were drunk to Southern patriots and leaders, from Capt. John Smith to Thomas Jefferson. The first mention of an association for the purpose of "securing country air to the children of those whose limited circumstances deprived them of it" was this year. There was procured from the Board of Health for this purpose the use of a wing of the City Hospital at Bush Hill, where accommodations, food, and medical attendance were provided for sick children and their mothers.

The Bank of the United States in April bought the old Norris mansion on Chestnut, between Fourth and Fifth Streets, paying one thousand dollars per foot, and offered five hundred dollars for the best plan of a building. John Haviland secured it in August. Bank loans had been curtailed since October, 1817, and by October, 1818, the reduction reached seven million dollars, resulting in a severe money stringency. In December, at the Coffee-House, a meeting of merchants passed resolutions that Congress should be petitioned to prohibit exportation of specie from the United States. A committee was appointed, but when its members assembled it was found that they were opposed to obeying their instructions. Three declined to act, three refused to draw up the petition, and only one was in favor of it.

Rut the subject that attracted most attention in Philadelphia during 1818 was the Lancasterian system of teaching, of which something has already been said. James Edwards, who had established himself in the city in 1817, claimed to be the only certificated teacher from Joseph Lancaster in Philadelphia. Edward Baker, in January, delivered a lecture on the Lancasterian system. Edwards came out shortly afterwards with a long statement, claiming his position as the only teacher of the real and

true Lancasterian system, which he followed strictly, "excepting such corporeal punishments as are not permitted by the laws of this country." In a subsequent advertisement Edwards admitted that he never had learned the system from Lancaster, in fact, had never seen that person, but had obtained his knowledge in Canada from William Scott, who was one of Lancaster's pupils. Baker claimed to have organized the Lancasterian schools in New York. Mr. Cullen lectured upon the system in the Lancasterian high school in January. Mrs. Baker opened a Lancasterian school for girls at No. 48 South Fifth Street in March. John B. Weston opened a new model school at No. 7 Pear Street in June. Meanwhile the system had attracted legislative attention. It offered a cheap and seemingly feasible way of educating large numbers of pupils with great speed. Without some such incentive the free-school system could not have been adopted so soon, nor have propitiated a bitter opposition. Lancasterian methods were received with great enthusiasm. The Legislature had in 1817, as we have said, declared the city and county the "first school district" of Pennsylvania. The city was declared to be the first section, Northern Liberties and Kensington the second section, Southwark, Moyamensing, and Passyunk the third section, and Penn township the fourth section. Another act directed that City Councils should elect annually twelve directors, the Commissioners of Northern Liberties six directors, and the Commissioners of Southwark, Moyamensing, and Spring Garden, each six. The directors of each section were authorized to elect one person from among every six of themselves to be a member of a select body, to be called "The Controllers of the Public Schools for the City and County of Philadelphia." The number of sections was also increased. Oxford, Lower Dublin, Byberry, and Moreland were made the fifth section, Oxford and Lower Dublin having four directors, and Byberry and Moreland each two. Germantown, Bristol, and Roxborough constituted the sixth section; Germantown with four directors, and Bristol and Roxborough each with two. Blockley and Kingsessing formed the seventh section; Blockley having three directors, and Kingsessing two. The directors of the fifth, sixth, and seventh sections were authorized to superintend the schooling of poor children within the district. The directors of the fifth, sixth, and seventh sections were to be appointed by the Court of Quarter Sessions. The law declared that "the principles of Lancaster's system of education in its most improved state shall be adopted and pursued in all the public schools within the district, with the exception hereinafter mentioned." The exceptions were in the outer districts. The controllers organized on the 6th of April, and established two schools in Southwark, two in Moyamensing, two in the Northern Liberties, and two in Penn township. In the second section the Adelphi School was adopted as a public school. Edward Baker opened a school

at No. 48 South Fifth Street, which was continued until the arrival of Joseph Lancaster, who was engaged by the controllers to superintend the working of his system in Philadelphia. The model school was first established in a building on Fifth Street, adjoining St. Thomas' African Episcopal Church, below Walnut Street. The house was afterwards used as a place for exhibitions, under the name of Maelzel's Hall. A building for the purpose of a model school was then contracted for. It was built of brick, upon the east side of Chester Street above Race, and school was begun on the 21st of December by Joseph Lancaster. At the end of the first quarter there were in the school four hundred and thirteen boys and three hundred and twenty girls. The boys were taught reading, writing, and arithmetic, and the girls were taught the same branches, also needlework. At the end of the first year the number of pupils was two thousand eight hundred and forty-five. The cost of maintaining the schools in teachers' salaries (excluding buildings, rents, etc.) was \$5082.75, a great reduction on the amount formerly paid by the county under the poor-school law, which was from ten to twelve dollars for teaching each pupil. Lancaster delivered a course of lectures upon educational topics and other subjects, and his employment for the purpose of superintending the schools was considered a most judicious movement on the part of the controllers.¹

¹ The Lancasterian system was at this time an object of general attention in Great Britain and the United States. Joseph Lancaster, usually considered the founder of this plan of instruction, adopted a system originated by Rev. Dr. Andrew Bell, chaplain and teacher of orphan children at Madras. The principal point in Bell's system was that as it was impossible in his school to obtain the services of ushers, the school should be conducted by the scholars themselves, the master superintending all. Bell published a pamphlet on the subject on his return to England in 1797, and Lancaster took it up and applied the principles of what he called the "Monitorial System" to the education of poor children. He was in Baltimore, New York, and other cities, and established numbers of schools. He also published a pamphlet and a book, now quite rare, in Philadelphia, descriptive of his system, with illustrative sketches. Thomas Dunlap, for many years president of the Board of Controllers of the public schools, spoke in the following manner, in 1851, of the Lancasterian system, as he found it when he entered the Board of Directors of the public schools, in 1824: "I found (and for several years saw nothing better) seven school-houses, containing fourteen schools, in each of which about two hundred children were to be educated; that is, imbued with valuable learning, and trained to future usefulness, on a patent scheme, the visionary hallucination of a wild, though perhaps benevolent, enthusiast. And what were its requirements, its promises, its hopeful machinery? It formed schools—pardon the misnomer—where the young idea was to be developed into penmanship by scratching with sticks in a sand-bath, and showing educational agility by quickly erasing the crow tracks; developed into arithmetic by the dulciful, simultaneous chant of the multiplication-table, in which neither scholar, monitor, nor master could detect one intelligible sound, or, in Saxon vernacular, 'hear their own ears'; developed into poetry and morals by howling in horrid chorus certain doggerel ballads, or Lancasterian (not Pierian) hymns; schools where the baby of five was the all-sufficient teacher of the baby of four, save that the latter, if stoutest, generally practiced more successfully in flogging his monitor than in figuring in his sand-box; and where, but too often, a master—whose qualifications for teaching, like the reading and writing of a certain distinguished functionary, 'came by nature'—lounged through two or three hours of the morning, and as many of the afternoon, in gazing down upon the

The year 1819 was the year of a new convention with Great Britain, the acquisition of Florida, and practically of Oregon also, the beginning of the Missouri Compromise struggle, the rousing of the anti-slavery sentiment of the North, and the reassembling at Philadelphia of the convention for promoting abolition. This movement originated in the Middle States,—in New Jersey, Pennsylvania, and New York, soon spreading to Massachusetts. We shall hear more of these important issues and discussions.

Local politics in Philadelphia were unusually virulent. The Wurts charges against Thomas Sergeant, secretary of the State, were revived. The old-school Democrats nominated for senator in the county Robert McMullin; county commissioner, John Y. Bryant; sheriff, Thomas Elliott or Caleb North; auditor, John Roberts. The Federalists generally supported these nominations. The old-school party in the Northern Liberties called a meeting in September, and were driven from the hall by the Findlayites; but, meeting elsewhere, nominated an independent ticket for commissioners, among whom were Dr. Michael Leib and Mordecai Y. Bryant. The new-school Democrats nominated John Connelly for the Senate. When the election came off McMullin received 6482 votes, and Connelly 3603. There were eight candidates for sheriff, and Caleb North was elected. For county commissioner, George Ingalls, and for auditor, John Roberts, were elected. In the city the Democrats carried both Councils. The old-school elected to the Select Council, Stephen Girard, Anthony Cuthbert, Elijah Griffiths, and William Delaney. Joseph Worrell succeeded to the presidency of the Common Council, and George Vaux succeeded Robert Waln as president of the Select Council. In the city the Federal ticket for Assembly was Benjamin R. Morgan, George Emlen, William Lehman, Thomas McEuen, and Henry Solomon. The Democratic ticket for Assembly was James Thackara, Josiah Randall, William J. Duane, Dr. Richard Povall, and Alexander H. Cox.

An unexpected element was introduced into the city canvass, which controlled the election for the House of Representatives. This disturbing influence came from the volunteer fire companies in the city. They found that the cost of maintaining the companies was increasing annually. The insurance companies gave them no assistance. An association was therefore formed among the fire and hose companies for the purpose of assisting themselves, but a bill which was presented to the Legislature for a charter making the association an insurance company was lost, and it was charged that the influence of the old insurance companies had prevented its passage. The firemen therefore determined to enter the political

contest in the city with a firemen's ticket, nominated October 2d, at the Falstaff Hotel, upon which were the names of William Lehman and Henry Solomon, Federalists, and James Thackara, Josiah Randall, and William J. Duane, Democrats, this being a combination ticket. This movement caused the greatest excitement among the politicians, nor were the firemen themselves unanimous in support of the step. The politicians were therefore able to start a counter-movement, and on the 9th of October a meeting of firemen, at which John M. Scott presided and Richard Price acted as secretary, was held at the mayor's court-room. About five hundred firemen were present, and resolved that "fire companies were instituted for the sole purpose of promoting the public good by exertions at fires;" that "the nomination by firemen who lived in the county of candidates to represent the city in the Legislature was highly improper;" and that "the proceedings of the Fire Association emanated from but a small portion of that influential body, the fire department." Members were present from the following fire companies: Resolution, Niagara, Pennsylvania, Philadelphia, Humane, Hibernia, Federal, Hope, Reliance, Friendship (Northern Liberties), Friendship (city), Vigilant, Harmony, United States, Sun, Relief, and Washington; and from the following hose companies: Neptune, Hope, Phoenix, Washington, Fame, Resolution, and Columbia. The Southwark Hose Company published a card declaring that they would support the firemen's ticket, and the Resolution Hose Company published a card stating that they did not belong to the Fire Association, and would oppose the ticket. This company at that time numbered the Dutilhs, Destouets, Chaudrons, Bosquets, and other natives of France, among its members, and was called the French company. The members of the Diligent Fire Company were unanimously in favor of the firemen's ticket. They formed the company into a committee of vigilance to secure its success, and ordered all members to be waited upon to secure their votes. The firemen's movement proved successful, the vote being as follows: Morgan, 2277; McEuen, 2346; Solomon, 2115; Emlen, 2315; Lehman, 2543; Povall, 2380; Randall, 2519; Cox, 2349; Duane, 3012; Thackara, 2494. Messrs. William Lehman, James Thackara, Josiah Randall, and William J. Duane—four out of the five on the firemen's ticket—were thus elected.

Local politics immediately after the fall elections centred again about the charges against Sergeant and Governor Findlay. A memorial was sent to the General Assembly charging the Governor with misconduct in office; with corruptly exercising his official duties for the purpose of advancing his own private interests; with misusing his patronage to obtain pecuniary advantages for himself, family, and friends, from applicants for office; with misconduct in awarding auctioneers' licenses, and various other abuses of his position.

intellectual pandemonium beneath his rostrum, diversifying his educational labors by not unfrequently bringing his rattle in as third man between the stout baby and the cowardly baby monitor."

The Legislature passed several important acts relating to Philadelphia. In January there was a strong but unsuccessful effort made to create a new county to be called Decatur. It was to consist of the townships of Roxborough, Germantown, Bristol, Oxford, Lower Dublin, Byberry, and Moreland, and such parts of the Northern Liberties and Penn as should lie eastward, northward, and westward of a certain line "beginning on the north side of the Delaware River at Gibson's wharf, and including the same, and from thence in a direct line to Penn's Solitude, on the west side of the river Schuylkill, and from thence to where the division-line of Kingsessing and Blockley intersects Mill Creek on the property of Jacob Mayland, and thence along said township line until it strikes Cobb's Creek, and thence along said Cobb's Creek until it strikes the Montgomery County line, and thence along said line until it strikes Roxborough township." The district thus defined was intended to become a separate county on the 1st of November. On the 25th of February an act to incorporate the Philadelphia Saving Fund Society was passed. The incorporators were Andrew Bayard, Samuel Archer, Richard Bache, Charles N. Bancker, Clement C. Biddle, Samuel Breck, Turner Camac, Reuben Haines, Thomas Hale, Adam Konigsmacher, Louis Krumbhaar, John McCrea, Samuel B. Norris, Isaac W. Norris, Richard Peters, Jr., Condé Raguét, Joseph Rotch, William Schlatter, Samuel Spackman, John C. Stocker, John Strawbridge, Roberts Vaux, John Vaughan, Daniel B. Smith, and Matthew C. Raiston. March 16th, the Legislature incorporated that part of the township of the Northern Liberties lying between Sixth Street and the river Delaware, and between Vine Street and Cohocksink Creek, as "Commissioners and Inhabitants of the Incorporated District of the Northern Liberties." This was an alteration and an amplification of the first act incorporating the district, passed March 28, 1803. "The Indigent Widows' and Single Women's Asylum of Philadelphia," the "Philadelphia Society for Promoting Agriculture," and the "Schuylkill West Branch Navigation Company" were also incorporated in March. The latter intended to use lock-navigation, and to have a canal "from the mouth of the west branch to its intersection with the east branch on the farm of Daniel Dreibelbis, on the Centre turnpike, five miles from the town of Orwigsburg."

Early in January the pioneer in the coal trade of the Schuylkill, whose name, however, was not given, advertised in the *United States Gazette* that orders would be received for Lehigh coal at No. 172 Arch Street, "in quantities not less than one ton, between the 1st of April and the 1st of December, at thirty cents per bushel of eighty pounds. The coal may be seen burning at the above place." The house referred to was the residence of Josiah White, who, with his partner, Erskine Hazard, had previously demonstrated the value of anthracite coal. At the price

mentioned, the cost of a ton of Lehigh coal was eight dollars and forty cents. The origin of the manufacturing town at Flat Rock, afterward Manayunk, dates from this spring.

In February the Schuylkill Navigation Company published proposals to supply water-power from the Schuylkill. They had erected a dam at Flat Rock, completed a canal, and had power for the extensive manufactories. "The price is for the present at three dollars per annum, in the nature of a ground- and water-rent for each square inch of aperture under a three-feet head. An aperture of one hundred square inches is computed to yield water sufficient to grind about ten bushels of wheat per hour." The point at which the dam was erected, which was called Flat Rock, was so named from a peculiar rock now in the upper part of Manayunk. Ariel Cooley was brought from Connecticut to construct the dam. The first power was sold to Capt. John Towers April 10, 1819, who built a mill, the pioneer manufactory in the village afterward known as the Falls of Schuylkill, and still later as Manayunk. Charles V. Hagner purchased the second power in September, 1820. It was fifty inches, and subsequently he added fifty inches more. Here he commenced making oil and grinding drugs, afterward adding a fulling-mill and a number of power-looms for weaving satinets, the first power-looms used in Pennsylvania for weaving woolen goods. Coal and new manufactories gave business a decided impetus, but there were complaints from some that the new water-works would ruin property along the Schuylkill. "Judge Peters will lose an island of two or three acres. Mr. Johnson, Mr. Burd, and others will suffer considerably. Bingham will lose a fine meadow of twenty acres, and Breck a meadow, a fine island of sixteen acres, a wharf, and a distillery." The "Association for the Promotion of the Internal Improvements of New York" authorized its secretary, in September, to report on the practicability and expense of a canal between New York and Philadelphia by the Raritan and Delaware Rivers, or by any other practicable route. This was the first movement toward inland water-communication between the two cities.

Philadelphia had two fires in 1819. The first, January 28th, at 11 P.M., burned "the old red stores" on the second wharf below Race Street on the Delaware, owned and used by William T. Elder, cotton and hay presser. On the night of March 9th the Masonic Hall on Chestnut Street was totally destroyed by fire. The loss was thirty-five thousand dollars, partly covered by an insurance of twenty thousand dollars.¹

¹ This fire was long remembered as a grand spectacle. Roofs and street were covered with snow. It began in a defective flue, about nine P.M.

"Room after room was gained by the flames; and in about an hour after the first alarm a wild burst of fire and smoke betokened that the roof was nearly consumed. The beautiful steeple, the pride and glory of the Order, was the next object of attack. The bright flames ran rapidly up the wood-work to the spire. In a short time the entire tower

On the day after the fire the Masons met at Washington Hall. Thomas Elliott, Grand Master, presided, George A. Baker acted as secretary. The meeting was opened with prayer by Rev. Dr. Rogers, the Grand Chaplain. Committees from the various lodges were appointed to receive contributions. Victor Pepin, manager of the Olympic Theatre, at Ninth and Walnut Streets, a member of the fraternity, volunteered to appropriate the proceeds of a benefit. Warren & Wood, the managers of the new theatre, Chestnut Street, expressed their wish to do the same. Labbe, the famous dancing-master of the day, gave a grand ball at his room on Library Street,—since called Military Hall. Hupfeldt, Lefolle, Danenburg, and Schetky, the principal instructors in music, gave a grand concert at Washington Hall, and the fraternity succeeded in disposing of six thousand tickets. After the destruction of the Chesnut Street building, the brotherhood appear to have returned to the old hall on Filbert Street, between Eighth and Ninth, although Concordia and L'Amenite lodges held their meetings on Taylor's Alley.

An act of March 27th required an exact list of births in the city, to be registered alphabetically. Another act, passed the same day, vested in the Board of Health the burying-ground in Blockley township, adjoining the grounds of Elizabeth Powell, and the corporation of the city of Philadelphia. This was the southernmost of the two burying-grounds lying on the banks of the Schuylkill, upon the east side of the street or road leading from High Street to the bridge at the Upper Ferry. It was the ground which the Society of Friends had claimed in former years. The preamble to the bill recited that the lot belonged to the Society of Friends under an equitable title, but that the "Monthly Meeting had by a formal act ceded and relinquished to the Board of Health all their rights and claims."

The City Councils in February memorialized Congress to remit customs duties upon iron pipes imported from London for the water-works. The joints had to be nine feet long, and of twenty and twenty-two inches diameter. It was difficult to procure contracts for such large-sized pipes in this country. Congress, however, took no action on this memorial. In March the Councils ordered the city commissioners to open a street fifty feet in width on the western boundary of the Northeast Public Square to connect Race and Vine Streets. After it was opened the commissioners were ordered to close up Seventh Street. Some citizens who were opposed to this change commenced proceedings in the Quarter Sessions in June to reopen Seventh Street.

was wrapped in the embraces of the glowing destroyer and stood a pillar of fire! In an hour after the first alarm the flames were roaring and triumphing with vindictive fury within the walls of the edifice. In half an hour more the steeple had fallen; and by three o'clock the next morning the only memorials of the late Masonic edifice were the blackened walls, fitfully revealed by the light of burning embers."

A proposition to erect a bridge across the Delaware in front of the city led to strenuous opposition from the Councils, who objected that there was no restriction as to the abutments, and urged that they should not be allowed to approach each other nearer than two thousand three hundred feet. They finally desired that the Legislature would postpone the consideration of it until the next session, which was done. A meeting in opposition to the building of this bridge was held in December at Elliott's tavern.

The clock and bell at the new market, Second and Pine Streets, was finished in August, and six hundred dollars appropriated by the Councils towards the expense. The Councils ordered culverts built in North-east Square, and there was talk of one on Pegg's Run. Among the important improvements of the year was the laying out and partial building of Palmyra Square, which, as originally projected, extended from Vine Street to Wood and from Tenth Street to Twelfth. The row between Tenth and Eleventh Streets, on Vine, was for a time the chosen residence of citizens of wealth and influence.

The city, early in February, gave a banquet to Gen. Andrew Jackson, who was on his way to New York, it being probably the first time that he had been in Philadelphia after his service as United States Senator for Tennessee, in 1797-98. The officers of the First Division called upon him on the morning of February 18th, and an address was made by Gen. Cadwalader, to which Gen. Jackson responded. The dinner took place at the Washington Hall Hotel. Pierce Butler presided. The 22d of February was celebrated at the hall of the Washington Benevolent Society, and the oration was delivered by David Paul Brown. Great alarm was occasioned this year by deaths from hydrophobia. Two of such instances occurred in the early part of June, and were followed by several others. The Councils passed an ordinance for the destruction of dogs, it being the first regulation of the sort. They ordered all dogs running at large to be seized, killed, and buried, and promised one dollar for each. In the summer yellow fever began in the Upper Ferry Tavern, on the north side of Market Street wharf. Two persons died in the vicinity, and twenty were affected. Energetic measures were taken, and not more than ten or twelve deaths took place. It probably originated in a filthy condition of several yards and cellars, no suspected vessels having arrived. July 4th the Society of the Cincinnati reported \$3576.59 on hand for their proposed monument to Washington. July 12th, the new custom-house building, on the west side of Second Street, near Dock Street, William Strickland architect, was opened for business. Rush was the carver of a wooden statue of Commerce near the apex of the gable. July 30th, a number of prisoners in the Walnut Street jail made an unsuccessful attempt to escape. One man was stabbed in the fight. In August, the gold medal

voted by the Pennsylvania Legislature to Capt. Jesse Duncan Elliott for his gallant services in Perry's victory on Lake Erie in September, 1813, was presented to him in Philadelphia. August 2d, the Point Pleasant Market, at the corner of Frankford road and Maiden Street, was completed, and the stalls were rented a few days later. In December a meeting was held at the mayor's office, and contributions were secured for the persons burned out at Wilmington, N. C. Mayor Barker was chairman and Robert Ralston was secretary.

One of the events of the year was a riot which grew out of a series of balloon ascents. September 2d, Lee, Bulkley & Pomeroy were to have a balloon ascent at Camden, and thirty thousand persons visited the spot, but the inflation failed, and the angry crowd slashed the balloon with their pocket-knives. It was repaired and used successfully several days later. Soon after this Monsieur Guille announced that he would make an ascension about the 20th of September in this city. But Monsieur Michel forestalled him, and fixed upon the 8th as the time for his ascension from Vauxhall Garden with balloon, gondola, and parachute. At the height of two thousand feet he proposed to cut loose and descend to the earth as near Vauxhall as he could. He was aided in the preparations by M. Stanislaus; and they expected a rich harvest, as the price of admission was one dollar. At that time the grounds about Vauxhall were open commons; and the entire neighborhood from the Centre Square to George [Sansom] Street, south nearly to Locust Street, eastward to Thirteenth Street, and westward nearly to Schuylkill Eighth Street, was covered with people, thirty or thirty-five thousand persons being crowded together.

On the previous day another attempt had been made to ascend with the Camden balloon. Mr. Lee took his place in the parachute. The aerostat was blown against a tree, and a hole made in it. It was then suffered to escape, and soared to parts unknown. This failure was heard of by those who went to witness the ascent of Stanislaus and Michel's balloon, and no doubt contributed towards the belief that all aeronautic endeavors were impositions upon the public. About noon September 8th the inflation of the Vauxhall balloon began, but the wind was very unfavorable, and caused many delays. Michel expected to be able to start at 5.15 P.M., but postponed the time one hour. At 6 P.M. the balloon was hardly a fourth filled. The crowd now became impatient, angry, and excited. About this time a boy, who endeavored to climb over the fence of the garden, was struck by an attendant of the establishment, and seriously injured. It was reported that he was killed, and a number of persons seized sticks and stones, rent the silk of the balloon, tore down the fence, and rushed in. Some one took the money-box, containing nearly eight hundred dollars. Others broke the barrels containing the acids, demolished the pipes, and did every possible

injury. They attacked the bars, drank the liquor, broke the bottles and glasses, and then commenced operations in the pavilion, where they tore down the scenery, carried off the dresses, and finally set fire to the building. It was after eight o'clock when this occurred. The fire and hose companies were early upon the ground, but in a short time the pavilion was in ashes. Mr. Magner, the proprietor of the garden, was the greatest sufferer. The balloonists lost twenty-five hundred dollars. A concert was afterwards given at Washington Hall for the benefit of Mr. Magner by Mr. Keene, vocalist. Messrs. De Luce and Brennan assisted. It is a comment upon the manner in which newspapers were then conducted that Poulson's *Advertiser* and the *Aurora* contain not a word in relation to this riot. Local news was not much attended to by old school newspapers. The *United States Gazette*, speaking of the affair, says,—

"A mobbing spirit has not been characteristic of Philadelphia, and it is with regret that we publish that such a disgraceful riot has taken place."

We have spoken of the anti-slavery agitation that grew out of the Missouri contest. The meeting held in Philadelphia in November, this year, was of historic importance. The *Aurora* of November 29th published the following report of the meeting:

"On Tuesday afternoon a very numerous and respectable meeting was held in the State-House, in the same chamber in which the Declaration of Independence was declared. The object was to 'consider an application to Congress to resist the extension of human slavery in the new States that are about to be, or may be hereafter, added to this confederation.' Jared Ingersoll, Esq., was called to the chair, and Robert Ralston was appointed secretary.

"The business of the meeting was opened by Mr. Horace Binney in a very perspicuous and eloquent speech, in which he most ably and clearly developed the inhumanity, impolicy, and injustice of slavery generally, 'its pernicious tendency in human society, and its incompatibility with republican institutions, with the spirit of our Revolution and Constitution, and with divine and human laws.' He also clearly demonstrated the power of and obligation on Congress to prohibit the extension of slavery in new States. His argument on the constitutional part of the question was so explicit and perspicuous as to place that point beyond the possibility of controversion. After Mr. Binney had thus opened the business, he offered a series of resolutions, which were read and unanimously adopted."¹

¹ These resolutions were,—“The slavery of the human species being confessedly one of the greatest evils which exist in the United States,—palpably inconsistent with the principles upon which the independence of this nation was asserted and justified before God and the world, as well as at variance with the indestructible doctrines of universal liberty and right, upon which our Constitution is erected,—it unavoidably follows that personal bondage beyond those States which were originally parties to the confederation must be deprecated, and should be prevented by an exertion of the legislative power of Congress; therefore.

“Resolved, That in the opinion of this meeting it will be inconsistent in principle, unwise in policy, and ungenerous in power, to allow States, hereafter to be created members of the American Union, to establish or to create slavery within their jurisdiction, and that every lawful means should be employed to prevent so great a moral and political transgression.

“Resolved, That this meeting will adopt a memorial, to be signed by our fellow-citizens, imploring the Congress of the United States to exert all its constitutional power for the prevention of slavery in States hereafter to be admitted into the Union.

“Resolved, That a committee of correspondence, consisting of twenty-five, be appointed; that it be requested to circulate these proceedings throughout the State of Pennsylvania, and be further authorized to

The following gentlemen were appointed as a committee of correspondence, viz.: Jared Ingersoll, William Rawle, Horace Binney, Robert Ralston, Thomas Leiper, Robert Walsh, Jr., Caleb North, Roberts Vaux, Dr. George Logan, Gen. John Steel, Charles Chauncey, Peter S. Duponceau, William Sanson, Manuel Eyre, Joseph P. Norris, Moses Levy, James C. Fisher, Samuel Breck, James N. Barker, Benjamin R. Morgan, John Hallowell, John W. Thompson, George Latimer, John Connelly, and Timothy Paxson.

In November the people of color held a meeting to protest against the colonization scheme, James Forten being chairman.¹

The year 1820 was an important one in the history of the city. It was signalized by the return of the yellow fever in a much more malignant form than it had assumed during its brief visitation in the previous year, and although the Board of Health took measures to stop its progress by barricading the streets in which it had gained a foothold and ordering away the shipping from the vicinity, the malady increased, and so much alarm was created that some citizens removed from the city. The first case made its appearance on the 24th of July in Water Street, near Race. From that time until the 2d of August fourteen persons residing in the neighborhood were attacked, and ten died. Then there was a lull, and the temporary hospital in Schuylkill Front Street was closed. August 9th, eighteen cases were reported near Walnut Street wharf, and the hospital was reopened and put in charge of Dr. Burden. On the 19th of August the City Hospital at Bush Hill was opened and placed in the charge of Drs. Hewson and Chapman. September 7th, when the seventy-four-

gun frigate "North Carolina" was launched from the navy-yard, the Board of Health requested citizens not to assemble. Between August 19th and September 10th thirty-six patients, eleven of whom died, were received at the hospital. September 12th, leading merchants, Paul Beck, Marsden & Bunker, and others, published an address to citizens of other States, intended to disprove rumors in reference to the extent of the fever in Philadelphia. It said that the infection had been confined to a part of the city but rarely frequented by Western or Southern merchants; also that danger was then over, and strangers might visit the city with safety. In order to show the mild character of the disease, a table of deaths in Philadelphia and New York, between the 22d of July and September 12th, was published, by which it was shown that the deaths in this city in the period above were but seven hundred and fifty-seven, while in New York there were seven hundred and ninety-three. Philadelphia had then a larger population than New York. During the summer the negroes of Philadelphia were affected with a fatal disease peculiar to themselves. A letter was also published, signed by Samuel Archer, R. M. Whitney, and Charles Biddle, Jr., addressed to Dr. Samuel Jackson, president of the Board of Health, who replied that there was not a single case of yellow fever at that time in the city or liberties. On the 16th, John Tremper, Peter Shade, and others residing in Front Street, between Market and Arch, published a statement similar to that of the merchants' memorial.

On the 22d of September the Board of Health officially announced that they would grant the usual bills of health, and that the epidemic had ceased. The whole number of cases of fever between the 24th of July and the 30th of September was one hundred and three, and the deaths were sixty-seven. The loss occasioned by this epidemic was estimated as follows, in a paper prepared a month later:

"In 1820 there were three hundred and twenty-four families removed, consisting of two thousand and fifty-five persons. Moving, at eight dollars each, out and home, six thousand four hundred and eighty dollars. Two hundred and eighty-nine dwellings shut up, and one hundred and fifty-two stores, counting-houses, and shops; total, four hundred and forty-one, at two hundred and fifty dollars per annum, on an average of seventy-five days, twenty-two thousand nine hundred and sixty-eight dollars. One hundred and ninety-three persons supported by the Board of Health, averaging, at about forty days, one thousand six hundred and eleven dollars. Additional expenses of the Board of Health, say—Independent of their usual expenses—five thousand dollars. The mercantile loss of the most productive months in the year cannot be estimated at a less sum than five hundred thousand dollars. Total, five hundred and thirty-six thousand and fifty-nine dollars."

The attention of the public was directed to the subject of sanitary improvement of the dangerous parts of the city. Paul Beck, Jr., an eminent merchant, suggested a return to a certain extent to the original plan of William Penn. The right to all the wharves and buildings, from the Delaware to the east side of Front Street, inclusive, and between Dock and Vine Streets, was to be first purchased. All the

make such publications in support of the opinions of this meeting as it may deem proper."

A memorial afterwards adopted was,—

"Resolved, That the committee of correspondence be authorized to appoint committees to offer the memorial for signature to the citizens in their respective wards and districts.

"Resolved, That the ward and district committees supply any vacancies which may occur in their several circuits, and that they be requested to deliver the memorials, when signed, to the committee of correspondence, to be transmitted to Congress.

"Resolved, That the thanks of the meeting be given to the chairman for his dignified conduct in the chair.

"Resolved, That the thanks of the meeting be presented to Horace Binney, Esq., for his very eloquent and conclusive arguments before the meeting.

"Ordered, That the proceedings be published."

¹ Among the resolutions passed by the colored people were these,—

"Resolved, That how clamorous soever a few obscure and dissatisfied strangers among us may be in favor of being made Presidents, Governors, and principal men in Africa, there is but one sentiment among the respectable inhabitants of color in this city and county,—which is, that it meets their unanimous and decided disapprobation.

"Resolved, That we are determined to have neither lot nor portion in a plan which we only perceive to be intended to perpetuate slavery in the United States. And it is, moreover,

"Resolved, That the people of color of Philadelphia now enter and proclaim their most solemn protest against the proposition to send their people to Africa, and against every measure which may have a tendency to convey the idea that they give the project a single particle of countenance or encouragement."

buildings were to be torn down, and blocks of stores erected, each twenty feet front by one hundred feet deep, and two and a half stories high, between the east line of Front Street and the boundaries of the wharves. This would leave a wide space on each side of the stores, and would promote the circulation of air. A wall, with iron railings, it was suggested, should be erected on the east side of Front Street, and the view being uninterrupted from the stores on the west side, would render the property much more valuable. The improvement, it was estimated, could be effected for \$3,651,000. To recompense this outlay, the sale or rent of the stores was the first source of income. It was also expected that a privilege of levying wharfage upon foreign and domestic imports might also be obtained, and that the annual yield would amount to more than six per cent. But it was obvious that the levy of a wharfage-tax at this part of the city would drive business to that part of the city front below Dock Street, so the purchase of the property from Dock to Cedar [South] Street was suggested. A meeting of citizens in favor of this plan was held at the Coffee-House in December, and it was there agreed that the entire city front, from Vine to Cedar Street, would require the improvement. It was estimated that two million dollars would be amply sufficient to accomplish the work, as the proceeds of sales of the stores would supply the balance. Accordingly it was resolved to form a stock company, in shares of one hundred dollars each, and to apply to the Legislature for a charter. The scheme was, however, too extensive for general approbation, and the levy of a wharfage tax in that district would have driven the shipping business to Southwark and the Northern Liberties. The plan met with much opposition, and the matter was finally abandoned.¹

¹ After this epidemic a report was made to the Councils in reference to yellow-fever visitations previous to 1820. It was as follows:

"The committee appointed to estimate as far as practicable the losses which have been sustained at different periods by the prevalence of malignant fever in the city of Philadelphia, report that, having entered on the subject submitted to them, they have found it encumbered with difficulties of no ordinary magnitude. The deficiency of all the necessary data precludes them from presenting a calculation in all its details accurate, and founded on established principles. The Committee of Health for the year 1793 have left, however, among other documents which they collected during that period of arduous duties, a very complete census of the city and liberties. The document has furnished your committee with the means of estimating with tolerable correctness the losses sustained by our city in that memorable and fatal epidemic. In those particulars in which it has been necessary to resort to hypothetical positions we have endeavored to approach the truth, and have sought carefully to avoid any exaggeration. We have wished to err rather in the lowness of the estimate than otherwise. The particular items of the calculation will be found in the annexed schedule, from which it appears that the whole loss suffered by the city in that year may be fairly taken at \$1,751,449. In the year 1797, although the pestilence was not so general as in 1793, yet nearly, if not quite, as many persons abandoned the city, and the stagnation of business was equally great. And in 1798, the disease assuming a still more malignant and fatal character than in 1793, a far greater proportion of the citizens fled from their homes. Dr. Currie, in his account of the fever of 1798, states that on the 9th of October no more than 1654 houses remained opened from Vine to South Streets, and from the Delaware to Twelfth Street. By some it was conjectured that 40,000 persons had retired to the country,

A meeting was held in January at the City Hall, and money raised for the relief of sufferers from a great fire which took place in Savannah, January 11th, when four hundred and sixty buildings were burned, and a loss of four millions of dollars was caused. Chief Justice Tilghman was chairman, and Mayor James N. Barker was secretary. Rev. Abner Kneeland preached at the First Independent Church of Christ, in Lombard Street (Universalist), for the benefit of the fund. Another meeting in July raised money for the sufferers at a fire in Troy, N. Y.

In February and March great alarm prevailed in consequence of supposed attempts to "fire the city," and the mayor addressed the Councils. A resolution offering two hundred dollars reward for the detection of the incendiaries was increased to five hundred dollars, and afterwards to one thousand dollars. An additional police force was also authorized. This excitement was increased by the entire destruction of the Chestnut Street Theatre, on Sunday evening, April 2d. The origin of the conflagration has never been satisfactorily ascertained. It was attributed to an incendiary, but Mr. Wood, one of the managers of the theatre, has since, in his published autobiography, ascribed it to a chance spark which may have fallen from one of the torches used by a fire company

and it was the general opinion that full three-fourths or five-sixths of the inhabitants had deserted their houses. It cannot, therefore, be considered far from the truth to estimate the losses of each of those years as equal to those of 1793, which would give for three years the sum of \$5,254,347. Your committee have not been able to obtain any information that would enable them to enter into a detailed estimate of the losses sustained in years when the disease only partially prevailed. But in 1802 and in 1805 some thousands of persons left the city, and commerce and most other business were completely arrested. On a mere conjecture, the losses occasioned by the disease might be set down as equal in the two years to the losses of 1793, which will give us a total loss for five epidemics of \$7,005,796. The committee have been furnished with materials which have enabled them to calculate the loss produced by the appearance of the disease the last summer and autumn with some degree of accuracy. The result is presented in the annexed schedule. An opinion may be formed of the immense loss that necessarily attends the prevalence of pestilential fever, even to a small extent, by the facts disclosed in the report of the Board of Health of New York on the fever of 1805. It there appears that only 645 cases of the disease occurred, and 302 deaths; and that 26,996 persons removed from the city out of a population of 75,770. It is not considered requisite to dwell on the enormous losses that we endeavor to show must have been sustained by our city from the different epidemics that have laid it waste. But it is well to bear in mind that the aggregate loss of the epidemics of 1793, 1797, 1798, 1802, and 1805 occurred in the short space of fifteen months,—an average of three months for each year, or \$467,053 per month. No exertions should be esteemed too great to guard against the occurrence of similar evils. There is one circumstance, however, which we cannot forbear to press on your attention. The table of deaths in different streets in 1793, in the accompanying schedule, exhibits clearly that the disease does not spread in the more cleanly and well-ventilated parts of the city. This is now the unanimous opinion of medical men, founded on experience and observation, however different may be their theoretical doctrines. From the unquestionable nature of this fact it is demonstrated that it is not a matter of ingenious theory or conjecture that, whether malignant fever be imported, or is of domestic origin, its ravages can be prevented. It can be rendered perfectly innocuous by removing whatever vitiates the air or renders it confined.

"PAUL BECK, JR.
"SAMUEL JACKSON."

located in the building on the Carpenter Street front. Nothing was saved but the green-room mirror, a model of a ship, and the prompter's clock. The scenery, a most valuable wardrobe, a choice and rare musical and theatrical library, and great stores of theatrical property, were destroyed, and the loss was estimated at more than one hundred thousand dollars.

Early in February a meeting was held at the room of the Carpenters' Company, on the east side of Carpenters' Court, to establish a library for the use of apprentices, and Horace Binney was president. The library was opened at Carpenters' Hall, No. 100 Chestnut Street, in May, the time for giving out books being Saturday afternoon. The preamble to the original charter, obtained in April, 1821, declared that it would "promote orderly and virtuous habits, diffuse knowledge and the desire for knowledge, improve the scientific skill of our mechanics and manufacturers, and increase the benefits of the system of general education." The library was in 1821 removed to old Carpenters' Hall, and kept there until September, 1828, when it was removed to a building on the north side of Carpenter (now Jayne) Street, east of Seventh Street. Subsequently it was stored in the old United States Mint building, Seventh Street, above Sugar Alley, now called Filbert Street. The Free Quaker Society, in 1841, leased the second story of their meeting-house, Fifth and Arch Streets, to the library company, the rent to be fifty dollars a year, which was returned as a gift. The library was opened here July 17, 1841. Some years afterward a library for girls was also opened, and the use of the whole building was obtained. A reading-room was also established.

We have spoken of efforts to aid the deaf and dumb asylum in Hartford. In February or March of this year David G. Seixas came to Philadelphia and established a school for the instruction of the deaf and dumb "on the south side of Market Street, the third brick house west of Schuylkill Seventh Street." A meeting was held April 12th, at the hall of the American Philosophical Society, for the purpose of establishing an asylum. Seixas was present, and it was shown that for some months past he had conducted a school, and had instructed ten or twelve deaf-mute children without pecuniary recompense. The persons present at this meeting resolved to establish a school under the auspices of a society entitled "The Pennsylvania Asylum for the Deaf and Dumb." An exhibition was given at Washington Hall on the 24th of May, and William Rawle delivered an address. Measures were taken to enlarge the institution, and by the end of the year Seixas had accommodations for sixty or seventy pupils.

The Windmill Island bridge project was steadily fought by the Councils in the Legislature, and several meetings were held to express the public feeling. One in January in Southwark, Benjamin Martin chairman, and Samuel Sparks secretary, was in favor of the bridge. Another meeting was held at the

county court-house in favor of the bridge a few days afterwards. Timothy Matlack was president. The Commissioners of the Northern Liberties adopted resolutions protesting against the passage of the bridge law. On the other hand, a meeting of citizens a few days afterward favored a bridge, but not at Windmill Island. These parties passed resolutions in favor of "a bridge across the Delaware, from shore to shore, within two miles of the iron-foundry of the city." City Councils sent a committee to Harrisburg in February to oppose the passage of the bridge law. The Legislature passed the bill to incorporate "The President, Directors, and Company of the Pennsylvania and New Jersey Communication Company." The commissioners were Pierce Butler, Robert Waln, William Meredith, Andrew Bayard, Charles Penrose, Edward Pennington, Edward Sharp, Caleb Newbold, Isaac Mickle, Samuel L. Howell, Samuel Harris, and Henry Chew. The bridge was to commence at New Street, Camden, about three hundred feet south of Wild's Ferry, and thence to extend direct to the island or sand-bar in the river Delaware opposite the city. If the Councils of the city, with the Commissioners of the Northern Liberties and Southwark, and the board of wardens of the port should represent that the bridge "has created or is creating a bar or bars in said river injurious to the navigation thereof, or otherwise injurious to the port of Philadelphia," the Governor might appoint commissioners to make report, which, if unfavorable, would justify him in ordering the bridge to be taken down. It was to be thirty-six feet wide and twelve feet above the water without a draw, and was to be built within six years. The company was given authority to establish a ferry between the west of the island and the city. The proviso placed in the bill operated against its success, as the risk of having the bridge abated as a nuisance, kept prudent persons from subscribing to the stock.

Some of the minor events of the year are worth record. Col. Biddle's regiment was reviewed by Maj.-Gen. Scott on the 22d of February, and Joseph P. Norris afterwards delivered a patriotic address. In February, also, the "Musical Fund" Society was formed, "to relieve distressed musicians and their families." March 6th, the Kensington District of the Northern Liberties was incorporated.¹ March 18th, took place

¹ The boundaries of the district were,—“Beginning at the mouth of Cohocksink Creek and the line of the incorporated district of the Northern Liberties; thence northward along the river Delaware to the south line of the land late of Isaac Norris, deceased, and now of J. P. Norris; thence along the same line, the several courses thereof, across the Frankford road to the Germantown road; thence down the eastwardly side of the said Germantown road to the middle of Sixth Street continued; thence along the middle of the same to the line of the incorporated district of the Northern Liberties; thence along the line of the same to the place of beginning.” There were to be fifteen commissioners, who, after the expiration of three years, were to be elected, five persons annually, for three years. Upon this board the Legislature conferred all the public landings within the district, “the market-houses lately erected on Beach and Maiden Streets, in the said district, and the lots thereunto belonging.”

a notable "butchers' procession." There were sixty carts in the line, forty-four of which carried beef, and the others mutton, pork, and goat flesh. The drivers were attired in white frocks, with hats ornamented with ribbons. The horses were adorned with portraits of Washington and Franklin. Each cart bore a white flag with the word "Pennsylvania" printed on it. A number of butchers accompanied the carts upon horseback. There was a boat on wheels, the "Lewis Clapier," in which were persons who heaved the lead and executed nautical manœuvres. Books of subscription to the stock of the Delaware and Raritan Canal Company were opened at the Merchants' Coffee-House on the 24th of April, and eight thousand shares of stock were offered at one hundred dollars each. In June a dinner was given to Henry Baldwin, a member of Congress from Pennsylvania, by the "friends of national industry," at the Peacock Tavern. June 20th, an attempt to rob the Philadelphia Bank by digging in from a sewer was discovered, but the parties engaged in the enterprise escaped. In October the "Union Adult Society" opened four free schools,—two for whites, and two for negroes.

Next to the deadly assaults of yellow fever the event of the year was the insurrection which broke out, March 27th, in the Walnut Street prison. This was one of the most remarkable outbreaks on record in the United States, and grew partly out of the difficulty at that prison the previous year. Powell, the colored man who had then interfered for the protection of Keeper Armstrong, was an object of much dislike to the other prisoners. March 27th, Powell had a quarrel with another convict named Hedgeman, in which the latter was badly stabbed. The other convicts rushed to the spot, and with the cry "Murder the snitch!" some forty of them, armed with sand-spades, made an attack on him. Powell fought bravely, but fell back until he reached the blacksmith-shop, seized a bar of iron, and stood at bay. Bars of iron, stones, tools, and other missiles were hurled at him. Several who approached too near were knocked down, but he was at length dislodged from his shelter by McIlhenny and others, who obtained access to the shop by a rear window. Retreating from his shelter, Powell, reaching the jail-yard, was met by a convict, who struck him with an iron bar, crashing through skull and brain, and McIlhenny stabbed him with a clasp-knife. The inspectors met shortly afterward, and resolved that the ring-leaders should be put in cells to await trial. The next morning, accompanied by keepers, the inspectors went to the door of the room in which McIlhenny and the more desperate of the prisoners were confined. McIlhenny came out, seized an iron bar from the hands of a keeper, and attacked inspectors and keepers, being reinforced by some forty convicts, who rushed out of the room in which they had been confined. The keepers and inspectors fled, and the convicts, black and white, proceeded to the doors of the various prison-rooms, and

tore them open. In a short time two hundred prisoners were added to the wild force, and the apartments of the women convicts were also forced. The prisoners repaired to the yard and made energetic efforts to escape. An alarm spread through the city. Citizens assembled in the neighborhood of the prison, and mounted the sheds and buildings of Carter's livery-stable, adjoining the eastern wall of the prison. They were armed, and John Runner, a mulatto prisoner, was killed by shots fired from that direction. A number of the prisoners obtained a heavy plank, and used it to batter down a gate leading to Sixth Street. Some muskets were fired at this party, and three were wounded in the limbs, after which they dispersed. Foiled in the attempt to escape, the prisoners roamed about the yard in squads and gangs, shouting, hallooing, and seeking means of escape. Meanwhile citizen soldiers had assembled. A company of marines was brought from the navy-yard. Caleb North, the sheriff, put this force under the command of Col. Biddle, who marched his men into the prison-yard with loaded muskets and bayonets fixed. Col. Biddle mounted a marble block, and said, "I give you three minutes to march to your rooms. Any hesitation will bring upon you a volley from these muskets." This intimation was sufficient. Forty-five of the most prominent prisoners were arrested and put in their cells. For three or four nights fifty armed men patrolled the building, when, order being restored, they were discharged. Thirteen or fourteen of the convicts who took part in the murder of Powell were tried, but the prosecution failed.

There were several more balloon ascensions attempted. One by Monsieur Guille, who had failed at Vauxhall in 1819. July 10th, at Camden, he made a trial, but his balloon escaped before he could get in the car. In October he made another trial, and landed at Pennington, N. J. November 23d he again ascended, sent a monkey down in the parachute, and landed himself at Mantua village.

August 19th, the cadets from the United States Military Academy at West Point, under their regular officers, arrived in the city. They were received by the volunteers, marched to Mantua village, and encamped. They were two hundred in number, and had marched from the Academy across New York, New Jersey, and Pennsylvania. They were under the command of William J. Worth, afterward a major-general. The uniform of the cadets was very neat. The coat was of gray, with no facing, and little trimming; pantaloons of white, and cap of leather, surmounted by a tall narrow black feather; cartouch and bayonet belts of white. August 21st, the cadets drilled at their encampment in the presence of thousands, after which the citizens gave them a dinner at the Mantua Hotel. The mayor presided, assisted by Gen. Cadwalader, Charles Ingersoll, and Richard Bache. The mayor and Gen. Cadwalader made speeches of welcome,

which were responded to by Maj. Worth and Cadet Holland. The next morning they struck tents, and marched back to West Point over the same roads.

Local politics in 1820 hinged entirely on the gubernatorial contest. The new-school Democrats gave Governor Findlay a unanimous nomination; Joseph Hiester, his opponent, was supported by old-school Democrats and by the Federalists. The patronage of the executive was very considerable under the Constitution of 1790, and it was useless for any man, no matter how able a politician or honest and wise a leader, to hope to use this patronage without rousing jealousy, party faction, private hatred, and public assaults. Governor Findlay was defeated, and at the general elections of the following year the Democrats gained entire ascendancy in the Legislature.

The last important event of the year was a Tariff Convention, composed of delegates from various parts of the United States opposed to high-tariff rates, which met at Washington Hall in November. William Bayard was elected president. They adopted resolutions in favor of a low tariff and "the encouragement of commerce, which would increase importation but not encourage smuggling." The merchants of the city gave them a dinner November 4th, Thomas M. Willing acting as president.

The year 1821 has generally been considered by historians of national affairs as an epoch-marking period, a dividing line between the old landmarks and the new. It witnessed the reannexation of Florida and its claims acknowledged to the Pacific; it saw the effort to part out those new domains between South and North,—freedom and slavery. The party tests and political doctrines of the generation that fought the war of 1812 were already of the past, were dead and forgotten issues; the quarrels of the Duanees and Binnses were of no consequence to mortal man any longer. Questions of finance, internal improvement, and tariff demanded a new sort of political training. Old Mathew Carey's economic doctrines were being studied; the works of Franklin and Hamilton were read by young American statesmen. But nearer and more portentous than any or all other issues, the slave interest, crystallized into a unity of purpose, and led by men of absolute genius, began to battle for the control of the national policy. Calhoun and nullification were at hand; the guns of Sumter were but forty years below the time-horizon. From 1821, the close of Monroe's first term of office, the era of American politics that closed with the end of the late war may properly be said to date its beginning.

With the year 1821 there were many subjects of importance brought before the Legislature of Pennsylvania. The subject of city taxation was already becoming more interesting by reason of the increase of the burden of contributions to the public support, which was growing heavier every year. A meeting

was held in Dock Ward on the 18th of January, at which a method of relief to tax-payers was proposed, which was in advance of the times, indeed, was more than thirty years ahead of the popular favor. John Leamy was chairman, and Robert A. Caldcleugh was secretary. Resolutions were adopted declaring that the visits of tax-collectors were inconvenient, ill-timed, and caused irritation. It was declared that the opening of a central tax-collection office for the reception of the taxes of citizens who would pay voluntarily, with an allowance and deduction to those who pay in proportion to the time of payment and the amount due, would be a measure of wisdom. A committee was appointed, consisting of the president and secretary, with Messrs. Levi Garrett, John McMullin, Henry Tumbleston, Thomas Mitchell, William Abbott, and Thomas Dunlap, to draft a memorial to the Councils in favor of this change. As an illustration of the value of the plan, it was stated that the collection of the United States direct taxes in Philadelphia in the years 1815 and 1816 had been made in that way, and without a single loss to the public. A meeting was held in Walnut Ward in the succeeding month favoring the same plan. But the proposition was entirely too soon. The influence of the tax-collectors was very powerful in city politics, and became much stronger in after-years. The increase of pauperism was one of the causes which added to the burdens of taxation, and it was expected that something practicable would be elicited in regard to the prevention of that evil in the report of the commission on the causes of pauperism appointed by the Legislature in the preceding year. That report was sent to the Assembly in due time, and was of considerable length. It was successfully shown that pauperism had increased. But the material duty of the committee, which was to show *why* it had increased and what means should be taken to reduce the evil, was not discharged.

The consumption of coal in the city was by this time becoming more extensive. In this year the Lehigh Navigation and Coal Company sent three hundred and sixty-five tons of coal to Philadelphia.

March 20th, the Legislature passed an act to provide for the erection of a State penitentiary within the city and county of Philadelphia. The commissioners appointed to erect it were Thomas Wistar, Dr. Samuel P. Griffiths, Peter Meircken, George N. Baker, Thomas Bradford, John Bacon, Caleb Carmalt, Samuel R. Wood, Thomas Sparks, James Thackara, and Daniel H. Miller. They were given authority to select a site and to make contracts for the building, which was to be on the plan of the penitentiary at Pittsburgh. They were also to sell the Arch Street prison to the Commissioners of the County of Philadelphia if they would pay fifty thousand dollars for it. These commissioners advertised in May for plans for the building, promising to give one hundred dollars for the design of a prison of two hundred and

fifty cells. In the early part of the year they selected the Cherry Hill farm property, on the north side of Francis Lane (since Coates Street and Fairmount Avenue), west of the Ridge road. Improvements since made have placed this lot between Corinthian Avenue and Twenty-first Street. John Haviland was selected as the architect.

One of the most important reforms accomplished in this year was the breaking up of the auction monopoly, which had prohibited auction sales except by a few licensed auctioneers, appointed by the Governor. This office had become very valuable, and was conferred for political reasons. If not a source of actual corruption, it had subjected the administration of Governor Findlay to much suspicion. By the act of April 2d the business was thrown open without limitation. It was then declared that a first-class license to sell within two miles of the State-House should be given to any one who should apply for it, give proper surety, and pay a license fee of two thousand dollars in advance. Licenses to sell horses, cattle, and carriages, it was directed should be furnished for one hundred dollars per annum.

Political affairs in the early part of the year were quiet. The defeat of Findlay was not accompanied by sufficiently important results in the Legislature to furnish Governor Hiester with a working majority. Findlay's friends were very active in pushing him for United States senator. At the joint meeting of the Legislature in January three ballots were taken, but no candidate could obtain a majority over all others. The convention therefore adjourned *sine die*. In April Governor Hiester arrived in Philadelphia, and put up at the Rotterdam Hotel, in Fourth Street above Race. A week afterward ex-Governor Findlay was in the city, and his admirers gave him a complimentary dinner at the house of William Stewart, No. 46 North Sixth Street.

The local election contests of 1821 were about as lively as usual. An "Administration ticket," supported by Federal Independents (old-school Democrats), was nominated, having for senators Stephen Duncan and William Wurts, in place of William McMullin, resigned; county commissioner, Robert Brooke; auditor, Samuel Patton. In the city, what were called the Federal Republican nominations for Assembly were William Lehman, James M. Broom, John Edwards, Jr., George Emlen, and Joseph Robertson. In the county the Independent Republicans (old-school)—Hiester men—met at the house of Bartholomew Graves, in Spring Garden, and nominated for the Assembly Lynford Lardner, Robert Carr, Algernon S. Logan, Tracy Taylor, Charles Levering, and John Thompson. The new-school (late Findlay) Democrats nominated John Conrad, Jacob Holgate, Jacob Shearer, Nathan Jones, and Joel B. Sutherland. At the election the Administration party carried most of the city and county, and elected Senators Duncan and Wurts, County Commissioner Brooke, and

Auditor Patton, also getting control of the Legislature.

Among other interesting events of 1821 was the incorporation of the Apprentices' Library, also the establishing of the Philadelphia Law Library, under the auspices of "The Society for the Promotion of Legal Knowledge and Forensic Eloquence." This year occurred the death of Elias Boudinot, in the eighty-second year of his age. He was born in Philadelphia in 1740, of Huguenot ancestors, and was eminent in law, politics, and literature. At the time of his death he was president of the American Bible Society.

The year 1822 was marked by the usual political conflicts. Indeed, the study of the past is enough to convince any one that heated political contests are not a modern invention; that rancor, charges and counter-charges, "mud-throwing and wire-pulling," were not unfamiliar sixty or seventy years ago. For more than twenty-five covered by this narrative we have seen the annual elections, city, county, State, or national, conducted with an energy and plain-speaking unsurpassed. The disposition to attack all in power, and to call them sharply to account for their doings, had long been exercised almost without limit or discretion. Governor Hiester, in 1822, called the attention of the Legislature of Pennsylvania to the chief causes of this. "Permit me to suggest," he said, "whether it would not be possible to devise some method of reducing the enormous power and patronage of the Governor, . . . and whether the annual sessions of the Legislature might not be shortened?" Early in 1822 ex-Governor Findlay was elected to the Senate of the United States for the full term of six years from the preceding 4th of March. Two of his brothers were in the House of Representatives at the same time.

Philadelphia politics were divided about as usual. The Federalists nominated on the county ticket for sheriff, William Milnor; county commissioner, John Simmons; auditors, John Roberts and Isaac Boileau; senator for the county, Mr. Jones; senator for the city, James Robertson. The Federal nominations for Congress were: First District, Samuel Breck; Second, Joseph Hemphill; Third, Thomas Forrest. The Democrats of the old school, under the title of the "State and Administration ticket," nominated for senator in the county, Joshua Jones; Assembly, William Wagner, Joseph Parker, Tracy Taylor, Lynford Lardner, Robert Carr, George Rees, and John Johnson. They supported for Congress in the Third District Thomas Forrest, the Federal candidate. The Federal nominations for the Assembly were William Lehman, Dr. George Gillespie, Henry J. Williams, Charles Roberts, of Arch Street, and George M. Lynn. The new-school Democrats nominated for Congress in the First District Joel B. Sutherland; in the Second District, Adam Seybert; and in the Third District, Daniel H. Miller. The new-school candi-

date for county commissioner was Jeremiah Peirsol; senator in the county, Daniel Groves; senator in the city, Joseph Barnes; sheriff, Jacob G. Tryon; auditors, John C. Tillinghast and George A. Baker; County Assembly, Jacob Holgate, Jacob Shearer, John Conrad, James S. Huber, George N. Baker, Nathan Jones, and Joel B. Sutherland. The latter also ran upon the Congressional ticket in the First District, thus holding on to two chances. There was strong opposition to Sutherland in the First District, upon the ground that he was responsible for that part of the Congressional apportionment bill which divided Philadelphia and Delaware County into districts, and had thrown his influence towards carving out the First District in such a manner as would make an opportunity for himself. Sutherland was also charged with being an opponent of the Chesapeake and Delaware Canal. The principal objection to Breck was that he had voted for a bill taxing the retailers. The *Union* said, "Mr. Sutherland is a young man, noisy and vapory. His age alone is a sufficient objection to him as a candidate for Congress. We have no predilection for boy legislators. 'Woe to that nation whose prince is a child!'" When the election was held Sutherland was defeated for Congress, but was re-elected to the Legislature on the new-school ticket. Breck and Hemphill, Federalists, carried respectively the First and Second Districts for Congress; and Daniel H. Miller, new-school Democrat, succeeded in the Third District. Tryon was elected sheriff; Tillinghast and Baker, Democrats, auditors; and Peirsol, Democrat, county commissioner. Groves was sent to the Senate from the county. The new-school ticket was elected in the latter, while in the city the Federalists had their usual fortune,—carrying senators, Assembly, and City Councils.

During the year but few events of permanent interest occurred. Manufactures increased, city improvements extended into the suburbs, the public squares preserved a better appearance; the sentiment in favor of free schools for rich and poor alike, not merely for the children of the indigent, increased steadily. On the 24th of January there occurred a fire which destroyed the Orphans' Asylum, and in which twenty-three children perished. The Mercantile Library was formed, and the College of Pharmacy and also the Museum were incorporated. It is interesting to note that the American edition of Rees' *Cyclopedia*, in forty-one volumes, with six additional volumes of plates, was completed this year in Philadelphia. It contained one hundred and forty-seven engravings, and was, up to that time, the most costly publication attempted in the United States.

The Fairmount Water-Works were fairly completed by the end of this year, the dam being finished and the water-wheels in order. The substitution of iron pipes for wooden pipes was not entered upon until 1818; and at the end of 1822 there were still thirty-two miles of wooden water-pipes in use in the city.

The year 1823 was marked by the usual political campaign, this time chiefly for Governor. Hiester had long before announced that he was not a candidate, and refused to allow his name to be used. In January a legislative caucus was held at Harrisburg, which recommended a nominating convention at the same place, March 4th, to choose a Presidential candidate and to make up an electoral ticket. This convention was held, and it not only arranged an electoral ticket, but went into nomination for Governor, George Bryan and Samuel D. Ingham being prominent candidates. John Andrew Shulze was a third candidate. After several ballots, Ingham and Bryan leading the votes, the convention adjourned. Before it assembled on the second day an arrangement had apparently been made between the friends of Ingham and Shulze, which resulted in the abandonment of Ingham and the union of his friends with those of Shulze, who was nominated by a vote of ninety-six to thirty-five for Bryan. This result caused surprise and dissatisfaction, Shulze being little known, though certainly a man of much ability.

The Federalists met at Lancaster, James Buchanan presiding, and nominated Andrew Gregg, of Centre County, an old Democrat. A number of discontented Democrats sent delegates to this convention, and perhaps influenced the nomination. Other considerations beside those of State politics were involved in the nomination for Governor. The Presidential question intervened. Calhoun and Crawford were strong candidates against Gen. Jackson, and the nomination of Shulze was supposed to be made in the Calhoun and Crawford interest. A meeting of Democrats was called at the county court-house, June 12th, in reference to the nominations, of which Thomas Leiper was president and Josiah Randall secretary. Mr. Wurts made a motion to approve the nomination of Shulze; but confusion ensued, and the meeting adjourned without taking any action. Shortly afterwards another meeting was called of the supporters of Shulze. The *American Sentinel*, supporting Shulze, said that seven hundred or eight hundred persons were present; but the *United States Gazette* said there were not more than three hundred and fifty. The Gregg party next day met in the State-House yard. The *United States Gazette* said that two thousand persons were present. Col. Thomas Forrest was president, and Mr. Wurts offered a series of resolutions. The journals of the city which were attached to the new-school party supported Shulze, but were on most unfriendly terms with each other. Binns said of the *Franklin Gazette*, "It is doubtful whether that paper be more conspicuous for folly or dictation." The *Franklin Gazette* said of Binns, "The Democratic party would much rather be in a minority than in a majority that would elect a Governor over which the alderman had any influence." The *Columbian Observer* remarked, "John Binns is a notorious rascal, and the *Franklin Gazette* not much better." Binns

was indignant at the *United States Gazette* for publishing these extracts. When the time came for local nominations the Gregg party in the county nominated for the Legislature George Gorgas, William Binder, Jesse Y. Castor, Samuel F. Moore, George De Benneville, Evan W. Thomas, Jr., and John Durney. The new-school (Shulze) Democrats nominated in the county for the Legislature, Jacob Holgate, Jacob Shearer, George N. Baker, James A. Mahany, Joseph B. Norbury, Joel B. Sutherland, and Samuel Neill. The Federal ticket for the Assembly was: For senator, George Emlen; Assembly, William Lehman, John Keating, Jr., John M. Read, Charles Graff, Henry J. Williams, and Henry Wikoff. Jacob G. Tryon, the sheriff, whose term had not expired, died during the early part of the year, and nominations were made for that office. The Federalists and Gregg party nominated Robert Brooke; the Shulze Democrats, John Douglass. For coroner, John Dennis was nominated in the Shulze interest, and George Ritter by the friends of Gregg. For county commissioner, John Markland was nominated by the Gregg party and Conrad Wile by the advocates of Shulze. For auditor, Stacy Potts (Gregg); Benjamin S. Bonsall (Shulze). The result upon the Gubernatorial ticket was that Gregg had in city and county 7757 votes and Shulze 6654. This majority ought to have carried through all the candidates on the Gregg ticket, but Douglass for sheriff and Dennis for coroner, by personal popularity, overcame it, and polled good majorities besides. John Markland, an old Revolutionary officer, was elected county commissioner, and Stacy Potts auditor, beating the Shulze candidates. The Federal tickets carried the city, and the new-school (Shulze) Democrats, as usual, elected their assemblymen. In the State, Gregg was badly beaten. Shulze received a very large German vote, while Gregg lost a good many Federalist votes on account of his former political career as a Democrat.

The settlement of the State canvass did not end the political agitation of the year. The Presidential question to be determined in 1824 was of great interest. It was said that the interests of the Shulze party were in favor of Crawford or Calhoun, and that Ingham was bitterly opposed to Gen. Jackson. The opposition to caucus nominations by legislative bodies which was developed in Pennsylvania during the State canvass was now turned against the Congressional caucus system of nominating candidates for President of the United States. The friends of Jackson were opposed to a Congressional caucus, it being evident that the majority in Congress was favorable either to Calhoun or to Crawford. A meeting of Democrats was held December 20th at the county court-house, Chandler Price, chairman, James Thackara and Henry Horn, secretaries. Col. John D. Goodwin offered resolutions denouncing the caucus and in favor of the nomination of Gen. Jackson; also order-

ing the appointment of a committee to go to a convention at Huntingdon, to form a Jackson electoral ticket for the State. John Binns was at this meeting with resolutions in favor of the Congressional caucus, which were negated by a large majority. The convention appointed as delegates to Huntingdon, Thomas Leiper, Henry Toland, Washington Jackson, John N. Taylor, Stephen Simpson, William Duncan, Nathan Jones, of Blockley, Chandler Price, John D. Goodwin, Dr. George W. Riter, William Moulder, James Ronaldson, and Isaac Worrell.

March 31st the Legislature passed an act to incorporate a company to construct a railroad from Philadelphia to Columbia, in Lancaster County. The preamble said,—

“Whereas, It hath been represented by John Stevens, in his memorial to the Legislature, that a railroad from Philadelphia to Columbia would greatly facilitate the transportation between those two places,—suggesting, also, that he hath made important improvements in the construction of railways,—and praying that, in order to carry such beneficial purposes into effect, himself and associates may be incorporated.”

It was ordered that John Connelly, Michael Baker, of Arch Street, Horace Binney, Stephen Girard, Samuel Humphreys, of Philadelphia, Emmor Bradley, of Chester County, Amos Ellmaker, of Lancaster City, and John Barbour and William Wright, of Columbia, should be constituted the president and directors of a company to be called “The President, Directors, and Company of the Pennsylvania Railroad Company.” Connelly was named as president until an election was held under the provisions of the act. The law granted a term of fifty years for the existence of the company, with power to lay out a railroad from Philadelphia to Columbia not more than forty feet wide,—to be located so as to do the least damage to private property. The *United States Gazette* said, in May, that “the Pennsylvania Iron Railroad is to commence at Hamiltonville.” The shares were to be six thousand, of one hundred dollars each; and the road was to be laid out under the superintendence of John Stevens. So little was this plan understood that a correspondent of the *Philadelphia Gazette*, in April, inquired of the editor, “What is a railroad? What does this plan mean?” And the editor himself wisely responded that it was probable some of his correspondents “might be able to explain.” In the latter end of the month the same paper published an article on railroads in England. Among other things it was said that a horse could draw from twenty to fifty tons. No allusion was made to steam. It could not be in utter ignorance of the idea of railroads that these comments were made, after the discussions caused by Oliver Evans’ plans. The object probably was to discover the plan of Stevens, which was claimed to be original. The Senate passed, during this session, a bill to incorporate a company to build a railroad from Harrisburg to Pittsburgh, but it failed in the other House.

May 22d, the corner-stone of the “New Penitentiary” was laid at Philadelphia. This building was in-

tended for solitary confinement of prisoners, and the great outbreak, of which we have given an account, doubtless led to the plan. There were to be cells secure and separate. It was a year of severe drought, and forest fires were unusually abundant. The great fires in Maine during the summer and the nearly total destruction of Wiscasset, Alna, and other villages caused widespread sympathy, and a public meeting was held in Philadelphia, at which a large sum was raised for the sufferers.

During this year the Schuylkill water was introduced into three thousand nine hundred and fifty-four private houses and one hundred and eighty-five manufactories in Philadelphia; four hundred and one private baths were supplied with it.

An event of national importance was the signing, March 13, 1824, of the convention between Great Britain and the United States for suppressing the slave-trade. April 5th a treaty was signed at St. Petersburg with Russia relating to the boundaries of what was then Russian America. Gen. Lafayette, under invitation from Congress, came to America, arriving in New York August 13th, and his triumphal tour through the prosperous and united land that he had aided to make free is one of the pleasantest episodes of our history. Said Edward Everett, the eloquent and polished orator, addressing Lafayette, August 25th, at Harvard University: "With the present year will be completed the first half-century . . . from the commencement of our Revolutionary war." Lafayette "has returned in his age to receive the gratitude of the nation to which he devoted his youth. Enjoy a triumph such as never conqueror nor monarch enjoyed, the assurance that throughout America there is not a bosom which does not beat with joy and gratitude at the sound of your name." Of Lafayette's reception in Philadelphia we shall have more to say hereafter.

During 1824 national and local issues were closely intertwined in politics, since it was the Presidential year, and the Democratic party was rent by the fierce struggle between Jackson, Crawford, Adams, and Clay. The Federalists made no nomination, and the overwhelming strength of the Democratic party, together with the want of systematic nominations, rendered the canvass uncertain, because there were no means of ascertaining the relative strength of each candidate, and the fight among them became more bitter. Controversy ensued as to the manner in which the Democratic nominations should be made. Heretofore a Congressional caucus settled upon the candidates for President and Vice-President on behalf of the Democratic party; but the spirit of opposition to caucus decrees which had commenced in Pennsylvania during the gubernatorial canvass of 1817, and which had been intensified in later years, had gradually spread over the Union, and feelings of opposition to that method were particularly strong among those who favored Gen. Jackson. From an examination of the roll of Congress it was thought that a

caucus of the members of that body would favor the nomination of William H. Crawford. The friends of Gen. Jackson, of Adams, and of Clay, therefore, opposed a caucus, and argued against it long before the conference was held. Governor Hiester, of Pennsylvania, in his message, suggested some amendment of the law relating to Presidential electors. He recommended that the law of the commonwealth relating to the meeting of electors for President and Vice-President of the United States should be changed so as to designate some other place for the meeting of the electors than that in which the Legislature was in session, because the electors, if they met at the seat of government, would be under the influence of the Legislature, and could not freely exercise their judgment. A committee was appointed by the House of Representatives to consider this recommendation, and it undertook to defend the legislative right to govern political nominations by consultation. When this report was presented, Gen. Ogle, of the House, said that it had "a squinting toward a Congressional caucus, where, it was supposed, William H. Crawford would be nominated." The majority of the House of Representatives wisely refused to become committed in relation to this question. A resolution to strike out those portions of the report of the committee which related to the rights and wrongs of the caucus question was adopted by a vote of sixty-two to twenty-six, and a resolution against changing the place of meeting of the Presidential electors was then carried.

The Jackson Democrats of Philadelphia met in February, and appointed delegates to the Harrisburg Convention. This convention assembled on the 4th of March, and Jacob Holgate was chairman. Resolutions in favor of Jackson were carried with but one dissenting voice. For Vice-President, John C. Calhoun received 87 votes, Albert Gallatin received 10 votes, Henry Clay received 10 votes, William Findlay received 8 votes, John Todd received 8 votes, and Daniel Montgomery received 1 vote. At the delegate elections in August the Jackson ticket swept the city and county, carrying every ward. The Crawford party held a convention at Harrisburg in August, in which ten counties were represented. Philadelphia City sent as delegates Josiah Randall, T. F. Gordon, Maj. Samuel H. Perkins, Col. Joseph Strahan, Joseph Diver, and Lambert Keating. From the county the representatives were James McEwen, Capt. David Hardie, Joseph P. Le Clerc, Col. James Dyer, John Johnson, and John R. Jones. A committee of correspondence at Philadelphia consisted of Judge Jacob Sommer, Charles J. Ingersoll, Manuel Eyre, Horatio G. Jones, Samuel Badger, Thomas F. Gordon, and Josiah Randall. On the electoral ticket for Crawford and Gallatin were the names of Richard Rush, Samuel Wetherill, John Geyer, and John Connelly. The friends of John Quincy Adams held a meeting in the court-house on the 18th of October, Thomas Forrest

chairman, and Clement C. Biddle and Bloomfield McIlvaine secretaries. John Purdon made an address. A committee of correspondence was appointed, consisting of Thomas Forrest, John Purdon, Clement C. Biddle, John Conard, Samuel Humphreys, and John Sergeant. The electors upon the Adams ticket from the city and county of Philadelphia were Col. Thomas Forrest and Josiah Supplee, of the county, and John Sergeant, Thomas P. Cope, and Clement C. Biddle, of the city. An Adams meeting was held at the court-house in October, of which William Montgomery was chairman, and Richard C. Wood secretary. Committees were appointed to conduct the ensuing election on behalf of the Adams men. The Henry Clay party were not early in the field, but they formed an electoral ticket, upon which Philadelphia was represented by Langdon Cheves, John Todd, Matthew Lawler, Mathew Carey, and Mark Richards. On the Jackson ticket, when completed, were the names of Thomas Leiper, Cromwell Pierce, Philip Peltz, Alexander McCaraher, and Daniel Sheffer.

The State elections were of course influenced by the Presidential controversy. A town-meeting of Democrats was called at the court-house on the 16th of September. Alexander Cook was chairman, and Samuel Badger and William Stewart were secretaries. They agreed upon a ticket for the Assembly from the city,—Henry Horn, William Duncan, Josiah Randall, Lewis Rush, John M. Taylor, and Robert Cooper; for Congress, William J. Duane. The latter declined, and his father, William Duane, was nominated in his place. The Federalists nominated for Assembly in the city William Lehman, John M. Read, John K. Kane, George M. Stroud, John R. C. Smith, and William M. Meredith; for Congress, Joseph Hemphill. In the county Samuel Breck was nominated by the Federalists in the First District for Congress, but he declined, and John Wurts was chosen. The Democrats nominated Joel B. Sutherland for Congress. In the Third District three candidates ran, William Duncan, Daniel H. Miller, and Jacob Shearer. Three tickets for the Legislature were nominated in the county. They may be said to have represented the Jackson, Crawford, and Adams or Clay parties. The successful ticket had upon it Jonathan J. Knight, David Snyder, James A. Mahoney, George N. Baker, Robert O'Neill, and Joel B. Sutherland. At the election Wurts beat Sutherland for Congress in the First District by 95 majority. Hemphill was elected in the Second District by 576 majority. Miller succeeded in the Third District. For county officers the Democrats carried the commissioner (Conrad Wile) and auditor (Benjamin S. Bonsall).

At the election the vote in the city for electors was, Jackson, 2264; Adams, 1500; Crawford, 580; Clay, 107. In the county, Jackson, 3634; Adams, 576; Crawford, 580; Clay, 91. In the State the vote was even more overwhelming in favor of the hero of

New Orleans. It stood as follows: Jackson, 35,898; Adams, 5405; Crawford, 4186; Clay, 1701. Jackson's majority over all was 24,601, and over Adams, 30,488. He received the whole electoral vote of Pennsylvania. The election went to the House of Representatives, and John Quincy Adams was chosen President. The old parties were broken up. The name Federalist sank into oblivion, and after sailing in different sections under various titles with which the party did not broadly agree, the Whig party of ten or twelve years later substantially took the place of the old Federal party, rallying about Henry Clay, "the mill-boy of the slashes," and finding its chief strength in the great and growing West.

The Delaware and Chesapeake Canal, the construction of which had been urged for many years, was now placed in the way of fulfillment. A contract for building it was made with John Randel, Jr., on the 20th of March. On the 15th of April work was commenced upon the canal at Newbold's Landing, opposite the Pea Patch Fort on the Delaware River, in the presence of the chief justice of the State of Delaware, the mayor of Philadelphia, and many citizens, this being from the beginning essentially a Philadelphia work. The first sod was cut by the chairman of the superintending committee of stockholders, after which Thomas P. Cope delivered an address giving the history of the enterprise.

The great public event of the year was the welcome given to Lafayette. July 29th, the Councils of Philadelphia extended an invitation, and began to make preparations for the great occasion. Brig.-Gen. Robert Patterson called a meeting of the officers of the First Brigade to assist in the arrangements, and this was followed by a general meeting of the officers of the division, at which there were present Maj.-Gen. Cadwalader; Gen. Robert Patterson, of the First Brigade; Gen. Thomas Castor, of the Second Brigade; Col. Thomas W. Duffield, of the First Regiment of Philadelphia County Volunteers; Lieut.-Col. Andrew Geyer, of the First Regiment; Henry J. Williams, lieutenant-colonel of the Second Regiment; Andrew M. Prevost, lieutenant-colonel of the Artillery Regiment; and Kenderton Smith, lieutenant-colonel of the Second Regiment of County Volunteers. A committee of arrangements was appointed, consisting of Cols. Charles S. Cox, Nineteenth Infantry; Anthony Simmons, Ninety-sixth Regiment; Joseph Strahan, Ninety-first Regiment; John G. Watmough, One Hundred and Twenty-third Regiment; Lieut.-Cols. George Jeffreys, Ninth Regiment; William J. Dubbs, Seventy-fourth Regiment; Andrew Geyer, One Hundred and Second Regiment; Maj. William S. Simmons, Seventy-second Regiment; and Capt. Robert Cooper, of the Artillery Regiment.

Three days after Lafayette's arrival in New York the citizens of Philadelphia met, and were presided over by Thomas Leiper. A committee of twenty-one was appointed to make arrangements for the

reception. During the months of August and September meetings of persons engaged in various trades were held to adopt measures proper to be taken in honor of the event. Mayor Watson issued a proclamation permitting an illumination of the city, and it was resolved to have a civic ball during the time that Lafayette was a guest of the corporation. The 28th of September was appointed for the reception of Lafayette, and volunteers from different portions of the State and from adjoining States came to take part in the ceremonies. The procession was

THE LAFAYETTE ARCH.

to be divided into civic and military sections. The latter portion was under the command of Maj.-Gen. Thomas Cadwalader. Of the civic division John Swift was the chief marshal, and James S. Skerrett was the aide-de-camp. The assistant marshals were Henry Shoemaker, Bloomfield McIlvaine, James Harper, James C. Biddle, Edward S. Coxe, Edward Twells, Edward Ingersoll, Thomas Penrose, Thomas Morrell, and Mordecai S. Lewis. The volunteers were ordered to be concentrated in Rush's field, on the Frankford road, half a mile beyond the first turnpike gate. A salute was ordered to be fired as Lafayette entered the field, and the troops were then to be reviewed by Lafayette before the line of march was taken up.

On the 26th of September the First City Troop left the town, and at Holmesburg it was joined by the Second City Troop and the First and Third County Troops, the whole squadron being under the command of Capt. J. R. C. Smith, of the First City Troop. The next day, at Morrisville, where the Governor had delivered an eloquent address of welcome to Lafayette, they were joined by the Second County Troop and the Bucks County Troop. They met and escorted Gen. Lafayette and Governor Shulze to Frankford, where they slept for the night at the United States Arsenal. The people of Frankford were very much disappointed at the escort arriving when it was yet too light for illumination and still too dark to give a favorable view of the procession. Lafayette visited the village the next morning and was received by Isaac Worrell, town clerk, who made a speech of welcome on behalf of the borough authorities. On the morning of the 28th the First City Troop and the

First County Troop escorted Lafayette and Governor Shulze to Rush's field, where the main body of the escort was drawn up. Here the ceremonies of review were gone through with. The two troops of cavalry were formed for escort. The barouche was drawn by six cream-colored horses, and in it, with Lafayette, was the venerable Judge Peters, of the United States District Court, Governor Shulze following in another barouche. At one o'clock the ceremonies of the review were over. The line of march was then taken up, the barouche of Lafayette being followed by those of the Governors of Pennsylvania and New Jersey, City Councils, and other dignitaries. At the stone bridge the civic procession was passed by the First Brigade and the accompanying troops, after which that portion followed the military. The rear of the procession was brought up by the Second Brigade and some of the county troops.

Upon reaching the State-House further ceremonies were held, and Lafayette was escorted to his headquarters at the Franklin House, south corner of Walnut Street and west side of Washington Square. On Wednesday, September 29th, in the Hall of Independence, the State Society of the Cincinnati waited upon Lafayette, and Maj. William Jackson delivered an address. The children of the public schools were received in the State-House yard on the 30th, and in the afternoon the general was received at Masonic Hall by members of the Masonic order. He remained in the city for a week, during which time there were many other receptions, balls, and festivities, his visit having stimulated patriotic feelings which had long lain dormant and directed the popular mind toward the history of the American Revolution, and to the contemplation of the claims which the services of the fathers of the republic had upon posterity.

Local events present nothing further of great importance during 1824. Robert Wharton, who had been for many years mayor of the city, resigned in the month of April, and Joseph Watson was chosen in his stead. The Franklin Institute was incorporated this year. A census taken by a committee of business men showed that the city contained fifty-five printing-offices, one hundred and twelve presses, and one hundred and fifty printers. Among the men of note who died this year were Rev. Dr. William Rogers, aged seventy-four (professor for years in the Pennsylvania University), and Charles Thomson, who has been called "perpetual secretary of the Revolutionary Congress," aged ninety-five.

On the 4th of October a noteworthy celebration took place in Philadelphia, being to commemorate the anniversary of the landing of William Penn, the great legislator. It took place in Letitia Court. It was intended to hold it in the cottage of William Penn, presented to his daughter Letitia. But so little did the historical enthusiasts of the time know of the real topography of the neighborhood, that they selected a house, Doyle's Rising Sun Inn, which had

not been built until long after Penn left America for the last time. Peter S. Duponceau delivered the address.

The year 1825 was in many respects more crowded with events than any year since the beginning of the century. Pennsylvania's strenuous efforts to develop internal improvements, to which cause the Legislature had pledged six million dollars, began to meet with success. Coal, iron, and manufactures were becoming triple pillars of the commonwealth, the agricultural interests of the State were more prosperous than ever before, and abundant harvests for several years previous had rewarded the husbandman's labors. The financial and industrial difficulties which had seemed so enormous but ten years before were swept away and nearly forgotten. There was, it is true, too much hopefulness, and too great debts were incurred at this period to link Lake Erie with the rivers of the South and East, and to connect Philadelphia with Pittsburgh. A debt was contracted by the State that five years later brought its finances into a deplorable condition, which required the utmost skill, firmness, and energy on the part of the Governor to remedy. But 1825 was a period when optimism was predominant.

Politics ruled throughout the year. It was the re-fluent wave after the Presidential election, the tidal rush after an earthquake. A Pennsylvanian was involved in the great struggle in the House of Representatives, and some account of the affair is necessary.

In January the official and correct list of the electoral votes of the various States upon the election of President and Vice-President was published. It stood, for President, Jackson, 99; Adams, 84; Crawford, 41; Clay, 37. For Vice-President, Calhoun, 182; Sanford, 80; Macon, 24; Jackson, 13; Van Buren, 9; Clay, 2; and one blank. There were 261 votes, and 131 were necessary for a majority. Calhoun was elected Vice-President, but for President there was no choice. The friends of Jackson stood alone, making no combinations; each of the others would have preferred any success rather than Jackson's.

At that time the position of Secretary of State was considered the stepping-stone to the Presidency,—Jefferson, Madison, and Monroe having been in that office before reaching the Presidency. On the 28th of January the *Columbian Observer* published a letter "written by a Pennsylvania member of the House of Representatives," in which it was charged that there was a coalition or arrangement to the effect that Henry Clay, of Kentucky, who was then Speaker of the House of Representatives, should be made Secretary of State if he and his friends would aid in the election of John Quincy Adams. On the 3d of February there appeared in the *United States Gazette* a card from Clay, dated January 31st, pronouncing it a base forgery, but "if genuine," calling its author a "dastard and a liar."

Two days afterward a card was published in the *National Intelligencer* of Washington City, signed "George Kremer, member of the House from Pennsylvania," avowing its authorship. On motion of Mr. Clay a committee was appointed by Congress, and it summoned Kremer to appear before it. He protested against the authority of the House, and refused to appear before the committee. He also published, March 3d, in the *United States Gazette*, a letter addressed to his constituents of the Ninth Pennsylvania District, giving his reason for the charges against Clay, and stating that his letter was written for the information of his constituents; that he supposed that Clay would call on him personally, and that this was the reason why he revealed his authorship. Clay afterwards published a letter to his constituents in relation to the attitude he held toward Adams, and denied the allegations of Kremer. He also used the words "military chieftain," referring to Jackson, and the latter in hot anger wrote a letter, published in the *United States Gazette* on March 7th, in which he spoke very strongly in relation to the imputed charges of ambition contained in the words of Mr. Clay, and in other respects. There was a subsequent correspondence, published April 8th, between Mr. Clay and John H. Eaton, in reference to the Kremer letter. The *Philadelphia Gazette* published on April 28th a letter from Samuel D. Ingham, of Pennsylvania, on the Clay-and-Kremer affair. When Congress proceeded to vote for President the result was, John Quincy Adams, thirteen States; Andrew Jackson, seven; William H. Crawford, four; Clay's friends supported Adams. All the members from Pennsylvania voted for Jackson except Samuel Breck, of Philadelphia, who supported Adams. On the 4th of March, Adams and Calhoun were inaugurated. Shortly afterward Henry Clay was made Secretary of State.

The friends of Jackson in Philadelphia had formed in 1824 the Hickory Club, No. 1. This body resolved to celebrate the anniversary of the battle of New Orleans (January 8th) by a public dinner at Amos Holahan's inn, Chestnut Street, east of Sixth. Chandler Price was chairman of the first meeting, and Charles Harned was secretary. A committee was appointed to make arrangements, consisting of Gen. William Duncan, John Pemberton, Charles Harlan, Peter A. Grotjan, H. S. Hughes, Benjamin S. Bonsall, Henry L. Coryell, Frederick Stoeber, William Taylor, and Edward King. The officers of the day were: Thomas Leiper, president; vice-presidents, Chandler Price, William Duncan, John Pemberton, and James N. Barker. In place of Holahan, Thomas Hieskell, of the Indian Queen, prepared the dinner. Among those present were Judge John Bannister Gibson, of the Supreme Court, and Col. John G. Watmough. Volunteer toasts were offered by Thomas Leiper, Chandler Price, William Duncan, J. N. Baker, Henry Horn, Alexander Cook, James Page, John

Curry, Sheldon Potter, John Lyle, Nathan Nathans, John Worrell, James Ronaldson, and others. Another dinner was held January 8th, at Branson's tavern.

At the fall election the Federalists in Philadelphia nominated for senator, Stephen Duncan; for Assembly, William Lehman, Jacob S. Waln, Jacob F. Seeger, William M. Meredith, Cadwalader Evans, and John R. C. Smith. The Democrats nominated for senator, Mark Richards; for Assembly, William Duane, Henry Horn, Robert Cooper, Richard Poval, William Duncan, and Edward D. Ingraham. The Democratic conferees of the county nominated for senator, Joel B. Sutherland; for Assembly, George N. Baker, Jonathan T. Knight, David Snyder, Peter Hay, Joseph Bockius, Jesse R. Burden, and Jacob F. Heston; for county commissioner, Jacob Holgate; auditor, Richard Palmer. The Federalists and old-school Democrats of the county nominated for senator, Robert Carr; for Assembly, Charles Peirce, Joseph Sterne, William Binder, Franklin Comly, Thomas Ryerson, John Keefe, and Nathan Jones; for county commissioner, Dr. John M. White; for auditor, Robert McMullin, Jr. An attempt was made to nominate a "Federal Internal Improvement Ticket," from which the names of Stephen Duncan and William M. Meredith were omitted. They came out in a card before the election, and said the opposition against them was because they had opposed the Schuylkill Coal Company, objecting to so great an interest being placed in the hands of a corporation, to the injury of individual mining interests. At the election, Duncan was chosen State senator by a majority of less than one hundred. On the Assembly ticket, Lehman, Waln, Seeger, and Smith (Federalists), and William Duncan and Poval (Democrats), were elected. Meredith and Cadwalader Evans were defeated. On the ticket for Select Council there were elected three Democrats and one Federalist, and on the Common Council ticket, eight Democrats and twelve Federalists. In the county, Sutherland was elected senator, and also the full Democratic ticket for the House of Representatives. For county commissioner, Jacob Holgate was successful over White by nearly four thousand, and Palmer over McMullin by three thousand six hundred. In the Northern Liberties the water question entered into the contest for the election of commissioners. The Federalists supported the ticket for commissioners who were in favor of obtaining the water supply from the city, but they failed.

Another question submitted to the people was on constitutional amendments. The Legislature in the early part of the year had authorized a vote to be taken on the question of calling a Constitutional Convention. This proposition was lost in Philadelphia, the vote being in the city,—for, 1776; against, 3450; in the county,—for, 1496; against, 2701: total city and county vote,—for, 3272; against, 6151. The vote

in the State also was largely against the proposition, and it was not until 1838 that a new constitution was adopted by the people of Pennsylvania.¹

We have spoken of the internal improvements at this time attracting the attention and increasing the taxes of the people, and shall now consider them more in detail. Early in January a large meeting of citizens was held in the court-house, Chief Justice Tilghman presiding, and Nicholas Biddle secretary. The meeting discussed the proposed Alleghany and Susquehanna Canal bill. Mathew Carey, the noted economist, desired to amend it to "a canal between Lake Erie and the Alleghany." Speeches were made by John Sergeant, Mathew Carey, Samuel Chew, Jr., Samuel Archer, William J. Duane, Charles J. Ingersoll, Thomas Biddle, Daniel W. Coxe, Judge Duncan, and Josiah Randall. The original subject and the amendment were referred to a committee; also a motion by Charles J. Ingersoll directing the committee to inquire into the expediency of railroads. An adjourned meeting was held on the 24th of January, at which the committee reported that the Schuylkill Navigation was completed, that the Union Canal was rapidly advancing, and would soon reach the Susquehanna. They reported also the following resolutions:

"Resolved, That in the opinion of this meeting a communication by water between the Susquehanna and the Allegheny Rivers, and between the rivers Susquehanna and Allegheny and Lake Erie, ought to be opened with all practicable expedition at such points as soon as a suitable board of skillful and experienced engineers may select.

"Resolved, That in the opinion of this meeting the work ought to be undertaken by the State and executed at the expense of the State, because it requires for its completion large powers, which may be safely intrusted to the public authorities of the commonwealth under the direction of the Legislature, but which would be regarded with jealousy in the hands of an individual or corporation."

A committee was appointed, William Tilghman chairman, to memorialize the Legislature, and thanks were also voted to the "Pennsylvania Society for Promoting Internal Improvements." This society was active during 1825, as for a number of years previous, urging the public to increase the means of interior communication. They published an address early in January upon the proper means of construct-

¹ Bernhard, Duke of Saxe-Weimar, was in Philadelphia on the election day, in 1824. Speaking of the State-House, he said, "In front of it we saw a great assemblage of people. We heard it was the election of the Common Council. . . . From the public-houses in the vicinity flags were displayed, to give notice what political party assembled there. Handbills were sent all over town into the houses to invite votes. From the tenor of these bills one might have concluded that the city was in great danger. The election, however, to our exceeding astonishment, passed over very peaceably. Here is one of the bills: '*Sir*,—The inclosed Federal Republican ticket is earnestly recommended to you for your support this day. Our opponents are active. Danger threatens. Every vote is important. One may be decisive. Be therefore on the alert. Vote early for your own convenience and the public good. Bring your friends to the poll and all will be well. The improvement of the city is carefully regarded; good order and tranquillity abound; general prosperity is everywhere apparent. Then secure by your vote this day a continuance of the present happy state of things. Our mayor is independent, faithful, and vigilant. Who will be mayor if we fail? Think on this and hesitate no longer, but vote the whole of the inclosed ticket. [Naturalized citizens will please to take their certificates with them.]'"

ing railroads. A few days afterward an address made its appearance in relation to the importance of increasing the canal accommodations of the State of Pennsylvania. In this document it was said that in 1796 the aggregate exports of Philadelphia were forty per cent. more than those of New York; whereas now they are forty-five per cent. less. The difference was to be ascribed to the facilities for transportation afforded by the canals of New York. In March the acting committee of the society published an article on railways, with plan of a railroad, etc., taken from European sources. The *United States Gazette*, March 28th, published a description of wooden-track railroads in use near Philadelphia.¹

In April the *United States Gazette* published an account of a steam-carriage, with three wheels, invented by T. W. Parker, of Edgar County, Ill.

Some time in March the New Jersey Legislature authorized the Delaware and Raritan Canal, and this was hailed with joy in Philadelphia as another link in the Middle State system. Much nearer, however, to every citizen's thoughts was the project of uniting the Delaware and the Schuylkill. Engineers were requested by the Water Committee of Councils to examine the most suitable route. The utility of making a canal of Pegg's Run had been urged in 1821, and the Commissioners of the Northern Liberties then had the matter before them. A meeting of the citizens of that district deemed it inexpedient to press the scheme, and suggested that it would be better to wait until the works at Fairmount were completed. Those works having been finished, the project was again renewed, and two routes were examined, one commencing near the pond at Fairmount, passing near Callowhill Street, and thence along the bed at Pegg's Run to the Delaware. Another plan was to take the canal so that it would fall into the Cohocksink between Second and Third Streets. A third route was to commence near Pine Street on the Schuylkill, thence southeastwardly by a small run and by deep cutting until the Delaware was reached about Reed Street, in Southwark. The completion of the works of the Schuylkill Navigation Company, and the connection by the Union Canal with the Susquehanna, and by the projected State canal, from thence to the Alleghany, would, it was thought, bring a vast trade down the Schuylkill, and render a canal from the

Schuylkill to the Delaware necessary. This entire scheme was intimately connected with the disposal of the surplus Fairmount water-supply owned by the city. It was thought that by means of the proposed canal water-power could be taken to manufactories constructed along the route. Surveys were made by Canvass White and Samuel Hains, city surveyors. In regard to manufactures, the committee expressed a belief, in a report of July 6th, that there was no doubt that water-rights could be sold. An agreement was made with the owners of the Morrisville estate (which lay below Fairmount) for the city to purchase ground there. Negotiations were begun with the owners of the Lancaster-Schuylkill bridge to carry the water across their roadway. The owners of the Morrisville property offered to sell their water-front on the Schuylkill, below the Upper Ferry bridge, for a ground-rent of eighteen hundred dollars per annum. The expense of the southern route was estimated at \$194,758.50, with only a guard-lock at Fairmount. On the northern route there would be eight locks, and the length would be two and three-fourths miles. There was considerable opposition to the scheme, and the proposal to build a railway was renewed.² A meeting was held September 24th at the Supreme Court room, of which John D. Goodwin of the Northern Liberties was chairman, and Gerard Ralston secretary. Gen. Cadwalader presented a report and resolutions in favor of the formation of a company to build a railway between the Delaware and the Schuylkill. Estimates were ordered, "the work to be constructed on the system of levels and inclined planes, and to embrace all the necessary sidings in the single way, together with all the late improvements." The committee was composed of Thomas Cadwalader, Peter A. Browne, Charles J. Ingersoll, Paul Beck, Jr., Gerard Ralston, Mark Richards, Samuel Wetherill, Charles Goodman, John Naglee, Henry J. Williams, and Alexander Cook.

But while this discussion was going on a State convention was organized. May 6th, in the Philadelphia court-house, citizens met and chose delegates to an "Internal Improvement Convention," which met August 4th in Harrisburg, and was increased by delegates from many other counties of the State. Joseph Lawrence, of Philadelphia, was chosen chairman, and N. P. Hobart and Francis R. Shunk secretaries. Resolutions were adopted in favor of the construction of a canal from the Susquehanna to the Alleghany or Ohio River, and from the Alleghany to Lake Erie.

¹ This article said, "A wooden-rail track, which has proved very efficacious, is at present under the direction of that excellent engineer, Mr. Randall, for the purpose of removing the excavated earth of the Delaware and Chesapeake Canal below Philadelphia. A wooden railway, for the purpose of transporting ice from the bank of the river, where the depot was established, to the shipping in the Delaware, was introduced by our enterprising citizen, Turner Camac, Esq., whose early, repeated, and successful efforts to promote internal improvements entitle him to our gratitude. A model of a railway several hundred feet in length has been made by Mr. John Stevens, the gentleman who recently applied for permission to construct a railway from Columbia to Philadelphia. It is scarcely necessary to remark that the launch of every large vessel is an exhibition on a large scale of the prodigious effects resulting from a species of railways, viz., the shipways."

² A writer in the *United States Gazette*, who opposed the plan, said that the canal would not be used, and that it would cost much more than the amount named. The Union Canal boats might be able to use the proposed canal, while the boats of the Schuylkill Canal, which were much wider, would not be able to pass through it. In addition he urged the objection that a canal through the city would become a nuisance by the deposits thrown into it. Instead of paying the money which would be required for such an experiment, the writer suggested that three tow-boats of twenty-five tons each, with engines of forty horse-power, should be employed to tow the boats around to the Delaware front of the city.

It was also resolved that "application of the resources of the State, beneficially invested, increases the public wealth, improves the revenue, and greatly enlarges the ability of the State to extend aid in every quarter where it may be wanted." At the same time was published the report of William Strickland, who had been sent to Europe by the Pennsylvania Society for Internal Improvements. He took strong ground in favor of railways as preferable to canals. Under date of Edinburgh, June 5th, Mr. Strickland said, "I state distinctly my full conviction of the utility and decided superiority of railways above every other mode as means of conveyance, and one that ought to command serious attention and adoption by the people of Pennsylvania." On the 5th of September the *United States Gazette* republished an article from the *Williamsport Gazette*, in which the writer argued that railways were inexpedient in Pennsylvania, and that canals were much more economical. This was followed the next day by a long article in favor of railways. A meeting was held in the borough of Columbia on the 8th of October, urging a railway between Columbia and Philadelphia. James Buchanan, of Lancaster, made a speech supporting the proposition. In the early part of the year the city journals rejoiced over the fact that passengers had arrived from New York in nine and a half hours. There were many routes and a number of changes this year. The "Pennsylvania," Capt. Kellum, ran from Market Street each morning for Bordentown. The Union Line went by way of Trenton and New Brunswick, its steamer, the "Philadelphia," leaving at noon. The new steamboat "Trenton," which was built at Hoboken by Robert L. Stevens, arrived at Philadelphia in the spring of the year, and took her place on the Union Line, under Capt. Elisha Jenkins.¹

In April proposals were issued to receive subscriptions to the Philadelphia, Dover and Norfolk Transportation Company,—route by steamboat from Norfolk, Va., to Seaford, Del., one hundred and fifty miles; from Seaford to Simon's Creek, near Dover, by land forty-three miles; by steamboat from Dover to Philadelphia, seventy miles. This route was shorter than by the way of Baltimore. The capital stock was fixed at \$75,000, of which \$33,000 was already subscribed in

Delaware. It was said that the line could make two trips each way in one day and two nights. The probable receipts were estimated at \$39,996; freight, \$10,000; total receipts, \$49,996. The expenses were estimated at \$28,000. A new packet line to Reading was established in June by John Coleman and Jacob Peters. The canal-boat "Lady of the Lake" ran in connection with mail-coaches. Passengers were taken from the White Swan Hotel to Fairmount, where the packet lay. The fare to Reading was two dollars and fifty cents. Passengers left Reading at noon on Monday, lodged at Pottsgrove, and arrived at Fairmount early Tuesday evening. The boat left the Upper Ferry on Thursday night and arrived in Reading the next morning. There were several transportation lines for the carriage of freight between Philadelphia and New York. The new Exchange Line was managed by James McLouer and C. & F. King, proprietors, freight being taken by the "Congress" and the "Legislator." The Columbian Transportation Line was connected with the steamboats "Pennsylvania" and "Etna." The Mercantile Transportation Line also employed the same boats. In July the steamboat "Pennsylvania" was placed on the line to Cape May, carrying passengers destined for the Cape Island House.

Two steamboats were destroyed this year. May 1st the "Albemarle," which was lying at Arch Street wharf, took fire, was towed to Smith's Island, and was burned almost to the water's edge.

On the 2d of June the steamboat "Legislator," of the New York and Philadelphia Line, exploded her boiler at New York. Five persons were killed and several were badly scalded. The boat had low-pressure engines, and this disaster renewed the controversy about low-pressure and high-pressure engines for steamboats. The "Legislator" was on the New York end of the new Exchange Line, and the "Congress" was on the Delaware River end.²

Several important acts of Legislature and Councils deserve note. In January the Legislature incorporated the Pennsylvania Fire Insurance Company, capital two hundred thousand dollars, which might be doubled; in February they incorporated the Philadelphia Fire Insurance Company. In February an act was passed granting eight thousand dollars per annum

¹ This boat was larger, swifter, and more handsome than any steamboat which had yet appeared on the Delaware. Her boilers were on the guards of the boat, outside the hull, and on the deck there was a clean sweep of passageway from stem to stern. The cabin was decorated with paintings, imitation marble pillars, etc. On her first trip, on April 27th, the "Trenton" beat all the other boats on the river, having a particular trial with the "Congress" of the Exchange Line, and the "Pennsylvania" of the Columbian Line. The "Trenton" went to Burlington in one hour and twenty-nine minutes; to Trenton in three hours and nine minutes,—stoppages, eighteen minutes. This boat enabled the Union Company to run two lines a day,—the "Trenton," Capt. Jenkins, at six o'clock in the morning, connecting with the "Thistle," Capt. Cornelius Vanderbilt, at New Brunswick; the "Philadelphia," at noon, connecting with the "Bellona," Capt. G. Jenkins. The fare in the morning line was three dollars and fifty cents, and by the line leaving at noon the fare was three dollars.

² After the explosion the steamboat "Bolivar" for a long time took the place of the "Legislator." In order to calm the fears of persons afraid to take passage in the steamboats, the plan of a safety-barge was suggested. The latter was to be towed by the steamboat, so that if there were an explosion the barge would escape. The proprietors of the Exchange Line now built the safety-barge "Cherry and Fair Star." There was a ladies' apartment handsomely fitted up, and the dining-table was large enough to accommodate eighty persons. On the first trip the "Congress," under command of Capt. De Graw, towed the barge to Burlington in one hour and forty-five minutes. The fare to Burlington was usually fifty cents, but in the safety barge it was seventy-five cents. On the New York end of the line the safety-barge "Matilda" was built and towed from New Brunswick by the "John Marshall." The line then changed its name to the Safety Exchange Line, the fares being two dollars and fifty cents in the steamer and in the barges three dollars and fifty cents.

to the "Pennsylvania Deaf and Dumb Asylum," the inception and growth of which we have previously recorded. A bill was reported to the Legislature in February to incorporate the Philadelphia Gas-Light Company, with authority to manufacture gas, to lay pipes in the public streets, and to furnish gas to the public. The City Councils were conservative, and raised many objections. Writers in the journals denounced gas as "unsafe, unsure, a trouble, and a nuisance," and spoke particularly of its "intolerable stench." The Legislature finally denied the petition, and the gas company had to wait for their charter. The bill for a new division of wards, which had been before the Legislature on previous occasions, was passed on March 15th. Seventh Street was made the dividing line. The eastern wards extended from the Delaware River to the east side of that street, and were,—Upper Delaware, from Vine to Sassafras; Lower Delaware, from Sassafras to Mulberry; High Street, from Mulberry to High; Chestnut, from High to Chestnut; Walnut, from Chestnut to Walnut; Dock, from Walnut to Spruce; Pine, from Spruce to Pine; New Market, from Pine to Cedar. The western wards extended from the west side of Seventh Street to the Schuylkill, and were,—North Mulberry, from Vine to Sassafras; South Mulberry, from Sassafras to Mulberry; North, from Mulberry to High; Middle, from High to Chestnut; South, from Chestnut to Walnut; Locust, from Walnut to Spruce; Cedar, from Spruce to Cedar. April 11th, a very important act was passed appointing a Board of Canal Commissioners for the State of Pennsylvania, to which was intrusted important powers in connection with the general subject of internal improvements. The commissioners were Dr. Robert M. Patterson and John Sergeant, of Philadelphia; Dr. William Darlington, of Chester County; Albert Gallatin, of Fayette County; and David Scott, of Luzerne County. Mr. Gallatin declined, and Abner Laycock took his place. In May a city ordinance was passed changing the names of the public squares. The Northeast Square, it was ordered, should be known as Franklin Square; Southeast, as Washington; Southwest, as Rittenhouse; Northwest, as Logan; Centre, as Penn; and State-House Yard, as Independence Square. The Councils considered that the Fairmount Works were now completely finished, even to decorations, and it was so announced.

May 9th there was a fire in the Northern Liberties, on Third Street, near Brown, and nearly thirty houses were destroyed. That corporation had refused to use the Schuylkill water, and the citizens had voted against it on several occasions. Their economy was now found enormously expensive. This was the third large fire that had occurred in that region within three years. In September they again refused to use Fairmount water.

In July the ex-Empress Iturbide and her sons settled in Philadelphia. Achille and Napoleon Murat, sons of the king of Naples, were living here at this

time, and in July filed declarations of intent to become citizens.¹

Dinners, celebrations, and social events were unusually numerous in 1825, though fortunately less political than for some years previously. The Washington Benevolent Society went to Zion Church, on Fourth Street, February 22d, and were addressed by Joseph M. Doran. May 17th, a superb dinner was given at Washington Hall Saloon to Commodore James Barron, who had given up the command of the Philadelphia Navy-Yard, being succeeded by James Biddle. Mayor Watson was president; John Leamy, Gen. Robert Patterson, Josiah Randall, James M. Broom, Chandler Price, and William Craig were vice-presidents. There were present, as invited guests, Gen. Cortes, admiral of the Mexican navy; Commodore Daniels of the Colombian navy; Colonel Placio, consul-general of Colombia; Capts. Biddle, Harris, and McCall; Dr. Harris, of the navy; and Maj. Gamble, of the marine corps. The Marine Band was present. Thirteen regular and many volunteer toasts were offered. May 24th, Maj. Gamble, of the marine corps, was given a dinner by his friends at the Washington House, Fourth Street, Mayor Watson presiding. June 2d, a preliminary meeting was held to arrange for a banquet to be given to the famous De Witt Clinton, of New York, James C. Fisher, president, and E. S. Burd, secretary. June 4th, a committee of merchants and city officials met Governor Clinton, and they went, on the steamer "Trenton," to visit the works of the Chesapeake and Delaware Canal, but the day was extremely stormy. June 8th, the banquet took place as previously arranged for in Masonic Hall, the mayor presiding. Governor Geddes of South Carolina, and C. L. Livingston, of New York, were also present. The mayor's toast was, "The Erie and Champlain Canal, magnificent in design and prompt in execution." Clinton's toast was, "The colossal power that has one foot on the Delaware and the other foot on the Ohio: may its wisdom be commensurate with its strength, and be manifested in the flourishing state of internal improvement and productive industry." Many volunteer toasts were given.² Philadelphia welcomed

¹ The emperor Augustine de Iturbide, after having served in the revolution against the Spanish crown, was successful in securing the independence of his country under the Iguala plan of Feb. 24, 1821. He was president of the regency until May 18, 1822, when the people of Mexico proclaimed him emperor as Augustus I. He held that office until March 20, 1823, when he resigned, and was banished. He went to Italy and England, re-embarked for Mexico in 1824, landed at Soto la Marina July 14th of that year, and was taken prisoner and shot April 28th. The empress and two of their children, who had accompanied him, had also landed at Soto la Marina. The Mexican government was merciful to them. It continued to the widow the pension promised to be paid to the family at the time of the emperor's abdication, giving her privilege to live in Colombia or in the United States. She chose the latter, came to Philadelphia, and raised and educated her children here, remaining until the time of her death.

² Fletcher & Gardner, silversmiths of Philadelphia, finished in March two elegant vases of silver, intended for presentation to De Witt Clinton, by the merchants of Pearl Street, New York. The pieces were twenty-

Governor Schulze in September, and he also visited the Chesapeake and Delaware Canal. The Governor, with a select company, went down the river in the steamboat "Delaware," inspected the fortifications at the Pea Patch, and partook of a public dinner at New Castle, on which occasion Gen. Thomas Cadwalader presided, and Judge Joseph Barnes and Daniel Groves were vice-presidents. In October (the 24th) the Pennsylvania Society had a dinner at the Masonic Hall. John Quincy Adams, who arrived in the city two days before, was present, as was the Duke of Saxe-Wiemar, then traveling in the United States. An ode, "The Pilgrims of Pennsylvania," was read by the author, James N. Barker, and also "Penn's Treaty Elm," a poem by Judge Peters. They also had an address at the University of Pennsylvania Hall, by Charles J. Ingersoll.

The greatest festivities of the year, however, were those that marked Lafayette's second visit to Philadelphia. He had been through the growing West, and July 16th arrived on his way to embark for Europe. A committee from the Councils met him at Bordentown, and they landed at the new Chestnut Street wharf. Then he was escorted to the Franklin House, corner of Walnut Street and West Washington Square, the whole house being appropriated to his use. Here he dined with the mayor, recorder, and aldermen. He gave as a toast, "The great and beautiful city of Philadelphia, where I was first, nearly half a century ago, welcomed as a recruit, and am now as kindly welcomed as a veteran." On Monday, July 18th, "the nation's guest" attended a concert given for the benefit of the Female Hospitable Society. On the 20th he visited Germantown. Accompanied by a committee of Councils, he was met at Logan's Hill by the Germantown companies and by citizens. They took breakfast in the Chew House, visited Benjamin Constant's academy, went to Mount Airy, and then to Chestnut Hill. On his return he listened to an address by Charles Pierce, of the Masonic lodge, at Reuben Haine's house, and visited Walter R. Johnson's academy. Returning to Philadelphia, he attended the Rush dinner, July 20th, at Washington Hall, in honor of Richard Rush, for eight years envoy to England. Among those present were Lafayette, Bishop White, and Judges Peters, King, and Morton. Chief Justice Tilghman presided, and Mathew Carey and Charles J. Ingersoll were vice-presidents. Lafayette paid "a tribute to the happy message, in 1824, of his old friend and companion-in-arms," alluding to the "Monroe doctrine." He said it was "a declaration from the government of the United States which had already determined the recognition by one European government of the independence of the American republics." Lafayette offered this toast, "The memories of Penn and Franklin,—the one never greater than

when arraigned before an English jury, or the other when before a British Parliament." On July 21st, accompanied by City Councils, Lafayette went to Fairmount to inspect the water-works. On the 22d he held a reception for the ladies at Independence Hall. On the 23d, in the evening, he visited Vauxhall Garden, where there was a grand exhibition of fire-works by Joseph Diackery. He entered the garden at nine o'clock, and was received by a numerous band of little boys and girls, each holding a torch. The stage, steps, and ornamental architecture of the garden were canopied with red, white, and gold; the American flag and the French flag were displayed. On Monday, the 25th of July, in the afternoon, Lafayette left the city, intending to visit the battle-field of Brandywine, and enter Lancaster on the 27th. An effort to have Lafayette lay the corner-stone of a monument to Washington in Washington Square deserved success, but failed because only eleven thousand dollars, or less than a sixth of the required sum, had been pledged, so that the committee were not willing to proceed.¹

A local sensation of 1824 continued to attract attention this year. John Pluck, an ignorant hostler, was elected colonel of the Eighty-fourth Regiment, as a joke and to ridicule the militia system. The election was resisted, a board of officers setting it aside as illegal, and a new election was ordered, at which Pluck received 447 votes; Benjamin Harker, 64; and John Ferday, commonly called "Whistling Johnny," 15. The successful candidate issued orders for a parade of the First Battalion on May 1st on Callowhill Street, the right resting on Sixth Street; and the Second Battalion on the 19th. "Lieut.-Col. Joseph Norbury was to command the training of the First Battalion. The colonel took charge of the Second Battalion. On the 19th Col. Pluck's famous parade took place. Numbers of persons appeared in fantastic costumes, armed with ponderous imitations of weapons. Philadelphia was not accustomed to such displays, and this parade of 'horribles' attracted much attention. Col. Pluck and Adj. Roberts were the moving spirits. The regiment marched out to Bush Hill, followed by thousands of people on foot and hundreds on horseback. The press was either silent or expressed dissatisfaction. A few days afterward Pluck issued new orders. He said, 'Well, I am an honest man, anyhow. And I ain't

¹ The Councils in June, upon the petition of the officers having charge of the Citizens' Washington Monument Fund, had passed a resolution authorizing its construction, and approved of the plan designed by William Strickland. This design, never executed, was thus described:

"It is a copy of the famous choragic monument of Thrasylbus, at Athens. Square pillars rest upon pedestals of the same form, and that on a terrace, the ascent to which is by a flight of stone steps. On each side the pillars are ornamented with pilasters in panels between faces and other ornaments, the top ornamented with entablature and garlands. The entrance into the interior of the monument from a terrace by a door on each side. The whole may be surmounted by an urn or statue. The monument will be one hundred and twenty feet high. Estimated cost, sixty-seven thousand dollars."

four inches high, and weighed about four hundred ounces. They were elegantly chased, and were enriched with scenes on the canal.

afraid to fight, and that's more than most of them can say.'"¹

The Southwark Bank, projected several years before, had now been chartered, and April 19th books for subscription were opened at Commissioners' Hall. The commissioners had ordered that only two shares should be sold to any one person. This made trouble, because all persons who desired large quantities of the stock hired porters, draymen, and other muscular persons to make subscriptions for them. The affair was conducted something like an election, the officers being inside their building and the subscribers approaching a window, of which one pane was open. The mob pushed, squeezed, and ended by kicking, cuffing, and striking. Strong and rough men clambered over the heads of others to reach the window. Many citizens had their clothing nearly torn off, and the scene was disgraceful. The bank was organized, after the stock was all taken, by electing Samuel Humphreys president, and J. J. Skerritt cashier. It was opened for business August 22d, at No. 266 South Second Street, below South.

The Pennsylvania Agricultural Society, organized some time before, obtained permission to give exhibitions "not less than seven miles from the city." In May this society offered a gold medal, valued at fifty dollars, "to the person who should conduct the business of a farm in Pennsylvania on the largest scale in two years, without using or suffering ardent spirits to be used on his property, unless prescribed by a physician." Also a silver medal to the farmer who, previously to the 1st of January, 1827, shall have made in Pennsylvania the most successful and extensive experiments in the use of fish as a manure. Their annual exhibition of cattle and manufactures was held in October, near Holmesburg.

Remembering the "Pluck parade" and many disorderly assemblages, the grand jury in June declared Bush Hill a public nuisance. This was a large open field on the north side of Callowhill Street, between Schuylkill Fourth and Schuylkill Fifth. Their presentment stated that there "men and women have resorted on various days, as well as on the Sabbath and other days of the week, between the 1st of May and the time of making presentment, as well in night as the daytime, drinking, tippling, cursing, swearing, etc." The grand jury said that it had "particular reference to the days on which regiments and battalions of militia parade, when numerous booths, tents, and gaming-tables are there erected."

The noted Franklin Institute had been meeting with much success in its work, and was now one of the well-established organizations of the city. The

directors were encouraged to raise funds for a building, and soon secured thirty-four thousand dollars in shares of fifty dollars. June 8th, the corner-stone was laid, on the east side of Seventh, below Market, by the Grand Lodge of Pennsylvania. Rev. J. Potts offered the prayer, and Peter A. Browne delivered the address. In the cavity of the corner-stone were deposited a curious medal by Abraham Eckfeldt, a medal of Monroe by the same, and a bronze head of Washington by Peter A. Browne, together with coins and other things. In the Masonic ceremonies Governor De Witt Clinton, Past Grand Master of New York, and Past Grand Master Geddes, of South Carolina, assisted. The city authorities, the Agricultural Society, the Philosophical Society, and the Academy of Natural Sciences were present. In October the institute gave an exhibition. The same month John Haviland and Peter A. Browne organized with others to build an "Arcade" on Chestnut, near Seventh, on a lot one hundred and nine feet front and one hundred and fifty feet deep. It was to cost one hundred and fifty thousand dollars, to be two stories high, and contain eighty-eight stores, twenty-four stands and stalls, and four cellars, to be fire-proof, and estimated to rent at seventeen per cent. profit on the whole investment.

During the winter months vessels bound to Philadelphia were often in great peril in Delaware Bay, and measures were taken by the merchants to induce Congress to form an artificial harbor. December 28th, a meeting of citizens was called at the Supreme Court room. Horace Binney presided, and Samuel Jaudon was secretary. Resolutions were offered by Joseph Hopkinson and adopted. They affirmed that it would be highly useful to the commercial and naval interests of the United States if a secure artificial harbor were constructed at or near the mouth of the Delaware Bay. The attention of the general government was requested, and the influence of Congress was invoked. Two years before commissioners appointed by the Secretary of War had examined the bay, and recommended the construction of a harbor near the capes as essential to navigation. The loss of shipping in consequence of the want of a natural harbor had been immense. By statistics afterward compiled by the Philadelphia Chamber of Commerce, it was shown that between January, 1807, and August, 1826, twenty ships, fifty-seven brigs, forty-eight schooners, forty-three sloops, and twenty-five other craft, or a total of one hundred and ninety-three vessels, had been driven on shore in the neighborhood of the capes, blown out to sea, wrecked, sunk, and damaged. Between the 28th of December, 1826, and the 15th of January, 1827, a period of only eighteen days, sixty-two vessels of all kinds, having cargoes valued in the aggregate at more than two millions of dollars, were driven to sea, injured by storms and ice, or compelled to seek a precarious anchorage in the bay, the crews being much injured and frost-bitten. The commercial ma-

¹ The *United States Gazette* said, "Pluck is the head groom at the corner of Third and Callowhill Streets. Some months ago he was chosen commander-in-chief of the 'bloody Eighty-fourth;' but the powers that be refused to commission him. . . . The military system is a farce. Demagogues have been using commissions in the militia as stepping-stones to offices of profit and honor. A cure must be found for the evil, which is to make fun of it."

rine of Philadelphia was increased by the launch in April of the brig "Agorea," built by Haines & Vaughn, in Kensington; also by the ship "Ohio," a New Orleans packet, launched June 26th, from the yard of Joseph Ogilbie, below Almond Street, Southwark. October 27th, Tees & Van Hook, of Kensington, and Bowers & Van Dusen, launched from the ship-yard of the former a large vessel of eighteen hundred tons burden, calculated to carry sixty guns, built under the superintendence of Mr. Grice, "for a gentleman in New York, who intends her for the South American or Greek market." Several companies of militia were on board when she was launched, and twenty thousand people were spectators.

CHAPTER XXIV.

PROGRESS FROM 1825 TO THE CONSOLIDATION IN 1854 OF THE VARIOUS CORPORATIONS, BOROUGHES, DISTRICTS, AND OTHER MUNICIPAL BODIES WHICH NOW, IN THEIR UNITED FORM, CONSTITUTE THE CITY OF PHILADELPHIA.

IN the years 1826-27 there were frequent alarms in relation to kidnapping colored children, which created much excitement. A story was published concerning the operations of a person residing at Rocky Springs, Miss., who had carried off five negroes. The names and residences of the boys were given, and the kidnapper was represented to have taken them off from Philadelphia in a vessel to Virginia, whence they were transported to Alabama. They were stopped at Rocky Springs, and finally returned to the city. The operations of the kidnappers were reported to have extended to the abduction of twelve persons. These facts were so well substantiated about the beginning of 1827 that the City Councils passed a resolution offering a reward of five hundred dollars for the arrest and conviction of every person concerned in kidnapping. The agitation on this subject, which continued for several months, caused the passage on the 25th of March, 1826, of an act of Assembly, which denounced the offense of kidnapping negroes or mulattoes from the commonwealth, and subjected all violators to a fine of not less than five hundred dollars nor more than two thousand dollars, and imprisonment of not less than seven years, nor exceeding twenty-one years.

The introduction of the Schuylkill water into the city by the corporation seems to have been looked upon by the inhabitants of the adjoining districts with indifference for nearly a quarter of a century. In the Northern Liberties there had been several severe fires, the destruction by which had been much increased by reason of the scarcity of water to supply the fire-engines. The necessity of a better supply for the district was urged by prudent citizens, but

resisted by the majority, who succeeded on several occasions in preventing definite action. The district of Spring Garden was the first to accede to what seemed to be a necessity. A contract was made by that district with the city in March, 1826, by which water was supplied from the Fairmount works at fifty per cent. advance to consumers beyond city rates. The commissioners of Spring Garden were to make collection of water-rents with an allowance of six per cent. with that service. This arrangement stimulated a new effort in the Northern Liberties. A meeting was held in that district in May, Dr. Joseph Martin being chairman, and Joseph Cowperthwait secretary, at which it was resolved "that it is expedient to introduce the Schuylkill water into the incorporated districts of the Northern Liberties immediately." The commissioners of the district were requested to enter into a contract on the best terms that could be obtained. The pressure was very great, and the commissioners were obliged to obey. They agreed to take the Schuylkill water from the city on the same terms as the district of Spring Garden. The district of Southwark came to the same conclusion at the same time, and on the 8th of June Councils ratified the contracts. The iron pipes were ready, and immediately afterward they were laid down in the districts. The first hydrant in Spring Garden north of Vine Street was in place and ready for use in May.

On the 3d of May, 1826, the corner-stone was laid of a building which it was expected would be an ornament to the city and a successful business enterprise. As far as regarded appearance and architectural effect these hopes were fulfilled, but as a financial project the building was a failure. The Philadelphia Arcade was the property of a joint stock company. The idea of its erection was borrowed from the city of London, where the Burlington Arcade, a collection of small retail shops in one building, was about this time successful. The Philadelphia Arcade Company purchased for the purpose of the building the mansion and grounds of Chief Justice Tilghman, on the north side of Chestnut Street, between Sixth and Seventh, which extended through to Carpenter (now Jayne) Street. Here had been erected at an early period a mansion-house by Joshua Carpenter, and in which he had lived, and afterward Dr. Thomas Graeme, John Dickinson, and others about and during the Revolution, Gerard, the French ambassador, and Chevalier de La Luzerne. Dickinson tore down a part of the old Carpenter mansion and erected in front a double three-story brick building of imposing dimensions. It was for many years the grandest house in Chestnut Street. Chief Justice Tilghman bought the property in 1798, and lived there until it was sold to the Arcade Company. The managers paid forty-two thousand five hundred dollars for the ground. They estimated that the entire property, when the building was finished, would cost

them one hundred and fifty thousand dollars. They had obtained subscriptions of eighty-eight thousand five hundred dollars when the corner-stone was laid, and there was a comfortable balance with which to commence the building. The Arcade was built upon the Chestnut and Carpenter Street fronts of Pennsylvania marble, one hundred feet front and one hundred and fifty feet deep. There were four open arches of great height in front. The interior was divided into one large central building, on each side of which was a wide open avenue leading from street to street. On

THE PHILADELPHIA ARCADE.

the east and on the west side a row of shops opened upon the avenues. The centre building was wider than the others. It contained shops running from avenue to avenue, which were capable of being divided in the centre and inclosed, so as to make a shop on each avenue. Entrance to the second story was obtained by stairways near the Chestnut Street and Carpenter Street fronts. Galleries extended through from street to street at this story, and gave access to the second-story rooms. The third story was closed and used on all sides of the building by the Philadelphia Museum, the entrance to which was by the main stairway and a stairway leading upward near Chestnut and Carpenter Streets. Over the avenues (which were paved with flags) were two skylights, of the full width of each, for the purpose of giving light to the apartments below, and making the avenues in effect covered streets, which in actual use they were, being favorite short-cut thoroughfares between Market and Chestnut Streets. John Haviland was the architect of this beautiful building. There were ten apartments running from side to side in the centre, and twelve on the sides of the avenues. The second-story rooms were of somewhat smaller dimensions. Altogether there were eighty rooms in the shop part of the building, with a museum occupying

the whole of the upper story, and in the cellar a fashionable restaurant, extensively visited, and kept for many years by David Gibb. There were niches at each flank of the Chestnut Street front, in which it was designed to place iron-bronze statues representing commerce and navigation. The project, however, never reached fruition. Over the niches there were placed in *bas-relief* the arms of Pennsylvania and of Philadelphia cut in marble. The pilasters of the arches were ornamented with heads of Mercury cut in bold relief. The construction of this building cost one hundred and twelve thousand dollars. It was finished in September, 1827, and was opened with the most flattering prospects. The rents of the shops were six thousand four hundred and seventy dollars, and of the museum seven thousand nine hundred and seventy dollars. For some years the place was popular, but it never achieved the success that was anticipated. The great current of business swept by on Chestnut Street without eddying into this bay. The tenants became discouraged and went elsewhere. The rents dropped in amount. Finally, when the museum was removed to Ninth and Walnut Streets, the upper stories were used as a music saloon and as a hotel. In the lower stories a few shops or offices were opened, but were not places of general resort. The property was finally bought by Dr. David Jayne, who, in 1863, tore down the Arcade and erected there three fine marble stores, extending through to Carpenter Street.

The militia system, which at this time required that every male between the age of eighteen and forty-five years should parade and receive military instruction twice in each year, had become worse than a farce because the State failed to provide arms or uniforms. Persons who did not regard the order of the militia officers to turn out "and toe the curbstone," as the method of alignment was facetiously called, were subjects of fine. The collectors were paid commissions on the amounts received, and were under incentive to be vigilant. They had summary powers to seize personal property and sell it, and their conduct in many instances was so rude and outrageous that they were excessively unpopular.

Statements in the latter part of the life of the venerable Thomas Jefferson that he was in pecuniary difficulties attracted much attention about this time, and stimulated many persons towards obtaining for the benefit of the patriot such contributions as true sympathy ought to accord not as a charity, but as a debt of gratitude to one who had done much in the service of his country. At a public meeting, held in May, 1836, resolutions were adopted declaring that subscriptions should be taken up in the city and county of Philadelphia limited to one dollar each, and similar subscriptions were recommended to the people of the State in all the counties. The one-dollar limitation fared as usual with such projects. The idea of allowing the whole country to contribute was

liberal, and it was expected that patriotism would be stimulated largely among individuals. It was found in a month, as was reported at a meeting of the subscribers to the Jefferson fund, that very little had been collected in comparison to what had been expected. In consequence, upon the limitation of the subscriptions, the committee was instructed to proceed without limitation, and to receive any and all sums that might be tendered. Up to the 4th of July the whole amount which had been collected was \$2414.14. Jefferson died on the 4th of July, and in September the trustees of the fund were ordered to pay it over to the executors under his will for the benefit of his daughters. News of the death of Thomas Jefferson and of John Adams, which occurred upon the anniversary of the day of the declaration of independence, in procurement of the passage of which they were active and earnest advocates, created great sensation throughout the country. In the city the bells of Christ Church were tolled by order of the mayor. Councils ordered the Hall of Independence and their own chambers to be draped in black for six months. John Sergeant was appointed to deliver an oration on the 24th of July. A public meeting of citizens was held at the District Court room. It was resolved that the 24th of July should be set apart as a day of mourning; that occupation and business ought to be suspended; that the public offices be closed and places of religious service opened. The mayor was asked that the old Liberty Bell in the State-House should be muffled and tolled; that Gen. Cadwalader, commanding the division, should cause minute-guns to be fired; that the vessels in the river should display their flags at half-mast; that all the apartments on the lower floor of the State-House should be hung in black; and that all citizens should wear mourning for thirty days. These recommendations were generally observed. There was a solemn military and civic parade. The soldiers marched to Independence Square. In the rear of the State-House was a scaffold covered with black cloth, over which was a black canopy. The only brightness was in the flags of the United States and volunteer corps displayed around the scaffold. Here John Sergeant delivered his oration, the scaffold being filled with members of Councils and the judges of the various courts, while below, upon the ground, were other benches used by citizens. The military and civic parade, under the command of Brig.-Gens. Thomas Cadwalader and Samuel Castor, entered the yard at the Walnut Street gate, marched in slow time up the centre walk, and took position twenty paces from the platform. The civic portion of the parade grouped beyond the military. Mr. Sergeant was not an impassioned orator, but he was a gentleman of fine education, an elegant scholar, thoughtful, and philosophic. His oration and eulogium was justly considered a finished production.

Shortly afterwards Mr. Sergeant, who had been ap-

pointed one of the two envoys extraordinary and ministers plenipotentiary to the Congress at Panama, from which it was hoped important benefits would flow looking towards a diplomatic union between the republic of the United States and South America, received the honor of a complimentary banquet from the Philadelphia bar before his departure. This tribute took place in November, at Masonic Hall; sixty or seventy lawyers were present. William Rawle presided, and Joseph Hopkinson, William Meredith, and Horace Binney were vice-presidents. A few days afterwards another dinner was given to John Sergeant by his fellow-citizens at Masonic Hall. Samuel Wetherill acted as president, and James C. Fisher, Capt. William Jones, Daniel W. Coxe, Andrew Bayard, and Edward Shippen Burd were vice-presidents. Within a few days afterwards Mr. Sergeant sailed for Mexico in the United States sloop-of-war "Hornet."

At this time Greece had broken out in rebellion against Turkey, a contest which attracted largely the attention and interest of Christian people throughout the world. There was strong disposition in the United States not only to sympathize in words with the Greeks, but to give them substantial aid. On the 2d of January, 1826, a meeting of the young men of the city and county was held at the court-house, with George S. Geyer chairman. Strong resolutions were adopted. In October of the same year, at a meeting held at Mrs. Holt's tavern, at Chestnut Street, G. R. Lillibridge being chairman, it was resolved to form a military corps to be called the American Greek Legion. This spirit was emulated in the succeeding month at a meeting of citizens, at which the venerable Mathew Carey was chairman, who resolved that subscriptions should be taken up to build a vessel of war to be presented to the Greeks. Shortly afterwards two other meetings were held, and it was resolved, in December, that charity rather than military assistance was needed. Mathew Carey offered a resolution that contributions should be gathered for the purpose of obtaining the necessaries of life for the Greeks. One gentleman offered to contribute one thousand barrels of flour, whilst another volunteered the service of a vessel to convey provisions to Greece. The attempts to send military assistance were not popular, and they were soon abandoned. There was little difficulty in obtaining subscriptions for the relief of distress, but few persons cared to contribute money for purposes of war. After this subscriptions were taken up in churches, and money made up in various other ways. The brig "Tontine," in March, 1827, sailed with provisions on board worth sixteen thousand dollars. The subscriptions closed about the summer of 1828, when there had been collected altogether \$25,574.82.

In July, 1826, a movement was made which resulted in the introduction of great changes in the custom of burying the dead, more particularly in

relation to the places in which interments were made. The church burying-grounds or the Potter's Field were the only places of interment. The families of persons who did not belong to religious congregations were at great disadvantage on the occasion of their death, or if there was no difficulty on this account the charges for opening the ground and permitting the burial were heavy. Besides, there was no property in a grave, and it became necessary in course of time to dig new graves exactly where old ones had been situate. These circumstances led to the calling of a meeting at the "New Market" Inn, Pine Street near Second, kept by William Ogden, about the 12th of July, 1826, "for the laudable purpose of forming a mutual association, without any exception or distinction on account of differences of religious tenets, to economize the heavy expense attending of sepulchral ground for an interment, and to insure to every individual member a lot or piece of ground of equal size to him and to his heirs forever to be reserved as a family cemetery, and the possession of a burying-place after the example of the patriarch Abraham." It was stated at this time that the church-wardens of Christ Church and St. James presented bills of twenty and thirty dollars for opening graves, and would not allow a tombstone to be put up until the money was paid. These proceedings culminated in the formation, at a meeting held at Lambert Keating's, Sixth and Chestnut Streets, on the 17th of August, of the Mutual Burying-Ground Society of the City and County of Philadelphia. The members purchased a piece of ground on the south side of Prime Street [or Washington Avenue], east of the line of Tenth Street, and in a few days the price of a lot in Mutual Cemetery, of the dimensions of eight feet by ten feet, was announced to be ten dollars. In the succeeding year the Union Burying-Ground was formed in Southwark. A large lot of ground was purchased on the line of Sixth Street, extending down to Federal Street. The price of lots was fixed at ten dollars. The Machpelah was formed about 1827, and purchased ground on the north side of Prime Street [Washington Avenue], extending from Tenth to Eleventh Street. About the same time the Philanthropic Cemetery was established on Passyunk Avenue, below the county prison. All these were upon the mutual and associate plan.

About the period that the Mutual Cemetery Company was established, James Ronaldson, who was the owner of a lot of ground bounded by Shippen, Fitzwater, Ninth, and Tenth Streets, determined to lay out the eastern portion of the ground, nearly the whole of it, for the purposes of a cemetery. He opened main walks and intersecting small walks. The plots between were divided into burying lots, ten feet north and south and eight feet east and west. On the 2d of April, 1827, Mr. Ronaldson conveyed the ground to Joseph Parker Norris, Roberts Vaux, Robert M. Patterson, and Joseph Watson, in trust, to permit the

said James Ronaldson and his heirs "to use and occupy the said several small lots or subdivisions only as burial-places for the interment of deceased human beings other than people of color." There was also a provision to permit Ronaldson to build on both sides of the gate, or carriage-way, on Shippen Street, suitable houses for the keeper, etc. On the 8th of April, 1833, the Legislature incorporated the lot-holders as the Philadelphia Cemetery Company, in the township of Moyamensing. Mr. Ronaldson displayed great taste in the establishment of this ground and in the manner of laying it out. It was for some years considered the finest cemetery in the county, and was a popular place of burial. The projector said, in relation to his original plan, that he wanted to erect within the inclosure of the Philadelphia Cemetery a dwelling-house for the keeper, or grave-digger, on one side of the gate, and on the other side a house uniform with the grave-digger's, this house to have a room provided with a stove, couch, etc., into which persons dying suddenly might be laid and the string of a bell put into their hand, so that if there should be any motion of returning life the alarm-bell might be rung, the keeper roused, and medical help procured. The first interment at Ronaldson's Cemetery took place June 2, 1827, of the body of a lady who had died in a hospital under Dr. Physick.

The centre house at Centre Square was torn down about the beginning of the year 1827. The ordinance to open streets through the square was presented in May of the preceding year, but the measure was not finally accomplished for some time.

On the 24th of November, 1827, pursuant to a call in the newspapers signed by James Mease, N. Chapman, George Pepper, John Vaughan, Reuben Haines, Joseph Hopkinson, Charles Chauncey, Horace Binney, and Mathew Carey, a meeting was held at the Franklin Institute to form a Horticultural Society. Mr. Carey was chairman and Dr. Mease secretary. It was resolved "that it is expedient to establish a Horticultural Society in the city of Philadelphia for the promotion of that interesting and highly important branch of science, and that a constitution be framed for that purpose." A committee, consisting of D. Maupay, D. Landreth, Jr., T. Hibberd, T. Landreth, John McArran, and A. D'Arras, all practical gardeners and florists, was appointed to obtain members, and a resolution was passed that the society should be organized as soon as fifty members could be secured. This work did not require much time. On the 21st of December the Pennsylvania Horticultural Society was founded, with a roll of seventy-eight members. It was not until the 2d of June of the succeeding year that the first regular election was held. Horace Binney was chosen president; Dr. James Mease, Mathew Carey, D. Landreth, Jr., Dr. N. Chapman, vice-presidents; William Davidson, treasurer; Samuel Hazard, corresponding secretary; David S. Brown, recording secretary; George Pepper, Nicholas Biddle, Thomas

Biddle, Robert Patterson, Daniel B. Smith; Moses Brown, M. C. Cope, Thomas Astley, David Landreth, Jr., Thomas Hibberd, Thomas Landreth, and Joseph Longstreth, acting committee. Mr. Binney resigned in five months, and Zaccheus Collins was elected in his place. The presidents of the society since that time have been as follows: 1829-31, Joseph R. Ingersoll; 1831-36, George Vaux; 1836-41, Horace Binney; 1841-52, Caleb Cope; 1852-58, Robert Patterson; 1858-62, Matthias W. Baldwin; 1862-63, J. E. Mitchell; 1863-64, Fairman Rogers; 1864, J. E. Mitchell; 1864-67, D. Rodney King; 1867-83, William L. Schaeffer. In 1828 the meetings were held in the rooms of the Philosophical Society. The first autumnal exhibition of fruits and flowers was held at Masonic Hall, Chestnut Street, on the 6th of June, 1829. The second annual exhibition took place at Washington Hall, South Third Street. For some years these displays were matters of interest not only to the members of the society, but to citizens generally. The floral shows were handsome and attractive. The rare plants and fruits were regarded with attention by visitors. The places used for the collections were also resorts at which people could see and be seen, and for years they were visited by thousands of persons. They were generally held in the Masonic Hall up to the year 1841. In 1842 the Chinese Museum was engaged, and the exhibition was given September 21st in the lower saloon, and afterwards annually in the upper and lower saloons until the building was destroyed by fire in 1854. "These exhibitions were not only the most profitable, but among the most beautiful ever held by the society, and their annual occurrence was considered one of the great events of the time; both saloons," about two hundred feet long by sixty-five feet wide each, "were not large enough to hold the crowds of ladies and gentlemen who desired to visit them, and it was no uncommon thing for Ninth Street to be filled with people as far as Chestnut Street waiting to gain admission."

After the burning of the Museum building, in 1854, the society was embarrassed for the want of a suitable place to hold the annual exhibitions. They were accommodated at one time at Sansom Street Hall and at Concert Hall. In 1855 the use of the Southeast Penn Square was granted by Councils for the purpose. The show was arranged under three large circular canvas pavilions, connected with each other by passages floored over, and brilliantly lighted at night with gas. The burning of the Museum building caused serious thought as to the best method of providing a permanent place for the accommodation of the association. In 1865-66 committees were appointed to procure subscriptions for the purchase of a lot of ground and the construction of a hall. Eighty thousand dollars was raised without much difficulty. The society, which had been incorporated March 24, 1831, received authority from the Legislature to make the necessary purchase, and the committee bought a

lot of ground at the northwest corner of Broad and Lardner Streets, adjoining the Academy of Music, of the dimensions of ninety feet front by two hundred feet in depth. A strip of fifteen feet on the north was left open for ventilation and light, and a splendid building seventy-five feet front by two hundred feet in depth was commenced according to designs furnished by Samuel Sloan, architect, on the 1st of September, 1866, and was completed and formally opened with a grand bazaar, conducted by ladies, for the benefit of the society, on the 29th of May, 1867. This building was of imposing proportions. The front, which was of sandstone, with brownstone accessories, appeared to give the edifice a height of two stories, but on the sides it was seen that there were three stories. A basement partly under ground, a first story hall, and the main saloon of the third story, except in the space taken by a foyer of moderate size in front, was of the full length and breadth of the building, with ceilings of considerable height, which was encompassed on three sides by a gallery. The 31st of January, 1881, Beth Eden Baptist Church, at the northwest corner of Broad and Spruce Streets, took fire and was totally destroyed. The flames were carried to Horticultural Hall, immediately opposite on the north, which was also destroyed. The loss on that building was estimated to be sixty thousand dollars. In a few months the hall was rebuilt. The side walls were generally in good condition. The new front, of sandstone and brownstone, was somewhat modified from the former style, the principal change being in doing away with the high steps which rose between each pillar and pier of the colonnade and substituting an entrance not much above the street level.

The construction of a breakwater near the entrance of Delaware Bay had been a matter of interest frequently urged by merchants and business men of the city for many years. The movements and discussions on this subject were of sufficient importance to influence Congress by act of May 7, 1822, to appropriate twenty-two thousand seven hundred dollars for erecting in the bay of Delaware two piers of sufficient dimensions to be a harbor or shelter for vessels from the ice, if the Secretary of the Treasury, after survey being made, should deem the measure to be expedient. The examination was made and a plan reported sufficiently extensive to employ the small appropriation which had been made. The engineers, however, suggested that a work upon a larger scale might with advantage be constructed of durable materials. Upon this an application was made to the President for a more extensive and accurate survey. A board was formed, under direction of the War and Navy Departments, of officers of the engineers and of the navy, consisting of Gen. S. Bernard, Lieut.-Col. J. G. Totten, of the army, and Commodore William Bainbridge, of the navy. They examined into the whole subject by personal inspection of the shores of

the Delaware Bay, near Cape Henlopen, and filed in the War Department plans for the construction of an artificial harbor in the bay of Delaware upon an extensive and durable plan. The President recommended the matter in an annual message. It began to be considered that the work proposed was something more than a local improvement for the benefit of the commerce of the Delaware Bay and River. It was a matter that concerned all sorts of shipping, foreign or domestic, which might be within sufficient distance to make their course to the harbor of refuge in rough weather or impending storms. The Chamber of Commerce of the city of Philadelphia at the end of 1825 petitioned Congress for the building of the breakwater according to the plans of the engineers already made. A large town-meeting was held on the 28th of December of that year in the Supreme Court room, Horace Binney being in the chair. Resolutions were adopted that Congress should be memorialized in favor of the construction of the breakwater according to the plans of the commissioners to the Secretary of War in 1823. In addition to other matters there was a suggestion "that in times of war a harbor at the mouth of the Delaware, guarded by the simple but impregnable fortress which the locality admits, would be invaluable as a national work, and as a place of refuge for vessels pursued by an enemy, unapproachable under all circumstances without a pilot, or as a station from which access to the ocean is at all times practicable, it would combine advantages to the national and commercial marine scarcely equaled by any port in the United States." In this memorial it was stated that the registered tonnage belonging to the port of Philadelphia was nearly sixty thousand tons, enrolled and licensed for the coasting trade more than twenty-five thousand tons, exclusive of river craft, making a total of eighty-five thousand tons navigating the Delaware Bay from the port of Philadelphia. The imports at that time from foreign countries were estimated to exceed \$12,000,000, and the exports were estimated at \$10,500,000. To the memorial of the Chamber of Commerce was appended a schedule of cases of shipwreck, loss, and disaster within the bay of Delaware by vessels being driven into or out thereof by storm or ice, and which would have been prevented had there been a place of shelter at its entrance. This schedule included the period between October, 1826, and January, 1827, and registered the misfortunes of twenty ships, fifty-seven brigs, forty-eight schooners, forty-three sloops, four pilot-boats, one bark, and twenty other vessels, the classification of which was not ascertained. In 1828 another movement was made to effect action in Congress, and there was sent to that body the names of and particulars of misfortunes within the space commencing on the 28th of December, 1826, and the 15th of December, 1827, of disasters to thirteen ships, eighteen brigs, twenty-five schooners, four sloops, one bark, one steamboat, —total, sixty-two vessels, the value of which with

their cargoes was beyond \$2,000,000. The Committee of Commerce of Congress reported, in February, 1828, in favor of the construction of the breakwater. It was estimated that the amount necessary for its construction would be \$2,326,627, but that many years would be required for its completion, so that the cost might be defrayed by installments.

Finally these efforts resulted in the passage of an act, May 23, 1828, "that the President of the United States cause to be made near the mouth of the Delaware Bay a breakwater." The sum of two hundred and fifty thousand dollars was appropriated for the accomplishment of that object. This, in the language of the commissioners selected by Congress, was "to shelter vessels from the action of the waves caused by the winds blowing from east to northwest round by the north, and also to protect them against injuries arising from floating ice descending from the northwest." The first stone of the breakwater was laid shortly afterward. The light-house, known as the breakwater light, was built in 1848. The plan of the engineers comprised a structure of semi-hexagonal shape. One wing ran from the east northwestward five hundred and eighty yards, then bending a little to the southwest extending seven hundred and forty yards, then bending southwest four hundred and forty yards; within these bends there was room for a large harbor of nearly one million cubic yards. The work was commenced in 1829, under the direction of William Strickland, architect. Blocks of rubble from the nearest quarries were thrown into the sea to form their own slopes for a foundation. The surfaces of both slopes, to the level of low water, were paved with rough blocks set at right angles to the slope and well wedged together, thus presenting as little surface as practicable to the action of the waves. The upper portion of the slopes, to within six feet of the low-water mark, were of blocks of three tons weight; thence to high-water mark three to four tons, and above this four to five tons to a height of four feet three inches above the highest water. The ordinary rise of tide at the breakwater is nearly five feet, equinoctial tide seven feet. The plan of the breakwater was altered somewhat when it was built. A straight mole twelve hundred and three yards long was laid in water of from five to six fathoms depth, having a base at the bottom of one hundred and seventy-five feet, and a width at top of thirty feet. Its position was in a line tangent to the seaward extremity of Cape Henlopen, extending southeast and west-northwest, in the original course of the ebb tide, the shore of the cape being one thousand yards distant from its eastern end, but only five hundred yards distant opposite toward the south. This mole protects the harbor behind it from the northern and eastern winds. The second mole, intended for an ice-breaker, is opposite the western end of the breakwater proper, and separated from it by a channel of three hundred and fifty yards. In the inclosed and sheltered portion

there was an estimated harbor of three hundred and sixty acres, with a depth of from three to six fathoms.¹

The manufacture of silk, which had been matter of interest from the time of the Stamp Act, when the promotion of domestic manufactures was advocated, again became a subject of discussion and of effort. An association was formed in 1828, entitled "The Pennsylvania Society for the Promotion of the Culture of the Mulberry and the Raising of Silkworms." This association offered a premium of sixty dollars for the greatest quantities of sewing silk of the best quality produced within this State, raised within the same, and produced by one family, not less than twenty pounds. Second premium forty dollars for the next best quality and greatest quantity, not less than fifteen pounds. Third premium of twenty-five dollars for the next greatest quantity and quality, not less than ten pounds. Fifty dollars premium was offered for the greatest number of cocoons raised in Pennsylvania, and thirty dollars for the next greatest quantity, not less than fifty pounds. For the best white mulberry-trees not less than two years' growth and planted at equal distances, say twenty-five feet apart, raised within twelve miles of the city, not less than four hundred trees, fifty dollars. Thirty dollars for the next greatest quantity, not less than three hundred, and twenty dollars for the next greatest quantity, not less than two hundred.

Michael McGarvey, a carter, murdered his wife in November of this year in a most brutal manner. They lived in a frame house at the corner of Ball Alley and Pine Alley. McGarvey beat and whipped his wife with a cart-whip until she died, and then hung her body head downward out of a second story window. The cruelty of the assault created much feeling, and there was an expectation that McGarvey would be convicted of murder in the first degree and hanged. He was convicted of murder in the second degree and sentenced to imprisonment of eighteen years.

In August, 1828, a riotous disposition was manifested in Kensington among some weavers. At an affray which took place on the 11th of that month, Stephen Heimer, a watchman, was killed. Two days afterward another riot took place at the corner of Third and George Streets, on account of the hanging out of a weaver's banner. Stones and brickbats were fired at the house from which the offensive display was made.

Guns were fired, some persons were wounded. The sheriff called out the *posse comitatus*, issued his proclamation, and called upon the mayor of the city for help. These occurrences led to the holding of a meeting of native and naturalized citizens of the Northern Liberties and Kensington at the house of Patrick Murphy shortly afterward, John Thoburn being the chairman. By this body resolutions were adopted in reference to the disturbance. The preamble declared that owing to misrepresentations in the city a general and unfounded belief was held that the riots were preconcerted, or carried on or subsequently sanctioned by the great body of weavers residing in the district, and that, moreover, the public mind had been unfavorably impressed relative to the character of those natives of Ireland who lived in the vicinity of the disturbances. The persons composing the meeting therefore resolved "that we absolutely disclaim all participation in said proceedings, and that we will co-operate with our fellow-citizens to bring to punishment the offenders, etc." A committee was appointed to inquire into the cause of the riots, and another to collect subscriptions for the relief of the family of the deceased watchman, Heimer. Collections were no doubt made. But if there was any attempt to inquire into the causes of the riots, there does not appear that there was public report. Thomas Weldon, James Weldon, George Weldon, James Oliver, and John Browne were tried for participation in this riot in December. It appeared that the disturbance arose in consequence of Heimer, who was not on duty that night, going along Third Street above Poplar Lane making a noise. He went into Weldon's house, which was a tavern or restaurant, to get something to eat or drink. He was requested to be quiet, as there was a dying woman in the house. He paid no attention to this request, and the Weldons, with the others, set upon him and beat him so that he died from his injuries. The Weldons were Irish. Heimer, in the quarrel, had called them "bloody Irish transports." These words repeated excited much indignation among the Irish weavers of the neighborhood, while an opposition to them of Americans quite as strong arose. The second riot was caused by the weavers' taunt, by hanging out their banner. This was the first disturbance in the city or county in which race prejudice was manifested. It was the forerunner of fearful outrages arising from such causes.

On Sunday, the 6th of December, 1828, the Reading mail-coach, which left the city at half-past two in the morning with nine passengers, was stopped upon the Ridge road about Turner's Lane by three men, one of whom ran out from the side of the road, grasped the leading horse, and turned him around to one side; two men then stepped up, one on each side of the road, opposite the driver's box, presented a pistol at the latter and ordered him to stop. The lamps were struck with the pistols and the lights put out. The robbers then coolly commenced their operations

¹ Col. J. G. Bernard, of the corps of Topographical Engineers United States army, in 1876 wrote that the utility of the Delaware breakwater was best exhibited by the statement that since 1833, 246,011 vessels had taken refuge from storm under its protection, of which there were 17,307 in the year 1871 alone. "Let a threatening sky foretell the approaching storm, and a few hours will suffice to fill a previously vacant harbor. Let a northeasterly storm continue for a day or two with severity, and the harbor becomes crowded entirely beyond its capacity. The fleet of vessels which now fill it are seen to come in in rapid succession from the seaward, and there is no single fact more capable of impressing on the mind the magnitude of our coasting trade than the great number of vessels which a few hours' time will, under the above circumstances, congregate at this point."

on the passengers. A person who was riding on the seat with the driver was ordered down and his money demanded, after which his hands were tied behind his back by the robbers. The coach was opened and the passengers ordered out, and each one required to hand over his money and valuables. One of the villains then jumped into the coach, took possession of the valises, saddle-bags, and what they could find, and threw them into the road, carried off the mail-bags from the driver's seat and threw them into the road also, and cut open the mail-bags at once. The passengers, after being personally robbed, were ordered into the stage and the driver to his seat, and the robbers made their escape in the darkness. The driver, well frightened, did not attempt to continue the journey, but drove back to the city. James Porter, George Wilson, and — Poteet were arrested on charge of the commission of this crime shortly afterward. Poteet turned State's evidence. Porter and Wilson were convicted and sentenced to be hung. For some reason President Jackson approved the sentence against Porter but did not confirm that against Wilson. The latter was sentenced to a long term of imprisonment. Poteet escaped punishment altogether. Porter was executed at Bush Hill, about on the line of Seventeenth Street, at Wallace, on the 2d of July, 1830.

The struggle in the British Parliament at this time for the emancipation of the Catholics attracted much attention and interest. On the 14th of May, 1829, news arrived of the passing of the Catholic Relief bill by the British Parliament. There was an unusual rejoicing. The old State-House bell as well as the bells of Christ Church, Protestant Episcopal, were rung "in testimony of joy at the recent triumph of religious liberty in England." Three days afterward a meeting of the friends of Ireland was held in the county court-room. A resolution was adopted "that the emancipation of the Irish Catholics is under the providence of God mainly to be attributed to the energy, patriotism, and influence of the Catholic Association of Great Britain;" also that thanks were due to Daniel O'Connell, the Duke of Wellington, and others, and it was resolved that there should be a celebration in this city. This rejoicing took the shape of a dinner, which was held in Independence Hall at the State-House, that being the last occasion upon which the apartment was used for such purpose. There were three hundred and fifty persons present, and Mathew Carey presided. On his left hand was seated Turner Camac, and at his right the mayor of the city, Benjamin W. Richards. Judge Edward King, of the Common Pleas, announced the toasts. A poem written by Dr. James McHenry for the occasion was read by Mr. Dunkin, and Lewis W. Ryckman sang a song. Stephen Edward Rice and John Binns of the Democratic press spoke upon the occasion, and a song was sung by Mr. Worrell, also written for the occasion. At the head of the room was a large trans-

parency, upon which was painted a female figure representing Ireland in chains. Lord Wellington in a military dress was depicted as presenting a scroll to the king of Great Britain, George IV.,—a scroll upon which was written, "She must be free or I resign." The king is represented as saying, "Thou hast conquered; she is free." Daniel O'Connell upon the right side of Ireland was represented as rejoicing.

Some excitement was created in 1829 by the visit of Frances Wright, commonly called "Fanny," and in her after-life Frances Wright Darusmont. She was an English woman, a social reformer and a philanthropist, a native of Dundee in Scotland, where, being left an orphan at the age of nine years, she was brought up by her guardians in doctrines of social philosophy such as were held by the French materialists. She promulgated opinions in regard to slavery, the qualities of the white and black races, which were of the advanced character of the doctrines afterwards enunciated with great strength by the American abolitionists. She was peculiar in her views of social topics, religious principles and doctrines, and political questions. She was a good speaker and fearless in the pronouncement of her opinions, the novelty of which attracted much attention, with expressions of dissatisfaction among large numbers of the people. She had been in America before this time, traveled through the United States between 1818 and 1820, and published a book called "Views of Society and Manners in America." Fanny Wright came to the city in June, and delivered lectures "On the Formation of Opinions" and "Existing Evils." On the 4th of July she delivered an address at the Walnut Street Theatre on "Subjects Applicable to the Day." Tickets for admission, admitting a gentleman and two ladies, were sold at a nominal rate. Some of the clergy undertook to reply to her. Among these was the Rev. W. L. McCalla, of the Scotch Presbyterian Church, who reviewed "Miss Frances Wright's System of Knowledge" on the afternoon of the 26th, and announced, "in observance of an old custom, he will take a text out of the Bible. It shall, however, be one which makes particular examination of a female predecessor of Miss Wright who taught a system of knowledge in the first century of the Christian era." In September this lady spoke at the Walnut Street Theatre for two Sunday evenings upon "National Republican Education for all the Children in the Land."

A riot between blacks and whites arising out of some personal cause of quarrel in which others than the original disputants became involved took place on the 22d of November, 1829; some persons were injured on both sides and some were arrested. This was the beginning of a series of riots, in which white people were generally the assailants upon the blacks. They were inflamed by prejudice and strong opposition to the doctrines of the friends of the abolition of slavery, which about this time were beginning to be boldly pronounced.

In September, 1830, news of the revolution in France upon the three days of July and the expulsion of the Bourbons was received in the United States, and excited lively interest throughout the country. The sympathies of the Americans always being strongly inclined toward the people struggling for their liberties, and especially in favor of France, whose assistance to our own government during the war of the Revolution secured independence, it was a matter of more than ordinary congratulation that in the movements which resulted in the banishment of Charles X. Gen. Lafayette, the nation's guest only six years before, was prominent as a leader. A town-meeting was called at the District Court room September 25th. William Rawle was president, Nicholas Biddle and Daniel W. Coxe vice-presidents, Richard Willing and Charles J. Ingersoll secretaries. The principal speaker was John Sergeant, whose remarks were addressed as much to the political meaning as the historic results of the Revolution. Mr. Sergeant proposed a preamble and resolutions, in which were set forth,—

"WHEREAS, The sacred principle of resisted tyranny and oppression exemplified and put in practice by our glorious Revolution, and subsequently by those of the other independent American States, has taken such deep root as to become a part of the common law of nations in this hemisphere, while in Europe immortal Greece has anew implanted it in a soil where liberty once flourished, but for ages has been trodden down by a barbarous despotism;

"AND WHEREAS, France, our first and faithful ally, after a struggle of forty years against powerful combinations of enemies within and without, has at last succeeded, by a unanimous and heroic effort, in shaking off the yoke of bigoted and tyrannical rules and establishing a government of her own choice;

"AND WHEREAS, The interesting position in which the French nation by its courage, its moderation, and its wisdom has thus assumed in the world, invites in a particular manner the expression of our sympathy and gratification; therefore,

"Resolved, That this meeting cordially participates in the joyful feeling which has been excited throughout the United States by the great events that have lately taken place in France.

"Resolved, That we cannot withhold our admiration of the unexampled courage and self-devotion with which the people of Paris on the memorable 27th, 28th, and 29th of July last rushed, unarmed and unprepared, upon a formidable armed force arrayed against them in the heart of their city, by their unanimous and well-directed efforts in the short space of three days conquered for themselves and for their country the blessings of liberty and self-government. . . .

"Resolved, That [a committee] be directed to convey to Gen. Lafayette our sincere congratulations upon the triumphs of the principles of liberty achieved by the people of France, and to express to him the gratification we feel as citizens of the United States, bound to him by the recollection of his eminent services to our country, at the distinguished and virtuous part he has taken and the large share that he has had in producing this great result."

John Binns offered a resolution declaring that the press of Paris deserve particularly to be congratulated. Mr. Binns said, "There are no acts which more entirely command our admiration and esteem than the devotion to sound principles and the general welfare which pre-eminently distinguished the editors of newspapers in their prompt and magnanimous determination to resist and utterly disregard the tyrannical and unconstitutional edict of Charles X., which was intended to prostrate the freedom of the press

and convert that glorious instrument into an engine of despotism." Other speeches were made by William J. Duane, Joseph R. Ingersoll, George M. Dallas, Josiah Randall, Peter S. Du Ponceau, Thomas Biddle, and Charles J. Ingersoll. About the same time a meeting of workingmen was held at Military Hall, Joseph R. Chandler being chairman, and J. O'Connor and Robert Morris secretaries. The preamble reported to this meeting said,—

"The part which the workingmen of Paris took in that contest, fighting in the thick of the battle when it raged with the greatest violence, and returning to their peaceful occupations when the strife was done, meets with our warmest and proudest approbation. Be it therefore

"Resolved, That as this signal victory was won by our brethren, the workingmen of Paris, commanded by the pupils of the Polytechnic Institute, we hail the triumph with peculiar delight."

In honor of the occasion the workingmen determined that they would celebrate it by a public dinner.

The officers of the First Division of the Pennsylvania militia also held a meeting at Military Hall. Maj.-Gen. Thomas Cadwalader was chairman, and Lieut.-Col. Morris, inspector of division, was secretary. Col. James Page offered the resolutions, among which were the following:

"Resolved, That regarding the achievement of the French as of vast importance to that nation and of immeasurable consequence to the whole human race, inasmuch as it is a proof of the spread of liberal opinion and the firm footing which the principles of liberty are obtaining throughout the world, we will celebrate the late glorious and auspicious event by a general parade of the volunteers of the city and county of Philadelphia.

"Resolved, That the 'tri-colored flag' be displayed in company with our national standard, as emblematic of the pure principles which gave origin to both, and as indicative of the fellowship we wish to maintain with the people which, in time of need, sent a Lafayette to our aid, and revived the hopes of our almost despairing countrymen."

The military celebration took place on the 4th of October. Before the procession was formed there were some interesting proceedings. The company of Philadelphia Grays, Capt. John Miles, bore a splendid tri-colored banner, upon which, in the white centre stripe, was painted a likeness of Lafayette. The State Fencibles were presented by Miss Emilie Chapron, at the house of her father, John M. Chapron, with an elegant tri-colored flag, which was received by Capt. Page with a fitting reply, the bands playing the "Marseillaise." The parade was of more than ordinary size. It was participated in not only by the volunteers of the division, but by several companies of horse, infantry, and riflemen from New Jersey, and from Montgomery and Chester Counties, in Pennsylvania. Maj.-Gen. Thomas Cadwalader was in command. The First Brigade was led by Brig.-Gen. Robert Patterson, and the Second Brigade by Brig.-Gen. John D. Goodwin. Aged citizens in barouches and a civic cavalcade of several hundred horsemen followed. Along the route of the procession tri-colored flags and hangings abounded. The theatres were illuminated in the evening. The proceedings were fitly concluded by a celebration by French citizens at Head's Hotel, at which one hun-

dred and twenty gentlemen took part. Peter S. Du Ponceau officiated, assisted by Dr. La Roche and M. Laussat, masters of ceremonies; Messrs. Clapier and Dupont De Nemours, of Wilmington, were vice-presidents, assisted by Messrs. Destouet and Lajus, who were the committee of arrangements. Among the guests present were Mr. Johnston (a senator from Louisiana), the Hon. James Brown (late ambassador to the French Court), the consul-general of France at Richmond, M. Chevallie, Mr. Dannery (French consul at Philadelphia), and the vice-consul of France at New York, M. Hersant. Mr. Du Ponceau was the only speaker at length. There were thirteen regular toasts, and about thirty volunteers. A patriotic hymn, written for the occasion by N. Peyre Ferry, was sung by M. Alfred, of the French Comedy Company. There was a song, composed by M. Tabarri, sung by M. Victorin, and another, also specially produced, sung by M. Meignen. Other songs were sung by Messrs. Leitellier, Curtot, and Privat, of the French company.

Circumstances attending a duel which occurred this year and occasioned the death of William Miller, Jr., a young lawyer of talent and respectability, attracted more than ordinary attention, and created a feeling of regret which was universal with all classes of people. Miller fell in a duel with Midshipman Charles G. Hunter, of the United States navy. A most unfortunate fact, so it was thought, was that neither Hunter nor Miller had anything to do with the original quarrel, which was between other persons. They were brought in by the supposed rules of the duelling code, which rendered it necessary that a second to a party challenged or challenging should himself be bound to fight in support of the honor of his friend. The origin of the quarrel which eventually involved Miller and Hunter was in a supposed offensive remark made in the latter end of 1829 at a dinner-party by H. Wharton Griffith. The words were resented by Roger Dillon Drake, who was present. The difficulty was made up, however, by the intervention of friends, and the parties were apparently reconciled. In the early part of 1830, Dr. Alfred Drake, who was a brother of Roger Dillon Drake, received an anonymous letter which was construed to reflect in some manner upon the character of the lady to whom Dr. Drake was about to be married. R. D. Drake assumed that this letter was in the handwriting of Mr. Griffith. The two met near a billiard-room in the neighborhood of Fourth and Chestnut Streets, to which they both repaired, apparently in an amiable humor, but when there Drake suddenly, and without any warning, struck Griffith in the face, and followed it up with several blows, and in his passion produced the letter, which he showed to Griffith in the intervals of the attack, and asked him if he knew the handwriting. The latter denied knowledge of the letter or the writer, statements which instead of mollifying added to the fury of Drake. The

result was a challenge by Griffith to Drake, which was sent by Midshipman Charles H. Duryee, of the United States navy. Drake refused to accept the challenge on the ground that Griffith by his conduct had rendered himself "too infamous to be met as a gentleman." Upon this Duryee declared that if Drake would not meet Griffith, he must be prepared to meet him (Duryee). There was considerable discussion and correspondence, in which Miller was for the first time introduced as a friend of Drake. The latter continued to declare that he would not meet Griffith. Thereupon Duryee denounced Drake as "a base coward and calumniator." On this Drake challenged Duryee. Then came into the quarrel for the first time Lieut. Hampton Westcott, of the United States navy, as second for Duryee. Westcott declared that Duryee could not meet Drake until the latter should give to Griffith the "satisfaction he required, and redeem your [Drake's] character." Drake then sent a peremptory challenge to Duryee by the hands of Miller. Westcott, as second for Duryee, refused to meet him upon any other terms than those already indicated. At the time this was going on, there were further disputes between Pierce Butler, friend of Griffith, but not a second, and William M. Camac, also a friend of Griffith, with Duryee as to certain things that were said. They were explained, however, so as to prevent trouble. While these disputes were going on a new element appeared in the controversy in the shape of a letter dated at New Brunswick, N. J., March 7, 1830, and signed R. A. De Russey, Miles C. Smith, James Neilson, Hatfield Smith, and Digby D. Smith. It was addressed to William Miller, Jr., and in reference to the difficulties between Drake and Duryee. In this curious epistle the parties stated that they disapproved of Duryee's conduct, as the same had become the subject of discussion, that they considered that he had lost the privilege to retrace his course, and that it rested with Drake to point out "what step on the part of Mr. Duryee shall efface the stain which this rashness of Duryee has put upon the character of your friend [Drake]." They further said in effect that they believed "that Mr. Duryee is convinced of his error, that he is willing to acknowledge that he committed it while under such excitement as his reason could not control." The signers of the letter then proposed a meeting at Trenton of a committee appointed on their part and one on the part of friends of Drake for a conference and settlement of the dispute. With a little more correspondence, the affair might have then been quietly concluded. Miller, as a friend of Drake, replied that "they looked upon the controversy between the latter and Duryee as settled on terms satisfactory to Drake, and that no stain rested upon his character in consequence of the misunderstanding with Duryee," and that there would be no advantage in reopening the controversy. By this time the character of the New Brunswick letter had become known to Duryee. He introduced a new party

to the controversy,—Midshipman Charles G. Hunter, of the United States navy. He was instructed by Duryee to call on Miller and demand the original New Brunswick letter, and that all copies of it should be destroyed. Miller at first hesitated, and asked time for consultation. Finally he determined to comply. He delivered to Hunter the original letter, and at the United States Hotel burned the only copy which he said he knew of or believed to be in existence. Here the affair might have rested without the effusion of blood; but five days afterwards, March 17th, a printed copy of the New Brunswick letter made its appearance in the city, and was circulated among acquaintances of the party. Upon this Hunter, on the theory that Miller had deceived him, challenged him at once, and Hampton Westcott was the second. Miller refused to accept the challenge on the ground that he knew nothing of the publication and had no connection with it. Whilst Westcott was with Miller most unfortunately Roger Dillon Drake came into the apartment where the conference was going on, ignorant, perhaps, of its character, and without waiting for a proper occasion to see Miller alone, presented a copy of the New Brunswick letter, which he said had been sent to his brother, Dr. Drake. Miller upon receiving it offered to Westcott to destroy it, in accordance with his original agreement, but Westcott replied that he did not care about its being destroyed, as printed copies were in circulation. Hunter upon this sent, by the hands of Westcott, a challenge to Miller, which the latter refused to receive, and Hunter posted Miller as a coward. Thus, after the quarrel had been tossed from Griffith and Drake to Duryee and Drake, and from them to Hunter and Miller, the affair that had been going on for two or three months was brought to a dead point. No amount of denial on the part of Miller was sufficient to relieve him in the minds of the other party of a suspicion of being concerned in the publication of the New Brunswick letter or of being concerned in making copies of it. Nobody seemed to think that it could be possible that of the five persons who had signed that letter one or more of them might have made a copy and circulated it for the information of other "gentlemen." The posting of Miller brought on the crisis. He sent his friend, Lieut. Edmund Byrne, of the United States navy, to Westcott, second of Hunter, with an acceptance of the challenge. The duel took place on Sunday, the 21st of March, at the nearest boundary of the State of Delaware, on the southern shore of Naaman's Creek. Miller's party consisted of himself, Lieut. Byrne, "another gentleman," and a surgeon. With Hunter's party were Westcott, Duryee, and another gentleman. The seconds had agreed that if the first exchange of shots was harmless, Hunter's friend should, if Miller acted like a brave man, retract the charge of cowardice; and if Miller's friend should declare that on his honor he believed that Miller was innocent of the charge of the publication of the New

Brunswick letter, the parties should be reconciled. They stood up, were placed in position, and fired at the word. Miller fell, uttering an exclamation, and died immediately, the ball having gone through his lungs. As he fell Hunter advanced and said, "Gentlemen, I assure you that I had no enmity against that man. His blood must rest upon the heads of others who have dragged him into their quarrels."

The circumstances excited much regret and intense indignation. Hunter was denounced in anonymous letters and in the newspapers as a bloodthirsty murderer. The House of Representatives of Pennsylvania declared in the resolution that Hunter was the challenger and the aggressor, and that the President of the United States should be requested to dismiss him from the navy. John Branch, the Secretary of the Navy, addressed President Jackson upon the subject, and said that it had been proved to his satisfaction that Lieut. Edmund Byrne, Lieut. Hampton Westcott, Passed Midshipman Charles H. Duryee, and Midshipman Charles G. Hunter, of the United States navy, had been concerned in a duel in which William Miller, Jr., was killed, and that he recommended their names be erased from the list of officers of the United States navy. On the next day President Jackson replied, "Let the above-named officers of the navy be stricken from the roll."¹

Who was responsible for the printing of the New Brunswick letter was never publicly known. After the death of Miller, Dr. Alfred Drake denied that he had furnished the copy for that publication, and R. Dillon Drake denied knowledge of the source of the publication, and asserted that he had made diligent search to discover the printer and the persons publishing it without success.

A singular difficulty between the butchers, who rented stalls in the markets, and the venders of meats from carts and wagons, who were not country people bringing their produce of their own farms to the city, but were really hucksters, threatened the inhabitants of the city for some days with a famine. These unqualified venders of meats, as the victualers called them, were nicknamed by them "Shinners." They generally came to market in the farmer's garb and pretended to be cultivators of the soil, but actually they were only dealers in meats. The trouble was that under the system of market laws the farmers had the privilege of using certain stalls in each market-house without the payment of any rent, whilst the butchers, on the contrary, were assessed with considerable stall-rents. They did not complain of the legitimate country farmer. A few sheep or hogs, with an occasional bullock or cow, was all the meat the latter could spare from their farms in the course of a year. They offered but little competition to the butcher.

¹ Two of them at least were restored in after-years. Hunter during the Mexican war captured Alvarado, and was known afterwards as "Alvarado Hunter." Westcott was also restored to the service and remained several years.

And they were, besides, guaranteed by the law with free stalls,—a regulation that had been enforced from the earliest days of the province. But the “shinners” were in market every day, and could afford to sell cheaper than the butchers. These annoyances had been the subject of frequent petitions and remonstrances to Councils with but little avail. In July another memorial was presented, in which the butchers complained that they were charged with heavy stall-rents, while the “shinners,” who falsely pretended to be farmers, escaped all contribution. They asked for the passage of an ordinance prohibiting the sale of butchers’ meat in less quantity than a quarter in any other stalls than those appropriated to victualers. This request, which would have given the butchers the monopoly of retailing meats, was not granted as soon as the impatience of the wielders of the cleaver desired. Whilst the matter was still under consideration the butchers resolved by a bold piece of strategy to convince the community how much it was indebted to the profession. They agreed not to attend the markets until their petition should be answered. On the next regular market-day the butchers’ stalls were deserted in the High Street markets; all but one, which was furnished as usual by a member of the fraternity who did not join in the resolution of his brethren. The result was not agreeable to the butchers. The people, suddenly deprived of supplies of food, which had always been accessible before that time, were not affected to any degree of sympathy with the butchers. Instead of taking sides with them, house-keepers were quite indignant. Councils were not frightened, and during the period of the absence of the butchers from the markets the committee which had charge of the butchers’ petition reported unanimously against granting the request that had been made. In the interval the farmers and “shinners” came forward actively with considerable supplies. The butchers stood out about a week, and then, without any flourish of the trumpets which used to blare when show-beef was in abundance, returned quietly to their stalls, the demonstration having proved to be a decided failure.

On the 11th of June the City Guards of Boston, a fine uniformed company of volunteers, paid a visit to the city. There had been little of that sort of visiting done previously by military bodies. The reception of Lafayette in 1824 brought companies from the interior of Pennsylvania and New Jersey, but Boston was so far away that a visit from the military of that city was really an event of novelty and interest in which the whole town took part. The uniform of the City Guards was a gray coat trimmed with black, white pantaloons, high cap with large black feather. The Boston Brigade Band of twenty musicians, considered at that time one of the finest military combinations in the country, came with the Guards. The strangers arrived in Kensington about half-past nine o’clock in the morning, and were received by an

escort of infantry companies under command of Col. James Page. A salute of twenty-four guns was fired as they approached the wharf. The main street of Kensington was completely choked with people of all sizes, ages, and sexes, who not only occupied the sidewalks and streets, and the windows of houses, but were crowded on the roofs of buildings and sheds, the lumber piles in the board-yards, the limbs of trees, fences, and all other available places throughout the streets of the Northern Liberties and the city. Col. Page marched his escort to Arch Street and Second, where was drawn up a large number of the uniformed companies of the First Division under Brig.-Gens. Robert Patterson and John D. Goodwin, the whole being under command of Maj.-Gen. Thomas Cadwalader. Some time previously City Councils had granted the use of one of the public squares for the Guards as a place of encampment. They were marched to the southwest Penn Square, where their tents had already been pitched. A guard from the Philadelphia company was detailed, and the division was dismissed. In the afternoon the whole company was marched to Swaim’s Baths, at the northeast corner of George (now Sansom) and Seventh Streets. In the evening they were entertained by Gen. Cadwalader in his own house, on Arch Street below Ninth. The next day was Sunday, and the Guards attended religious services with their band. The Rev. Stephen H. Tyng, rector of St. Paul’s Protestant Episcopal Church, had formerly been a member of the company, and it was an agreeable thing that he should be called upon to address them. The regular services were gone through with, and a sermon was preached from the 23d chapter of Proverbs, 15th verse, “My son, if thine heart be wise, my heart shall rejoice, even mine.”

In this year was passed an act which rendered traveling in the streets of the city and county as free and unrestricted on Sunday as on any other day. For more than a century after the foundation of the city there was no difficulty on this score. On the 4th of April, 1798, the Legislature passed an act, the preamble of which recited “that religious societies had a right to worship peaceably, and that having such rights it was proper that they should be protected in them.” It was therefore enacted that the congregations of churches in the city of Philadelphia should be authorized to fix chains across the streets where churches were situate, at a distance from the buildings, during the time of divine worship, in order that the congregation should not be disturbed by the noise of vehicles passing by. At the time when this act was sanctioned (1798) there were few churches in comparison to the number that were in existence thirty years later. The privilege of putting up the chains was generally embraced by the churches, and a vehicle endeavoring to pass from the northern part of the city to the south, or *vice versa*, found no street clear between Front Street and Ninth. The streets

running east and west were also greatly impeded. The United States mail, the carrying of which was supposed to have rights superior to all others, was frequently compelled to take a vexatious course in its way to and from the post-office. The firemen, frequently stopped by the chains, usually cast them down or broke them when it was possible, and it was a general feeling that it was a vexation that they should be maintained. Petitions were sent to the Legislature on the subject remonstrating against the continuance of the obstructions. On the other hand, remonstrances by the clergy and members of churches were as strongly made against a repeal. The Legislature finally, with some effort, was brought to a conclusion, and on the 15th of March the act of 1798 was repealed.

The trial of a woman for the murder of her husband, in April, led to the establishment of two important principles of law of much more than common interest. Johanna Clew was charged with poisoning her husband by administering to him arsenic mixed with molasses. The case was tried in the Quarter Sessions, in the Oyer and Terminer, before Judge King. The jury was charged about ten and a half o'clock on a Saturday evening, and according to the command of the English common law they were kept without meat or drink, fire or candles. After they had been out twenty-four hours the counsel for the commonwealth and the prisoner agreed that they should be supplied with food if they would receive it. The majority of them refused to do so. On Monday morning two of the jurors, Ebenezer Ferguson and Andrew Hooten, declared that if they were longer confined their lives would be in danger. Ferguson was seventy-six years old. His health had been impaired by previous illness. He could not walk without assistance, and he said that if he was kept in the state of privation and restriction in which he then was his life would be in danger. Hooten represented that he was ill and feeble from the effects of a previous bilious fever. Dr. Joseph Klapp was ordered to attend the jurors, and he reported that if they were "much longer kept in privation and restriction their lives would be in danger." On receiving the report, Judge King discharged the jury. In December of the same year Johanna Clew was again put on trial for the same offense. Her counsel pleaded *autre fois acquit*, and insisted that it was a constitutional privilege that no person's life could be twice put in jeopardy for the same offense. The Quarter Sessions decided against this plea, but upon the removal of the question to the Supreme Court that tribunal decided that there must be an overruling necessity to justify the discharge of a jury in a criminal case. This necessity was not shown upon the first trial. The jurors were not discharged because they were under actual suffering, but by reason of a fear that they might suffer. More than that, the Supreme Court said that the ancient English prac-

tice of depriving the jurors of meat, drink, fire, and candle was not in force in Pennsylvania, and that the jurors could have been supplied with everything they needed. Johanna Clew escaped punishment, but the law principles established by her case were of so much importance that her release was entitled to but trifling consideration in view of the results achieved thereby.

On the 26th of December, died in his house, Water Street above Market, Stephen Girard, a native of France, but for many years an active merchant and citizen of Philadelphia. He was buried on the 30th of December at the Roman Catholic Church of the Holy Trinity, his remains being accompanied to the tomb by the Councils of the city of Philadelphia, public officers, and a number of societies and many citizens. By his decease and the munificent bequests which he made a great influence, manifested in many ways shortly after that event and until the present time, was exercised upon the city of Philadelphia.

Girard was the richest man of his period. He was childless, his early marriage having been terminated in a few years by the insanity of his wife. He had exerted himself with dangerous generosity during the yellow-fever periods of 1793, and subsequently at the hospitals, and for this kindness he was greatly respected. At his death the value of his estate was estimated to be \$7,500,000. Of this amount he bequeathed to his relatives and friends \$140,000 in cash, with annuities amounting to \$65,000 more. His public bequests affected the rest of his estate. He gave to the city of Philadelphia for the improvement of the eastern front of the city on the Delaware, \$500,000. He bequeathed to the commonwealth of Pennsylvania, for internal improvements, \$300,000. To the cities of Philadelphia and New Orleans he devised 280,000 acres of land in Louisiana. This splendid gift was lost subsequently by an adverse decision in a lawsuit. To different institutions of charity in Philadelphia he bequeathed \$116,000. To the city of Philadelphia he devised in trust \$2,000,000 for the purpose of erecting and maintaining a college for the education of poor white male orphans, and lastly the residue of his wealth was devised to the city of Philadelphia for the support of the college, the improvement of the police system, and the reduction of taxation. Eventually the estate did not turn out to be as large as was expected, not because the estimate of the value was too large, but by reason of various losses in diminution of the capital.¹ The heirs of

¹ The value of the real estate and other properties secured by the heirs amounted to a large sum. Yet, with diminished capital, the residue of the estate in the hands of the city has, under the management of the board of trustees of the college and of the Board of City Trusts, which succeeded, increased greatly. On the 1st of January, 1884, the annual report of the Board of Trusts fixed the value of the real estate, which included the college buildings and grounds and other real estate from which revenue was derived, at \$7,857,717.75. This was the assessed valuation, and much below the real value. There were besides

Stephen Girard, mainly his nephews and nieces and their descendants, attacked the devisees and bequests to the city by every available legal method. The lands in Louisiana were lost by one decision. Girard had bought considerable real estate (coal lands) in the Schuylkill region and property elsewhere after his will was signed and before his death. Under the law of Pennsylvania at that time it was held that this newly-acquired property did not pass under the will, and the whole of it, of very considerable value, was divided among the heirs. Finally a suit was brought to break entirely the trust to the use of the college, and it was taken finally to the Supreme Court of the United States (*Vidal vs. City of Philadelphia*). The invalidity of the devise was urged upon various grounds, technical and otherwise, among which the strongest was the allegation that the college was "an infidel institution," because in his will Girard had declared "no ecclesiastic, missionary, or minister of any sect whatsoever shall ever hold or exercise any station or duty whatever in the said college, nor shall any such person ever be admitted for any purpose or as a visitor within the premises appropriated to the purposes of the said college. In making this restriction I do not mean to cast any reflection upon any sect or person what-

ver two million and a half dollars, in par value, of stocks, bonds, etc., worth much more at market value. The total value of the residuary fund, real estate, stocks, etc., was \$10,138,268.10. The par value of the stocks held for the improvement of the Delaware front of the city under Girard's will was \$772,606.94. The receipts and income during the year 1883, including a cash balance from a former year, were \$1,005,673.99. The expenditures of the college in 1883 for maintenance of pupils, teaching, etc., was \$444,613.57. The gross expenditures for the estate

soever, but as there is a multitude of sects and such a diversity of opinion amongst them, I desire to keep the tender minds of the orphans who are to derive advantage from this bequest free from the excitement which clashing doctrines and sectarian controversy are so apt to produce. My desire is that all the instructors and teachers in the college shall take pains to instill into the minds of the scholars the purest principles of morality, so that on their

entrance into active life they may, from inclination and habit, evince benevolence toward their fellow-creatures and a love of truth, sobriety, and industry, adopting at the same time such religious tenets as their matured reason may enable them to prefer." The Supreme Court decided against this objection. Since then there has been little trouble, although at times essays toward bringing new suits have been made occasionally or proceedings threatened.

The gradual advance of the Asiatic cholera to Continental Europe had been marked by the people of the United States for some years. Appearing as an epidemic in the neighborhood of Calcutta in August, 1817, it seemed to travel westward by regular stages. In 1819 it extended to the

Burmese empire, and in 1820 it destroyed one hundred and fifty thousand persons at Bombay. Persia, Arabia, and Asia Minor were visited in 1823. It appeared at Moscow, in Southern Europe, in 1830. In 1831 most of Central Europe was subject to its ravages. It appeared in England, at Sunderland, in October of that year.

in taxes, repairs, betterments, etc., during the year were \$528,706.60. After full payments on account of the estate and the college there was a balance on hand of \$32,353.82.

Stephen Girard

It was in Edinburgh in January, 1832, at London in February, and was doing its deadly work in Paris in March. There was hope that it would not cross the Atlantic, and this feeling had its effect to such a degree that no efforts were made to put the city in a position to meet the visitor until a few days before its ravages commenced in this country. The Board of Health addressed Councils on the subject on the 2d of June. Six days afterwards the first American case of cholera was reported at Quebec, and two days subsequently at Montreal. A communication of the Board

GIRARD'S DWELLING AND COUNTING-HOUSE IN 1831.

of Health to City Councils urged the necessity of cleansing the streets, the removal of noxious matter, and abatement of all nuisances. Councils did not respond for two weeks afterwards. An appropriation of thirty thousand dollars for sanitary matters was made June 18th, and a sanitary board appointed, consisting of three members of Select Council and eight of Common Council. Southwark and the Northern Liberties soon afterward made appropriations for the same purposes. The sanitary board appointed a medical commission, consisting of Dr. Samuel Jackson, Charles D. Meigs, and Richard Harlan, to visit Canada and the city of New York, where the disease had broken out on the 24th of June, to investigate, if possible, the causes of the epidemic and the best methods of prevention and cure. While they were gone the managers of the Pennsylvania Hospital were granted permission to erect wooden sheds for temporary hospital purposes upon one of the lots in the neighborhood of Pine and Eighth Streets. The sanitary committee set to work to establish cholera hospitals, and

were aided by the Board of Health in the establishment of hospitals in the county.¹

These places of refuge were fitted up with the appliances considered necessary for the accommodation of patients, beds, bedclothing, utensils, drugs, and other articles, among which as permanent supply were many coffins. There was considerable prejudice in some quarters of the city against the establishment of these places of refuge. Violence was threatened in some instances, and in one case the place selected for a hospital had to be abandoned.

The medical commission appointed to visit Canada and New York made report on the 8th of July. They agreed that the disease which had made its appearance in the northern portion of the country was the genuine Asiatic or spasmodic cholera, that it was atmospheric, and consequently there was a general free disposition among all persons which made them liable to be affected with the disease without exciting causes. Such causes, they stated, were mainly "moral excitants, as fear or anger; intemperance in the use of fermented or spirituous liquors or in eating, or in the use of acid drinks; the use of undigestible animal or vegetable food; excessive exertion or fatigue and exposure to the night air." Prudence in living was recommended, tranquillity of mind and body, and the wearing of flannel next to the skin was considered an important precaution. In addition to these recommendations there seems to have been established, without medical direction, a popular sanitary code which was influenced by public opinion. Precautions in diet were considered necessary; the cucumber was put under ban as a deadly food; the usual summer fruits were looked upon as extremely dangerous; the blackberry maintained its character because it was supposed to be a good medicine in case of diarrhoea;

¹ Hospitals were located in the following places:

City.

In the Presbyterian Session room, Cherry Street above Fifth.
City Carpenter-shop, Lombard Street above Tenth.
City Carpenter-shop, Jones' Alley, near Front Street.
Session- or school-room, St. Augustine's Roman Catholic Church, Crown Street, below Vine.
Model School-house, Chester Street above Race.
Public-school house, corner Twelfth and Locust Streets.
Dock Street near Front.
Penn Street below Pine.
Corner of Eleventh and Race Streets.

County.

Bush Hill City Hospital, Dr. Thomas C. Hewson physician-in-chief.
Public-school building, Buttonwood Street near Eleventh, Dr. W. O. Brinkley physician.
Near Sixth and Vine Streets, Dr. Isaac Remington.
School-house, Third Street above Brown, Dr. Jacob S. Zorns.
Near Sixth and Coates Streets for blacks, Dr. John A. Elkinton.
School-house, Hope Street above Otter, West Kensington, Dr. Abraham Helfenstein.
School-house, Sixth Street near Catharine, Dr. Lewis P. Thompson.
School-house, Catharine Street between Third and Fourth, Dr. D. F. Coudie.
West Moyamensing, Dr. George B. McKnight.
Eight other hospitals were intended to be established by the Board of Health, and some of them were afterwards opened.

the huckleberry was denounced, and even the mild strawberry and raspberry were looked upon with suspicion; the peach was dangerous; the canteloupe was avoided, and the watermelon was as noxious as an ascertained deadly poison; simple diet prevailed; mush and milk and bread and milk were more largely used than ever before, and the meats were sparingly used. Personally the people suffered more from heat this summer than they ever did before or afterward; the weather was hot and yet the majority of persons kept themselves warmly clothed with flannels, and some with medicated hair skins upon their chests, while others were shielded on their breasts or backs by Burgundy-pitch plasters; camphor in bags suspended from the neck and resting on the breast was worn by many people; pocket-handkerchiefs were saturated with it; household closets were provided with "cholera medicines,"—camphor, brandy, Cayenne pepper, and mustard,—for use in case of attack; the pungent odor of chloride of lime could be smelled everywhere, and in many parts of the city the gutter-stones and curbs were whitewashed.

The first case of cholera occurred on the 5th of July. The victim died in three days. He was a man named Musgrave, and resided in a cellar in Filbert Street near Schuylkill Fifth. He had lately been discharged from the New Jersey State prison, and had been suffering from diarrhoea for some days previous. On the 9th of July a colored man, who had no premonitory symptoms, as in the other case, was suddenly attacked, and he died in four days. He had resided in St. John Street above Callowhill. These were followed, on the 13th and 14th, by the death of a man, his wife, and his wife's mother, who lived on Coates Street near Third. They expired one after the other within twenty-four hours. The old lady died within twelve hours, and on the same day a French woman, living in Kensington, was taken suddenly, and died in three or four hours. These cases occurring in various parts of the city, and apparently increasing in the deadliness of the attacks, attracted great attention and much alarm. It was evident that they were not disseminated by personal contagion. The persons attacked lived at distances apart, and there were no known cases of sickness from which they could have taken infection. After the 14th the disease lingered. There were three or four cases a day until about the 27th or 28th of July, when the epidemic fairly set in. In the meanwhile measures were taken by the Board of Health to prevent the increase of the pestilence, by compelling the vacation of premises which were overcrowded. A block of six four-story houses, inhabited by ninety-two families, consisting of four hundred and seventy-three persons, and situate between Front Street and Water and Race and Vine Streets, was first attacked. In thirty of the houses there were fifty-five families, and it was reported that they were without a single privy. It was believed that if they were allowed to remain the ravages would be terrible there,

and that the premises would be a great danger to the neighborhood. The Board of Health was assisted by a consulting medical board, composed of Drs. Thomas F. Hewson, L. P. Thompson, William C. Brewster, Thomas H. Brinckle, George McClellan, William D. Brinckley, Isaac Kline, Samuel Calhoun, Jesse R. Burden, Joseph Pancoast, John T. Sharpless, Jacob S. Zorns, and David F. Condie. Under the advice of these physicians the houses in Front Street, together with those in other portions of the city where the conditions were considered dangerous, were vacated and the inmates removed. Common Council, on the 23d of July, passed a resolution interdicting intercourse with New York and other towns affected with the Asiatic cholera as soon as practicable. It was manifest that such a quarantine could not be maintained by authority of the city, no matter what vigilance had been exercised, while the adjoining districts were free for any one to enter. Select Council refused to pass the resolution. During the time that the disease was at its height an asylum for children whose parents were taken sick, or who had died in consequence, was opened in Library Street, under the care of ladies. Fifty-five children were received and attended to there. The old engine-house of the water-works, near the Schuylkill at Chestnut Street, was fitted up as a place of refuge for the poor, and a large number of shanties were erected in the same neighborhood. Thursday, August 9th, was observed as a fast-day, and it was more truly so on account of the solemnity of the occasion than such humiliation had been at any previous time.

A common incident was the assembling of large numbers of people on Fifth Street below Library. The office of the Board of Health was immediately south of and adjoining the Philadelphia Dispensary. From the high wooden steps daily at twelve o'clock the official reports of the progress of the epidemic were made. The crowds assembled usually heard the announcement in silence, to which succeeded low murmurs of approbation if the intelligence was favorable, or of regret if it was otherwise. They separated immediately afterwards, and carried the news to all parts of the city. George Washington Dixon, "the great American buffo singer," who had acquired notoriety as singer of the negro song, "Coal-Black Rose," had improved the occasion by issuing a daily paper called the *Cholera Gazette*. It was published every afternoon as soon as the Board of Health reports were made, and had a very considerable circulation. The occurrences connected with the breaking out of the epidemic in the Arch Street prison on the 30th of July, during which seventy out of two hundred and ten persons died, will be found in the chapter on prisons. Much alarm existed after the disease got fairly to work. There was strong prejudice among the ignorant against the cholera hospitals. They were represented to be depots for the distribution of the disease, and the story got about that the physicians were

anxious to force persons into the hospitals so that they might practice upon them. Under the influence of such ideas much indignation was expressed against the physicians, and some of the nurses were subject to maltreatment. These threats and insults became so unbearable that on the 6th of August, Drs. Joseph Parrish, Nathaniel Chapman, Samuel Jackson, Thomas Harris, Richard Harlan, Charles D. Meigs, Charles Lukens, and O. H. Taylor presented an address to the Sanitary Committee, in which they declared that unless they were sustained and protected by their fellow-citizens in the discharge of their painful duties they would "wash their hands in innocence," and retire from the charge of the hospitals. The Sanitary Board requested the mayor to take measures to protect the physicians and the hospital attendants. But fortunately the publication of the physicians' protest and the good sense of the people prevailed, so that there was no longer annoyance. The disease lasted until the 4th of October, when the last case was reported. Altogether there were two thousand three hundred and fourteen cases reported, and nine hundred and thirty-five deaths. The ratio of cases to the population within the bills of mortality was one in seventy, the deaths one to one hundred and seventy-three and a fraction. The cases of attack exhibited considerable difference in ratio of severity in various parts of the territory. In the city, exclusive of fractions, the cases were one in one hundred and ninety-seven in the population; in Kensington, one in one hundred and twenty; in the Northern Liberties, one in two hundred; in Penn township, one in one hundred and two; in Southwark, one in eighty-two; and in Moyamensing, one in thirty-nine.¹

After the pestilence had ceased the Councils and Board of Health determined, in fear of future visitations, to keep two hospitals permanently open. The hospital for contagious diseases at Bush Hill was placed in order for new patients, and the cholera hospital in Jones' Alley was reserved to the same purpose. The physicians at the hospitals served without remuneration. Councils resolved to present those who represented the city with pieces of silver plate with appropriate inscriptions. Thirteen silver pitchers were prepared and presented, in March, 1833, to Drs. John C. Otto, Nathaniel Chapman, Joseph Parrish, John K. Mitchell, Thomas Harris, Samuel Jackson, Charles Lukens, William E. Horner, Charles D. Meigs, Richard Harlan, Hugh L. Hodge, Oliver H. Taylor, and G. Emerson. The Sisters of Charity of the Roman Catholic Church had during the calamity volunteered their assistance to act as nurses in the hospitals, and had, during the whole melancholy scene, discharged those duties with care, attention,

and kindness. It was proposed to present pieces of plate to them, but they declined their acceptance, because such a course would be contrary to the spirit of their vows. City Councils therefore appropriated a sum of money equal to the value of the plate to the Catholic Asylums of St. John's and St. Joseph's and a school which was under the charge of the Sisters of Charity.

The approach of the centennial anniversary of the birth of Washington had been spoken of in various parts of the country as an occasion suitable for commemoration in some uncommon way. In the city of Philadelphia a town-meeting was called in reference to the subject on the 1st of February. Benjamin W. Richards was president, and Alexander McCaraher secretary. Resolutions were offered by Joseph R. Ingersoll, by which it was resolved to celebrate the 22d of February with civic honors. A committee of twenty-four persons was appointed to carry out the designs of the meeting. Councils appointed a committee of co-operation, and appropriated two thousand dollars to aid in the object. There was a general interest in this matter, but unfortunately the period between the time when the meeting was held and the day fixed was very short, or the procession would have been much larger. As it happened there was a handsome display. It was estimated that there were upwards of twenty thousand persons in the procession,² and more than one hundred thousand persons in the streets as spectators. The movements of the civic portion of the procession were directed by a chief marshal and twelve assistants. The first division was preceded by eighteen pioneers with axes, and the city police and watchmen with badges and sashes. The Cincinnati Society, Revolutionary officers and soldiers, with officers of the late war and of the army and navy, with foreign ministers, city officers, City Councils, commissioners of the districts, county, State, and Federal officers succeeded. The second division included the volunteers of the late war, the butchers, mounted, four abreast, in white frocks and blue sashes, carrying a banner, "We feed the hungry." The saddlers and harness-makers followed. The hatters bore the banner of St. Clement, and had cars displaying skins of the various animals used in the business, with a full working hatter's shop, bows, and felting apparatus, kettles, with hatters at work making hats; during the procession they made a hat out and out in the street, which was intended to be presented to Gen. Lafayette, and one for Charles Carroll of Carrollton, while another hat was commenced for Mayor Richards. In the third division were ferrymen, tobacconists, and cigar-makers at work, bakers with an oven in which bread was baked during the procession, glass manufacturers and cutters, cabinet-makers, barbers, gilders, and gold-beaters.

¹ Philadelphia escaped with less loss by this scourge than any other large North American city: In New York the cases were one to 15½ in the population; deaths, one in 25½; in Montreal, cases one in 5½ of the inhabitants, deaths one in every 10½.

² This was the estimate of some newspapers at the time. From later experience in processions, it must be pronounced a greatly exaggerated calculation.

The house-carpenters and builders were preceded by a handsome oblong temple consisting of twenty-four sides, each representing a State, each side forming an arch, above the summit of which was inscribed the name of the State in a blue field. The columns were white, surmounted by a blue architrave plinth and cornice, with a cupola roof of variegated blue and white, surmounted by a cap of liberty of blue and white silk in spiral stripes with gold fringe. This temple was built by the journeymen at very short notice, and was one of the finest features of the procession; several old carpenters were seated in the car, which was drawn by six horses. The brick-makers, bricklayers, plasterers, stone-cutters, painters and glaziers, black- and white-smiths, tin-plate workers, plumbers, and brass-founders were all in the fourth division. The brick-makers had working cars showing the manufacture from preparing the clay to burning the bricks. The stone-cutters on a car drawn by seven horses displayed the corner-stone which they had prepared for the new Washington monument. The smiths displayed on a car a forge, anvil, and working-bench, and heated and hammered iron, and made horseshoes. The tin-plate workers struck off medals of tin with the head of Washington, which were distributed along the streets. The fifth division embraced the tailors, cordwainers, and comb-makers. The latter were accompanied by a car in which combs were made and distributed. In the sixth division there were manufacturers and dyers, who exhibited spinning jennies at work, weaving, dyeing, bleaching, and finishing. The spinners and weavers, accompanied by a car on which spinners, spoolers, and weavers were at work, were succeeded by the carpet-weavers. The chasers, silversmiths, jewelers, and engravers struck off and distributed a medal with a head of Washington. The potters were at work making jugs, bowls, pitchers, etc. The printers struck off on a press an ode composed for the occasion by James N. Barker. The bookbinders and booksellers, copper-plate printers, tanners and curriers, morocco- and skin-dressers, plane-makers and coopers, all exhibited on floats or cars the manner in which their respective trades were conducted. The shipwrights and rope-makers, boat-builders, riggers and sail-makers, calkers, and block-makers were all provided with means of displaying the operations of their respective crafts. The mariners presented one of the most interesting objects of the procession in the shape of a full-rigged ship, called the "Washington," which was the largest object in the line. The ship was commanded by Capt. James Dumphrey, First Lieut. John McKeever, and the other officers and crew composed of sea-captains. The "Washington" cast anchor whenever the procession came to a stop, and hove anchor when it started. The deep-sea lead was kept going from the mizzen chains and the depth announced. The captain, with spy-glass, was continually looking ahead for squalls, and the mimic scene was

amusing. Two models of canal-boats followed. The ninth division was composed of draymen and carters, mounted, wearing white aprons and other decorations. The Horticultural Society pleased all eyes with a beautiful display of flowers. The tenth division consisted of the Philadelphia Association of Young Men for Celebrating the Fourth of July without distinction of party; the Hunting Park Association, with the trotting horse Top-Gallant, the wonder of the world, and several other famous race-horses and mounted citizens on horseback. The firemen made their first appearance in public in a procession on this occasion. There were thirty-seven companies, men in their uniforms, engines and carriages decorated, with other features that were attractive. Here was first introduced in a firemen's procession a representation of a North American Indian by the Weccacoe Engine Company, which was preceded by a chief in full dress. The twelfth division was entirely civic, officers of colleges, learned and scientific societies, lawyers, teachers, directors, and pupils of the public schools, etc. The Odd-Fellows made their first appearance in public in this division. The military, in consequence of the sickness of Maj.-Gen. Cadwalader, was commanded by Brig.-Gen. Robert Patterson, and consisted of the whole division, cavalry, artillery, and infantry. The procession started about half-past ten o'clock in the morning, and moved over a long route. It was not until six o'clock in the afternoon that the military, at the end of the line, reached the State-House. It is necessary to explain that the participants were not marching all that time. The management was not good. There were great stops for long periods of times, which were tedious and fatiguing to those who participated as well as to the spectators.

On the 22d of February, while the Centennial procession was passing along Third Street, the corner-stone of the Philadelphia Exchange was laid in Dock Street near Walnut. A short address was delivered upon the occasion by John K. Kane. The persons interested in this enterprise had been eleven years in reaching the point which they had now attained. A design for a merchants' exchange was exhibited at the Coffee-House in May, 1821, and it was intimated that the proper place for the building was on the lot bounded by Third, Walnut, and Dock Streets. It was then proposed that the principal front of the building should be upon Dock Street, with a portico one hundred feet in width. The successful movement towards the building of an exchange was the result of a meeting held on the 19th of July, 1831, at which it was resolved to form a company, and appoint trustees for the stockholders to hold the necessary real estate in trust until an act of incorporation could be obtained. The trustees were Stephen Girard, Robert Ralston, Joseph P. Norris, James C. Fisher, and Joshua Longstreth. The building was constructed without delay, and was opened for business in 1834. It was in its time considered the most beautiful edifice

in the city. The material was Pennsylvania marble. The shape that of a parallelogram, ninety-five feet front on Third Street, one hundred and fourteen feet on Walnut Street, with a semi-circular radius on Dock Street of thirty-six feet, making the extreme length from east to west one hundred and fifty feet. The eastern front was embellished with a portico of eight Corinthian columns and antæ. The Dock Street front presented a semicircular portico with eight similar columns, supporting a roof, above which rose a lantern forty feet above the roof, pierced with windows and ornamented and modeled after the choragic monument at Athens, called the Lantern of Demosthenes. The lower stories were divided into apartments rented out for various purposes. The United States post-office occupied nearly the whole of the northern front on Dock Street. Insurance companies had their offices on Walnut Street, and brokers occupied offices of a small semicircle on Dock Street. A wide hall ran through the centre of the building, from which two flights of marble stairs rose to the entrance of the main 'change-room in the second story. This apartment was also approached by marble steps rising from Walnut Street and Dock Street, flanked and protected on each side by the marble figure of a lion and handsomely-cut scroll work. The main 'change-room was high, extending to the roof, and marked by four splendid marble columns which supported the lantern. The ceilings and walls were painted in fresco with elegant effect by Monachesi. The main room was occupied at first by the officers of the Merchants' Exchange and of the department for shipping news, and by stands for newspapers from all parts of the Union, which were arranged from a semicircle in the rotunda. In time these were removed and placed in a large room in the north part of the building. Here, for some years after the building was finished, the merchants met at the high 'change hour, twelve o'clock, communicated with each other, arranged for sales or payments, and did a great deal of business. Here the public auction sales were held of real estate and stocks every week, and the exchange-room was a place at which might be seen upon the news-books, openly exposed to all every day, shipping and other news. The building held its position for thirty years, but gradually fell into mercantile disuse. The Corn Exchange, a much more vigorous and active association, was formed and took in bright and enterprising business men, and in time the Merchants' Exchange ceased to be used for any mercantile purpose. The stock gradually went into a few hands. The situation was excellent for business purposes, and the owners came to consider it as a source of investment to be measured as to its worth by the annual value of the rents which it produced.

At the general election in October political feeling ran high. It was the year of the Presidential election. Gen. Jackson was the candidate for re-election, and there was strong opposition to him. In those

times the city elections being held at the State-House, each party usually rented and occupied some neighboring building for the purpose of a headquarters. Transparencies of muslin, upon which were painted emblematic scenes or allegorical figures or other devices, were common. They were in gaudy colors, but were very effective when illuminated at night, lights being placed behind them. At this election the anti-Jackson headquarters in the city were at the Bolivar House, an inn kept by Samuel Carlls on the north side of Chestnut Street west of Sixth, between the Chestnut Street Theatre and the Arcade. Above the first story was displayed a transparency representing the arms of the State of Virginia, an armed figure of Liberty standing over the body of a prostrate foe, beneath which was the ordinary motto, "*sic semper tyrannis.*" The streets were crowded all day. The anti-Jackson transparency attracted much attention. Somebody in the crowds gave out that the prostrate figure on the ground was that of Gen. Jackson, and it was averred that the face of the man upon the ground was that of "Old Hickory" himself. These stories led to an attack upon the house in the evening, during which considerable injury was done to the premises and the transparency broken and cut by stones. The Jackson headquarters were opposite the State-House, and symptoms of an attack by the anti-Jackson men on those premises were observed. By good fortune the police managed to prevent any further outbreak.

The death of Charles Carroll of Carrollton, which took place at Baltimore on the 14th of November, 1832, was subject of a solemn commemoration. Councils passed a resolution of respect for the memory of the deceased. John Sergeant was requested to deliver an eulogy upon his life and character. A military procession in commemoration of his death marched through the streets, and the proceedings upon that day wound up with an oration at the Arch Street Theatre by Anthony Laussat.

The centennial celebration of the birth of Washington revived the interest which had been displayed in 1824 in favor of the erection of a monument to the memory of Washington, towards the cost of which some contributions had been collected. A meeting had been held in June, 1832, at which it was resolved to collect subscriptions for the purpose, and a committee was appointed to act in conjunction with the survivors of the committee of 1824. So sanguine were the parties at this time of their success in obtaining funds that they resolved that the corner-stone of the monument, prepared by the marble-masons during the procession of February 22d, should be laid on the 4th of July. Councils gave the necessary permission. As soon as these enthusiastic gentlemen began to make their solicitation for money subscription they were mortified by the hesitation and indifference with which their requests were met. It was therefore determined to postpone the laying of the corner-stone until the 22d of February, 1833. Even

with so long a time to get ready, the preparations were scanty. The public generally was given short notice of the intended ceremonies. In consequence the civic portion of the parade was meagre. The marble-masons, to whom the occasion was one of great interest, came out in strong force. The corner-stone was drawn upon a platform by four white horses. The hatters turned out, wearing cocked hats of the Revolutionary fashion; farmers, gardeners, tin-plate workers, tobacconists, cabinet-makers, silver-plate workers, cordwainers, and saddlers, with their banners and insignia, were the principal participants. They did not appear in the strength of the previous year. The military parade was quite respectable. There were three troops of horse, a battalion of artillery of five companies, and eleven companies of infantry. The place assigned for the monument was the central circular plot in Washington Square. Here an excavation was made, ten or fifteen feet deep, in the course of which the remains of several of the ancient tenants of that ground were unearthed. After the stone was laid an address was delivered by Dr. W. C. Draper, chairman of the committee on celebration. David Paul Brown followed, Bishop William White, of the Protestant Episcopal Church, offered a prayer, and the ceremonies were concluded. The stone was covered up with care in the anticipation that the monument would soon be commenced. It has never been disturbed. After fifty years it remains where it was placed.¹

Another result of the centennial parade was the encouragement of the firemen to arrange a procession of their own companies and apparatus. Flattered and surprised by the applause lavished on them, they chose the 27th of March, the anniversary of the formation of the Fire Association, as the day of their parade. Forty fire-engine and hose companies participated. Jacob E. Lancaster was chief marshal, assisted by numerous aids, and the procession marched over a long route, and closed up the day with a fine ball at Musical Fund Hall.²

¹ The Washington monument fund of 1824 and 1832 not being sufficient to authorize the commencement of any work, came eventually into the possession of Joseph Ingersoll, as surviving trustee, appointed by the meeting of 1832. On the death of Mr. Ingersoll, Alexander Purves, president of the Philadelphia Saving Fund, held the subscription moneys for some years. They had been carefully invested, and the interest re-invested during the trusteeship of these gentlemen, and amounted to a respectable sum, which finally, by decree of the Court of Common Pleas, was given in charge to a trust company. About the beginning of 1882 the Pennsylvania Society of the Cincinnati, which had commenced the collection of a fund for the erection of a monument to Washington in 1811, made application to the Court of Common Pleas that the monument funds of 1824 and 1832 should be paid over to them, their purpose being the same as was intended by persons who gave their money to the citizens' committees. The amount of the citizens' funds was about fifty thousand dollars. The Cincinnati Society fund was one hundred and thirty thousand dollars. By decree the petition was granted, and the Cincinnati Society now having one hundred and eighty thousand dollars for the purpose of building the monument, measures were taken to obtain designs and set the work of preparation in motion.

² In after-years the firemen's parades were brilliant events. The companies were strongly governed by emulation and rivalry in the matter of

On the 8th of June, President Andrew Jackson, who had determined to make a tour of the Northern cities, arrived in Philadelphia. He landed from the steamboat "Ohio," which had brought him from New Castle to the wharf at the United States navy-yard, where he was received with a warm welcome by the large crowd of citizens there attending. The appearance of "Old Hickory" was striking. His tall figure, and peculiar and strong-marked countenance, and clothing which was not cut according to the latest Philadelphia fashions, was surmounted by a high white hat, with a brim of generous size, above which black crape appeared. At the navy-yard the President was seated in a barouche, after a salute of twenty-one guns, and escorted by the First City Troop, Capt. Hart, National Troop, Capt. Riley, and the Washington Cavalry and Montgomery Troop. A civic parade of committees in carriages and horsemen in citizen's dress followed, and proceeded to the City Hotel, Heiskell's, on Third Street, near Arch. There was a strong political feeling at the time, which had been much increased by the measures taken by Jackson against the Bank of the United States. In some portions of the county the demonstrations were uproarious, but in the city they were not marked nor enthusiastic. The next day being Sunday the President attended divine worship at the First Presbyterian Church, on which occasion an excellent sermon was preached by the Rev. Albert

duty and the decoration of their apparatus. A style of ornamentation with paintings and emblems grew almost barbaric with ornaments of polished copper, brass, silver, and gold, and with mirrors and inlaid mother-of-pearl and other elegancies. The banners were decorated with the finest paintings by artists of merit. The uniforms were almost always new. There were great displays of artificial flowers and tinsel on the apparatus, which were frequently loaded down with them. The mouths of silver and brass trumpets were filled with bouquets of flowers, and there were great displays of ribbons and other adornments. The companies paraded with their full strength, and frequently there were from six thousand to eight thousand firemen in line. The following are the dates of these parades, with the names of the chief marshals up to the time when the volunteer department was superseded by the department established by the city of Philadelphia:

1832, February 22. In centennial procession; Alexander Henry, of Hope Hose.

1833, March 27th. First parade, Jacob B. Lancaster, Southwark Hose Company.

1834, March 27th. Second parade, George K. Childs, Good Intent Hose Company.

1837, March 27th. Third parade, John Price Wetherill, Philadelphia Hose Company.

1840, March 27th. Fourth parade, Peter Fritz, Perseverance Hose Company.

1843, March 27th. Fifth parade, John T. Donnelly, Pennsylvania Hose Company.

1846, March 27th. Sixth parade, Thomas Graham, Southwark Engine Company.

1846, March 27th. Seventh parade, Edward S. Wester, Globe Engine Company.

1849, May 1st. [Extra parade.] Edward S. Wester, Globe Engine Company.

1852, May 3d. Eighth parade, David Matthews, Franklin Hose Company.

1857, May 5th. Ninth parade, John F. Gibson, Northern Liberties Hose Company.

1865, October 16th. Tenth parade, Henry B. Bobb, Washington Engine Company.

Barnes. Previous to his arrival, City Councils had appointed a committee to tender the proper expressions of respect for the chief magistrate, and to offer him the use of Independence Hall as a place for the reception of his friends. Mayor Swift and members of both Councils, with the aldermen and city officers, formally received him there on Monday morning. The Hon. Louis McLane, Secretary of War, and Hon. Lewis Cass, with Mr. Donaldson, the private secretary, were present. Citizens were then admitted, and for more than two hours a continuous line of persons of all ages and sexes filed into the room, passed by the President, and bowed to him or shook hands, and then passed through the southern window in the State-House yard. Several thousand persons took part in these ceremonies, which lasted two hours. Afterwards the President, mounted on a large white horse, was escorted by a strong body of volunteers, under the command of Maj.-Gen. Robert Patterson, through the streets of the city, over a long route, extending as far northeast as Beach and Maiden Streets, to Twelfth Street on the west, and to Catherine Street on the south. The parade ended at the City Hotel. The next day Gen. Jackson left the city for New York.

At the same time that the President was in the city the Indian chief Black Hawk, with other warriors, who had been on a visit to Washington, were also in town. This party was lodged in Congress Hall, in Third Street above Chestnut. The mayor and a delegation of the City Council took charge of them and went with them to places of interest in the neighborhood of the city. The Indians viewed the procession accompanying the President from their hotel. They left town a day or two afterwards. A bitter political controversy followed these receptions. The Democratic papers charged boldly that the mayor (John Swift) and Councils of the city had decidedly insulted the President of the United States, and had made the reception of Indian captives the pretext for neglecting the chief magistrate. On the part of the city officers this was denied. They cited the resolutions passed by Councils before the President came and the reception at Independence Hall, in which they, as city officers, participated. They denied the practice of any discourtesy, and argued that after their own formal reception it was their duty to leave the President in the hands of his attached friends. However this might be, it was clear that the mayor and Councils were bitterly hostile to the President on political grounds. Their courtesy might have been up to the boundary of exact politeness, but it did not go beyond it, while the attentions paid to the Indians were so marked that the contrast seemed offensive. As an offset to these shortcomings, at a later period in the year the reception of Henry Clay by mayor and City Councils in November was noted. Clay was the idol of the anti-Jackson party. He was received by a procession of citizens at Kensington, where he

landed from steamboat, November 23d. He was met officially by the mayor and Councils at Independence Hall, and many courtesies were extended.

John Randolph, of Roanoke, Va., an eccentric statesman and politician, died at the City Hotel on the 24th of May. He had come to the city for medical treatment, and was under the ministrations of Dr. Joseph Parrish. He had been minister to Russia in 1830-31, and was about to return to Europe at the time of his death. A public meeting was held on the day after his death in the District Court room of the United States, of which the Hon. Joseph Hopkinson was chairman and the Hon. John G. Watmough secretary. A committee was appointed "to confer with the personal friends of the deceased, and if consistent with their views and feelings, to make arrangements for uniting with them in a public tribute of respect to the remains of our distinguished countryman, the late John Randolph, of Virginia, whose death in the midst of us has peculiarly reminded us of the splendid contribution his talents and genius through a long public life have made to the reputation of our country." Nicholas Biddle was made chairman of this committee, and he addressed immediately John S. Barbour, Henry E. Watkins, and William J. Barksdale, citizens of Virginia and friends of Mr. Randolph, who returned suitable acknowledgments in reply. But they declined any ceremonies of a funeral character in Philadelphia, saying, "The wish which he avowed for the removal of his mortal remains and their interment within his native land will make their early departure necessary. And the delay that must follow any further tribute of respect to the memory of the deceased than that already manifested by the inhabitants of this city would be attended with great inconvenience."

In August a riot took place between whites and blacks, which was much more serious than any occurrence of that character previously known. The abolitionists were beginning to be active in their opposition to slavery. Their efforts occasioned great indignation at the South, and there was a strong body of sympathizers at the North to demonstrate their prejudices. A slight cause was sufficient to excite these feelings to active hostilities. There was an exhibition of flying-horses in a temporary building upon a lot on the north side of South Street above Seventh. Blacks and whites were visitors to this show, and some difficulties between persons present led to strife of no serious character. The story, however, that the negroes had insulted the whites got out, and led to the institution of measures which were originated in another part of the city. On the night of the 12th of August a large party of young men, who were supposed to have come from the Northern Liberties, Kensington, and Spring Garden, made their appearance at the flying-horse exhibition and stimulated a quarrel, in the excitement of which they attacked the machinery and apparatus used in the show, which they

totally destroyed, as well as the building in which the exhibition had been given, after which they retired, and there was no further disturbance on that night. News of these transactions was circulated through the city the next day, and in the evening a far greater crowd than had yet assembled marched down Seventh Street to an open lot near the Pennsylvania Hospital, where they were joined by others. They were mostly boys and young men, and nearly all of them were supplied with clubs or sticks. From the lot this mob repaired to Mary Street in the city, and to Bedford and Baker Streets in Moyamensing, in which colored people mostly resided. Here the crowd commenced the destruction of property, breaking windows, battering down doors, and entering the houses, which were stripped of their furniture, which was thrown into the streets and broken. The police force of Moyamensing were unable to suppress these rioters, and their ravages extended to Shippen Street and Seventh Street, and as far down Small Street as Fifth or Sixth. The negroes, whenever they were caught, were assaulted and beaten mercilessly, and the most savage feeling prevailed. The rioters were put to flight by the arrival of two divisions of the city police, headed by Mayor John Swift and High Constable Willis H. Blaney. Marching boldly upon the mob they attacked them, securing about twenty prisoners. In these proceedings the whites who resided in the neighborhood escaped injury by reason of displaying lights in their windows. The next day the civil authorities, which had allowed two nights of riot to go by without attempt, except on the second night, to interfere with it, were thoroughly awake. Three hundred special constables were sworn in and placed under command of Peter A. Browne. The City Troop, Capt. Hart, and the Washington Grays, Capt. Worrell, were ordered under arms, and remained at their armories all night. The *posse comitatus* assembled about eight o'clock and marched down to the hospital lot, and thence to the neighborhood of the disturbances of the previous evening. A new excitement was active in the neighborhood, under a rumor that the hall of the African Grand Lodge of Masons, Seventh Street below Lombard, westside, was filled with several hundred armed negroes. Expressions of determination to destroy the building were heard. The posse marched on the ground. Mayor Swift addressed the persons present, exhorting them to keep the peace. Officers who entered the hall found that there were black men there who were very much frightened. They were told to depart, which they did without much ceremony. The posse remained until after twelve o'clock, by which time the crowd had dispersed. In the mean while there was an excitement elsewhere. Near the Wharton Market upon Moyamensing road there was a small meeting-house used by a congregation of colored people. Some demonstration had been made on the previous evening in that neighborhood, but there were no overt acts. Late in the evening a

story went into circulation that some boys passing the meeting-house were fired upon from a dwelling-house in the neighborhood. A mob soon collected and proceeded to tear down the meeting-house. It was a slight structure, which stood upon posts rising from the ground. These were cut through with axes. Ropes were attached to the upper parts of the building, at which the mob pulled until the whole structure came down and was entirely broken up. Some eight or ten houses in the neighborhood were also attacked and the windows broken. News of these disturbances were sent to the city, and Peter A. Browne marched down with a portion of the *posse comitatus*. They arrived on the ground about ten o'clock and found everything quiet, the rioters having dispersed. At a subsequent meeting of citizens it was estimated that the damage done during these riots amounted to four thousand dollars, and a committee was appointed to make collections toward a fund to reimburse the sufferers.

A murder, committed in the neighborhood of the Locust Ward election-poll, near Twelfth and Locust Streets, on the 3d of October, presented a mystery which was never cleared up. William Perry, a young man, standing in the evening conversing with a friend at a position some distance from the crowd, and on the opposite side of the street, was suddenly killed. Some circumstance happening near the polls created a scattering in the crowd. Persons ran across the street in the direction where Perry was standing, and while passing him some one stabbed him several times, so that he died in a few hours. There was apparently no motive for this crime, certainly no justification in anything which Perry had done. He had not been engaged in any recent quarrel, and was not among the persons who might have been in dispute near the polls. The attack was sudden and unexpected, and so quick in action that the murderer escaped before the perpetration of his crime was even suspected. Large rewards were offered for the arrest of the assailants. Some few persons, against whom nothing could be proved, were arrested and discharged, and the perpetrator was never discovered. The body of Perry was buried on the succeeding Sunday, and was attended by an immense crowd of persons, being the largest funeral that had ever taken place in the city up to that time. The Democratic Association of Locust Ward afterwards erected a monument to the memory of Perry.

A few days afterwards, on the 14th, the general election took place amid much excitement. In Moyamensing the citizens voted for the first time at the Commissioners' Hall, Christian Street between Ninth and Tenth. There were some disturbances in the evening at one of the voting windows between rival partisans, which resulted in scuffling and blows. The Jackson men in Moyamensing were at the time in the minority. They were driven away from the polls and their lamps broken. The fight was shifted to the

ground to the east of the hall, where the Jackson headquarters were held in two tents, in front of which was a hickory pole. The Whigs drove the Jackson men away, demolished their tents, and cut down the pole. This was the end of the disturbance at that time, but news of the circumstance having been carried to the polls at Southwark, large numbers of persons went over to Moyamensing, and a Jackson delegation marching down from the Northern Liberties joined the crowd. The new-comers reinforced the Jackson men of Moyamensing greatly, and methods of revenge and retribution were determined upon. Opposite the hall, at the northeast corner of Christian and Montcalm Streets, stood the Whig headquarters, in a three-story brick house, in front of which was a tall liberty-pole. The mob in revenge for the cutting down of the Jackson hickory-tree attempted to prostrate this pole. The lower portion was strapped with iron, and the accomplishment of the task was rather difficult. Assaults were made upon the headquarters in which the Whigs had taken refuge, and then new efforts were made against the pole. At this moment the parties in the Whig headquarters fired from the upper windows with muskets loaded with buckshot. Fifteen or twenty persons were wounded in the crowd, one of whom, James Bath, afterward died. Rendered desperate by this attack, the mob rushed against the doors and windows of the headquarters, which were broken in by main force. The inmates were assaulted, and got out the best they could. The windows were broken and the furniture thrown into the street. While these things were going on a fire had been kindled with wood placed around the liberty-pole. As they could not cut it down by reason of the iron hooping around the lower portion, they endeavored to burn it down. Whether the house adjoining caught from the pole was not known. In a short time it was on fire, and the flames spread to a row of four dwelling-houses on the east. The premises were known as Robb's Row, and some of the houses were inhabited. The light of the fire created an alarm. Fire-engines and hose-carriages came from other portions of the city. They encountered an infuriated mob, which had determined that the property should not be saved. The firemen were ordered to desist their active efforts to save the property. The hose was cut, their engines defaced, and some of the firemen dragged from their apparatus were terribly beaten. They could do nothing, and before morning Robb's Row was totally destroyed. The loss upon the property fell upon the tenants and on James Robb, the owner of the houses. A meeting was called afterward at which it was resolved to compensate these sufferers. Nothing of importance was effected by these measures. On the 11th of March, 1836, the General Assembly passed an act for the relief of James Robb and others by reason of the damages sustained during these riots. The Court of Quarter Sessions was authorized to issue a venire and

summon a jury to inquire into the damages, and on their certificate the same should be paid, providing that the sum did not amount to more than six thousand dollars. This was followed in the succeeding June by an act which afterward became very important in its operations upon the city treasury. "In case any dwelling-house or any other building or property, real or personal, shall be injured or destroyed within said city and county of Philadelphia, in consequence of any mob or riot therein at any election, or at any other time, it shall be lawful for the owner thereof, or his agent, to apply in the county to the Court of Quarter Sessions, and if in the city to the Mayor's Court, who shall thereupon appoint six disinterested persons, who shall be sworn or affirmed, to ascertain and report the amount of said loss, and also whether the said owner had any immediate or active participation in the said mob or riot, and on such report being made, and the fact that the owner had no such participation being ascertained and the report being confirmed on an examination of the law and fact by said court, the said report and confirmation shall be certified to the County Commissioners, who shall forthwith draw their warrant on the treasury for the amount so awarded, which warrant shall be duly paid by the treasurer." Under the special act for the relief of Mr. Robb the full amount named in the act, six thousand dollars, was paid to him and other sufferers by the fire.

In the country at this time there was strong political excitement among the people in reference to the measures which the government, under the influence of President Jackson, had taken against the Bank of the United States. The latter was a Philadelphia institution, and citizens of Philadelphia were to a large degree stockholders. Whatever touched the bank affected also the interests of the city, it was argued, and in no part of the Union was hostility to the administration of Gen. Jackson more openly pronounced. The bill to recharter the United States Bank was vetoed by President Jackson on the 10th of July, 1832, a measure which created indignant protest and bitterness of feeling among large classes of persons. As early as August, 1833, circulars were sent by direction of the President to various State banks, inquiring if they would receive the deposits of government moneys if the President should decide to remove the funds from the Bank of the United States. On the 18th of September, in the same year, the President read to the members of his cabinet his reasons for the removal of the deposits from the national bank. The principal reasons given were that the bank had entered the political arena, and had exerted its vast influence to the promulgation of certain political principles which, it may be said, were not those which were held by the government. President Jackson said that in sixteen months, ending shortly before the veto, the bank had increased its loans over twenty-eight million dollars, with the intention of bringing a large

number of people under its power and influence, and that a considerable part of this fund had been appropriated towards subsidizing conductors of the press. For these reasons and others named, the President declared that it was no longer safe to allow the public moneys to remain in the possession of the Bank of the United States. The 1st of October, 1833, was named as the day on which the deposits should be removed. Great efforts were made to prevent this dreaded consummation. The bank appointed a committee to examine the charges made by the President, which made report in December. The institution was defended against the specific charges of malfeasance. The statement of the increase of the loans of the institution was declared to be a great exaggeration, and the figures named were eleven million dollars more than the actual amount of the loans. The withdrawal of the government deposits from the bank was denounced as a gross violation of the contract. The financial results were deplorable. The Bank of the United States and the State banks, in a policy of precaution and safety, began to draw in their loans and curtail their circulations, and pressed for the payment of debts due them. Distress and difficulty followed from the pressure. Large numbers of persons could not pay their debts, and became insolvent. Wages were reduced. Industry was depressed. Workmen were discharged. Prices fell, and all over the country there was suffering and distress. The Board of Trade, on the 1st of January, 1834, passed resolutions which declared that the sudden change which had come over the community and spread gloom and apprehension throughout the great interests which support its prosperity could be ascribed to no other cause than the policy of the government towards the Bank of the United States, and that nothing would counteract those evils and restore the confidence of the people in their future prospects than the restoration of the Bank of the United States to the station it had heretofore held as an agent of the government. This was followed by a memorial from the following banks of Philadelphia: North America, Pennsylvania, Commercial, Mechanics', Penn Township, Manufacturers' and Mechanics', Moyamensing, Schuylkill, Farmers' and Mechanics'. The officers of these institutions stated that the removal of the government deposits from the United States Bank to the State banks was a disorganization of the whole moneyed system and the whole revenue system of the country; the manner in which the national bank controlled the currency was declared to be salutary, and kept it in a healthful condition. The restoration of the deposits to the Bank of the United States was a measure which these banks declared to be absolutely necessary. In this memorial the Philadelphia, Western, Southwark, Kensington, Northern Liberties, and Girard Banks did not join. The latter had already become one of the deposit banks, a measure about the propriety of which there was considerable difference among the

stockholders. The Councils of the city passed resolutions against the removal of the deposits, and urged, among other reasons, the fact that the stocks of the Girard estate had depreciated by the amount of \$312,304.18.

Felix Murray was hanged in this year for the murder of Joseph Sutcliff in November, 1833. The latter was sitting at home with his wife and children. Murray came in carrying a leather wheelbarrow-strap. Another person also entered with a club. They attacked Sutcliff with both weapons, and beat him so severely that he died. Murray was convicted of murder in the first degree.

On the 15th of April the United States senator, William C. Preston, and Representative George McDuffee, of South Carolina, addressed a meeting at Musical Fund Hall, which was called in opposition to the measures of President Jackson. About this time news had been received of an anti-Jackson victory in New York. The name Whig, as distinctive of the opposition party, had just been adopted. Resolutions were passed complimentary to the Whigs of New York, and it was resolved to celebrate their victory by a public festival to be held at Powelton, the country-seat of John Hare Powel, on the west side of the Schuylkill, between the Market Street and the Callowhill Street bridges. A committee of one hundred was appointed to make the necessary preparations. They acted with great liberality, and there were placed upon the ground an immense stock of provisions,—boiled ham, beef tongue, crackers and cheese, bread, and other articles,—with a large stock of ale, beer, porter, and cider. Refreshment-stands were set up in various parts of the ground, and everybody could eat and drink without stint. A matter quite unusual was the throwing open the bridges at High and Callowhill Streets to all passengers free of toll. This was a great novelty, and had considerable influence in swelling the crowd, the number of which was computed to be sixty thousand persons. In the city many stores and factories were shut, and all who were usually engaged therein went out to the "Powelton Jubilee," as the fête was officially denominated. A large delegation of the Whigs from New York arrived at Chestnut Street wharf about two o'clock in the afternoon, and the persons composing it were escorted to the public grounds. Here there had also been erected a very large platform and booth for speaking. Speeches were made by Josiah Randall, David Paul Brown, James C. Biddle, and Col. James Watson Webb, editor of the *New York Courier and Inquirer*.

The steamboat "William Penn," a new and handsome boat which belonged to the People's Line between Philadelphia and Baltimore, while coming up the river Delaware on the 4th of March was discovered, when near Greenwich Point, to be on fire. The flames progressed so rapidly that the captain decided to run the boat on the flats below the navy-yard.

This was done, but the change in the direction of the vessel brought the burning portions to the windward side and the flames swept completely across the decks. The bow of the vessel was in shallow water, and the persons who were on board the boat could jump overboard and wade on shore, but those who were on the stern were compelled to jump into the deep water and risk the chances of swimming to the shore; five persons were drowned,—the Rev. John Mitchelmore, of Lewes, Del., Col. Joseph S. Porter, W. W. Buckley, a merchant of Connecticut, and a lady and child. The boat, with its furniture, was totally destroyed, entailing a loss of seventy thousand dollars.

Information of the death of Gen. Lafayette, at Paris, was received in June. Councils of the city passed resolutions of regret, and resolved that there should be a procession of commemoration on the 21st of July. It was civic in character, participated in by officers of the city and district corporations, members of benevolent societies, and several fire and hose companies. The commemorative exercises were held at Zion Lutheran Church, southeast corner of Fourth and Cherry Streets. A prayer was made by Bishop White, of the Protestant Episcopal Church, and an oration was delivered by Peter S. Du Ponceau, the friend and military companion of Lafayette during the Revolution.

The dullness of the times, the diminution of wages, and the necessity which existed for reducing the number of mechanics and laborers employed in many industrial pursuits were met by the parties most interested with counter demonstrations. A trades-union society had been established in the city and county in the previous year. According to the counsels of the leading members, a remedy for the distress and pinching necessities of a portion of the people was to shorten the hours of labor, while the remuneration should remain at the old standard. The trades-union resolved that twelve hours ought to be the utmost limit of a day's work, and in that time one hour should be allowed for breakfast and one for dinner. The actual working hours were therefore only ten. But the ultimatum was expressed in the phrase and motto prevalent in the newspapers, chalked on fences, and exposed in the windows and stores of persons who desired the custom and influence of working men, "from six to six." These cabalistic words were seen everywhere. The agitation was kept up with persistence. Meetings were held by various classes of mechanics. Speeches were made, and resolutions passed. The claim was not considered unreasonable on the part of citizens not engaged in mechanical employments. On the contrary, there was a strong feeling that the demand was just, and that the concession ought to be made to toiling men. By degrees the various trades came into this movement. The employers yielded. In June, City Councils directed that the hours from six to six shall be allowed to all persons in public employment.

The feelings of animosity against people of color, which had previously been manifested, were again brought forth conspicuously through an unfortunate circumstance. Robert R. Stewart, who had been United States consul to Trinidad, resided on the east side of Sixth Street, between Prune and Walnut. He had in his service a native African boy, called Juan, who was a native of the Eboe nation, the representatives of which bore the character of being vindictive, revengeful, and easily moved to anger. Juan had been brought to the United States from the West Indies by Mr. Stewart. For some reason not known he determined to take the life of his master. An attack was made upon Stewart while sleeping of an afternoon in his chamber, and the butt end of a hatchet was used in a shocking manner upon the head of that unfortunate gentleman. He was frightfully mutilated and injured, and it was supposed that he would never recover. He did live, and died several years afterwards. Juan attacked Stewart on the 12th of July. A statement of the circumstances in the newspapers of the next day created excitement, and in the evening crowds began to assemble in the neighborhood of Sixth and Locust Streets. The city authorities had learned something from the events of previous years, and a large body of watchmen and police were assembled near the lower portion of the city, in the neighborhood of Sixth, Seventh, Lombard, and South Streets. Crowds began to assemble in that neighborhood, composed of men and half-grown boys, in the early part of the evening. They were dispersed about the neighborhood, talking together, in small groups. Rendered prudent by the presence of the police of the city, they carried their destructive propensities into an adjoining district, and commenced an attack upon houses occupied by colored people in Small Street, between Sixth and Seventh. The inmates were beaten and put to flight, and their furniture destroyed. From this place their ravages were carried upon Seventh and Shippen Streets. Thence the destruction was transferred to "Red Row,"—eight or nine houses on Eighth Street below Shippen. The mob here made a discrimination. All the young colored men that could be found were assaulted, because the young men were generally saucy, but the old men and women of color were not injured. During the proceedings "Red Row" was set on fire, and all the houses were destroyed.

The mob were unrestrained by the presence of police, and from Eighth and Shippen they proceeded to Christian and Ninth Streets, where several brick and frame houses were attacked. Some of these were defended by the owners, and several shots were fired from them, two persons in the mob being wounded. The houses were finally entered, but the residents had escaped. Meanwhile the fire kindled at "Red Row" had been burning, and when the firemen came to perform the duties of their mission

they were opposed by the mob, which attempted to cut their hose and to prevent them from playing on the premises. The firemen persevered, and fought their way, and succeeded in saving all but the house which was first set on fire. Houses in Fitzwater Street were attacked and injured, and, coming back to Shippen Street, fresh assaults were made on buildings which were passed by at the beginning of the disturbances. By these occurrences the colored people in the lower part of the city were frightened to a degree of terror which had not affected them in previous years. On the day afterwards hundreds of families moved out of the neighborhood of the previous day's destruction, or, locking up their houses, sought refuge where they could find it. Numbers of men, women, and children bivouacked in the woods and fields, and several of the fugitives were given shelter in barns and outhouses.

In the evening of Tuesday, the 14th, crowds again began to assemble in the neighborhood of Sixth and South Streets. On the rumor that a house on St. Mary Street was garrisoned by armed blacks the mob proceeded there. The statement was true. Fifty or sixty colored men were in the building, armed with knives, razors, bludgeons, and pistols, besides a great store of bricks and paving-stones placed in the third story to be hurled at an attacking party. These men were desperate, and were rendered savage by the occurrences of the two previous days. The city police force was ready to prevent the assault intended to be made by the whites upon the house, and at the same time were charged with the difficult duty of getting the colored men away in safety. The matter was finally managed, and there were no further disturbances.

The members of the Abolition party were active at this period in the Northern States. They were few in number but greatly in earnest, exceedingly industrious, and ready to adopt any policy which would annoy slave-holders or render the holding of slaves unpopular. The Southern people, passionate and deeply interested in slaves as property, were much excited. There was an equal degree of hostility to abolitionism in the North, partly sympathetic with the Southern people, and partly controlled by prejudice. The Abolition societies were active. They were publishing newspapers, pamphlets, and tracts, in which slave-holders and the practice of slave-holding were attacked by argument, invective, sarcasm, and ridicule. Many citizens not connected in interest with slave-holders believed that from the character of the Southern people, and the continuing perversity of the Abolitionists, dreadful consequences would ensue. In order to assure the Southern people that their rights were respected by others than members of the Abolition societies, a town-meeting was held on the 24th of August at Musical Fund Hall. A series of strong resolutions were presented by Robert T. Conrad. They deprecated agitation upon the sub-

ject of slavery, censured the formation of Abolition societies as unwise and dangerous and menacing to the peace of the Union, pledged the friendship and sympathy of the citizens of Philadelphia to the South, and declared that they regarded "the dissemination of incendiary publications through the slave States with indignation and horror." A circumstance which unexpectedly happened on the day succeeding gave to the persons who were prominent at this meeting an opportunity to prove their sincerity. On the arrival of a steamboat from New York, a wooden box, directed to a citizen of Philadelphia, was accidentally broken open by laborers. To the dismay of those who examined the box "it was found to be stuffed with incendiary publications." There were packages of the *Liberator*, of *Human Rights*, *The Slave's Friend*, and other papers and publications directed to persons in the Southern States. The officers of the meeting of the night previous were apprised of the grave circumstances, and they consulted with each other as to what had best be done. The person to whom the box was directed was waited upon. He denied all knowledge of the package, where it came from, or who sent it, and surrendered all rights that he might have in it to the committee. Upon this the latter, with about one hundred other persons, went to the transportation office, and upon a vote being taken, it was decided to carry the box out upon the river Delaware, where its contents should be destroyed. This sentence was solemnly performed. The *Liberators* and the *Slave's Friend*, etc., were consigned to the waters. "The whole affair," said the *Pennsylvania Inquirer*, "was conducted in a spirit which exhibited a fixed purpose to resist everything like the circulation of incendiarism of any description, and at the same time to avoid any improper excitement among ourselves."

John Marshall, chief justice of the Supreme Court of the United States, died at the boarding-house of Mrs. Crim, in Walnut Street, between Fourth and Fifth, on the 6th of July. He had been in the city a short time, and was expected to return to Virginia, but was not able to proceed in consequence of sickness. The information of his death was contained in the newspapers of the 7th. On the afternoon of the same day a town-meeting of citizens was held, of which Bishop William White, of the Protestant Episcopal Church, was president, Benjamin R. Morgan and Thomas M. Pettit vice-presidents, and Nicholas Biddle and Judge Edward King secretaries. Resolutions were passed expressive of sorrow and of admiration for the character of the deceased, "that as he has died in the midst of this community, it feels itself as specially called upon to express its sentiments of respect for his memory. And as the citizens of Philadelphia would have rejoiced to meet him in life with every mark of hospitality, they will extend to his honored remains the testimony of their unfeigned veneration." They resolved that they would form a funeral procession, to move from the late residence of the deceased

to the place of the embarkation of his body. On the same day the members of the bar held a meeting, Peter S. Du Ponceau being chairman and Justice Charles Smith, of the Supreme Court, being secretary. Resolutions of admiration for the character of the late chief justice were passed, and it was recommended to the bar of the United States to co-operate in erecting a monument to his memory at some suitable place in the city of Washington. A committee of thirty members of the bar, William Rawle being president, was appointed to carry out this design and to confer with their brethren in other parts of the Union in carrying the resolution into effect.¹

At the bar meeting a committee, consisting of Associate Justice Baldwin, of the Supreme Court, Richard Peters, Jr., John Sergeant, William Rawle, Jr., Thomas I. Wharton, and Edward D. Ingraham, was appointed to accompany the remains of Chief Justice Marshall to the city of Richmond, and to attend the funeral there. John Sergeant was requested to deliver an eulogium upon the character of the deceased.

City Councils at special meeting also passed resolutions of regret, and determined to attend the remains of the lamented deceased beyond the borders of Pennsylvania, and that the mayor, recorder, aldermen, and citizens be invited to assist in paying this tribute of respect to his distinguished character and services. Horace Binney was invited to pronounce an eulogium on the character of the chief justice. The American Philosophical Society requested Judge Joseph Hopkinson to prepare an obituary notice.

On the morning of July 8th, about five o'clock, the remains of Chief Justice Marshall were removed from Mrs. Crim's boarding-house, and, attended by city officers and Councils, members of the bar and citizens, were carried by the most direct route to the steamboat lying at the foot of Chestnut Street wharf. The mayor and Councils and many citizens went down with the boat as far as New Castle, and the bar committee traveled to Richmond. Mr. Binney's oration was delivered at Musical Fund Hall, on the 24th of September.

On the 21st of March, City Councils passed an ordinance "for the construction and management of the Philadelphia Gas-Works." Thus was effected the solution of a controversy which had been carried on for

many years. The first inflammable gas used for illuminating purposes was made in 1796, by Michael Ambrose & Co., Italian fire-workers, who had an amphitheatre for exhibitions on Arch Street between Eighth and Ninth. They displayed representations of temples, masonic emblems, and allegorical devices, which they said were produced by "inflammable air, with the assistance of light." J. C. Henfrey, in 1803, made a proposition to Councils to light the city by gas-lights burned in high towers. James McMurtrie, in 1817, petitioned Councils for liberty to introduce gas-lighting.

In 1816, Dr. Charles Kugler exhibited to the public at Peale's Museum, in the State-House, "gas-lights, lamps burning without wick or oil." This effect it was said was produced "with carbonated hydrogen gas, on a new and improved plan." This lighting took place in April. The effect was so satisfactory that Warren & Wood, of the new theatre, introduced the gas-lights at the fall season, commencing November 25th of the same year. Dr. Kugler was not a practicing physician, although he had received a scientific education. He was a member of the firm of Pratt & Kugler, merchants. William Henry, copper-smith and tinsmith, constructed the apparatus for the use of the gas at the museum and theatre. He was so well satisfied with the result of his work that he put up a gas apparatus in his own house, 200 Lombard Street, near Seventh, and invited City Councils to witness the effect. This was the first private dwelling illuminated by gas in the United States. The Councils committee reported next year that they had examined the gas-lights at the museum and theatre, and, whilst not taking any present action, recommended that a standing committee on gas should be appointed to learn something more upon the subject, and report from time to time. Peale continued to light his museum with gas until the spring of 1818. His manufactory was in a small closet under the steps in the great hall leading to the upper floors of the State-House building. Here he had a furnace and apparatus, and the establishment being considered dangerous, objection was made to its further continuance, and he thereupon ceased that method of illumination.

The use of gas-lights at Masonic Hall was brought to a sudden close by the burning of that building on the 9th of March, 1819. When the hall was rebuilt in 1822 the Grand Lodge erected a new gas-works. As the new Chestnut Street Theatre was also being built about the same time, it is probable that the petition presented by the Grand Lodge in 1822, asking permission to lay pipes on streets to furnish other consumers than themselves, was principally governed by an expectation of furnishing light to the theatre. Councils refused the privilege asked for: The theatre was not supplied, and predictions were freely made that gas as an illuminator would soon go out of use. For many years Masonic Hall was the only public building in

¹ The amount realized was small. Little response was made outside of Philadelphia, and the total collections were discouraging. The gentlemen who held the trust managed it with fidelity, and continual investment of the interest added to the principal. In the course of forty-seven years the fund had increased to such an amount that it was considered the time had come to carry out the resolution of 1835. Peter McCall, the last survivor of the committee of thirty, held the fund. At his death the papers and securities were found by his executors. The Law Association of Philadelphia taking the place of the departed trustees, all of whom had been members of that society, petitioned Congress in 1883 for the erection of the monumental statue in memory of Chief Justice Marshall at the city of Washington. As nearly the whole cost was to be supplied from the Philadelphia fund, there was no difficulty about the passage of the resolution, and the necessary authority of Congress was given.

Philadelphia which was lighted with gas. There was about this period a tavern on Second Street near Dock, called the "Gas-light Tavern," which was the only other building illuminated in that way.

In 1825 an effort was made to induce the Legislature to pass a bill to incorporate the Philadelphia Gas-Light Company, with authority to manufacture and furnish gas and lay pipes in the streets. Councils were aroused, and the proposition was opposed. A writer in the *United States Gazette* denounced the project of lighting by gas to be "a folly, unsafe, unsure, a trouble, and a nuisance. Common lamps take the shine off all gas-lights that ever exhaled their intolerable stench." Other writers denounced gas as an unpleasant nuisance, and the influence against it was sufficient to prevent the passage of the act of incorporation.

Henry Robinson and Robert Carey Long, who were concerned, with others, in schemes for lighting Baltimore with gas, requested authority, in November, 1826, to introduce that plan of illumination into Philadelphia, and were willing to make a contract with the corporation. The Councils committee reported favorably to the plan. But doubt was expressed whether it was expedient to confide such a matter to individuals. There was risk of failure; it would be better, it was thought, for the city to manufacture the gas. A committee was appointed to make the necessary inquiries. In the succeeding year the committee reported in favor of the proposition of Robinson & Long, and recommended that a contract be made with them. Common Council adopted the recommendation unanimously; but the other chamber was not as eager, and the proposition languished for want of ratification.

The application for a charter was renewed in 1828, but was again refused by Councils. In October, 1830, a public meeting was called for the purpose of urging Councils to take into consideration a plan for the introduction of gas-lights into the city. The committee representing the persons interested in this meeting said, "This brilliant and economical method of illuminating the public streets and public and private buildings has long since been adopted in many of the principal cities of Europe with entire success, and several places on this side of the Atlantic have followed the example. It has often been a matter of astonishment that the beautiful city of Philadelphia should have been suffered to slumber so long in comparative darkness." These parties offered to light a portion of the city gratis if the privilege was granted of laying down the pipes in the streets. Common Council voted to appoint a joint committee on the subject, but Select Council was not prepared, and laid the proposition on the table.

Peter A. Browne, in April, 1831, petitioned Councils for authority to lay down pipes upon Carpenter Street and Lodge Alley, crossing Seventh Street, to be connected with the gas-works of the Masonic Hall. This

permission was sought for the purpose of lighting the Arcade. A report was made in favor of granting this privilege in Common Council, and authority was given by the vote of both chambers, but the plan was not carried out. In November of the succeeding year memorials were introduced to Councils asking that the corporation of the city of Philadelphia would erect suitable works for the supply of gas for lighting the public streets and private houses. They represented that there could be no danger in the work, that the experience of other cities in Europe and in the United States proved that every reasonable objection could be avoided, and that in time the works would yield a large profit to the city from the sales of gas to private consumers. As usual, Councils listened and deliberated.

A year elapsed before the committee appointed on the subject was able to report. On that occasion a much more elaborate examination was given to the subject than at any previous time. The committee reported estimates of the cost of proper buildings, gas-holders, retorts, furnaces, main pipe, and four hundred lamp-posts, altogether sixty-six thousand seven hundred dollars, without considering the value of a lot of ground for the works, it being proposed to use the buildings and lot of the old city water-works at Chestnut Street, Schuylkill. The estimate was that gas might be manufactured and supplied at three dollars and fifty cents per one thousand cubic feet, exclusive of the interest to capital and salaries to officers. The gas-rate of sale would be higher to consumers. In the city of New York at that time gas was sold to citizens at seven dollars per one thousand feet.

On the 1st of January, 1833, the committee presented a further report embodying statements and estimates, and recommended that the gas-works should be built and managed by the city corporation. Remonstrances began to be presented with freedom. One of these papers protested against "the plan now in agitation of lighting the city with gas as one of the most inexpedient, offensive, and dangerous nature; in saying this we believe we are fully sustained by the accounts of explosion, loss of life, and great destruction of property where this mode of lighting has been adopted. We consider gas to be an article as ignitable as gunpowder and nearly as fatal in its effects." The manufacture was represented to be dangerous. The discharge of refuse from the works would poison the water of the Delaware and Schuylkill, and cause "the destruction of the immense shoal of shad, herring, and other fish with which they abound." Appended was a list of accidents and injuries produced by the use of gas by explosion, fires, destruction of fish, etc. Another report on the subject, in which the objections of the signers of the remonstrance were explained or refuted, was made in March. Many testimonials were submitted from persons in places where gas was used, with explanations of the true facts in relation to the

supposed objections and references to cases of disaster.

The matter lingered. In February, Mark Richards and James J. Rush sent a communication to Councils stating that they were authorized by a company of gentlemen who were willing to undertake to manufacture gas to light four lamps in each square free of charge if authority was given, with privilege to supply lights to private consumers. Further petitions and remonstrances were presented, and among others was one which suggested that Councils should send to Europe "a person from previous pursuits well qualified to examine, understand, and report on the highly diversified manufacture of gas in the different countries in which it is used on a large scale." Prof. Robert Hare, of the University of Pennsylvania, sent a communication to Councils in October, 1833, in which he declared it to be his opinion "that it would be inexpedient for a corporation of a city to assume the business directly, and upon the whole, for one I would rather be without gas than to endure the inconvenience of attending its introduction." On the other hand a gas company would be a monopoly. In 1834, D. B. Lee and W. Beach made a proposition to light the city by lamps placed on the top of a tower or towers. The illumination to be by gas "obtained by burning tar, pitch, and resin over a hot fire of anthracite coal. The light was to be placed at the top of the tower in a glass lantern or case. On a large tower the lantern should be from ten to twenty feet in height, and flaming from a diameter of from three to five feet from the bottom to twelve or fifteen feet at the upper end. They expressed the opinion that the whole city could be lighted from one tower three hundred feet in height.

Finally in extreme prudence Councils adopted the resolution that a person of scientific knowledge should be sent to Europe as agent of the city to examine into the methods of manufacturing gas there, and to obtain all the information possible as to the effects of gas-lighting. Samuel V. Merrick was intrusted with that duty, and he returned in December, 1834, with a very favorable report. He declared that gas-lighting was superior to any other method of illumination. That the manufacture of gas could be carried on profitably and safely. That the fears and objections of many were groundless. That all danger from explosion could be obviated by care in the construction and connections of pipes. That the works should be constructed upon a moderate scale with capacity of future extension, and that the city ought to own a manufactory.

On the 21st of March, 1835, Select Council passed unanimously, and Common Council nineteen for and two against, an ordinance for the construction and management of the Philadelphia Gas-Works. It was directed that one hundred thousand dollars should be raised in shares of one hundred dollars each, the money payable in the city treasury. For these in-

terest certificates were to be granted by the mayor, countersigned by the city treasurer, stating the amount of the subscription, pledging to the holder the faith of the city for ultimate redemption of the loan with interest, subject to the right of Councils at any time to take possession of the works, and to convert the stock into a loan. Twelve trustees were to manage the works. They were divided at first into classes of one year, two years, and three years, and thereafter four trustees were to be elected annually to serve for three years. It was declared to be the duty of the trustees forthwith to construct suitable works for the manufacture of carburetted hydrogen gas from bituminous coal, and to lay pipes for its distribution through the city. The works were to be on a scale competent to manufacture seventy-five thousand cubic feet of gas daily. For the purpose of the construction of the works a lot of ground belonging to the city was assigned, bounded north by Filbert Street, east by Schuylkill Front Street, south by Market Street, and west by the river Schuylkill. In October the trustees reported their rules and regulations in regard to the manner of supplying gas and the method in which it should be introduced into houses. The price determined upon was \$3.50 per thousand cubic feet, with a discount of five per cent. upon the amount of all bills paid within three days after presentation. The works were finished and put in operation on the 8th of February, 1836. Up to that time there had only been applications for nineteen private services and for forty-six public burners. Only two stores were fitted up so as to be able to illuminate as soon as the gas was supplied. On the 1st of July, 1841, the city took advantage of its right to buy out the stockholders. There were paid one hundred and seventy-three thousand dollars in certificates of loan, and for their security there was a guarantee offered to the loan-holders that the trustee system with which the works started should be maintained for the benefit of the loan-holders. This contract in later years was found to be an obstacle to the city in endeavors to take possession of the works and oust the trustees. It was a guarantee which could not be broken. Another oversight continued the trustee system long after it ought to have expired. Either by inadvertence or purposely it is not known which, the new loans for the extension of the gas-works were for many years issued in the same terms as those originally given to the stockholders of the gas company. There was a guarantee in the certificates that the trustee system should be retained, although the persons loaning the moneys contracted on the faith of the city, and not because trustees were placed in power at the works. The form of certificate was then changed, but it had to be maintained until the last loan with the trustee guarantee could be paid off. This event is expected to happen in 1885.

The original works at Schuylkill Front and Market

Streets were enlarged from time to time until there was no more space for accommodation. The trustees purchased a tract of land of twenty acres near Point Breeze, to which other additions were afterward made. Here there were extensive buildings, gas-holders, and other constructions. The great telescopic gas-holder was one hundred and sixty-five feet in diameter and ninety-five feet high, and could be extended to its greatest height by three sections, sliding into each other. This establishment, afterward called Point Breeze, or Twenty-sixth Ward Works, were put into operation on the 13th of December, 1854. Subsequently large works were erected on the Delaware River at Port Richmond by the trustees. In Spring Garden, by virtue of an ordinance passed by the District Commissioners Sept. 7, 1846, the erection of gas-works near the river Schuylkill at the intersection of Twenty-sixth Street was authorized. The works were so far completed by the end of 1847 that some gas was manufactured. They were considered to be finished in the spring of 1851.

In the Northern Liberties an ordinance to establish the Northern Liberties Gas-Works was passed by the commissioners March 15, 1838. Subsequently the stockholders were incorporated as the Northern Liberties Gas Company, April 1, 1844. The capital was two hundred thousand dollars. This company supplied the gas manufactured at its works on Laurel Street, near Frankford road, at the intersection of Cohocksink Creek, and was the source of supply of gas to public and private consumers in Northern Liberties and Kensington. Other gas-works were established at Manayunk and at Frankford. A company was chartered to introduce gas into Southwark, but it occupied only the position of a huckster, purchasing gas supplied from the city works and retailing it at a profit to consumers.

Boat clubs for rowing purposes were established about 1833. Four-oared, six-oared, and eight-oared barges, each carrying a cockswain, were the favorite shapes. These associations were first seen in exercise upon the Delaware. But, after some experience of the rough water and difficulties and dangers incident to commerce which rendered the river unfavorable for ordinary rowing, the barge clubs took to the Upper Schuylkill above Fairmount. The first boats in use on that stream belonged to the "Imp" and "Blue Devil" clubs. They were each manned by eight oarsmen and a cockswain. The "Imp" was a long, dark boat, and the uniform of the crew was white trowsers, red-and-white-striped shirts, and close red Grecian caps. The "Blue Devil" was painted blue with a white stripe. The crew wore white pantaloons, blue-and-white-striped shirts, and small, round hats. These inaugurated boat-racing on the Schuylkill on the 14th of April, 1835. The novelty of the contest attracted several thousand persons to the banks of the river, some coming in carriages and some on foot, and they occupied every available place

of lookout. The course was from Fairmount to Belmont, estimated to be nearly three miles. The race was won by the "Imp" coming in ahead of the "Blue Devil" about forty yards in eleven minutes' time. A stand of colors and a silver oar were the prizes assigned to the winning crew. The success of this race stimulated preparations for a regatta. There were ten boats on the Schuylkill, and material sufficient for a fine display. The time fixed for the first regatta was the 12th of November. There were two classes of boats. The first embraced the "Cleopatra," "Falcon," "Sylph," "Blue Devil," "Metamora," "Aurora," and "Imp"; all of eight oars. The second class was composed of six-oared boats, the "Ariel," "Nymph," "Dolphin," and "Neptune." The course was up the Schuylkill to a point and return. The "Ariel" took the first prize for the second class, a silver cup, and the "Nymph" the second prize, a flag presented by Mr. Debaufre. The first-class prize was a very handsome boat named "The Prize." It was won by the "Cleopatra" in twenty minutes' time. The "Falcon" followed in twenty and a half minutes and took a silver pitcher, while the "Sylph" won a silver goblet, presented by the theatrical manager, F. C. Wemyss, of the Walnut Street Theatre. This festival brought to the shores of the Schuylkill more persons than were ever assembled on its banks before. From Fairmount to Belmont, on both shores, the heights and vantage-places were crowded. Large numbers of spectators came on horseback and in gigs and wagons and coaches, the number present being several thousand, and the event being also considered by some persons sufficient to justify a cessation of business for the day.

On the 18th of February, 1836, the General Assembly passed a law to incorporate the stockholders of the National Bank of the United States, excepting the government of the United States and the Treasurer of the United States, as the "president, directors, and company of the Bank of the United States." The corporation was to continue until March 3, 1866. No note was allowed to be issued by the bank for less than ten dollars. The capital was to remain as before under the charter of Congress, thirty-five million dollars. This action had been vigorously urged on behalf of the stockholders of the bank from the time that it became apparent, after the veto of the first bank bill by President Jackson, that a Federal re-charter could not be obtained. It was urged in favor of the continuance of the operations of the institution that winding it up would produce great financial difficulty and distress which would be highly injurious to the business interests of the community, and that the continuance of the operations of the bank with its great capital was necessary for the public good. The Democrats, fully imbued with the Jackson hostility against banks, were violent in expressions of opposition, and when the bill was passed their denunciations were warm and vigorous. Jesse R.

Burden, member of the Assembly from the county, who had been a prominent Democratic politician, and was exceedingly popular with members of the party, voted on this occasion for the bank bill, a proceeding which caused the bitterest feeling. His course was denounced passionately. The indignation culminated in a procession in which effigies of Burden and one of his Democratic companions who also voted for the bill were carried. Marching to the sound of the "Rogue's March," played by fifers and drummers, the party repaired to Southwark. On an open lot between houses on the west side of Second Street the effigies were hanged, and a great fire being kindled under them, they were consumed amidst the plaudits of the crowd. Burden, in a letter to the Commissioners of Southwark explaining his position, admitted that in 1834 he was opposed to the recharter of the National Bank. But he declared that he was anxious at the same time for the creation of a great State institution, and that at the period he joined with many other Democrats who were opponents of the United States Bank in a petition to the Legislature for the charter of a State bank of ten million dollars capital. The privilege which was granted by the commonwealth was required to be paid for at a good round price, much more, in fact, than subsequent occurrences showed that the franchise was worth. The conditions were that the bank should pay into the treasury two million dollars as a bonus for the favor, the payments extending over ten years, the money to be appropriated for common-school purposes. The institution was also required to loan to the State six million dollars, and purchases of stocks in several railroad, canal, and turnpike companies were stipulated for. Out of the two million dollars bonus to be paid by the bank appropriations were made to several turnpike companies and toward the State canal improvements. The stockholders of the bank were prompt in accepting the provisions of the act. Nicholas Biddle, president of the National Bank of the United States, offered his resignation about the beginning of March. It was accepted by a unanimous vote, and it was resolved that in memory of his services a valuable set of silver plate should be presented to him. This was afterward done. The set was made in magnificent style, the value being represented at thirty thousand dollars. Mr. Biddle was at once elected president of the State Bank of the United States, which went into operation on the 4th of March.

Gen. William Henry Harrison, of Ohio, who had been spoken of as a candidate for the Presidency of the United States, visited the city in July. It was arranged that he should be received with marks of distinction. Numbers of Whigs congregated at the steamboat wharf where "the Hero of Tippecanoe" was expected to arrive. A fine barouche with four horses was prepared to carry him to his hotel. The animals became excited in consequence of the shouts

and huzzas of the crowd after they had proceeded a short distance, and were restive and threatened an accident. In this emergency they were taken out of the harness, and the people who were following the carriage took their places. Ropes were obtained and men took hold of the line. It was not long enough to accommodate all who were willing to take part in this strange proceeding. Cries of "More rope!" were heard above all the noise of the accompanying procession. The line was lengthened from time to time, and when the carriage reached the United States Hotel, in which Gen. Harrison was to be lodged, there were several hundred persons who had hold of it. The circumstance created much amusement among the Democrats, and furnished them with a taunting catch-word which was used sarcastically for many years. "More rope" was an epithet of derision which sometimes led to resentment and fights. During his continuance in this city Gen. Harrison was received by his friends at Independence Hall, at Commissioners' Hall, Northern Liberties, and other places.

The district of Southwark was divided into five wards by act of March 31st. The division-line was the centre of Third Street from South to the line of the Southwark Railroad, on Prime Street or Washington Avenue. The First Ward lay east of this line, between the middle of South Street and the middle of Catharine Street. Immediately adjoining to the south was the Second Ward, which took in the remaining ground as far as the Southwark Railroad. West of the centre of Third Street, extending to the district boundary-line on Passyunk road, was the Third Ward, between South and Catharine Streets, and the Fourth Ward between Catharine Street and the railroad. The Fifth Ward included all the ground in the district south of the centre of the Southwark Railroad and between the Delaware and the western line of the district.

In June, as noted on a previous page, an act of Assembly was passed which placed upon the county of Philadelphia liability for the payment of damages in case of the destruction of the property by mobs or riots. The losses on property destroyed in the riots before this time were borne by the owners. There was no provision for compensation. The act, allowing an inquiry into the circumstances of the destruction of Robb's Row and the payment of damages thereon was the first attempt to make the community responsible for the preservation of the peace. In after-years the operation of this law was found to be important. A large amount of valuable property was destroyed in various riots, the most noted of which was the burning of Pennsylvania Hall in 1838, and during the Native American riots of 1844-45.

By the will of Dr. Jonas Preston, who died in 1836, a new charity was provided for. In the document referred to he expressed his opinion "that a lying-in hospital for indigent married women of good character ought to be established in the city of Philadelphia, which would be distinct and unconnected with any

other hospital, where such females may be received and be provided with proper obstetric aid for their delivery, and with suitable attendants and comfort during the period of their confinement." Mr. Preston bequeathed a large portion of his estate for the support of such a hospital "when established and incorporated." In consequence, John Sergeant, Joseph Parker Norris, and about one hundred other persons associated themselves as the society to carry out the will of the donor. The Legislature by act of June 16, 1836, incorporated these persons as "The Preston Retreat," with provisions for the increase of the corporation by the admission of contributors. A visiting committee was directed to be appointed annually "of not less than twelve respectable females" residing in the city or county of Philadelphia, or the county of Delaware. Women patients only were to be admitted who were residents of those districts. The time for their remaining under the care of the institution was four weeks, with power to increase it to twelve weeks in case of necessity.

The great benefits which were expected to follow the chartering of the United States Bank as a State institution were not realized. The banks which had expanded their issues were drawing them in, greatly to the annoyance and distress of many of their debtors. There were also political movements connected with the pressure, which were caused by the action of the Federal United States government, and followed the war which had been waged against the Bank of the United States. Under the "Treasury Circular," or the "Specie Circular," as it was indifferently called, it was ordered that the land-office of the United States should receive no payments for purchases of public lands unless they were in gold or silver. This regulation required the payment of coin, and frequently occasioned large drafts upon the banks. Over-importation of foreign goods caused heavy exportation of coin to Europe. Under all these circumstances business failures were made frequent. Trade was dull. Thousands of persons were out of employment, and the collection of debts was a difficult matter. The banks stood up against these obstacles until the 10th of May, when those institutions established in New York City suspended specie payments. The news was received in Philadelphia by mail upon the evening of the same day, and the next morning, May 11th, the banks of Philadelphia suspended, and they were followed in that action by the banks all over the country. The circumstances created dismay. The difficulties likely to result for the want of currency, especially small change, were at once anticipated. The specie in circulation it was foreseen would command a premium, under the stimulus of which the retirement of coin would be a matter of necessity. In this emergency the Councils of the city were petitioned by citizens to issue notes for purposes of furnishing a currency of the denomination of twenty-five and fifty cents, and one, two, or three dollars.

The finance committee, to which these petitions were referred, took cognizance of the subject at once. They reported on the same evening, May 11th, an "ordinance for raising supplies and making appropriations for the year 1837." Appropriations were by this bill authorized to be made for various objects, and the mayor was empowered to borrow the sum of one hundred and thirty thousand dollars, "in such amounts and at such times" as the committee on finance should direct, the same to be redeemable in one year, and the certificates bearing an interest of one per cent. Within two days notes of twenty-five and fifty cents and upwards, printed in blue ink, were issued and immediately went into circulation, passing from hand to hand as coin might do. The example of the city was followed with little delay by the Commissioners of Northern Liberties, Spring Garden, Kensington, and Southwark, and the Commissioners of the county of Philadelphia. By these means some relief was effected. The example of the municipal corporations was, however, a bad one. They had power to borrow money, but none to issue notes in resemblance of a currency. Necessity, it was argued, caused the illegal course to be taken and justified it. Their course was immediately followed by certain corporations lately created, which were called Savings and Loan Companies. They also went largely into the issue of circulating notes. Their authority to do so was doubtful, but they argued that they had permission by charter to loan money, and this was only a loaning of money in small sums. The chartered companies were soon assisted in the work of pushing out a paper currency by various companies which were not incorporated. They took occasion of the public necessity to put into circulation notes of five, six and a quarter, ten, and twelve and a half cents and upward. Specie retired entirely from circulation, being a matter of purchase and sale by brokers. Even the old red cent became scarce. Distressing consequences followed the bank suspensions. It was estimated that there were three hundred mercantile failures in New York City in 1837, involving the loss of some millions of dollars. In Philadelphia there were insolvencies and general suffering. Rents went down, wages were reduced, prices fell, and the injury was universal.

Up to this time the navigation of the river Delaware in winter, when ice prevailed, was left to chance. The Philadelphia Steam Tow-Boat Company was the first to interfere with the solid reign of winter. It was established under a charter granted in 1832, but did not get into full operation for two or three years afterward. The boats were stanch and strong, and were able to contend with floating ice successfully. But frequently they were embarrassed in the effort to tow vessels by the freezing of the courses which they had made in channels before they could return to open them. In 1837 petitions were sent to Councils asking that the city would make an appropriation for the

purpose of building an ice-boat and keeping it in order for winter service. A town-meeting aided in producing the desired effect. An appropriation was made and work on the boat commenced at once, and prosecuted with such diligence that the vessel was launched in August, and was fully ready for duty by the middle of December.

On the 19th of May, James Moran was executed, under a conviction for murder, on the high seas, of Capt. Smith, of the schooner "William Wirt," on the 22d of November, 1836. This vessel was bound from Boston for Rio Janeiro. Moran had shipped on board as a seaman. A quarrel between the captain and Moran, about three days before the murder was committed, was followed by the striking of the latter by Ward, the mate. Moran having gone below was confined there for some time, and becoming free, was taken and lashed down and scantily fed with biscuits and salt. On the third day he was released in the afternoon and ordered to duty. During the following night Moran went into the captain's cabin and stabbed the latter seriously. Ward, the mate, was also assaulted and killed and his body thrown overboard. The captain lingered. Moran and Estevan Garcia, a Spanish sailor who had enlisted with him, practically took command of the vessel. Subsequently Garcia was killed by Charles Reyman, a sailor, and James Johnson, and his body thrown overboard. This was done at the instigation of Moran. Finally Reyman, Johnson, and Hart, the cook, united to overcome Moran. He was overpowered and secured. These men then undertook to navigate the vessel. The captain was not yet dead, and being brought up from below, he was strong enough to give orders, by which a vessel passing near was hailed. Some of the crew came on board and finally showed the way, to Pernambuco, the "Wirt" being steered by the course of the other vessel. Capt. Smith died about six days after the arrival at that port. Moran was convicted in the United States Circuit Court, before Judge Baldwin, on the 27th of April, and sentenced to death. He had been confined in the Eastern Penitentiary. On the day of the execution he was taken thence, under guard of a company of the United States marines from the navy-yard. The gallows were erected about the middle of Schuylkill Sixth [Seventeenth] Street at the intersection of Green Street. The execution was seen by thousands of spectators. It was the last public execution in Philadelphia.

For the encouragement of trade it was argued by certain persons that much good would result from the establishment of a public warehouse for the inspection and storage of tobacco. The wholesale trade in this article had not been large. The reason was asserted to be the want of proper accommodations for the business, a result of which was that large quantities of tobacco were passing through the city to other places where there were sufficient preparations. Un-

der this stimulus it was resolved that a public tobacco inspection warehouse should be built on the city lot, part of the old draw-bridge property, bounded by Spruce, Little Dock, and Dock Streets. At the same time a row of fine stores was built on Front Street. The tobacco inspection and storage warehouse was a solid, large building, suitable in strength and capacity to every demand of the trade. It was finished shortly afterward, and occupied at the beginning for the purposes intended with seeming prospects of success. Gradually the trade fell off, and in a few years the premises were abandoned altogether for the purposes for which they had been built.

A convention to consider amendments to the Constitution of the State of Pennsylvania had been authorized by the vote of the people. City Councils offered to provide that body with accommodations if it should come to the city. The proposition was accepted. Musical Fund Hall was hired for the purpose. The meeting-room was in the second story; the first story was occupied by committees and officers of the convention. This body remained in session several weeks, and having agreed upon the instrument known as the Constitution of Feb. 22, 1838, adjourned.

A false alarm in the autumn created much excitement in the community and throughout the country, the incidents of which, considered with reference to the cause, were quite ludicrous. By some means a rumor was put into circulation that the packet-ship "Susquehanna," belonging to Cope's Liverpool Line, which left the port of Philadelphia about the middle of October, was captured just outside the capes of the Delaware by "a long low black schooner," sailed by pirates. The most wonderful stories were told of the strange movements of the corsair and the confusion which was observable on board the ship. The "Susquehanna" bore a valuable cargo, and many well-known and respected citizens were passengers. Acts of piracy had been unknown upon the Atlantic for many years. The sea was considered as safe for vessels as the crowded streets of a city in daytime to the unoffending person. On the reception of the "news," which came to the city by express, great consternation followed. At Wilmington the revenue cutter "Gallatin" was at once prepared for immediate service. Commodore Stewart, at the Philadelphia navy-yard, detailed a detachment of officers and men for immediate service. Lieut. Dale was in command of this party, which was taken to Wilmington by the steam-boat "Pioneer" on the same night. As soon as they reached the "Gallatin" that vessel sailed in quest of the marauder. On the next day a meeting of mechanics and citizens was held at the Exchange, at which William D. Lewis presided, and Judge King, of the Common Pleas, made a speech. An executive committee was at once appointed to take measures to regain possession of the ship, relieve the passengers and crew, and punish the authors of the outrage. The employment of the steamship "Charleston" was

advocated, but the vessel was found to be in no condition for a long and dangerous cruise. Instead the pilot-boat "William Price" was armed and equipped, under the command of Lieut. Ritchie, of the navy, and manned with a crew of volunteers, captains and mates of ships, with some men from the navy-yard. This vessel was towed to the capes by the steam tow-boat "Delaware" in a few hours. The United States brig "Porpoise," schooner "Active," and cutter "Alert" were sent out from New York to cruise for the pirate, and at the same port, in order to prevent new outrages, the United States brig "Pioneer" conveyed a fleet to sea. While these measures were in progress there were some peculiar proceedings in the city. As soon as the "outrage" was announced certain knowing persons jumped at once to the conclusion that such a transaction as the carrying off of the vessel could not have occurred unless the parties connected with it had the assistance of accomplices in the city. Rumors flew fast, and as a result one gentleman fell under suspicion, was arrested and brought before a magistrate for examination. Nothing appeared against him, but he was held to bail for a further hearing. The vessels sent out to the rescue of the "Susquehanna" returned in a few days without further information either as to the fate of the ship or the whereabouts of the "long low black schooner." A voyage to Europe at that time was a matter of three or four weeks for sailing-ships each way. It was not until the beginning of January ensuing before information was received by a steamer from England in the ordinary ship news that the "Susquehanna" had arrived at Liverpool about the proper time, the passengers and crew being entirely ignorant of the excitement created on their behalf. On the return of the ship it was learned that there had been no suspicion of her danger. Off the Five Fathoms Bank, outside of the bay, an oyster-boat had been signaled to come alongside. Several bushels of this shell-fish had been transferred to the "Susquehanna" for use during the voyage. "The long low black schooner" turned out to be a harmless oyster-boat, and the confusion on board the ship was only caused by the desire of the crew to hoist up safely on board every one of the allotted bivalves.

The effects of the bank suspensions of 1837 continued during the remainder of that year and a portion of 1838. Generally, the Legislatures of the Eastern States were hostile to the measure, and desired a return to specie payments, enforcement of which was not resolved upon in consequence of the fear of injury to the people. The Legislature of New York, however, determined that the banks of that State should return to specie payments, and by law the 13th of August was fixed for resumption. Under these circumstances the banks of Pennsylvania, Massachusetts, Virginia, Maryland, Connecticut, Rhode Island, Kentucky, and Missouri resolved to resume on the same day. In other States such action was

not taken, and the bank currency was not redeemed. As a necessary consequence the currency of the States in which resumption had taken place was in demand, and redemption in coin sought as a matter of prudence as well as speculation. The effort of the banks was to limit the circulation of their notes as much as possible. The liability to demands for specie was much beyond the necessities of ordinary times, so that it was prudent to limit the bank issues to the actual ability of redemption dollar for dollar.

The municipal officers found that their necessities had by this time become greater than the accommodation. The construction of a new city hall was urged for the use of the municipal government. Immediately there arose a controversy between the advocates of particular localities for the sites of the buildings. Some of these only looked to public necessities and accommodation, but those who were most active were interested for or against the various sites that were spoken of. The lot at the southeast corner of Walnut and Sixth Streets, formerly occupied by the County Prison, had some advocates among property-owners in that neighborhood, who dreaded the consequences of the removal of the courts and city and county offices from the vicinity. But the greatest pressure came from the western part of the city, and took the shape of recommendations that a city hall should be erected on the northwest section of Penn Square. Common Council adopted a resolution, in which it was stated that the proposed construction would cost a million of dollars, and would materially change the course of business by removal of the public offices in the neighborhood of Chestnut, Fifth, and Sixth Streets. It was resolved that the question should be submitted to a formal vote of citizens. Select Council did not agree to this, and so the matter fell through. The Centre Square had been dedicated by Penn as a place for public buildings, and Councils had a right to place the city hall there. But in caution it may be supposed, legislative authority was obtained in the act of April 16th, which gave the city corporation authority to erect the city hall on any part of the Penn Square, the building to be under the control of the city government, and the expense paid for out of the city treasury, provided that if the county of Philadelphia had any legal claim to the square the consent of the county commissioners should first be obtained.

In the year 1837 the societies for promoting the abolition of slavery had become sufficiently established to require some better means of enforcing their peculiar doctrines than had yet been allowed them. It was almost impossible for them to obtain places for holding their meetings without difficulty, and some of the leading persons of the party determined that they would have a hall of their own. A large lot of ground at the southwest corner of Sixth and Haines Streets, below Race, was purchased by a joint-stock company, the members of which were chiefly abolitionists. Upon this ground they built a fine and ca-

acious building, which they dedicated to free discussion, and called "Pennsylvania Hall." The lot was sixty-two feet front by one hundred feet deep. The building was forty-two feet high. Stores, offices, and committee-rooms occupied the first story. The second story was the grand meeting saloon, occupying the entire width and length of the building, and having capacious galleries. It was estimated that three thousand persons could be accommodated with seats in that hall. The fixtures and furniture were in good taste. For purposes of public meetings the building was more complete than any that had yet been constructed. While this edifice was being built there was some unfavorable comment in regard to its proposed uses, but they did not go so far as to recommend any violence or destruction. The day of the dedication of the hall was the 14th of May. In anticipation of the occasion there was a gathering of men and women abolitionists from all parts of the country. The exercises of dedication were principally an oration by David Paul Brown. It was not strongly abolition. He expressed himself in favor of the abolition of slavery, but was not willing to go the whole length of urging immediate abolition. On the day of the dedication it was announced that the hall had not been erected for anti-slavery purposes alone, but that it would be consecrated to any purpose not of an immoral character. In the afternoon of the first day there was a public meeting in the hall, held by the Philadelphia Lyceum, at which essays were read on social and scientific subjects. In the evening there was a temperance meeting. On the next day the abolitionists occupied the meeting-room and debated the subjects of "free discussion," Indian wrongs, colonization, and the address of David Paul Brown at the dedication of the hall, which did not suit the leading abolitionists. In the afternoon the Philadelphia Lyceum again occupied the hall with the reading of scientific essays and papers. In the evening there was held an abolition meeting, at which George Ford, Jr., of Lancaster, Alvan Stuart, of Attica, N. Y., Alanson St. Clair, of Massachusetts, and others delivered speeches. During these two days the hall was crowded, and on the streets leading to it there were throngs of persons pressing towards the building. Among these were people of color, who were admitted freely without distinction, and sat among the audience, not being particularly assigned to any reserved space set aside for "people of color." Among the throngs passing along the streets the white abolitionists and the blacks walked frequently in company with each other, and on friendly terms. It was reported that white men and black women, and black men and white women

walked arm-in-arm. These statements, whether true or false, had much to do with what followed. A rising hostility against the building and its occupants began to be manifested. If the opening services had been confined to the meetings of the first and second days, leaving an interval during which the hall was closed, the excitement would have probably died away. But the parties owning the hall or interested in its management, strongly insisting upon the right of free discussion, determined to maintain their own privileges without regard to the feelings or prejudices of others. On the evening of the 15th written placards were posted in different parts of the city which stated: "A convention to effect the immediate emancipation of the slaves throughout the country is in session in this city, and it is the duty of citizens who entertain a proper respect for the Constitution of the Union and the right of property to interfere." It was suggested that citizens should assemble at Pennsylvania Hall on the next morning,

PENNSYLVANIA HALL.

Wednesday, May 16th, "and demand the immediate dispersion of said convention." There was a meeting in the hall at the time designated, with a discussion upon "Slavery and its Remedy." "The Anti-Slavery Convention" of American women occupied the lecture-room, and the Pennsylvania Anti-Slavery Society met in the afternoon. In the evening there was an abolition meeting, at which William Lloyd Garrison, Maria W. Chapman, and Abby Kelly, of Boston, spoke. There had been no serious demonstration about the hall in the morning, but at night persons evidently of riotous disposition were in the streets, and some within the hall hissing and hooting the speakers. Stones were thrown from the streets, and some of the upper windows broken. In consequence of these demonstrations the meeting was brought to a close much sooner than had been expected. The managers of the Pennsylvania Hall notified the mayor of the city next day of the manifestations that had been made, stating the character of the meetings that were held and were yet to be held, and that they requested protection for

themselves and property. The mayor endeavored to persuade the managers of the hall to give up the night meetings, but they, insisting upon their rights as citizens to hold them, refused to comply. If they had done so, after results would probably have been different. Toward the evening of the 17th crowds began to assemble near the hall. Harangues were made by excited persons. The managers by this time had become somewhat alarmed. They assembled in the hall about six o'clock, and after consultation it was determined to close the building and give the mayor, John Swift, the key. Repairing to the street, the latter made a speech to the crowd, who heard him and responded with applause. There were about three hundred persons present, and some of them went away with the mayor. But knowledge of the occurrences of the previous day and curiosity were bringing persons to the vicinity from all parts of the city. The crowd became so dense that it substantially occupied Sixth Street from Arch to Race, with portions of Cherry Street, Cresson's Alley, and other neighboring avenues. It was not long after dark before all the public lamps in the neighborhood were extinguished. Some persons with a scantling or long timber began to batter against the centre doors of the building in front. The mayor with a force of police came upon the scene and obtained passage through the crowd nearly to the place where the destroyers were at work. Very few if any citizens rallied to the support of the mayor. Before long the police were assaulted, some of them knocked down and bruised. By this time the doors had been broken open; two of the police force entered the building. On reaching the main saloon they found that fires had been kindled in three places. Short work had been made with the Venetian window-blinds, which were new and freshly painted, and in condition to burn easily. The gas-pipes had been broken, and the gas was leaking out into the room ready to assist the flames. The policemen were compelled to withdraw. About the same time the anti-slavery office in the first story was broken open, and the books, pamphlets, etc., thrown into the street. The flames soon attained headway and became furious. Firemen who repaired to the scene upon the alarm being given were deterred by threats from playing upon the hall, but were permitted to direct their efforts to the protection of adjoining property. In a short time the destruction was complete. The interior of the building down to the cellar was destroyed. The walls had been substantially built and might have stood the force of the conflagration, but under the effect of the fire and water the granite pillars on Sixth Street, which sustained the front from the second story up, crumbled away and the whole front came down. The managers of the hall association estimated their loss at one hundred thousand dollars, and commenced proceedings against the county of Philadelphia to recover compensation. The jury of inquiry to which the matter

was referred reported in 1841 that the loss amounted to thirty-three thousand dollars. The value of the lot which remained might have been ten thousand or fifteen thousand dollars.¹

The excitement did not terminate with this destruction. On the next evening the Shelter for Colored Orphans, a quiet and unobtrusive establishment managed by the members of the Society of Friends, and situate on Thirteenth Street, above Callowhill, was attacked by a mob composed of comparatively few persons. They obtained an entrance to the building and set fire to it. The firemen again appeared; efforts to intimidate them were resorted to with intention of preventing them from playing upon the fire and saving the property. At this time there was some resistance. Morton McMichael, police magistrate of the district, called upon citizens to aid him. The firemen rallied to his assistance. The Good-Will Fire Company was working strenuously to save the building; the members turned in under McMichael, and cleared out the gang of rioters without ceremony, so that the building was saved. It was afterwards used for the original charitable purpose for some years. These excesses were denounced with great strength of language in the *Public Ledger* newspaper. The expressions were so strong that some manifestation of hostility were made in the neighborhood of the office of that paper, at the northwest corner of Second and Dock Streets. Large crowds assembled in the streets for two or three evenings. The police force was now under much better control and management than on previous occasions, and the men were well disposed for the prevention of disturbances. The excitement in the neighborhood continued for two or three days, but there were no violent manifestations.

At the general election in October the Democrats and the Whigs of the county contested particularly the tickets for the Legislature. The Democrats claimed that they had upon the Assembly ticket 7870 votes, and they made the number of Whig votes 6346. This calculation was made by excluding the vote of the Northern Liberties. The Whig ticket there claimed a majority of 1000. At a meeting of the return judges the Democrats, being in a majority, set aside the Northern Liberties vote altogether, on the allegation that it was fraudulent. Six of the Whig return judges withdrew, met together, and made up a return, including the Northern Liberties vote, which elected the Whig ticket. The Democrats certified that Charles Brown and S. Stevenson were elected to the Senate, and Charles Pray, J. W. Ryan, Miles N. Carpenter, Benjamin Crispin, T. H. Brittain, A. Helfenstein, J. W. Nesbitt, and T. J. Heston, members of the House of Representatives. The Whig certificates were Senators James Hanna and William Wagner, Represent-

¹ The ruins of the hall remained a sad monument of disgrace for some years. The lot was eventually sold to the order of Odd-Fellows, by which a hall for their own purposes was erected and dedicated Sept. 17, 1846.

tatives Michael Day, Adam Woellper, W. F. Hughes, William Lloyd, William J. Crans, Samuel F. Reed, Benjamin R. Mears, and J. F. Smith. When the Legislature met, both of these sets of claimants went to Harrisburg. There had been two certificates, but Governor Ritner and Secretary of the Commonwealth Burrowes favored the Whig returns, and laid them before each branch of the Legislature. In the Senate, Charles B. Penrose, the Speaker, recognized the Whig candidates, who were sworn in. In the House the action was different; there were forty-four Whigs from other counties, and they, recognizing the eight Whig candidates from Philadelphia, organized and elected Thomas S. Cunningham Speaker. There were forty-eight Democrats in the Legislature, and they united with the eight claimants of their own party from Philadelphia, and elected William H. Hopkins Speaker. Neither party had a majority of the whole number without the aid of the Philadelphia delegation. The measures taken were therefore founded upon the necessity to rule. Governor Ritner recognized the Cunningham, or Whig body, as the legal House of Representatives, and the Senate took the same action. Each "House" insisted that it alone possessed legal authority. There was danger of violation of the peace, and perhaps of civil war. In this emergency the Governor proclaimed a rebellion, and made a requisition for troops upon Maj.-Gen. Patterson, commanding the First Division. In issuing his orders the Governor directed that the volunteers should load their guns with "buckshot and ball." From this arose the term "Buckshot War," which was given to the events of the period. The troops, about twelve hundred in number, left the city on the morning of the 8th of December, under the command of Gens. Patterson and Goodwin. They were carried by the cars of the Columbia Railroad from Broad and Market Streets. At Harrisburg they were put on guard at the arsenal and other places. Particular care was manifested to prevent collisions with the citizens, and the politicians were scarcely disturbed in their subsequent operations. A large number of persons went up from the city with the troops and afterward. They were mostly Democrats, and constituted themselves "a Committee of Safety." The two houses kept up their separate organization. The Hopkins party was strengthened by the accession of two Whig members,—Chester Butler, of Luzerne, and John Montelius, of Union. This gave to the Hopkins House fifty members, without counting the Philadelphia delegation. It also reduced the Cunningham House to forty-two members, without the Whig delegation. The work of the Committee of Safety here began. They crowded the chamber occupied by the Cunningham House, and were noisy, turbulent, and threatening. In the Senate the demonstrations were so violent that Speaker Penrose jumped out of a window near his chair. The Cunningham House was broken up by the pressure. Finally the Hopkins

House triumphed. The Whigs who had withdrawn went back to their seats, and the trouble was over. The troops were retained at the capital for nearly three weeks, and did not return to the city until the beginning of January.

Another trouble in relation to the same controversy took place in connection with the Congressional representation of the Third District, of which the Northern Liberties were a part. The Democratic return judges awarded the certificate of election to Charles J. Ingersoll, Democrat. The Whig return judges certified that Francis J. Harper was elected. Harper died before the appointed time to claim his seat. At a special election Charles Naylor, Whig, was returned as elected. He contested the seat of Ingersoll, and the latter was ousted and Naylor admitted.
